Fidel Castro is an essentially simple young man faced with a task of extraordinary complexity. The process he is now going through is one of trying to put into effect the ideals for which he always fought—and finding that the realities of politics, economics, and the administration of a nation do not often permit him to do so.

He freed Cuba, and now he has to conquer himself. He has been a destroyer; now he must create. He has been a fighter; now he must become the leader of a civil government. He has had companions; now the burden is his alone.

At times he seems dismayed and bewildered by it all. "Cuba is harder to run than the United States," he says. "Everything is disorganized." Yet one cannot see that his faith or courage or confidence have weakened, nor have his ideas changed.

"You are a newspaper man," he says, "devoted to your profession, determined to work for good, honest journalism. I am a revolutionary. Either I work, live, and fight for social justice, for bettering the life of the people, or I have no reason for existence. This is what the people of Cuba expect; it is what they demand. They understand what we are trying to do and we are going to give them what they want."

His whole philosophy is one of revolution, but it is still, as 2 years ago, expressed in vague, general terms. "Social justice is the necessity of the future everywhere in the hemisphere and the only hope of preventing much worse kinds of revolution," he says. "This is what you have achieved in the United States. Unemployment cannot go on at this high level in Cuba. The standard of living must be raised, but not by soaking the rich, not by war of class against class. I have complete faith in the triumph of this revolution, although I know that it will take time."

When it is pointed out to him that revolutions of a social and industrial nature are easier to formulate than to carry out, especially in the sort of democracy he is dedicated to, he is unimpressed. He seems still to lack an understanding of the complexity of a modern, industrial, free-enterprise structure, although he claims to have done much studying and meditating in the Sierra Maestra during the past 2 years and his grasp of economics and finance is certainly much greater than it was.

However, this is the first time he has ever had political, economic, and administrative authority, and no one can yet say just what he is going to do with the power he possesses. He himself cannot know, because he is finding that some ideals, like the abolition of gambling, are not feasible. For all the searing experience of those 2 amazing years of conflict, Fidel Castro is still an unformed, untried, inexperienced young man, when it comes to running a country.

This is what worries and even frightens many of his most ardent admirers. There is no escaping the fact that Fidel has that rare gift, which nature seems to bestow impartially on good or bad men, of being able to sway popular feeling at will. Such men, if they are evil, ambitious, or corrupted by power, can become dictators. If they are good men, they are in danger of crucifixion. One has just to think in our era of such complete opposites as Mahatma Gandhi and Adolf Hitler. It is only in our times, with newspapers, radio, and now television, that such men reach millions of people.

The great liberators in Latin-American history—Miranda, Bolivar, San Martin, Marti—died brokenhearted, denied or martyrized. Fidel, who is called a great liberator by his people, at moments seems to have a tragic sense of doom. He spoke of the danger of assassination the other afternoon as we strolled alone, unguarded, around the extensive grounds of his house, beyond the ineffective fence that we climbed over, and along a path that skirted a cliff, below which a little winding river ran into the sea. His house is on a knoll, the Sierra de Cojimar, with barren, open lands stretching a half-mile to the sea.

"There are so many former soldiers of Batista around," he said, "and the families of the men we have executed or sentenced to jail. But I don't like to go around with a big guard."

The risk is really great, and his followers and friends are continually worried. Yet he cannot bear to isolate himself. Fidel really loves people as people. It is not a pose, not the baby kissing and hand shaking of a politician, but a genuine, simple pleasure, and affection for people, the humbler the better. This was part of the secret of the unanimous support Fidel always got from the guajiros or peasants of the Sierra Maestra, and also a reason why his soldiers worship him. Fidel's father, a Gallego from northern Spain, was a man of the people who made a fortune in sugar.

When I remarked, standing under the trees outside the house while he was measuring a place for a hammock, that the power he has to sway the masses could be dangerous, he planted himself inches away, put his hands on my shoulders and said: "Why? How? Such a gift, as you call it, can do evil in the hands of dictators, but not in the hands of one who lives only for the people, who has no strength except in popular support."

His followers—now almost all Cuba—would also add that he is a man of high moral principles and is essentially good in the moral sense, although some of these worry about the way in which the force of circumstances has willy nilly given him the power of a dictator. But few Cubans critize him, as many Americans do, for the executions of the war criminals.

"I didn't foment the executions as I have been accused in the United States of doing," he remarked resentfully. "On the contrary, I yielded to popular demand as little as possible and, in fact, the unjust, ignorant accusations by Americans made our people much more determined than ever to have justice, and I was put under still greater pressure. I want these executions to end within a month, so that we can get down to happier and more important things." He added, in response to a question, that the families of the men executed will be taken care of by the state.

"I am not anti-American or anti-United States," he protested when taxed with constantly attacking the United States in his speeches and interviews. "I am anti American policies. Most of all, I had to defend myself and my countrymen against the injustice of American attacks and threats against us."

Like most Cubans, he has the same basic resentment against Americans that Americans used to have against the British, and he feels especially critical of American policies and of the two American Ambassadors in Havana during his fight to overthrow Batista. However, he agreed that berating the United States was a luxury that Cuba cannot long afford and anyway, he insists, he wants friendship and will respond in kind. Incidentally, while welcoming American investments he says he would prefer American loans.

It was consistent with his revolutionary outlook that in his opinion the attacks on him in the American press were motivated by interests seeking to defeat the aims of the Cuban social and economic revolution.

The afternoon sun was getting low as we sat on the steps of the house looking out over the sea. One of the officer barbudos came up and said there did not seem to be enough water for the plumbing in the house. "You mean to say we won't be able to take baths," said Fidel, doubling up with laughter.

His gaiety and sense of humor were a revelation to Habaneros and foreigners when Fidel Castro first reached the capital. The house in Cojimar has a happy atmosphere, friendly and relaxed. Barbudos wander around, looking sloppy and outlandish, usually smoking cigars as their leader continually does, but one cannot underrate those bearded ones after what they did, and every one of them would give his life in a second for Fidel.

He was pleased to be away from the luxurious confinement of the Habana Hilton Hotel, where he had been staying. He is one of those people to whom luxury or hardship is meaningless. He misses the Sierra Maestra, the trees, the jungle, the green things, the comradeship and the danger—all so simple and now so far away.

There is nothing simple today. Those who put Fidel Castro in a category, who label him, judge or praise or condemn him, are only expressing fears and hopes. Like all romantics, he defies classification, and in any event there is no adequate basis for judgment yet.

Two years ago he was beginning an epic struggle to overthrow his country's dictator and that was essentially simple. "We will know how to win or die," he said.

Now he has won and is beginning a new struggle, but the terms this time cannot be victory or death, only success or failure or something in between for the social revolution which is his goal. Two years ago Fidel Castro was a confirmed, fanatical idealist. Others around him, like his younger brother Raul, or Che Guevara, can still be, but not Fidel. The responsibilities and the realities of power are forcing him to compromise, to yield, to adapt himself.

To create an honest, efficient, democratic Cuba is an infinitely harder task than Fidel faced when we first talked together in the Sierra Maestra on February 17, 1957. All one can say today is that he knows it and is confident. Circumstances, not Fidel Castro, have changed.

## Hungarian Independence Day

EXTENSION OF REMARKS

OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, the bloody events of October-November days of 1956 in Hungary were the result of an outward manifestation on the part of tough and tenacious Hungarians held down by the most powerful totalitarian dictatorship. There in their homeland they were being oppressed by their taskmasters. Hating and detesting these alien overlords, and yearning for freedom, the people staged a sudden uprising, thereby hoping to expel Russian

Communists and the Red army detachments, and thus regain their freedom. Unfortunately, the helpless and brave Hungarians were alone in this unequal struggle against the massive and monolithic might of the Soviet Union. The valiant efforts of the brave Hungarians ended in a tragic blood-bath. But such events are not new or rare in Hungary's long history. Such an epochmaking event took place a little over 100 years ago which began on the 15th of March 1848.

In that year, when revolutionary waves were sweeping all over Europe, all oppressed peoples under autocratic regimes were stirred and became restive. Hungarian people showed their resentment against the Austrian government. Their great spokesman, Louis Kossuth, presented their grievances to the government early in March. But, before the government had given serious considerations to these grievances, demonstrations were held in various parts of the country, demanding freedom. Fortunately the government was not in position to suppress the people and ignore their demands. Finally on March 15, on the "Ides of March," their demands were granted; the people regained their freedom. Since then, for more than 110 years, March 15 has been celebrated as one of the chief national holidays of Hungary. The events of that day proved that however ruthless and heartless autocracies may seem, and often are, they are bound to lose out in the end against the will and tenacity of a sturdy and stout-hearted people. Perhaps the best way to revive the spirit of those days is to celebrate the anniversary of that great event, even when today Hungary is suffering under Communist tyranny. I therefore take pleasure in associating myself with Hungarian Freedom Day, and with those Americans of Hungarian descent who mark this day.

## Hawaii Statehood

SPEECH
OF
### HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 50) to provide for the admission of the State of Hawaii into the Union.

Mr. WIDNALL. Mr. Chairman, I heartily support this bill and hope it will have a speedy passage. It not only makes possible the addition of a new State to the Union that richly merits such recognition, but awarding statehood should prove most advantageous to the future of the United States. Hawaii has for 40 years awaited statehood status since the first bill was introduced in the House. Its population of almost one-half a million has for years shown its ability to support a sound economy and it has had outstanding development through progressive leadership. During World War II many of our citizens believed that, because of the very varied national background of the people of Hawaii that the islands would prove an Achilles Heel in our defense. To the contrary and to the everlasting credit of its residents their full loyalty was proven continually and aided immeasurably in our ultimate victory.

I believe that admission of Hawaii will prove of great significance in our history. It carries even greater import than the admission of Alaska last year. Finally, after many years of debate, sober thought, and judgment, the representatives of the 48 States and now Alaska, have put aside their prejudices and narrow views of the past. This year the debates on both the Senate and House floors were on a high level and did not display the appeals to passion and bias exhibited on some past occasions.

Not only does statehood fulfill the promises made in the Republican and Democrat platforms, but it demonstrates to the world that the people of our country respect the dignity of man and sincerely mean our belief in freedom and liberty and opportunity for all our citizens. Hawaiian statehood carries with it a spiking of Communist propaganda claims and I hope that it also indicates that the temper of both Houses is such that the long disfranchised residents of the District of Columbia will be granted self-government. It is a tragedy that the residents of Washington have been voteless for so many years.

We have spent billions on defense for missiles and H-bombs and billions to bolster the economy and yet unwillingness to grant the vote to District of Columbia citizens again provides Communist propaganda.

The vote that will be taken today will mark the beginning of a new era for the United States. As the Representative from the Seventh District of New Jersey, I consider myself most fortunate in being able to vote for Hawaii as our 50th State.

## Plumbing Contractors of Chicago Endorse H.R. 10

EXTENSION OF REMARKS
OF
### HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. O'HARA of Illinois. Mr. Speaker, on Monday H.R. 10, the Keogh-Simpson bill, on which there is tremendous national interest, is scheduled for floor action in this body. For the information of my colleagues, I am extending my remarks to include a statement by the Plumbing Contractors Association of Chicago. Nationwide there are in excess of 9,000 plumbing contractors, all like those of the Chicago association, small businessmen and largely self-employed. Their strong endorsement of H.R. 10 certainly merits the attention of my colleagues on both sides of the aisle. The statement follows:

The tax inequity which would be rectified by passage of the Keogh-Simpson bill, H.R. 10, is exemplified by the plight of members of the Plumbing Contractors Association of Chicago.

Plumbing contractors are usually self-employed and they are almost without exception small businessmen. Here in Chicago, about 85 percent of the local contractors are self-employed and employ 10 men or fewer. Very, very few have as many as 300 employees.

All these men in the small shops as well as the lareg ones are covered by a pension plan provided by their employers, as a fringe benefit, under an areawide labor-management agreement. Those employers who are self-employed plumbing contractors cannot provide similar protection for themselves except out of their income after taxes.

The tax laws make it hard for a self-employed person to provide retirement income, in two ways. For one thing, the high tax rates, especially those that apply in years when a person has a fairly good income, make it impossible, in many cases, to accumulate an estate that is big enough to provide retirement income. And, second, a self-employed person who tries to provide himself with a pension or annuity for his retirement has a tax burden that an employed individual who is covered by a union or company retirement plan does not have. The self-employed person must pay a tax on his entire income and save for his retirement out of what is left. He cannot, as part of his business expense, set aside a certain amount under a pension plan and deduct it from his taxable income.

Employed persons, on the other hand, have a tax benefit when their employers or a union provide coverage for them under an approved pension plan. The amounts paid by the employer are deductible by him as a business expense. Often the employee pays no part of the cost of providing for his future retirement; and he pays no tax on amounts used by the employer to provide the retirement benefits.

By allowing a self-employed person to deduct a limited amount of income if it is invested in an approved retirement fund, Congress would help the self-employed person on both these points. The self-employed person has more peaks and valleys in his income than an employed person does. In the peak years he must pay taxes at a high rate, but he gets no credit for this during low income years. By permitting a deduction for sums invested for retirement, you could help the self-employed person level out his income for tax purposes. Taxation of part of the income would be postponed until it is received as retirement benefits. More important, however, is the need for getting rid of the inequality that exists between the self-employed person and the employed person who is covered by an acceptable company or union pension plan.

Present inflation also makes it hard for a self-employed person to save for retirement. High prices increase his costs of doing business and require that he spend more to provide a reasonable living standard for himself and his family. Part of the inflation we have today results from the fact that people generally are not saving enough out of current income. A law that would encourage people to save would work against inflation to some extent.

The self-employed small businessman has always been an important factor in maintaining our system of private, competitive enterprise. Taxes that discriminate against self-employed people in favor of employees discourage self-employment, self-reliance, and individual initiative. To that extent they put a brake on the competition that has been provided by small business units.

We are not asking for tax exemption. What we seek is a postponement of part of a self-employed person's income tax from

his working years to the years of his retirement, and equitable tax treatment with employed persons under the law.

## A Wisdom Unmarred by Vanity

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. PORTER. Mr. Speaker, a good friend of mine, Jim Johnson, of Coos Bay, Oreg., just sent me a copy of a fine editorial written by another friend of mine, Bill Tugman, editor and publisher of the Port Umpqua Courier, Reedsport, Oreg.

Jim told me to memorize the part he underlined, which was "a wisdom not marred by the vanities which have blemished the achievement of so many other famous men." The editorial refers to General Marshall, a man to whom this Nation owes so much and whose example is surely one Americans will treasure throughout our existence as a Nation.

Under unanimous consent to extend my remarks, I include the text of the editorial entitled "Gen. George C. Marshall: An American":

GEN. GEORGE C. MARSHALL: AN AMERICAN

It is our belief that history will recognize in Gen. George C. Marshall one of the greatest Americans of all time—the man who gave guidance to those who played the more heroic role of leadership through the trying days of World War II; the man who later, as Secretary of State, conceived the program of aid and rehabilitation for our war-stricken allies which saved many of them from the ravages of communism; the Secretary of Defense who brought some degree of commonsense into the relationships of our Army, Navy, and Air Corps.

In war or in peace, George Marshall served his Nation and humanity as long as God gave him strength to serve—quietly and unselfishly. In this man was a blend of the indomitable courage and steadfastness of George Washington, much of the gentleness of Abraham Lincoln, and a wisdom not marred by the vanities which have blemished the achievement of so many other famous men. But it is for others to relate and appraise the many attainments of George Marshall. We are going to relate an incident which occurred long before Marshall rose to national fame.

It was during the terrible depression years. We started to Portland early one morning on the old Highway 99. On the outskirts of Eugene we noticed a tall, dignified gentleman, not "thumbing," but evidently eager for a ride. We stopped and took him in. His name, if we recall correctly, was Monroe, but names did not seem to matter for the moment. We talked about the weather and this and that. In a large field near Albany, we noticed a small herd of excellent horses, and Mr. Monroe said:

"You notice that close-coupled chestnut in the corner, the one with the deep chest and well-made legs? Notice him step. He's got springy pasterns. That, sir, is a riding animal. Good blood lines."

"You seem to know something about horses."

The old gentleman grinned.

"I ought to. I spent 50 of the best years of my life in the U.S. Calvary."

"Well, I was just a field artillery hack, but I worked with lots of cavalrymen. Ever know Col. Jimmy Hornbrook, of the 8th; Dodd of the 13. * * *

"Of course, of course, why most of those fine men were my boys. Why when I was just a recruit Black Jack Pershing was just a shavetail out of the Point."

The old gentleman went on to explain that he had never had enough education (as he called it) to rise above the rank of top sergeant (but you had to be all man and a little more to be a top in one of these old outfits). He explained how the young second lieutenants just out of West Point always placed themselves under the guidance of their senior sergeants till they had really learned how to lead men.

"There were always a few who were too proud to defer to the judgment of an enlisted man," said he, "but the really bright ones always bided their time to give commands. I'm on my way to to visit one of my boys right now."

"Who's that?"

"George Marshall, the new brigadier at Fort Vancouver, just across the river from Portland."

"I've heard good things of him."

"He is one of the best. I had him when he first came from VMI; he did not go to the Point. He and Mrs. Marshall always have me as their house guest during my birthday week. I'll be 80 this week. The visit always ends with a big review in my honor."

"That's nice."

"General Marshall never forgets an old friend. They'd be pleased to have you come to my review, if you could."

It has been a matter of long regret that "important" engagements prevented attending this review. We never saw the old gentleman again. Nor did we ever see George Marshall except across a large room. But we knew his friend and neighbor Hap Arnold very well—the impulsive, explosive, dynamic Hap who made Air Force a power in the world and his gentle wife, Eleanor, and through them many of the high rankers at Fort Myer. There was only one thing on which all these high-spirited and brilliant leaders were agreed during World War II—their confidence in the integrity and judgment of the modest Virginian who was their Chief of Staff.

The career of George C. Marshall deserves much thought and study by young Americans.

## Bar Association Praised on Supreme Court Report

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of Wednesday, February 25, 1959:

BAR ASSOCIATION PRAISED ON SUPREME COURT REPORT

(By David Lawrence)

WASHINGTON, February 24.—Seldom in American history has there been such a scathing criticism of the decisions of the Supreme Court of the United States as has just come from the American Bar Association.

This has nothing to do with the decisions of the Court on segregation or integration. Nor do the members of the bar—who by overwhelming vote approved at the Chicago convention this week a committee report on the subject of Supreme Court decisions—come from any one section of the country.

The action taken is a formal disapproval of several decisions of the Supreme Court not only in matters of law but in the misuse of the judicial power itself. The report, comprising about 20,000 words, does not criticize the Supreme Court as an institution nor recommend any limitation of its powers, but does say that Congress should at once, in the proper way, endeavor to correct the ill effects of the decisions. The report declares:

"Many cases have been decided in such a manner as to encourage an increase in Communist activity in the United States through invalidation of State sedition statutes and limitation of State and Federal investigating powers in the field of subversion although these cases might readily have been disposed of without so broadly limiting national and State security efforts."

SECURITY SEEN IMPERILED

"The paralysis of our internal security grows largely from construction and interpretation centering around technicalities emanating from our judicial process which the Communists seek to destroy, yet use as a refuge to masquerade their diabolical objectives.

"This trend was treated fully in the conference of State chief justices last year when they called upon the U.S. Supreme Court to exercise the power of judicial self-restraint. The dissenting opinions of certain Supreme Court justices have been crystal clear in charting the effect of the failure of the majority to recognize the underground forces that are at work and to appreciate how these decisions affect our internal security."

CONGRESS URGED TO ACT

The bar association's report says it is the duty of members of the bar to defend the institutions of the judiciary from unfair and unjust attacks and that proposals to limit the court's jurisdiction should not be approved. But at the same time the committee report, as adopted by the convention says that, where remedial legislation can be enacted by Congress to deal with Communists and other subversives, this should be given prompt attention. The report cites a long list of Supreme Court decisions in the internal-security field and points out exactly how they can be overcome by action of Congress.

Also, a chapter is devoted to current fallacies about communism. The report says: "It is just as false to measure the strength of communism in the United States by comparing the small number of party members with the large number of non-Communists, as it would be to measure the seaworthiness of a ship by comparing the area of its holes with the area of its hull. A few strategically placed holes can sink the largest ship."

DANGER WORSE THAN EVER

Adding that the danger and the menace of communism are worse than ever, the report calls on the members of the bar to alert the Nation on the menace of international communism.

As one reads the report, there comes a feeling that its writers tried to be as tactful as possible in their references to the present membership of the Supreme Court but nevertheless reveal again and again their dismay at the abuse of power by the highest Court.

"Our internal security," says the report, "has been weakened by a lackadaisical attitude on the part of the public and technicalities raised in judicial decisions which too frequently in the public mind have had the effect of putting on trial the machinery of the judicial process and free the subversive to go forth and further undermine our Nation."

M'CARTHY DETRACTORS BLAMED

The indifference of the public may be due to the job performed by some of the opponents of the late Senator McCarthy, of Wisconsin. Unfortunately, the period in which he struggled to direct attention to the Communist menace now is brushed off as merely one of hysteria, and there is no effort nowadays to separate what was valid in the crusade from that which was due to overzealousness and emotionalism.

Since the famous battle took place in the Senate in 1954, moreover, it has been an open secret in Washington that the Democratic Party leaders in both Houses have been under pressure from its so-called liberal elements to soft-pedal the inquiries into communism. Though two committees still do some work in this field, they are restrained by word from higher up in the party whenever they really want to expose some palpable manifestation of Communist effort inside the United States. Some prominent American citizens, for example, who have been openly siding with the Soviets against their own Government in certain controversies have never been called as witnesses by the committees of either the House or the Senate to explain their activities or their connections with the Communist propaganda machine. Maybe the American Bar Association report will awaken American public opinion and help to overcome the timidity of the Democratic Party leadership on these subjects.

## Nation's Information Mediums Portray South's Position in Unfavorable Light

EXTENSION OF REMARKS
OF
## HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including three editorials which appeared in the Thursday, March 5 issue of the Jackson, Miss., Daily News. The first of these, entitled "Publicity Peter Funks" appeared on the front page of this paper, and makes reference to the succeeding editorials.

These editorials point up what many of us have known for years: that a concerted and highly organized conspiracy exists among much of our Nation's mass information mediums to portray the South's attitudes and position to the rest of the country in the most ridiculous and unfavorable light possible.

The information contained in these editorials should be cause for grave concern on the part of every right-thinking and patriotic American citizen:

[From the Jackson (Miss.) Daily News, Mar. 5, 1959]

PUBLICITY PETER FUNKS

The extent to which organized, professional pressure groups apply the squeeze to the Nation's large newspapers, magazines, wire services, radio and television outlets on behalf of stirring up racial hatreds and warped opinions of the South has been uncovered.

Minutes of a secret meeting held in New York recently have been obtained. This document reveals very significant background into reasons the South continues to suffer abuse and slander in the court of last resort—public opinion. The judge and jury are both stacked against millions of decent, law-abiding people who disagree with left-wing, Communist-front strife-spreaders, do-gooders, and social and publicity Peter Funks.

The minutes of the hush-hush session at which distorted stories against the South were conceived appear, along with additional editorial comment, on the editorial page in this issue of the Jackson Daily News.

You will see from the pressure techniques plus an abundance of fawning willingness on the part of journalists and television commentators that the South has no more chance of unbiased treatment than a billy goat has of winning a prize at a perfume contest.

The minutes reveal propaganda leaflets are distributed by the Mass Media Committee of the Consultative Conference on Desegregation to all CCD agencies. It is reported about 40 agencies cooperate in this the falsehood spreading, but the names of these agencies are kept secret.

Visiting newsmen can swarm into the South and get all the factual information they desire on any organization, but the nerve-center of world journalism, television and radio has not been able to get a list of these agencies.

Right-thinking southerners should study with concern the underground activities of vicious sabotage against reputable people.

It must be accepted that the South has been long-suffering in enduring the assaults.

Although it can hardly hope to cope with a secret underground of hate-pushers, the Citizens Council (there's no secret about its board of directors) is the only active organization putting up an intelligent defense against the constant barrage of smear against the South.

After reading the details on the editorial page today we believe our readers will hold renewed respect and admiration for those who stand on the forefront of this all-important fight for decency and fairplay.

[From the Jackson (Miss.) Daily News, Mar. 5, 1959]

NEW ANTI-SOUTH PROPAGANDA PLOTTED AT SECRET HUDDLE

How does a pressure group dedicated to racial agitation work?

How do these creatures continue to gag the press, magazines, and radio and television?

How do they successfully distort and discredit remarks made by honorable American people who oppose their vicious slander?

In these same columns below you will read minutes of a most remarkable secret meeting held in New York City on February 4 at the NAACP's headquarters on West 40th Street. These minutes have been brought to public attention by the Richmond News Leader, of Richmond, Va.

Efforts by that newspaper have failed to establish the identity of "about 40" organizations allegedly supporting the organization known as the "Consultative Conference on Desegregation."

It is extremely significant that news media in New York, the nerve center of world newsgathering, can send high-powered journalists into the South to dig up any facts they desire on any organization, but the group of about 40 organizations supporting the CCD remain anonymous.

Is it not extremely strange that the CCD voted to protest to the Associated Press, United Press International and Editor and Publisher regarding identifying people by race when the meeting was arranged by an organization which includes the term "colored people" in its own name. We refer to the National Association for the Advancement of Colored People.

There is no more reason why the news media should suffer censorship at the hands of this unidentified outfit than should a judge juggle evidence in court or turn a deaf ear to defense attorneys.

After you have read the article below, we believe you will agree the Nation's press and radio and television facilities are being pressured into giving the South another double dose of ridicule in the court of last resort—public opinion—and, please, look at the professional agitators packing the court.

In the face of this evidence it is no wonder the South continues to take such a licking.

In the face of perpetual bombardment with vicious lies, it is a wonder this region has shown the remarkable restraint it has exercised.

The falsehood peddlers yell for moderation, yet they display no regard for the word in dishing out abusive propaganda.

[From the Jackson (Miss.) Daily News, Mar. 5, 1959]

HERE IS PROOF AGITATORS SERVE AS PRESS CENSORS—MINUTES OF THE MASS MEDIA COMMITTEE OF THE CONSULTATIVE CONFERENCE ON DESEGREGATION, WEDNESDAY, FEBRUARY 4, 1959

Present: Arnold Aronson, National Community Relations Advisory Council; Gunther Lawrence, Union of American Hebrew Association for the Advancement of Colored People; Alex Morisey, American Friends Service Committee; Guichard Parris, National Urban League; Alan Reitman, American Civil Liberties Union; Ed White, United Steelworkers of America; Chairman Alf Bernheim, American Jewish Committee; Secretary Harry Fleishman, National Labor Service.

1. Approximately 15,000 copies of Pogo and the Speakeasy Schools, a reprint of Walt Kelly's comic strips on that subject, will be published by the National Labor Service of the American Jewish Committee, the Southern Regional Council, the Anti-Defamation League, the American Friends Committee, and six AFL–CIO unions. Sample copies will be distributed to CCD agencies.

2. A letter was received from Herman Long, of Fisk University, director, race relations department, Congregational Christian Churches, mentioning that race labeling has begun to appear widely in the service stories in the newspapers. It was agreed that Alan Reitman would talk with officials of Associated Press, United Press International, and Editor and Publisher concerning this matter.

3. Reitman agreed to contact Life magazine again concerning a proposed article on the role of the clergy in the South in supporting law and equality.

4. The American Friends Service Committee is sponsoring a pamphlet on American Race Relations, which will be published by the University of Oklahoma Press. Agencies interested in quantities of the pamphlet should write to Alex Morisey, American Friends Service Committee, 1201 Chestnut Street, Philadelphia 7, Pa.

5. The Southern Regional Council reported that it will reprint the Arkansas Gazette report on the effect of the desegregation controversy on economic conditions in Arkansas. Sample copies will be sent to all CCD agencies.

6. The National Urban League has prepared an attractive 11 by 14 illustrated pamphlet, Half a Life, in connection with Equal Opportunity Day. Copies are being sent to CCD agencies.

7. The Turnpike Press has just published as a 24-page pamphlet, The Truth About Desegregation in Washington's Schools, which first appeared as a series of articles in the Washington Post, by Erwin Knoll. The

series is an excellent survey of progress in the Washington schools and should be helpful in countering the vicious propaganda being spread by Governor Faubus, of Arkansas, and other southern segregationalist leaders. Single copies are 15 cents postpaid, 10 copies or more 10 cents each postpaid; 100 copies or more 7½ cents postpaid; 500 copies or more 5 cents each plus shipping charges. Please order from the Turnpike Press, Annandale, Va.

8. A group of organizations in Miami, under the leadership of the United Church Women, have conducted a community audit in connection with United Nations Human Rights Day. Copies of the folder describing the community audit are being mailed to all CCD agencies.

9. Prosegregation ads have appeared in the New York Times, January 5, 1959, and in the Wall Street Journal, February 9, 1959 under the signature of Carleton Putnam, who describes himself as a distinguished New Englander. Putnam, a board member of Delta Airlines, has set up a Putnam Letter Committee, in Birmingham, Ala., to solicit contributions to reprint his letter as an ad in additional northern newspapers. When a similar ad was placed by Louisiana segregation leaders in the New York Herald Tribune in February 1958, we urged CCD member agencies to alert their local units to such ads and ask them to check with editors and publishers about the problem. When such ads appear in northern papers, it would be helpful if southerners would write dissenting letters to the editors analyzing the misstatements and errors in the ads. Where such ads appear, editors should be asked to include editorials rebutting the segregation thesis advanced in the ads, or at least run news articles (in the same issue carrying the ads) quoting opponents of segregation.

10. Integration—A Challenge to the Social Agency, a 25-page report of a workshop conducted by the National Social Welfare Assembly's Committee on Intergroup Relations, features discussion of case histories in hiring Negro social workers, establishing integrated programs, problems of loss of financial support by prointegration agencies, achieving community acceptance, developing national and local policy on integration, etc. Copies of the workshop report are available at 75 cents each from the National Social Welfare Assembly, 345 East 46th Street, New York 17, N.Y.

11. Papers throughout the Nation carried an Associated Press wirephoto February 2 and 3, showing a lone Negro boy in Maury High School Auditorium in Norfolk, Va.—apparently shunned by his classmates. An article in the New York Post, February 5, reported that the photo was phony. Photographers had beckoned the Negro boy up front and took the picture. A minute later, the seats around him were filled and other kids were asking him if he could play basketball or football. By then the photographers had gone. It was agreed that it would be useful if editors would query A.P. on the alleged irresponsible reporting and also bring this to the attention of Editor and Publisher magazine.

12. Alan Reitman agreed to suggest to the New York Times that it carry a story concerning the reactions of students who have returned to desegregated public schools from private schools and tutoring classes. It was felt that such a human interest story might make the comparison more meaningful, even in the South. Henry Moon agreed to suggest the same kind of stories for the educational pages of Time and Newsweek.

13. Members of the committee expressed great indignation over the way in which Chet Huntley had called for virtual suicide by the NAACP on his program on the Second Agony of Atlanta. It was suggested that the February 8, 1959, program ought to include a genuine moderate, who recognizes the importance of the role of the NAACP in the desegregation issue. This was felt, could effectively explode the Huntley thesis that Southern moderates were only awaiting NAACP abdication to rise up in their might in support of orderly desegregation. NAACP attempts to arrange for the inclusion on the program of such a moderate were unavailing. (Fortunately, Roy Wilkins did such a tremendous job on the February 8, 1959, NBC program with Chet Huntley and Thomas Waring, editor of the Charleston, S.C., News and Courier, that he removed a good deal of the sting from the Huntley thesis.)

Respectfully submitted,

HARRY FLEISHMAN,
*Secretary, Mass Media Committee, CCD.*

---

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

---

## RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

---

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

---

## CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

---

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

# *Daily Digest*

## HIGHLIGHTS

House received President's message on mutual security program and passed bills on Lake Michigan water diversion, coloring of oranges, military enlistment, and naval construction.

See Congressional Program Ahead.

# Senate

## *Chamber Action*

The Senate was not in session today. Its next meeting will be held Monday, March 16, at noon.

## *Committee Meetings*

(*Committees not listed did not meet*)

### COTTON ACREAGE ALLOTMENTS

*Committee on Agriculture and Forestry:* Committee, in executive session, ordered favorably reported an original bill authorizing the leasing of cotton acreage allotments during the crop years of 1959 through 1961.

Also, the committee agreed that subcommittee hearings will be held as soon as possible on wheat programs.

### APPROPRIATIONS—PUBLIC WORKS

*Committee on Appropriations:* Subcommittee on Public Works had as its witness Gen. William A. Carter, Division Engineer, Lower Mississippi Valley Division, Army engineers, and president of the Mississippi River Commission, who discussed fiscal 1960 budget estimates for rivers and harbors and flood control projects in this area.

Hearings continue Tuesday, March 17.

### DEFENSE MATTERS

*Committee on Armed Services:* The Preparedness Investigating Subcommittee continued, in executive session, its hearings relative to major defense matters, with especial emphasis on the military budget for fiscal 1960, and the Berlin situation, with testimony from Adm. Arleigh A. Burke, Chief of Naval Operations, and Gen. Randolph McC. Pate, Commandant, U.S. Marine Corps.

### WITHHOLDING OF INFORMATION

*Committee on the Judiciary:* The Constitutional Rights Subcommittee held hearings on the subject of "Executive Privilege" and Freedom of Information, with testimony from Robert Keller, General Counsel, who appeared for the Comptroller General, who was accompanied by Lawrence Powers, Director of Defense Accounting and Auditing Division, both of the GAO; and Prof. Joseph W. Bishop, Jr., Yale Law School. Topics of discussion included description of experiences in obtaining information from the Air Force, ICA, and Navy, and legal and constitutional questions involved in the power of the President to withhold information from the Congress.

Hearings were recessed subject to call.

### ADMINISTERED PRICE INFLATION

*Committee on the Judiciary:* The Antitrust and Monopoly Subcommittee continued its hearings on the character of public policies which can be adopted by the Congress to combat price inflation, with testimony from Dr. Simon Whitney, Director of the Bureau of Economics, Federal Trade Commission; and Eugene Havas, an economist, Washington, D.C.

Subcommittee will meet again on Tuesday, March 17, when it will begin hearings on S. 11, to amend the Clayton Act with regard to equality of opportunity.

### LABOR-MANAGEMENT REFORM LEGISLATION

*Committee on Labor and Public Welfare:* Committee continued its executive consideration of S. 505, proposed Labor-Management Reporting and Disclosure Act of 1959, but did not conclude its work, and will meet again on Tuesday, March 17.

# House of Representatives

## *Chamber Action*

Bills Introduced: 37 public bills, H.R. 5655–5691; 9 private bills, H.R. 5692–5700; and 3 resolutions, H.J. Res. 308 and 309, and H. Res. 209, were introduced.

Pages 3745–3746

Bills Reported: Reports were filed as follows:

(For details of H. Repts. 201–207 see under "Administration Resolutions" elsewhere in this DIGEST);

H.J. Res. 115, relative to a memorial to Franklin D. Roosevelt in the District of Columbia, amended (H. Rept. 208);

## Freedoms Foundation and the Philosophy of Our American Government

EXTENSION OF REMARKS
OF

**Hon. EVERETT McKINLEY DIRKSEN**

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. DIRKSEN. Mr. President, on February 17, the Honorable Charles H. Davis, Justice of the Illinois Supreme Court, delivered an address before the American citizenship committee of the Rockford, Ill., Women's Club. The address, under the title, "Freedoms Foundation and the Philosophy of Our American Government," is a solid contribution to this basic subject; and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOMS FOUNDATION AND THE PHILOSOPHY OF OUR AMERICAN GOVERNMENT

(Speech by Justice Charles H. Davis before the American citizenship committee of the Rockford Women's Club, Tuesday, February 17, 1959)

Freedoms Foundation is a nonprofit, nonsectarian, and nonpolitical organization, incorporated under the laws of New York. It is located at Valley Forge, Pa., on a small plot of the tract of land which served as the 1777–78 winter campground for the colonial troops during the Revolutionary War. David Taylor, author of "Farewell to Valley Forge," has called it the Gethsemane of the Revolution. At this site, 3,000 men perished of exposure, starvation, and disease, and were buried in unmarked graves, while those who were physically able built huts for living quarters and learned the rudiments of warfare. There General Von Steuben, the German; General Pulaski, the Pole; Generals Lafayette and Duportail, the Frenchmen; and General Lord Sterling, the Englishman, suffered side by side with the ragged but inspired Americans. And there, during the months of privation and death, these generals, under Washington's command, were building an army out of the survivors which, during the next 3 years, would defeat the best trained soldiers of the British Crown.

Our great and good President, Dwight D. Eisenhower, is honorary chairman and Hon. Herbert Hoover, former President of the United States, is honorary president of Freedoms Foundation. Dr. Kenneth D. Wells is its president, Adm. Felix B. Stump, its vice chairman, and its trustees are: Don Belding, chairman of the board and trustee; Roger S. Firestone, Hon. Herbert Hoover, Jr., Adm. Arthur W. Radford, Charles M. White, and Charles E. Wilson, distinguished and devoted Americans.

Freedoms Foundation is dedicated to the principle that freedom belongs to all people and that only by the thoughts and acts in their everyday lives can the American people extend and preserve their freedom.

Its charter purpose is:

"To create and build an understanding of the spirit and philosophy of the Constitution and Bill of Rights and of our 'bundle' of indivisible political and economic freedoms inherent in them.

"To inspire love of freedom and support the spiritual unity born of the belief that man is a dignified human being, created in the image of his Maker, and by that fact, possessor of certain inalienable rights."

To this end, Freedoms Foundation encourages all citizens to speak and act for freedom and gives awards for such conduct. These awards cover many fields such as essays, sermons, editorials, cartoons, public addresses, and school, college, plant and community programs.

Its many award entries are judged in relation to its credo of the American way of life which considers:

1. Is the entry based on a fundamental belief in God?

2. Is it free from Socialist, Communist, Fascist and totalitarian concepts and ideologies?

3. Does it pertain to economic and political rights and responsibilities?

These awards are made by a jury composed of at least 30 distinguished persons—one-third of State supreme court jurists, and 20 executive officers of national patriotic, veterans and service club organizations. All awards selections are made solely by this group, and no selections are made by any foundation official or employee. The awards jury selections are announced at Valley Forge on Washington's Birthday each year.

Through this program, the foundation has brought to many the significance of the American way of life and freedom. It has renewed and revitalized faith in America, liberty and justice. For this contribution to the strength and worth of America, Freedoms Foundation is in the process of earning one of America's greatest awards—the affection of her devoted citizens.

During the past 50 years, irresponsible historians and writers have depreciated the American concepts of government, disparaged the character of our national heroes and impugned the purity of their motives. They have attempted to rob our children of their real Americans of distinction, and have been joined by others who have substituted a fictitious Davey Crockett and synthetic heroes in the form of western lawmen, city police officers and private detectives. It can truly be said that the American people of today are overentertained and underenlightened.

In his "Collected Legal Papers,"[1] Justice Holmes stated:

"When the uniformed are taught to doubt, they do not know what they may safely believe. And it seems to me at this time we need education in the obvious more than investigation of the obscure."

There have been so many and varied attacks upon our system of government and its capacities that I believe it time to reaffirm the obvious rather than to investigate the obscure in form of foreign ideologies of government.

The philosophy which underlies our Government was conceived by our Lord and Master almost 2,000 years ago when He taught mankind a lesson it has never learned, yet never quite forgotten[2]—the personal dignity of each man, women, and child.

This idea received little or no application in government until 1215 when the lords of England wrested certain rights from King John at Runnymede. These rights were embodied in the Magna Carta and included certain rights which the lords were willing to grant to the freemen under them. By this move, the lords won the support of all England against the King. The most important of these rights were:

1. No freeman shall be arrested, imprisoned, outlawed, or deprived of property except by a judgment of his equals or the law of the land.

2. Justice shall not be sold, delayed, or denied to any freeman.

3. No taxes, except the customary ones, shall be levied except with consent of a council of prelates and greater barons.

The Magna Carta was drawn mainly to give more rights and privileges to the barons. The common people of England continued to live in a condition of inequality for hundreds of years. But the charter did break the barrier of special privilege and it is a landmark in human liberty.

Later in the history of England, a group of people refused to follow the practices of the Church of England and set up their own churches. In 1607 and 1608, they were driven from England by the religious persecution of both the church and the state. They temporarily found refuge in Holland. And, in 1620, they boarded the *Mayflower* to come to America to seek religious freedom. Upon reaching the American shores, and before disembarkment, they drafted the Mayflower compact which bound them into a religious-political group. It began with the words, "In the name of God, Amen." This compact established the first self-determining government in America and constituted the first American expression of the concepts which were later to be woven into the fabric of our Government. The 53 men who signed it agreed to set up a government that would make just and equal laws.

The years brought governmental abuses and tyranny to this and the other American colonies. And the American concepts of personal dignity, just and equal laws, and freedom were thwarted and denied by the King of Great Britain. And the men and women of America, few in number but firm of purpose, revolted against the greatest nation of the world.

They adopted the Declaration of Independence on July 4, 1776, in which they declared the causes which impelled the separation from their mother country. They then proclaimed their concept of the dignity of man in these words: "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pur-

[1] Holmes, "Collected Legal Papers," pp. 292–293.

[2] This clause was taken, in part, from the following clause, in Learned Hand's speech, "The Spirit of Liberty": "The spirit of liberty is the spirit of Him who near 2,000 years ago taught mankind that lesson it has never learned, but never quite forgotten; that there may be a kingdom where the least shall be heard and considered side by side with the greatest."

suit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. * * *"

Under this theory of government, men have unalienable rights because they are men and such rights are not the gift of any government, but rather are the endowment of our Creator; and governments exist for men, not men for government.

This theory of government, conceived in the teachings of Christ, sustained by the Magna Carta, first expressed in America in the Mayflower compact, and proclaimed in the Declaration of Independence, was enshrined in the Constitution of the United States. Under this concept, the people are sovereign, and all powers are vested in them, but certain of these powers and duties are delegated to the Government because it can administer them more efficiently than the individual. But, in the area of personal dignity, of freedom and liberty, the Constitution and the first 10 amendments provide that Congress shall make no laws respecting the establishment of religion or prohibiting its exercise, or abridging freedom of speech or of the press, or the right of the people peaceably to assemble and to petition the Government for a redress of grievances. All persons are guaranteed the right to be secure in their persons and homes against unreasonable searches and seizures; each person accused of crime is given the right to a speedy and public trial, by jury if desired, in the district where the crime was committed, with the right to process, to secure witnesses and to have the assistance of counsel of his choice. Excessive bail cannot be required of any person accused of a crime, and in all legal proceedings, every person is entitled to due process and equal protection of the law.

Our forebears were not willing to leave freedom to chance. Even though assured by the Constitutional Convention that the foregoing rights were embodied in the Constitution by implication, they proceeded, at the first session of Congress, to provide for the submission of the first 10 amendments to the respective legislatures of the States. These amendments, which specifically assured the preceding rights, were adopted June 15, 1790, and are commonly called the American Bill of Rights.

This concept of Government was revolutionary. It struck down the care-worn doctrine of the divine right of kings, and the theory that might makes right, upon which all totalitarian governments have been, are, and ever will be founded. By way of comparison, our concept of government is as revolutionary, new, and glorious today as it was in 1776. Under this theory, we are governed by laws and not by men. The rights of the meek and the poor are as sacred as those of the rich and the proud. Neither the legislator, the executive officer, nor the courts can deny them to the humblest citizen of the land. No man is above the law, and the sovereignty rests in the people.

Today America has great natural resources of minerals, oil, rivers, lakes, harbors, forests, fertile valleys, and prairies. We have built giant factories, office buildings, schools, colleges, universities, homes, and churches which manifest our wealth. We have developed railroads, highways, air transportation, intercontinental missiles, and rockets which travel in outer space. We have new and unused powerful weapons of destruction and defense. We have led the world in mechanical and inventive genius. Yet, America's greatest wealth and power lies in an idea—in its concept of freedom and liberty and government under the rule of law.

A large part of the earth and its people are today behind the Iron Curtain. Communism is not only a battle for power and for material things, but it is also a battle for the minds and hearts of men. Its threadbare totalitarian philosophy of the absolute supremacy of the state, its denial of God, the suppression of religion in the life of its people, and its rule by men and not by law, cannot compete in the open market with our philosophy of the personal dignity of man, and the rule of law.

However, the kind of freedom which lies at the heart of our way of life is not given to a nation so that it possesses it once and for all—rather, this freedom has to be won anew in each generation by a reinterpretation of its meaning and its responsibilities for the particular circumstances of the day. Government may acknowledge, but it cannot bestow freedom, and, like religion, freedom is a personal belief which every person has to renew. Our task is to maintain the meaning of American freedom, to pass it intact to each succeeding generation and to all the people of the earth.

Since our country was founded, it has been a refuge for the oppressed people of the world. In commemoration of this facet of our freedom, France, in 1886, presented to America the Statue of Liberty which now graces New York harbor. It bears these words:

"Give me your tired, your poor
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shores,
Send these, the homeless, tempest tossed to me,
I lift my lamp beside the golden door."

From these humble origins we have built America strong and free. Our philosophy of government, under God, can rebuild the world.

Freedom is only kept as we share it with our neighbors and with all of the people of the world. With freedom and liberty, to share is to increase—to hoard, to decrease. Our greatest contribution to the peace of the world and to its people lies neither in our Armed Forces, atomic missiles or sea power, nor in our foreign aid expenditures, even though such expenditures amount to billions. In truth, our foreign aid is too cheap; America needs to give more of herself and her theory of government to the end that all the people of the earth may have our freedom and liberty.

Our freedom is not free. It is not free from the responsibilities of citizenship. It is not free from respect for the rights of others. It is not free from the duties of service and devotion to an ideal. It is not free from debt to the lives of those who bought and defended it. It is not free from obligation to posterity and to God who has preserved it. And, we can only have it, if we are expendable for it. To have freedom is to live, proclaim, and share it.[3]

There are those who suggest that this theory of government is old and outmoded, but it is the newest concept know to man. Like love, faith, and hope, it is ageless, yet ever new upon affirmation. These are ideals, yet in the words of our late Justice Holmes, "Ideals furnish us our perspectives and open glimpses of the infinite."

Judge Learned Hand once said: "Liberty lies in the hearts of men and women; when it dies there, no constitution, no law, no court can save it; no constitution, no law, no court can even do much to help it."[4] Our challenge is to proclaim our concept of government—to share our liberty and freedom, and to make it live in the hearts of all men and women—for it is the last fond hope of the earth.

[3] The thought of this paragraph was derived, in part, from a sermon of Rev. Edward R. Ellson, entitled "Freedom is not free."

[4] Learned Hand, "The Spirit of Liberty."

## Student Views on Student Values

EXTENSION OF REMARKS
OF
## HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Student Views on Student Values." This was delivered by Dr. Edward D. Eddy, Jr., vice president and provost of the University of New Hampshire, at Boston University's Founders' Day observance Thursday, March 12, 1959.

Dr. Eddy is a well-recognized national authority in the field of education, the problems of youth in their educational pursuits, and in the administration of educational institutions. At a time when the whole Nation is concerned with educational problems as never before, because of the challenge of other nations in this field, I feel that Dr. Eddy's speech has much to recommend it to thoughtful students of the problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STUDENT VIEWS ON STUDENT VALUES

(Speech by Dr. Edward D. Eddy, Jr., vice president and provost, University of New Hampshire, delivered at Boston University's Founders' Day observance, Thursday, March 12, 1959)

One of the favorite pastimes of the present age is to wring our hands in despair and cry loudly over the deep-seated decadence of today's youth. In case you don't know it, you are a very nasty generation—corrupt, distorted, self-seeking, and obviously incapable of making any sense out of the near-perfect world which the older generation is handing you. Don't take all this too seriously. One of my favorite quotations goes like this: "Denunciation of the young is a part of the hygiene of older people, and greatly assists in the circulation of their blood." I suppose what I most rebel against is the idea that today's college youth somehow ought to be secure, purposeful, and endowed with all the attributes which are so obviously missing in their adult counterparts. Too often students are criticized as if they were somehow a breed apart, something to be judged by entirely different standards than anybody else. On the one hand, they are accused of having no spark. On the other hand, heads shake when the spark ignites occasionally in the wrong way. A great many of us appear to have forgotten that youth is a time of ferment, not cement.

Now that I have said all this, let me proceed to contradict myself by indulging in some rash accusations. I hope, however, that you will take them in the spirit in which they were reached and are now expressed—a supreme, unbending confidence in the silent generation and a sneaking suspicion that we are the ones who really are at fault. What I am going to say this morning emerges for the most part from a study which is reported in full in the volume "The College Influence on Student Character." Last year three of us, under the sponsorship of the American Council on Education, set out to take a look at the American college student and the process

of gradual enlightment which we like to call "higher learning." Two of the three members of the staff were recent college graduates whose job it was to become as much a part of the campus as possible. We spent time at 20 colleges and universities—of all types and sizes—in 17 different States across the country. On each campus the staff members lived with the students in dormitories, fraternities, or sororities. They ate with them, went to class and to meetings, participated in bull sessions, drank countless cups of coffee and mugs of beer. In addition, we interviewed members of the faculty and staff on each campus. In this way we began to feel the pulse of the college student and to understand a bit better his reactions to certain planned and unplanned influences.

In our observations and conclusions we leaned heavily on the reaction of students to the collegiate experience. We did this in the belief that how students receive education conditions what they receive. Everywhere we traveled we found the majority willing and often anxious to talk about what was happening to them. In many cases we noted a genuine sense of urgency. We emerged with no easy definition of education or of the contemporary college student. The best slogan which I can offer is that we found the student to be a paradox in parenthesis.

Now I'd better tell you what I mean by thtat. First, let me take the word "parenthesis." Over and over again college students told us that, in their opinion, the content and form of higher education are not sufficiently related to the rest of life nor is education genuinely relevant to their concerns. Because of this lack of relevance, students tend to regard the 4 years of college as a parenthesis between the brackets of which they can perhaps enjoy themselves for the last time before real "maturation" sets in. The parenthesis encloses something which has not particular striking relationship to what went on before nor to what will follow. Nevertheless, it is socially necessary—both as a custom and for the sake of a better life (which usually means a better job for the boys and a happier home for the girls). This is the background for the concern of one student who told us, "They keep telling me that college is preparation for life, but I'm alive now."

The absence of relevance of collegiate education has some side effects of substantial importance. If college is regarded only as a pleasant respite, the student may well come to feel that there are two worlds in which he may live—the here and the then. Not infrequently, for instance, we came across the student who was frank enough to admit, "I really don't see any relationship between my cheating on an exam now and what I'll do later in life. Because I get my kicks today doesn't mean that I'm always going to be living it up."

That's the parenthesis and the danger of its maintenance. Now what about the paradox. This is what I shall spend most of my time discussing with you—because I think the paradoxical student has something to say both to himself and to his teachers. And both had better listen.

First of all, let me pose the initial paradox: Beneath the student's studied pretense of indifference and apathy lies as unfashionable but searching desire for meaning in all that he does.

On almost every campus we visited—from California to New England—student apathy was the major topic of conversion. This was the one subject mentioned most often in our conversations with both students and faculty members. The characteristic student statement was couched often in the simple phrase: "I couldn't care less." This applied to academic work, to leadership positions in activities, to any number of campus events. A faculty member told us: "Apathy is another way of describing the attitude that registers superficial or studied indifference. The unfortunate result is satisfaction with mediocrity." The student it appears, should never become excited or involved. But, fortunately, we were not satisfied to stop here. What lies deeper?

When we probed—and sometimes it took some real digging—we found another but wholly contradictory characteristic: the student is interested, often urgently interested, in an honest search for meaning. To many the search is not an easy one because the student is just beginning to sense the dimensions of truth. As one student wrote in his campus newspaper: "I do not know what I want out of life—or what I want to contribute to it—but I am learning. First I had to learn that it was necessary to have some idea about these questions. It didn't take me long to discover that there are no simple answers." The search, it seems, is often hid under a crusty layer of nonconcern—but it's there.

David Riesman expressed it well in a recent article on dating patterns: "The qualities which young men and women today seek in each other in college are much less frenzied and much less external that 20 or 30 years ago. There are still, of course, big wheels and little wheels, and big wheels within little wheels on campus; and there are still fraternities and sororities and still an interest in good looks, popularity, good grooming, smoothness. But all this is more subdued and the relationships increasingly sought are more searching, more profound, more sincere. There's more desire to share; less desire to impress * * *. Young people are increasingly preoccupied with their capacity to love as well as to be loved."

If, then, students have this crusty layer of nonconcern skillfully covering the genuine search for meaning, why is there so little penetration, so scant a satisfaction with higher education? I'll put the blame squarely on us—the faculty the administrators. And, in doing so, I'll borrow Ordway Tead's phrase that so much in college education today is "so chatty, so trivial, and so inconsequential." In a nutshell, then, our collegiate expectations are not sufficiently high.

On only a handful of the campuses which we visited did many students claim that they were really performing to their full capacity. Their conclusion was further strengthened by our direct observation of the amount of time students expend on meaningless activity. College campuses may be busy places, but it's surprising how much trivia consume the important hour of growing up. Students are much too easily distracted, much too quickly dumped into a rut of self-pity and sometimes self-indulgence. It's fashionable, of course, to be busy—but the busyness is often more important than the achievement. Prestige comes from busyness. The student who can sing the loudest, "I've got more to do than you" gets the lead in the campus musical comedy.

Something rather dramatic and mighty encouraging happened last spring on the campus of the University of Wisconsin. Over 200 students, leaders active in campus affairs, sent to the president a petition which, according to our study, reflects well the sentiments of many students throughout the country. The petition read, in part: "Although the university is constantly making attempts to improve its standards, we believe that it has failed to challenge its students sufficiently." In many senses, it is too easy for thousands of students to get by and never learn to become critical, analytical thinkers or to achieve an understanding of the world around them. Students on all levels of attainment feel that they have not worked to the limits of their ability and time. "The university must raise its standards. In some cases this means simply requiring more work; in many more it means emphasizing an improved quality of work and an intelligent, analytical approach to the subject matter. Students must extend themselves to achieve a deep and meaningful understanding of material. But this is possible only if the faculty seeks to help us by challenging us more fully."

Paradox No. 2: While wanting to know what he should know, the student protests that he should have increasing opportunity to think and act for himself. The student, like all human beings, is naturally self-centered. He views education in terms of what it will do for him rather than with him. And so, over and over again, he will complain about his instructor with this kind of language: "If only he'd tell us what he wants us to know."

While desiring more independence in both thought and action, the student, nevertheless, has a strong urge to know exactly where he stands at any given moment—but, note this, he also wants the right to influence the conditions affecting the stand. Threatened with more stringent restrictions on one campus, a junior girl wrote a typical letter to her campus newspaper protesting that students desire to be treated as something better than machines. Bitterly she announced: "It is time to herald the thinking machine. No emotion, no benefit of experience—just an enormous brain—reading, listening to scholars, writing papers, taking exams. Learning about democratic ideology, but not having the terrible conflict of acting. And if the machine lasts 4 years without breaking apart or running down (it will be given) a piece of paper and (made into) a man or woman, prepared to assume its role in a much less bright society."

This paradox is beautifully illustrated by the response to one of our most challenging questions. We asked the student to describe the ideal person. His answer, for the most part, was first a reflection of society's current concern over the well-adjusted person who can get along with anybody. To this was added quickly education's concern over the person who reasons and acts for himself. The man of character, according to the student, is one who does not accept too readily the point of view of others and yet has the well-worshiped knack of understanding and working with all who cross his path and so is respected by them. Obviously the desire for individual thought is gravely threatened and compounded by the equally strong desire for social acceptance.

Let us move on quickly to another paradox: Often intensely dissatisfied with the programs and processes of education, the student, nevertheless, is reluctant to play much part in change. To my mind, there is no doubt whatsoever that the average student is not happy with his concept of higher learning. We came across unusually strong criticism of classroom methods: the overemphasis on marks or the heavy stress on the use of the cure in determining grades, for instance. One student told us: "We don't mind competing, but this is encouraging unhealthy competition. And then it often ends up this way: instead of competing with one another, we all gang up on the prof and compete with him."

A frequent complaint wherever we traveled centered on the overuse of objective type examinations. The most valuable use of objective tests is to analyze weakness and find the degree to which the student has acquired background material for more involved thinking. But if not attempt is made to take the second step, then the student feels that the teacher has really insulted his intelligence.

An editorial in the Colorado student paper discussed the question of whether or not the college graduate learns how to think and to weigh various concepts. It concluded: "In too many cases the answer is 'No.' Four years in college may simply signify that one is more adept than most at surviving the multiple-choice, true-false exams which are given in most classrooms. Colleges are turning out satisfied men with empty heads—and it is the colleges themselves which are primarily guilty."

The freshman year seems to take the brunt of the criticism. Here the courses are said to be the most tradition bound and the teaching the least inspiring. Unless the student is challenged and becomes, to some degree, fascinated at this stage of his educational career, later efforts to interest him will meet with far less success. As one commented, "In the middle of my freshman year, I suddenly discovered that I'd become awfully sour. I was pretty cynical about the great things the college said it was going to do with me. (Note the emphasis on 'with me.') I've recovered somewhat, but that first experience started me off on no feet at all."

Against this sometimes intense dissatisfaction with educational process lies the student reluctance to take part in change. Perhaps because students are campus transients, they are less prone to uproot traditional groups and events. Students will cite numerous activity groups and functions which might profitably be combined with other groups. But few profess a willingness, in accepting leadership, to be the one to take the leadership in change or to allow their organization to die a nice, relatively painless death. The question, Why? is a neglected interrogation in both curricular and extracurricular life. It is buried under the weight of the system, the custom and the tradition.

Most students have no idea of the influence at their command. They have the unquestioned opportunity to help broaden the horizon of higher education, to force the faculty member to delve more deeply and to cherish more fully. We were delighted to find one student who told us, "In our class the students agreed the teaching was lousy. The treatment was superficial. We backed the prof. in a corner and shot so many questions at the poor man that he had to go back and take a second look at his own knowledge as well as his method."

Let me deal but briefly with the next paradox of the modern student: Keenly interested in sensing and experiencing the totality of life and knowledge, the student often reacts by preferring to compartmentalize his own life and knowledge. The interest in totality is obvious. The inquiring student seeks the broader implications and relationships of what he studies. He frequently complains that too few of his teachers begin the encounter by discussing their concept of the overall purpose of the course, the place it may hold in the student's educational development, its relationship to other subjects, and what it might say to the student as a living, striving person. No matter what the field of study, that field does have a relationship to fundamental issues. A faculty member put it this way: "Do I insist that what is important is and must be something which is important in the immediate present? Or shall I be willing to consider the past? Do I identify myself simply with my colleagues who are living now, or do I try to sense the whole experience of the race? Am I willing to consider the question of tradition? Do I consider, for instance, the human image simply as I happen to meet it—walking around on the street, God help me—or do I view the human image at all times and in all places and contexts?

There, in a nutshell, is the heart of liberal learning. And how does the student react? He, like the instructor, proceeds to compartmentalize, to make no attempt to relate, to live today—not in the past and the present and the tomorrow. There is no better example than the student who gives lip service to integrity as a fundamental value of the human race and then cheats on the next examination, or copies the theme of another, or does any number of things which are quite foreign to the logic which he demands of the teacher.

The last student paradox is, in a way, a better illustration: While he respects and honors the adult who has explicit convictions, the student prefers to hide his own in the shelter of the group. Over and over again students claim to value far more highly the faculty member who is willing to make known his own commitments. The faculty member should not, of course, expect the student to accept them unexamined, for only by working ideas out himself does the student truly appreciate his own position.

Students agree that often they first recognize the importance of taking a stand after they have actually observed a person who is honestly and carefully committed. They sense immediately and are suspicious of any teacher who tries to hide under a blanket of assumed objectivity. One student concluded, "We're called the silent generation, but can you really blame us? We've studied under those who often make a fetish of silence."

A Harvard Student Council report commented: "Students frequently receive the impression that this noncommitted objective stance is the only one that is scholarly and scientific. Hence they may think that they should try to maintain it all of the time, even when commitment is in order. * * * If suspended judgment is connected with a scholarly approach, students may remain suspended until they leave the academic community, and then revert to earlier social norms or unthinkingly adopt new ones offered them by the society they enter."

This is what the student says he wants, but what really does he himself practice? As one told us, "Students prefer to hide their convictions under a blanket of superficiality because of the social pressures of the crowd." It is not popular on a campus to have a well-considered, deeply entrenched concept. We found, however, that most students are idealistic individually—but the group norm does not sanction expression. The setting of standards, for instance, is a group process. Relatively few students profess to maintain individually held values.

For this, they blame the world around them. Here is a beautifully phrased rendition of the current attitude, as reflected in a campus editorial: "We are the antiseptic generation. We have grown up protected from the germs of extremisms which had given our elders a case of intellectual gout. For us history is a study only of the past; greatness today is not our necessity. Therefore, we concentrate on life adjustment which helps us rid ourselves of the little idiosyncrasies of which greatness is made. (Malcontentism) is as great a sin as adultery and probably more often punished. But somewhere in the back of our minds we know that this protection is but a flimsy wrap. We want to know more, hear more, do more, think more, but our society neither encourages nor rewards those who inquire."

Parenthetically, let me add that we found significant differences on overt idealism between men and women. In a word, the women want to be better and the men, better off. Most students are deeply introspective. They want a frame of reference for their lives—but, let us add, it is not necessarily a religious frame. The student is not antireligious but he is, usually, uninspired by the usual pattern of religious activity. And often he confuses religious belief with mere humanitarianism. The student will not respond to empty moralizing. He will not commit himself religiously until he has found what is for him adequate grounds for commitment. This is why he prefers, at present, to intellectualize religion.

We found, too, that most students associate morality with their inability to comprehend and accept absolutism. For example, many expressed an inability to understand what they term the vestiges of a God-centered system of self-discipline to which their grandparents subscribed—and their parents less so. They contend that this system of Puritan ethics has been diluted by generations of growing questioning. It involves more compromise and hypocricy than they wish to embrace. So the moral standard becomes: "I'll take my chances but I will play it safe in the future." Here again: the standard of double existence. To the student, morality is stricly a personal matter; but it is, on inspection, largely group controlled.

The final paradox involves directly the college itself: The student is ready for a more searching and strenuous educational experience but the colleges themselves have not fully recognized nor are they fully prepared to meet this potential challenge. I shall not delve into this at length at this point because I suspect it will emerge from our luncheon session. Let me say only this: The colleges are often the purveyors of security worship. The failure of the student to respond is basically the failure of the college to challenge. As one student told us, "We all do our best when we really believe that somebody has faith in us. It's the indifference that makes rationalization so much easier."

We must overcome the motion in American higher education that our chief role is to preserve tradition. Wherever we traveled, we found that the student, beneath his facade of cynicism in strange combination with buoyant optimism, is ready to be challenged. This generation of college students may be silent at times and most loquacious at other times, beat one moment and out to beat the world the next, self-satisfied and frightened, but it is, by and large, well aware of its growing pains and not particularly reticient about discussing them. If the stimulus is right, the student will respond. Without the right stimulus, however, he will drift and finally moor in the haven which immediately appears most attractive.

For the intelligent student as well as the perceptive college, this represents both an obligation and a magnificent challenge.

---

## The Spiral of Danger

EXTENSION OF REMARKS

OF

## HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Spiral of Danger," published in the Morgan County News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SPIRAL OF DANGER

Business leaders and skilled economists all over the Nation are constantly warning of the danger of inflation in America's economy. Russia is playing cat-and-mouse and brushfire politics in the hope that the United States will fall, without gunfire, through

collapse of our economy. The spiral of inflation is recognized as the greatest danger facing the United States.

And still, with all these facts known and accepted, union leaders are crying for strike-enforced increases in salaries and wages.

To us, this doesn't make sense. That is, shouldn't make sense to the rank and file of unionism. The writer has an obsolete union card. It is a little easier to face these facts for that reason. Practically every union man we have known was an honest, hard-working, ordinary every-day guy who was more or less forced to go along with what the big bosses—the men in the ivory towers in Detroit and Chicago and New York City—handed down in demands through the organization.

Every time there is an enforced raise in salary, it automatically means an increase in union dues. This means more money for the bosses. It means more slush fund to be poured into the political contests. It means added power for the heads of the unions, who are already nearing the national dictatorship stage. It probably means only a few dollars a week for the worker—and these extra dollars are quickly swallowed up by the raise in the cost of living which was forced by the increase in salaries.

And so it goes—an endless spiral which can end only in chaos and destruction—a double fist-full of dollar bills for a loaf of bread. It can't happen here? It has happened elsewhere. And it will happen here unless the powers of labor bosses are curbed.

## Calm Talk Amid Confusion

EXTENSION OF REMARKS
OF
### HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. PROXMIRE. Mr. President, the Milwaukee Journal recently carried an editorial entitled "Calm Talk Amid Confusion." This editorial did a remarkable job of distilling the essence of a recent speech by Adlai Stevenson in Boston on our foreign policy.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CALM TALK AMID CONFUSION

It was another noisy, confusing weekend, with American eyes and ears assaulted with conflicting advice and information about the Berlin crisis.

There will be a war and there will be no war. It will be a nuclear war; it will be a limited war. Khrushchev plans this and plans that. We have no plans, we have a plan, we have various plans.

There was one calm, clear, firm voice. It was that of Adlai Stevenson, in a speech in Boston.

Here is what he said:

"Khrushchev should not drive this Nation too far and not mistake the underlying temper of our people. There will be no knuckling under to threats, no appeasement. Any interference with the West's freedom of access to Berlin must be understood by the Russians to entail the risk of war.

"Some issues are being built out of proportion. I don't think the issue of who stamps the [military] passes [Russians or East Germans] is important. If the Russians hand over their control functions to the East German Government or sign a separate peace treaty, I cannot see that any great harm is done. The East Germans are so blatantly and totally dependent upon Russian military support that no ceremonial dickering about their status or functions will change them from puppets.

"We should not show too much unwillingness to negotiate at the summit or any other level. Don't we have a supreme interest in reducing Soviet control in uneasy Eastern Europe by gradual withdrawal of Russian forces? Have the Eastern European countries any other hope of national freedom? Don't we * * * have a supreme interest in exploring new ideas on the possible future shape of a European settlement?

"I doubt if the Russians will negotiate seriously on the possibilities of withdrawing their forces. But if, despite all their protestations and propaganda about peace, self-determination of peoples, and noninterference, they dare not risk serious negotiation, we shall at least have recovered the initiative and made clear our own readiness for a more stable and hopeful settlement.

"The months ahead are far too grave for partisan bickering or for personal competitiveness in political influence."

## How To Get Everything Without Tax Increase

EXTENSION OF REMARKS
OF
### HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Evening Star of March 2, entitled, "How to Get Everything Without Tax Increase," written by Elmer Roessner.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO GET EVERYTHING WITHOUT TAX INCREASE

(By Elmer Roessner)

Things were tough in the republic of Democrastan. The people were clamoring for new schools with swimming pools, government sponsored art shows and classier pensions.

But income taxes had reached 90 percent in top brackets, everything from autos to light bulbs carried excises, and milk was taxed so much that people would have drunk whisky instead if it were not for the fact it was taxed even more.

The President called in his Chancellor of the Exchequer and the head of his Federal Reverse Board. "We have taxed everything to raise money," he said. "Nothing is made, nothing is done without the payment of a tax. We tax the dead, we tax the unborn—the former with estate taxes, the latter by loading them with a share of the national debt. We tax everything. Well, everything except savings."

IDEA IS OFFERED

"Hm!" said the Chancellor. "Not savings? How did that escape us?"

"We wouldn't dare," said the President. "Thrift—the ant and the grasshopper—Benjamin Franklin and all that. It would undermine our cultural and ethical concepts. Besides the banks, the insurance companies, the savings and loan association, and all the other saving institutions would raise hell. We can't afford to have trouble with them if we ever hope to get elected again."

"Right" said the Federal Reserve man. "We couldn't just tax savings. People would say," his eyes twinkled, "that it would be confiscatory. But perhaps we can dip into the people's savings without calling it a tax, without even letting them know it's happening."

"It doesn't sound honest—I mean I don't think we could get away with it," said the President. "How would we go about it?"

OLD FORMULA

"It's easy," said the Fed man. "We just give the people all the things they want, even the swimming pools. But instead of increasing taxes, we borrow the money."

"Couldn't we just print more?" asked the President.

"Of course not," said the Fed man. "That would be debasing the currency. People wouldn't stand for it. We'll borrow the money from banks, giving them bonds to hold. Then whenever they need money, they can put up the bonds as security, thus increasing the supply of credit."

"How will that tax the savings?" asked the President.

"By doubling the amount of credit, the plan will simply cut the buying power of savings in half," the Fed man answered. "The plan takes away half the real value of the savings and uses it to build swimming pools—or highways, apartment houses, or whatever the people want."

"Won't the savers object?"

NO ONE ALARMED

"Not very much. In the first place, this plan works fairly slowly. It will be years before they realize that half their savings are gone. Even then, what they have left will have the same name as their savings used to have—a thousand pesos, 10,000 marks, a 100,000 dollars, a million pounds, or whatever the label was.

"Besides, those who own real estate or stocks will think they are richer, because the name of the prices of those things will have gone up. A 100 simoleon stock will be worth 200 simoleons; a 10,000 bucko house will be priced at 20,000 buckos. Of course, they won't be any more valuable. It will just seem so because there is so much more credit bidding for them."

"Say, this is a great system," exclaimed the President. "We raise the money and the people we take it from never know it's gone until it's too late. Something as good as this ought to have a name."

"It already has a name," said the Chancellor of the Exchequer. "It's called inflation."

## Senator Johnson's Stabilizing Influence

EXTENSION OF REMARKS
OF
### HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. ERVIN. Mr. President, on Friday, March 13, 1959, the Asheville Citizen, of Asheville, N.C., carried an interesting editorial entitled "Senator JOHNSON's Stabilizing Influence," which points out that the senior Senator from Texas [Mr. JOHNSON] is the ablest, most

dynamic, and result-getting Senate leader of modern times, or perhaps of any time in American history. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR JOHNSON'S STABILIZING INFLUENCE

Maybe Wisconsin's Senator WILLIAM PROXMIRE has a point in his series of Senate speeches criticizing the mood and methods of Democratic Senate Leader LYNDON B. JOHNSON.

Perhaps Senator JOHNSON should call a party caucus occasionally and invite all the brethren to say their say. It might be a rare occasion, however, when the caucus did not adjourn, leaving the burden of formulating a clearcut policy and then finding Democratic and—sometimes—Republican support for it in the hands of the ablest, most dynamic and result-getting Senate leader of modern times, or perhaps of any time in American history.

When the new Congress began, Democratic Senate Leader JOHNSON saw and seized the opportunity of two important tasks:

1. He would prevent President Eisenhower, still immensely popular among the American people, and his aids from taking the legislative ball from the Democratically controlled Congress. Speaker SAM RAYBURN would give aid in this in the House.

2. In early January Mr. Eisenhower was still unhappy over Republican defeat last November. He had withdrawn a good deal into himself and there was little or no active leadership from the White House. (The President in recent weeks seems to have taken on new leadership life.)

Here was a vacuum in leadership. Such vacuums are for the occupancy of those who can take charge and do a good job. JOHNSON walked into the opening and began to lead.

But Mr. JOHNSON did not only run circles around the administration in the introduction of important bills, and securing passage of some of them. He had the responsibility of another big task.

The President and many others were talking much about radical "Democratic spenders." The country was being told to be ready for all sorts of wild-eyed Democratic legislation.

There was possibility of this prophecy's being fulfilled. It was JOHNSON'S job to stabilize what could be an unwieldly Democratic majority; to prevent the extreme Democratic liberals from taking charge of legislation.

He did this. First he defeated such extremists as Senator PAUL DOUGLAS, Illinois Democrat (now one of his critics), in the liberals' attempt to enact a radical law on the filibuster. DOUGLAS and many others wanted a simple majority to have power to end debate.

In short, JOHNSON followed a middle course, and in the filibuster battle 20 Republicans supported him while he daily disconcerted Vice President NIXON on parliamentary procedure.

For the first time since the Confederate War, a southerner, if a West Texan is truly a southerner, is being very seriously discussed by commentators and political leaders all over the country as a real presidential possibility. Perhaps Senators PROXMIRE and DOUGLAS would do better to talk more privately to their leader and less to the country at large.

## "Do's and Don'ts" for Traveling Abroad

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. WILEY. Mr. President, we recognize that tourism—involving more and more travel of persons between this country and other nations—will be expanding over the years to come.

Recently I was privileged to comment on the expansion of such travel—not just as a luxury for the rich, as in the past—but today as an opportunity to folks in a great many fields for business, pleasure, education, and other purposes.

We recognize, of course, that Americans traveling abroad are, in effect, ambassadors of good will for the United States wherever they may travel. Consequently, journeying in other lands is not only an opportunity but also an obligation for U.S. citizens to present only the best possible impression of our way of life and of our people.

Recently, the Milwaukee Journal carried a helpful article by Paul M. McMahon, travel editor, under the column "A Vagabond's Bench," outlining some important "do's and don'ts" for travelers.

In the article is included some helpful suggestions from Miss Frances G. Knight, director of the U.S. Passport Office.

Recognizing that travel abroad is a relatively new experience for a great many Americans, I believe that wider familiarity with Miss Knight's recommendations would be beneficial.

I therefore request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VAGABOND'S BENCH

(By Paul M. McMahon)

SOUND ADVICE FROM THE PASSPORT OFFICE

Some solid advice on how to handle a passport and a few suggestions on "getting along abroad" are offered in two new brochures which the U.S. Passport Office will distribute for the summer travel season through its passport field agencies and clerks of Federal district courts. Here are some things which the Passport Office says "Don't do":

Tamper with the passport picture.

Pack it in your luggage. When traveling keep it readily available but safe.

Use the passport as a notebook, scrapbook, or autograph book.

Tear or substitute pages.

Lend it for use by a friend or stranger.

Alter, insert, or overwrite any information or entry. If a change is necessary, it must be made officially by authorized Government agents.

If the traveler wants to make the Passport Office happy, here are things he should "Do":

Keep the passport safe. Its loss or disappearance can cause the owner considerable delay and expense.

Notify the Passport Office in Washington, D.C., or, if abroad, the nearest American consul, if the passport is lost.

Register it if it must be mailed.

Sign on page 2 as indicated. An unsigned passport is not valid.

Fill in the information required on the inside front cover. This is important because, in case of an accident, the next of kin or designated agent can be reached.

Check the visa requirements of countries to be visited.

A FEW SUGGESTIONS

In a recent letter to the Vagabond, Miss Frances G. Knight, Washington, D.C., Director of the U.S. Passport Office, said, "I am not in the business of teaching etiquette but I think the suggestions in the 'Getting Along Abroad' might do some good." In part, this pamphlet says:

"Most Americans who travel abroad are aware that their conduct as guests in a foreign country can have an important bearing on the good will of other nations toward the United States. Consequently they try to understand and appreciate the economic problems, customs, restrictions, and regulations of the lands they visit.

"Many citizens also try to learn something about the countries they intend to visit before they get there. In that way they are better able to appreciate the contributions of those countries to the world's culture. They seek to respect the local laws and try to avoid inadvertent acts or misinterpretations which could be embarrassing.

LEARN LOCAL CUSTOMS

"They familiarize themselves with local customs, such as the manner in which people dress in churches, restaurants, theaters, and other public places. In short, they show abroad the same consideration for others that they do at home and, consequently, they are our most effective and welcome ambassadors of good will."

## Tribute to Our National Park System

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. NEUBERGER. Mr. President, a stirring and eloquent tribute to the outdoors, in general, and to our national park system, in particular, appeared in the New Leader for March 9, 1959, under the byline of one of the most thoughtful commentators on the American scene, William E. Bohn.

Mr. Bohn, who visited the Western States last year, also discusses Mission 66 and its importance to the expansion and protection of the park system.

I am pleased that in his article Mr. Bohn has quoted from a letter to him by Thomas J. Williams, able superintendent of Crater Lake National Park, in southern Oregon. Crater Lake is one of the outstanding scenic marvels of the whole world. Mr. Williams has stressed to Mr.

Bohn that excursions into the wilds by the common people definitely will not spoil the beauty of the national parks. With that thought I emphatically agree.

I ask unanimous consent that Mr. Bohn's article, entitled "People, Plants, and Animals," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEOPLE, PLANTS, AND ANIMALS

(By William E. Bohn)

On January 5, I wrote a column in praise of Joseph Wood Krutch and his book "Grand Canyon," which is a brilliant example of Krutchian thinking and good writing. But toward the end of the column I got off my chest something which had been bothering me for a long time. Krutch, as we all know, is a reincarnation of Henry D. Thoreau. Don't be surprised if any day now he sets out to build a shack on the edge of some Walden pond though, making allowance for this frightful inflation, the building of it must be expected to require the expenditure of more than 28 dollars and 12½ cents. Like his Concord prototype, Krutch has an accurate knowledge and deep love of outdoor things and, like Thoreau, he also has a quiet fear and suspicion of his fellow men.

So I wrote: "There is in both Thoreau and Krutch an attitude toward human beings which I find unpleasant and dangerous. Both of them are afraid of people. Our versatile amatuer of things in general gives himself away in his discussion of the crowds in our national parks. There are, he explains, three sorts of nature spots, 'the wilderness area, the protected nature reserve and the recreation resort.' The first is for the small minority, the second for a larger group of the partially civilized, the third for the poor, dumb dopes who have never been taught to take care of things. Our author views with alarm the onward tramp of this mob."

Krutch, though the gentlest of souls, apparently is perfectly capable of defending himself. I have received from him two restrained but very effective letters. In the first of these he writes: "I most certainly do not resent crowds in the national parks. As you say, they were established to give as many people as possible at least a glimpse of nature. But I don't think there is anything undemocratic in recognizing differences of taste or the minor rights of a minority. We have land enough still in the United States to provide national parks, recreation areas and also wild regions. The latter are supplements to the parks and are proposed as such in the pending wilderness bill. All I am saying is that the two cannot be successfully combined. Wonderful as the parks are, they are not quite the same as genuine wilderness."

In another passage our champion of the wilderness explains himself thus: "The truth is merely (1) that I am the kind of person who likes people least in crowds and, even in the case of social gatherings, prefers the small to the large; (2) I don't believe that it is proper to regard other living things as merely for man's use. I think that one should recognize as far as possible that the right to life is not an exclusive human right. That doesn't mean that we don't often have to make a choice. I am not even a vegetarian. Many animals have to be condemned to death and (possibly) a few human beings too. But to deprive of life any creature capable of a real desire to live is a serious matter."

It is plain that Krutch is thinking of preserving the woods and all their teeming life rather than of developing human beings. In this respect, his center of interest seems to be different from mine and from that of the men who have developed our national park system. I have received letters on this subject from two of our park superintendents. The first is from John S. McLaughlin, Superintendent of Grand Canyon National Park, the gorgeous piece of national real estate which inspired Krutch's exciting volume. Among other interesting things, he has this to say:

"I am inclined to think that Krutch's real concern is the basic natural or land resourse. Considering the performance of the human race thus far, he has real doubts about the future. I think, to a degree, we share his concern but not his seemingly deep-dyed pessimism."

In another passage McLaughlin says of Krutch: "He has his doubts about developers in the National Park Service, and he calls our developments and facilities compromises. Actually our developments are based on master plans * * * which are drawn up after much study. * * * I suppose all plans are compromises, but there is a difference. * * * Krutch does not mention Mission 66, which you so ably covered in your series on the national parks. If the parks are to be preserved from overuse or, as Director Conrad L. Wirth said, 'from being loved to death,' then, as you point out, we need more parks, more rangers, more scientists, and greater provision for people's comfort."

The second letter is from Thomas J. Williams, superintendent of that heavenly spot, Crater Lake. After explaining that he has no fear that the common people will destroy the beauty of the parks, Williams goes on: "To date I think the National Park Service has done an exceptionally fine job of doing what Congress has ordered. There have been times when the areas have been threatened by lack of adequate appropriations to administer and protect them. However, under Mission 66 we shall be able so to plan and develop the several areas * * * that they will be protected for the use and enjoyment of all future generations."

## Criticism of the Court

EXTENSION OF REMARKS

OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. BRIDGES. Mr. President, a highly thought-provoking and timely column entitled "Criticism of the Court," written by Raymond Moley, appears in this week's issue of Newsweek magazine.

Regardless of one's opinions concerning the recent actions of the Supreme Court, Mr. Moley's observations are worthy of the attention of this body. He points out that—

The Court is a responsible, human institution. To elevate it above criticism would be to create a tyranny above the law and above the Government of which it is a part.

I ask unanimous consent that Mr. Moley's column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRITICISM OF THE COURT

(By Raymond Moley)

In the discussion over the American Bar Association's series of recommendations to Congress for legislation clarifying, limiting, and defining our protections against internal enemies and subversion, it was intimated that it is unwise to criticize not only the U.S. Supreme Court but any of its interpretations of the law. There are several good answers to this claim, some of which have been supplied by the Justices of that Court.

The statement adopted by the house of delegates of the American Bar Association specifically disclaimed any general criticism of the Court itself or any effort to limit the jurisdiction of that Court as defined by the Constitution. The recommendations of the house of delegates aim to have Congress clarify its own laws and to assume the powers vested in it by the Constitution.

For the Constitution in article II, section 3, states that "In all the other cases before mentioned the Supreme Court shall have jurisdiction, with such exceptions and regulations as Congress shall make." The only cases in which Congress may not regulate are named in the same section and are not pertinent to the cases which were under consideration.

THE BAR'S RESPONSIBILITY

The bar in this instance is acting in its most significant role. A lawyer is something more than a plain citizen. He is by tradition and law an officer of the court and an agent of the government. To refrain from guidance would be to shirk the bar's responsibility, as a professional association, to the public and to government.

Among the recommendations which the house of delegates has made to Congress, three are outstanding: The States should be permitted to enact and enforce laws to protect the Nation and its citizens against subversion, and Congress should make clear that by enacting its own security laws it is not preempting the field; the Smith Act of 1940 should be amended and strengthened to include not only participation in organized subversive groups, but the advocacy of overthrowing the Government, or to teach the necessity, desirability, or duty of seeking to bring about such overthrow"; and Congress should continue its committees on internal security.

The American Bar Association report points out the necessity of such legislation because of the serious consequences of various decisions of the Supreme Court. These, in the holy name of freedom, have seriously impeded efforts to investigate and legislate against subversive activity.

In the debate in Chicago over the American Bar Association recommendations some pertinent evidence favoring the report was presented by Alfred J. Schweppe, a Seattle lawyer who has labored indefatigably for years to provide public leadership through the bar. His evidence consisted of statements made by Justices of the Supreme Court itself concerning the right and duty to subject the decisions of the courts to merited criticism.

VIEWS OF JUSTICES

Back in 1898, Mr. Justice Brewer stated in an address that many criticisms may be devoid of good taste, but better all sorts of criticism than no criticism at all.

In 1941, Mr. Justice Black said in writing for the majority concerning a contempt case against the Los Angeles Times: "The assumption that respect for the judiciary can be won by shielding judges from published criticism wrongly appraises the character of American public opinion * * * an enforced silence, however limited, solely in the name of preserving the dignity of the Bench, would probably engender resentment, suspicion, and contempt much more than it would enhance respect."

Dissenting in the same case, Mr. Justice Frankfurter nevertheless said: "Therefore judges must be kept mindful of their limi-

tations and of their ultimate public responsibility by a vigorous stream of criticism expressed with candor however blunt."

The late Mr. Justice Jackson wrote in "The Supreme Court in the American System" that criticism by the profession is one of the important criteria in appraising a decision's real weight in subseqeunt cases.

The Court is a responsible, human institution. To elevate it above criticism would be to create a tyranny above the law and above the Government of which it is a part.

## Inside View of a Political "Angel"

EXTENSION OF REMARKS
OF
### HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. PROXMIRE. Mr. President, I ask unanimous consent that a remarkably perceptive, refreshing, and high principled discussion of political contributions and the role of political contributors, by Mr. Arnold Maremont, the highly successful Chicago industrialist, which was carried in the March 18, 1958, St. Louis Post-Dispatch, be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE VIEW OF A POLITICAL "ANGEL"
(By Arnold Maremont)

Meet a political "angel" who has never been appointed ambassador, never mentioned for minister to some two-by-four principality, and who has no worries that a Senate committee sometime may trip him upon the pronunciation of the name of a prime minister in some faraway country. Meet a political "angel" who has nothing to sell to any public body or branch of government, State or Federal, and who carries no clout. I offer myself as exhibit A of that tribe of political "angels" who go unobtrusively about their tasks in everyday life, unnoticed, unmentioned, unrecognized, and just about un-everything.

That is, until the campaign year rolls around. Then we who are marked as political "angels" become important. Our ratings in Dun & Bradstreet are considered. The politicians want our money.

Yesterday they passed us in the street without a flicker of recognition, and they were perfectly honest in doing so because, until the need for cash arose, they didn't know us from Adam's off ox.

My first contribution was in a primary campaign in 1933. In 1933, with lots of energy and a starry-eyed belief that a big change in political philosophy was called for, I volunteered to work for a Democratic nominee for the U.S. Senate. This was in St. Louis, and the nominee was the late Congressman John J. Cochran, who was running against a man named Harry. Harry won.

In the 1955 Chicago mayoralty campaign, when Robert Merriam ran as a Republican candidate against Richard J. Daley, the Democratic organization's choice, I supported Merriam with money and whatever influence I had to contribute. Dick Daley won. Fortunately, he developed into an aggressive mayor with great dedication to his job and the city of Chicago.

I am one man who can say that he lost political battles to both Dick and Harry. Whether there is also a Tom around the corner, I cannot say. But I have the satisfaction of knowing that I stood up and fought as a political "angel" for what I believed to be best for Missouri and best for Chicago.

My motivation is not unique. Of the hundreds of people that I know who make political contributions in amounts ranging from $10 to $1,000, practically none of them is furthering anything more ulterior than what he believes is in his own best interest as a fellow citizen of the community or Nation. He has convictions as to which types of government are best. He is willing to back these convictions.

The supreme tragedy of all this is that in our political arena, these do-gooders, these political "angels," are kept back in the grandstand or rather, the political dugout, until the moment of combat.

Milburn P. Akers, executive editor of the Chicago Sun-Times and at one time a member of the distinguished administration of the late Gov. Henry Horner, once said:

"We have, in far too many instances, abandoned party affairs and party control to persons interested only in profits, not principles. Such persons quickly turn political organizations into political machines."

A political party raises only a small fraction of the money spent in campaigns; out of some $90 million spent in a national campaign, only $8 million, roughly, is raised by the two national committees. Fully 90 percent of political money goes to various committees, organized only for a specific, one-shot campaign.

In 99.99 percent of the cases of political "angels" who shell out for campaigns, it is known in advance that they will neither ask nor receive any special consideration if their candidate is elected. I know that when I give $5 or 5 cents to the campaign of a man like Senator DOUGLAS, of Illinois, or Congressman SID YATES, of Illinois, I am going to receive no special VIP treatment for my contribution. These men, either of them, would do for me exactly as much, no more and no less, than they would do for any other person among their constituencies.

It is neither a sin nor a crime to spend one's personal funds in support of a candidate; I wish more men and women would do it, because we need broader and more open political activity, not less of it. I think all of history proves beyond dispute that the broader the participation of the citizens in political affairs, the commensurately less opportunity there is for graft, corruption, and political dictatorship. I do not fear the many in politics; I fear the few.

I have thought of organizing a society of political "angels" to coordinate our thinking, and to take concerted action to insure that our opinions are given some weight.

The cynicism of the pros who in many cases would rather lose with a stumblebum than win with a DOUGLAS, and thus keep control of the organization, plus the cynicism of the public, is enough to discourage any political idealist. One group regards us political "angels" as infantile touches; the other as sinister men bidding with our money for backdoor influence and power.

One view is as wrong as the other. I submit that we who are political "angels" have a job to do on the polls and the public alike.

## Criticism of the Supreme Court

EXTENSION OF REMARKS
OF
### HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. CASE of New Jersey. Mr. President, in the March 5 issue of the New Jersey Law Journal I find a thoughtful editorial entitled, "On Court Criticism."

In the State of New Jersey, the Journal, edited by Joseph Harrison, has long been highly regarded. I am sure Members of the Senate will find the editorial a constructive contribution to our thinking.

Mr. President, I ask unanimous consent that the editorial be printed in today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON COURT CRITICISM

Members of the bar, individually or associated in bar organizations, have a right and, it may well be argued, a duty to offer critical analyses of Court decisions. This is particularly true where such decisions have important impacts on the economic, social, or political life of our society. How the Court in a particular case interprets or applies Federal or State constitutions and statutes and the significant effects of such judicial constructions offer a legitimate area for commentaries by members of the legal profession. There is abundant legal literature to attest to this long-exercised prerogative by lawyers. Law reviews, texts, treatises, bar association reports, bar journal editorials and published speeches delivered at bar meetings are full of critical comments on Court decisions. In many instances they have brought about changes in decisional as well as in statutory law and many procedural reforms.

But it is one thing for lawyers or associations of lawyers to voice objective criticisms of court decisions and quite something else to impugn the motives of individual members of a court or an entire court. The latter suggests judicial impropriety, lack of judicial integrity or, as in some recent instances, plain judicial subversiveness. Such criticism, frequently intemperate, serves to undermine public confidence in our courts and to that extent threatens the existence of our constitutional form of Government, which for good reason is founded upon a division of authority among the executive, legislative and judicial branches of Government. When lawyers or bar associations, deliberately or otherwise, indulge in this type of destructive criticism, it then, indeed, becomes the duty of more responsible lawyers and members of bar associations to speak up and defend the integrity of judges and courts.

The fact that our history records many precedents of bitter personal criticism of judges and courts does not condone or excuse current attempts to discredit the Supreme Court of the United States or any other American court. It is significant that in supporting its report critical of 24 decisions of the Supreme Court, at the midwinter meeting of the house of delegates of the American Bar Association, the committee on communist tactics, strategy, and objectives went to some pains in its effort to indicate that it was not attacking the members of the Court and was not suggesting any curtailment of the Court's authority. If that committee felt that the 24 decisions called for remedial statutes to strengthen our national defenses against international communism it had every right to make appropriate recommendations.

Whether the tone of the report belied the committee's protestations of objectivity and its desire not to attack the High Court or its members will depend, in a large measure, on whether lawyers happen to agree or disagree with the committee's position on the 24 cases cited. The problem of balancing the constitutional freedoms of individuals against the rights of the State is as old as the struggle for individual freedom itself. Runnymede, the French Revolution, the American Revolution, each are milestones in this struggle. Today, as then, there are many men, includ-

ing many lawyers, who as a matter of legal, social, and political philosophy agree with the Supreme Court's decisions criticized by the American Bar Association's House of Delegates on the recommendation of one of its committees. Which consideration, the State or the individual, shall receive more emphasis will doubtless be determined by representataives of interests broader than those represented by the House of Delegates of the American Bar Association. Certainly the ideal balancing of the rights of the individual and the State is one of the most delicate and difficult duties of the judiciary.

That the Supreme Court will give proper consideration to objective criticism is evidenced by a decision handed down on February 24, 1959, in *United States* v. *Durham Lumber Co.* In that case it granted certiorari but refused to summarily decide the merits as it had done in other cases. Such summary dispositions on applications for ceriorari had been criticized in a recent law review article. Commenting on this change in the Court's attitude, Anthony Lewis, the New York Times' special writer on the Supreme Court, said on Monday of this week:

"The significance of the episode lies in the fact that the criticism that moved the Justices was detailed, professional, and constructive. It was not a generalized, emotional attack of the kind often made against the Supreme Court these days."

Mr. Lewis has well stated the core of the issue as to the propriety of recent Court criticisms.

## The Supreme Court and the Weather

EXTENSION OF REMARKS
OF
### HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. TALMADGE. Mr. President. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled, "The Supreme Court and the Weather," from the March 1959 issue of the Young Lawyer, publication of the Junior Bar Section of the District of Columbia Bar Association, written in endorsement of my proposed bill (S. 880) to prescribe minimum qualifications for Justices of the U.S. Supreme Court.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUPREME COURT AND THE WEATHER

"Everybody talks about it, yet nobody ever does anything about it." This was Mark Twain's classic remark about the weather. In recent years the same statement could be made about many lawyers and lay "Monday afternoon Supreme Court Justices." On February 2, 1959, HERMAN E. TALMADGE, U.S. Senator from Georgia, at least attempted to do something about the Supreme Court. Senator TALMADGE introduced S. 880, an act entitled, "A Bill to Establish Qualifications for Persons Appointed to the Supreme Court." It reads as follows:

"No person shall be appointed after the date of enactment of this paragraph to the office of Chief Justice of the United States or to the office of Associate Justice of the Supreme Court unless, at the time of his appointment, he has had at least five years of judicial service. As used in this paragraph 'judicial service' means service as an Associate Justice of the Supreme Court, a judge of a court of appeals or district court of the United States, or a judge or justice of the highest court of a State."

Of the nine present Supreme Court Justices, Senator TALMADGE pointed out in introducing his bill, only five had any judicial experience prior to their appointment to the Supreme Court and one of those had experience only as a police court judge. With the exception of Justice Brennan, none of the Justices had prior judicial experience of more than 5 years. Regardless of how one may feel about specific decisions of the Supreme Court, any fairminded person would agree that its present members are gentlemen of notable attainment and outstanding accomplishments in their fields. But the fact, nevertheless, remains that the majority of them have not labored as practicing lawyers or as judges in State or Federal courts inferior to the Supreme Court. Consequently, events have found them either unable or unwilling to subject themselves to judicial restraint or to sublimate their own beliefs and conclusions to the provisions of the Constitution and the laws of the land.

The wisdom of Senator TALMADGE's proposal is manifest; his logic is unassailable. Man's knowledge today is so diverse and broad in so many fields that many of our wisest leaders have had to train themselves to know more and more about less and less if they are to know anything useful about anything at all. We are living in an age of specialization; just look about you at the communication lawyers, the FTC practitioners, the immigration lawyers, the old and gas lawyers, and the tax specialists to name only a few of the specialists within our profession of the law. Thus, faced with the growing complexities of our modern life and law, it seems a small thing to ask that judges and only judges be appointed to our highest Court.

We may not yet be able effectively to do anything about the weather; we could, however, do something to make sure that our highest judicial tribunal remain truly a Supreme Court.

## Ten Times as Popular: The National Education Act of 1958

EXTENSION OF REMARKS
OF
### HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. YARBOROUGH. Mr. President, what we know as this modern world was made modern by scientists, scholars, and other men of learning. In this era of keeping pace with the stars, we have come to realize all the more the vital significance of education.

George Davenel, a noted educator, was quoted in a national magazine this month as saying that in 1900, the United States needed 1 engineer for every 400 workers. "Today," he continued, "we need 1 for every 40 workers. By 1965, we will probably need 100,000 more engineers plus 40,000 more doctors, 75,000 more college-trained nurses, 485,000 more elementary and high school teachers, 120,000 more college teachers, 8,000 more natural scientists, a total of nearly 1 million young people will have to be trained for these 5 professions alone."

Our Nation has the students willing to study. We must take all necessary steps to see that they are given the chance. Education today is the key to a better world tomorrow.

As a coauthor of the National Defense Education Act of 1958, it was with a great deal of pleasure that I read an editorial in the Wichita Falls (Tex.) Times recently.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the Times for Wednesday, March 4, 1959, under the heading, "Ten Times as Popular."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEN TIMES AS POPULAR

The student loan program authorized in last year's National Defense Education Act is proving far more popular than Congress anticipated.

A report from the U.S. Office of Education reveals that by the end of 1958, more than 1,200 colleges and universities had asked for $62 million under the loan program. Congress appropriated $6 million to get the program started.

Under the program, college students can borrow up to $1,000 a year for academic expenses. Repayment of the loan is not required to be started until 1 year after graduation, and then the terms are reasonable—10 years to pay at 3 percent on the unpaid balance. The colleges have to put $1 of their own into the loan fund for every 9 Federal dollars received.

A question has arisen over the program. Some doubt that loans to all for a college education, as far as the money goes, is a good policy. They would prefer a further requirement of scholarship ability for an initial loan and scholastic achievement for additional annual loans after the first year of college work has been completed.

At any rate, the popularity of the loan program cannot be denied. The applications for the money far outstrip the amount available and the administration has, in its budget request, asked only for another $24 million in fiscal 1959 and $30 million in fiscal 1960.

## The Resolution of the House of Delegates of the American Bar Association

EXTENSION OF REMARKS
OF
### HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. ERVIN. Mr. President, on Friday, March 13, 1959, the Richmond News Leader, of Richmond, Va., carried an editorial comment, entitled "Letter on the Law," on the recent resolution of the house of delegates of the American Bar Association relating to certain recent decisions of the Supreme Court of the United States on communism. I ask unanimous consent that the editorial comment be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LETTER ON THE LAW—CONNIPTION FITS: WARREN'S FRIENDS ARE HAVING THEM

Stand by for gas attack. A truly lethal fog of confusion is being spread concerning the recent resolutions of the house of delegates of the American Bar Association with

reference to Supreme Court decisions on communism.

Critics of the American Bar Association are now busy dressing up the resolutions to make them appear as attacks upon the Court. The American Bar Association's action is described—in typical liberalese—as "frightening" and "shocking." Though these critics of the American Bar Association stuff their knuckles in their mouths, make with saucer eyes and give every appearance of whooping terror, I think they are feigning, faking, and phonying.

For one thing, these people take to shock and fright on a very selective basis. Communism, for example—the most dangerous thing going—doesn't seem to shock them at all. Chiang shocks them. Mao doesn't. Syngman Rhee shocks them. But not Kadar. The House Un-American Activities Committee shocks them. Not un-American activities. Dulles, not Mikoyan.

For another thing, having selected the particular manifestation of anticommunism which they want to be shocked about, they then set up a howling, apocalyptic din well contrived to make us all think that the end of the world will soon come if the end of Chiang, Rhee, the house committee, or Dulles doesn't soon come. And so the public—deceived—gets stampeded.

Look now at the American Bar Association matter. The house of delegates on February 24 passed a series of resolutions which (1) called upon the bar to defend the U.S. Supreme Court from unjust and unfair attacks; (2) stated that three decisions of that Court had the effect of weakening internal security; (3) urged continuance of the Senate Internal Security Subcommittee and the House Un-American Activities Committee; and (4) recommended that Congress strengthen our internal security laws.

Do you find those recommendations terrifying? I doubt it. But in the old, familiar pattern they are now getting the "shock" treatment, soon to be followed, critics of the resolutions hope, by the public stampede. These people must have it 100 percent their way. The house of delegates, having defended the institution of the Court, even went on to disapprove any proposals (such as Senator BUTLER's) to limit any jurisdiction of the Supreme Court.

But this, apparently, did not suffice to satisfy the critics of the resolutions. They smelled in them criticism of some decisions of the Warren Court: The American Bar Association delegates were plainly deviationists who had dared to make one or two mild animadversions respecting the Court. Though, oddly enough, the American Bar Association resolutions do not in the least take the Warren Court justices to task. In fact, the resolutions actually do not even criticize the Court for the three decisions it refers to in the Watkins, Yates and Nelson cases. The resolutions say, in effect: "Rightly or wrongly decided, the net result of those decisions is weakening to our internal security. Therefore, we recommend that Congress pass legislation strengthening security in the areas affected by those decisions." This is bad?

So it seems clear that the resolutions do not constitute "attacks" on the Court—even on the Warren court. Anyhow, many of those now attacking the resolutions were—just a few years ago in the 1930's—spearheading the effort to attack the Court, pack the Court—even sack the Court.

Plainly, preserving of the "Court" does not constitute their motivation. What they seem most deeply to desire—with a truly poisonous passion—is to kill all efforts of this people to defend themselves against the Soviet world.

## World Refugee Year Resolution

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. WILEY. Mr. President, today I received a resolution, adopted by the National Lutheran Council at its annual meeting in Milwaukee, Wis., entitled "World Refugee Year Resolution."

Commendably, the National Lutheran Council—as have many other religious, Government, voluntary, and other groups and agencies—is giving deep consideration to the tragic plight of the millions of refugees around the world.

As we recognize, this is a tremendous problem that demands a constructive solution because of humanitarian, political, sociological, and other considerations.

To give my colleagues the benefit of the resolution, received from Paul C. Empie, executive director of the National Lutheran Council, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

WORLD REFUGEE YEAR RESOLUTION, ADOPTED AT 41ST ANNUAL MEETING, NATIONAL LUTHERAN COUNCIL, MILWAUKEE, WIS., FEBRUARY 5, 1959

That the National Lutheran Council—

Concerned over the long-continued plight of refugees in Western Europe, the Middle East, Hong Kong, and other areas of world tension;

Conscious of the debilitating effects of this situation not only upon the personalities of the individuals thus handicapped but also upon the moral sensitivity of nations in a world community;

Aware of the resolution of the United Nations General Assembly adopted December 5, 1958, as follows:

"General Assembly, having considered the report of the United Nations High Commissioner for Refugees, together with a resolution adopted by the UNRAF Executive Committee at its ninth (special) session on September 26, 1958, convinced of the need to make a further worldwide effort to help resolve the world refuge problem, having considered the proposal for World Refugee Year, to begin in June 1959 noting that this proposal has two aims, namely:

"(a) To focus interest on the refugee problem and to encourage additional financial contributions from governments, voluntary agencies and the general public for its solution;

"(b) to encourage additional opportunities for permanent refugee solutions, through voluntary repatriation, resettlement or integration on a purely humanitarian basis in accordance with the freely expressed interest of the refugees themselves.

"1. Urges states members of the United Nations and members of the special agencies to cooperate in accordance with the national wishes and needs of each country and from a humanitarian point of view, in promoting a World Refugee Year as a practical means of securing increased assistance for refugees throughout the world;

"2. Requests the Secretary General to take such steps as he may think fit to assist in the promotion of a World Refugee Year in accordance with the present resolution."

Mindful that the proposal of a World Refugee Year has received the endorsement of many world organizations, including the Lutheran World Federation and the World Council of Churches, and also that its objectives are in harmony with those pursued by the council during the past 10 years of its own extensive refugee resettlement program and through its financial support of related LWF and WCC programs;

Hereby endorses the general aims envisioned in the proposed World Refugee Year, and expresses its readiness to cooperate toward the attainment of the proposed objectives by whatever measures are appropriate to it and within its means.

## Qualified Diplomats

EXTENSION OF REMARKS
OF
## HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two very fine editorials from the Plain Dealer, of Cleveland, Ohio, and the Pittsburgh Post-Gazette.

These editorials deal with a matter of great importance to the future of our country; and I hope my colleagues will take the time to read them.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, Feb. 16, 1959]

QUALIFIED DIPLOMATS

Senator J. WILLIAM FULBRIGHT, new chairman of the Senate Foreign Relations Committee, will do much to arrest the deterioration of the United States overseas if he sticks by his guns in insisting on the selection of qualified ambassadors.

His ideas, and the policy which he intends to implement as head of the committee, were contained in a recent letter to Secretary of State John Foster Dulles prior to his illness.

With FULBRIGHT's record of conscientious effort to improve international relations his insistence that the committee "know of the candidate's language ability, his ability as an administrator, his ability to make friends, the nature and depth of his interest in foreign affairs generally, as well as specifically in the country to which he is being sent," cannot be taken lightly.

FULBRIGHT echoes his predecessor, Senator THEODORE FRANCIS GREEN, who wrote on April 3, 1957, that "we can no longer afford to give way to such pressure in appointment making." He referred to political pressure, the rewarding of incompetent men with ambassadorial appointments because they helped the party or contributed heavily to campaign funds.

The United States has been more lax than any other nation in sending overseas, at the most critical time in world history, not only envoys, but lower ranking personnel in no way qualified by knowledge of language or customs for the jobs in the countries that may be the field of their labors for years.

This indifference has cost us heavily in nations where there is a life-and-death struggle with the Russians. The Russians are expertly trained, they know the language, the mores and psychology of the people.

This tragedy is set forth with the sugar-coating of a novel in the current best seller, "The Ugly American," by William J. Lederer and Eugene Burdick. It is not much of a novel, for there is no plot. It is rather a series of sketches that dramatize a most unpalatable truth. And the final chapter is all undisguised fact. A couple of quotes sum it up:

"In the few years since the end of World War II, Russia has added 700 million people to the multitude already under direct rule. Its land empire has been swollen by about 5 million square miles."

"Yet in France, Italy, Germany, Belgium, the Netherlands, Norway, and Turkey, our Ambassadors cannot speak the native tongue 'although our Ambassador to Paris can speak German and our Ambassador to Bonn can speak French). In the whole of the Arabic world—nine nations—only two Ambassadors have language qualifications. In Japan, Korea, Burma, Thailand, Vietnam, Indonesia, and elsewhere, our Ambassadors must speak and be spoken to through interpreters."

FULBRIGHT is right. It is time to quit fooling and get down to the serious business of winning the people of the world.

---

[From the Pittsburgh Post-Gazette Feb. 28, 1959]

NAME TRAINED ENVOYS

The new chairman of the Senate's Foreign Relations Committee, J. WILLIAM FULBRIGHT, believes that this country's ambassadors should be appointed on the basis of qualification rather than as a reward for party service. We subscribe heartily to that doctrine.

The issue has been raised in a letter which Senator FULBRIGHT sent to Secretary of State Dulles. The new chairman expressed the committee's concern that for several years "some of our ambassadorial appointments have not been up to the standard that should be maintained if our interests abroad are to be fully promoted."

Every President is subject to pressures by party leaders who feel that ambassadorships should, like postmasterships, be awarded on the basis of past service or help. In far too many instances that procedure has been followed.

Many ambassadorial appointments have gone to wealthy individuals who contributed to the party in power. The only justification for this practice has been the fact that the United States is so niggardly in its financial support of embassies that only wealthy men who were willing to spend out of their own pockets could afford to take some of the top appointments.

But this Nation has come of age in foreign affairs. As leader of the free world, it can no longer afford to make ambassadorial appointments on a patronage basis.

The nations to which we send diplomatic representatives expect to be taken seriously. They look to us for responsibility and leadership. They will no respect us if we demonstrate through careless diplomatic appointments a disregard for their importance and sensibilities.

International diplomacy in this atomic era is far too important to be put into the hands of untrained people. This Nation should recruit, train and finance adequately a carrer foreign service from which diplomatic appointments can be made on the basis of ability.

We hope that Senator FULBRIGHT and his committee will examine closely the diplomatic qualifications of all future ambassadorial appointees.

## Farm Program

EXTENSION OF REMARKS
OF
## HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial which appeared in the Fort Lauderdale Daily News, of Fort Lauderdale, Fla., in which comment is made on our present farm program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TAXPAYER: READ AND WEEP OVER GRAVY TRAIN BIG U.S. FARMERS ARE RIDING

This past week, a well-known Republican Senator who comes from one of the so-called farm States rather bitterly chastised Secretary of Agriculture Ezra Taft Benson for proposing some much-needed changes in the Nation's farm program.

This Senator declared in stentorian tones that if Mr. Benson's proposals were ever adopted by the Congress the Republican Party would be lucky to elect a single candidate in the farm belt when the next election rolls around.

Like so many other Congressmen, this particular Senator wasn't the slightest bit interested in looking at Secretary Benson's commonsense proposals from the viewpoint of what's best for the Nation as a whole.

He was only interested in the political repercussions that might stem from Mr. Benson's efforts to put our extravagant farm program on a more sensible basis, and thus, even though this Senator might privately admit that the current program isn't working and that vast sums of money could be saved by revising it, he wasn't about to publicly support any changes because of the political dangers involved.

A few days later another Republican Senator, JOHN J. WILLIAMS of Delaware, who doesn't happen to hail from one of the farm States, also had something to say about the farm program.

Senator WILLIAMS had been doing some checking on the amount of money the Government handed out to farmers under the price-support program in 1957.

The Senator found out that two large farm operators had collected over $2,500,000 from the Federal Government in 1957. The Producer's Rice Mill, Inc. of Stuttgart, Ark., collected $1,460,902 in support payments on its rice crop, while the Delta & Pine Land Co., of Scott, Miss., collected $1,157,502 in price-support payments on its cotton crop.

Senator WILLIAMS declared that these two payments alone were larger than those received by all the farmers in his home State for the combined years of 1957 and 1958.

"The high rigid support program is little more than a Government guarantee on the operations of corporate type farming," Senator WILLIAMS declared, "and it actually encourages and underwrites absentee ownership to the detriment of the small farmers."

If the two cases cited by Senator WILLIAMS had been unique, the Delaware lawmaker might not have felt that it was necessary for him to take to the Senate floor to inform his colleagues of what he had found out. But while these two payments were the largest handed out in 1957, the Senator also found out there were scores of others in excess of $100,000.

Senator WILLIAMS, on the strength of his own personal survey, has now concluded that whereas the price-support program has been widely hailed as primarily benefiting the little farmer, it has actually been of far more benefit to the big-scale farmers who till thousands of acres per year and who have been primarily responsible for our huge crop surpluses.

As Senator WILLIAMS pointed out, the price-support program as it is being administered today, serves to guarantee big-farm operators an annual profit on their activities. It is the reason why the Federal Government now has enough surplus wheat in storage to meet all of our domestic and export needs for a full year if not a single bushed of wheat were to be harvested this year. It is why the annual cost of support this crazy farm program is now the third largest item in the Federal budget and going higher all the time.

This is not speculation. It is the cold, hard truth which some of our more conscientious legislators have been aware of for a good many months, yet every time these legislators, Secretary Benson or even President Eisenhower even suggest that the time might have come to stop this gravy train for the big farmers the legislators from the farm States immediately raise a tremendous howl and start pointing out the terrible things that will happen to their respective parties if any money-saving changes are enacted.

And so the farce continues. Secretary Benson wants to solve the wheat surplus problem by slashing the price supports on the farm commodity. But if he does it, even one of his closest associates remarked that "it will be very difficult for Republican Congressmen in wheat areas to run with Ezra's picture on their chests."

Supporting this nonsensical farm program is now demanding almost 10 cents out of every dollar every American pays in Federal taxes each year. The same porgram is also forcing every American wage earner to pay inflated prices for the food he eats. Yet it can't be curtailed or ended because neither of our political parties has the guts to put the Nation's welfare above its own selfish interests, and the few members of either party who aren't afraid to endorse a change can't get to first base because of the overwhelming opposition of those who won't risk a change for fear it might cost them some votes.

JACK W. GORE.

---

## The Major Question

EXTENSION OF REMARKS
OF
## HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Augusta Chronicle of March 9, 1959, entitled "The Major Question," discussing a speech made by our colleagues, the Senator from Indiana [Mr. CAPEHART].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAJOR QUESTION

In an impressive speech in defense of the rights of the American people, the American system of government, and free enterprise itself, Senator HOMER E. CAPEHART of Indiana recently put the major question of

the times to Members of the United States Senate.

"Do Senators want," he asked, "to maintain the kind of government our Nation has had for 170 years, or do the Senators want a system of government under which the government will impose controls?"

The decision Senators must make, he declared, is "whether they wish to maintain the American system of government in all its phases or whether they want a controlled economy, whether they want a dictator, whether they want to adopt the kind of government that exists today in Russia. The government which now exists in Russia controls everything in that country. Our Government cannot control part of our economy without controlling all of it.

"Why should we vote to break down our great American system of government? Why should they (some Senators) vote to break down the great American system of government which has served our country so well for 170 years?"

He riddled the Senators for talking about the American people having given them a mandate in the last election to support legislation destructive to the American system.

"I do not think," said Senator CAPEHART, "that they (the American people) mandated the Congress to liquidate the American system of government. I do not think that they mandated the Congress to liquidate the private enterprise system.

"Let us," he begged, "stand four-square behind the American system of government, or the private enterprise system, which it really is. Let us cut out the chaff and get down to the wheat. Let us use commonsense. Let us defend this great system of ours."

He charged that speeches made upon the floor of the Senate are giving aid and comfort to enemies of the Republic in that they portray the capitalistic system as a failure and the American people as being inept and mistreated.

He paid tribute to the American people in these words:

"I know our people are not perfect. I know that I make mistakes. I know that all other Members of the Senate make mistakes. But I am talking about the general principles of the American system of government. I oppose burning down a church or a house in order to get rid of the mice that may be in it. But that is about what some Senators have advocated here tonight; in effect, they have advocated going against the American system of government."

But, said the Senator, "I am going to fight for the private enterprise system."

Senator CAPEHART has sounded a pure note of patriotism amidst continuing cacophony of words in praise of the socialistic and totalitarian concepts in government.

In conclusion, it should be pointed out that not only the Senators of the United States have got to decide whether or not they will protect and preserve the American system of government but the American people as well must wake up to the fact that they too must assume responsibility for perpetuation of those principles.

## Necessity for Assistance to India

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of editorials and comments regarding the vital importance of a more vigorous U.S. and international effort in meeting the needs for economic growth in India. As these editorials make clear, it is vital that we place our loan assistance program on a larger and more sustained level and that we join with other nations in providing a basis of support for India's needs during this crucial period of economic takeoff.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Post, Mar. 5, 1959]

SAVINGS ACCOUNT

(By William V. Shannon)

WASHINGTON.—During the first Berlin crisis of 1948–49, China tottered irrevocably into Communist slavery. Now, 10 years later, while the free world's attention is fixed upon the second Berlin crisis, will India take giant steps toward the same dark fate?

No one knows whether Stalin seized Czechoslovakia and blockaded Berlin partly because he wanted to distract Western attention from the Communist takeover in China. But it is cetrainly conceivable that Khrushchev's manipulation of the present Berlin crisis is importantly connected, in some way not yet clear to us, with his and Mao's ambitions in Asia.

One hears much argument about standing firm or being flexible in the Berlin situation, but no one can question that there is one place in the world where we can do more than stand firm, where we can take the initiative, where we can do something positive and fundamental to direct the course of events to our own benefit. That place is India.

India has 40 percent of the population of the uncommitted world. It is the only major country on the Asian land mass that stands outside the Russian-Chinese combine. If India's economic development progam breaks down for lack of outside help, if the Congress Party then falls apart the way Chiang Kai-shek's Kuomintang Party disintegrated and India in the 1960's passes under Communist control, this will be a moral and strategic catastrophe.

If that disaster occurs, we can forget, for example, about Thailand, Vietnam, Pakistan, Iran, and our other small allies on the Asian mainland.

Those struggling countries will disappear into the Communist camp overnight. The whole fight for freedom on the mainland of Asia will have been lost.

The case for speedy action to help India is so compelling and the consequences of failure are so terrifying that one wonders why there should be any doubt about the American response to this challenge. Yet the record of the Eisenhower administration toward India is one of criminal negligence and irresponsibility. It has shuffled ambassadors back and forth to New Delhi for irrelevant political reasons, in one period leaving our ambassadorship there vacant for months.

In 1953–54, the administration helped lure Pakistan, India's northern neighbor, into the absurd Baghdad Pact. Every dollar we poured into Pakistan the Indians have tried to match on their own defense-spending for fear the Pakistanis would use American arms to seize disputed Kashmir by force.

This has siphoned off money that should have gone to economic development. The Indian response may be neurotic and wrongheaded, but it was wholly predictable and is understandable in human terms. As if deliberately wanting to make matters worse, Secretary Dulles and Vice President Nixon then engaged in the mad business of slapping the Indians in the face for being immoral neutrals.

We were meanwhile dribbling out economic assistance to India at the rate of $50 million annually during the first Eisenhower administration, but in 1955–56 that diplomatic genius Herbert Hoover, Jr., then the Under Secretary of State, decided to cut it by 25 percent in order to have $10 million.

A year ago, the Senate tried to reverse this record of folly. A bipartisan coalition under the leadership of Senators KENNEDY, Democrat, of Massachusetts and COOPER, Republican, of Kentucky wrote into the foreign aid authorization a special pledge of American help for India's economic development program. At first, the administration supported this move but when Senators KNOWLAND, Republican, of California and BRIDGES, Republican, of New Hampshire put pressure on Dulles, he left the pro-India forces in the lurch. The proposal was killed in the House-Senate conference.

There was brave talk last year that the new Development Loan Fund would give special attention to India's needs and permit orderly planning on a long-term basis. The DLF, however, "has totally failed to fill the need for long-term capital," as Senator KENNEDY recently said, "because it has never been given either a long term or very much capital."

KENNEDY and COOPER are urging that the DLF be put on a more nearly permanent basis (it is now dependent on yearly renewals) and that its funds be greatly increased above the $750 million requested by President Eisenhower. They are also urging the United States to join with Britain, West Germany, and other investing nations to set up a joint, long-term program to meet India's desperate need for hard currency.

The proposals for international action will become effective only if the administration gives some help. Is there no one who can persuade the man in the White House to put aside his bookkeeper's ledgers and look to freedom's needs in Asia?

---

[From the New York Herald Tribune, Feb. 22, 1959]

THE HELP INDIA NEEDS

The proposal for long-term aid to India made by Senator KENNEDY and Senator COOPER deserves support not only because India desperately needs help in its heroic struggle to improve the living standards of 400 million people, but because it would foreshadow an important change in our whole foreign-aid program. What has been suggested is to put the Development Loan Fund on a permanent basis so that help extended to underdeveloped countries is not subject to the annual pleasure of Congress. These countries are uneasily conscious of the temporary nature of this help. And they cannot, in any case, think of financial undertakings except in terms of several years or more.

Moreover, countries like India, and especially India, realize that our present system of foreign aid entails consideration of momentary political moods. Thus Indians reacted angrily last year to a western suggestion that India could receive much more financial support if its foreign policy were less neutralist. The Soviet Union has been careful not to make this kind of suggestion—at least not until its aid has been accepted.

The Senators emphasize India because India would profit most from the kind of loans made by the Development Loan Fund. He goes so far as to say that in deciding the fate of the fund this year, Congress will in large measure be deciding the future of India. This is the crucial year of India's current 5-year plan. Even after severe cutbacks, the Indian Government is still short almost $600 million which must be invested if the

plan is to succeed. For not only is the 5-year plan an article of faith with Indians. It is also a practical necessity if India is to keep its growing population alive. Unless India receives steady, long-term support from the West, of the kind the Soviet Union has given to Communist China, Senator KENNEDY warns, India as a free and democratic state will not survive. And this does not mean a dam here, a railroad there, and a model farm somewhere else. We have helped India a great deal in the past, and it has done good, but the time has come for help of a new order. That is the challenge.

---

[From the Washington Post and Times Herald, February 20, 1959]

THE SHAPE OF AID

James W. Riddleberger is an able career diplomat who should do a conscientious nonpolitical job of directing the International Cooperation Administration. He has an excellent record as ambassador to Yugoslavia and Greece, and his nomination by the President to succeed James H. Smith, Jr., in ICA is certainly preferable to a choice of one or another of the defeated politicians whose names were bruited about. It is regrettable, though, that the President did not see fit to select someone of national reputation who could evangelize the importance of an adequate economic assistance program in this time of challenge.

The need for such evangelism is the more pronounced because of the approach reportedly being taken by the Draper Committee surveying foreign aid. The committee is said to be embarked upon a very different tack from that envisaged at the time of its appointment last fall—supposedly in response to some of the questions raised in "The Ugly American."

Far from scrutinizing the balance between economic and military aid in critical areas, the committee has been focusing primarily upon the need for military aid itself, and a majority is said to favor a $500 million increase in military help to NATO countries. There may be something to be said for this, but the economic needs of nonallied countries apparently are being subordinated. At any rate, there reportedly is unwillingness among Members to recommend anything above the President's budget in economic help for underdeveloped areas.

In view of this approach, the speech by Senator KENNEDY yesterday stressing the need for a larger Development Loan Fund was especially appropriate. Mr. KENNEDY asserted that the DLF "has totally failed to fill the need for long-term capital—because it has never been given either a long term or very much capital." This is an exaggeration; but in place of the $1-billion-a-year 5-year capitalization which was proposed within the administration, the President requested a $225 million supplemental appropriation and a $700 million 1-year new appropriation. So far the DLF has had a total of $700 million, and against this it has more than $1.7 billion in partially screened requests for help and another $500 million in applications which meet the criteria.

Obviously the short-term approach is failing to meet the need; and, worse, it discourages long-term planning and efficiency. The same considerations apply with especial urgency in the particular case of India, where the hand-to-mouth help now being lent is not enough to bring rapid progress in the economic rivalry with China. In this connection Mr. KENNEDY has a constructive idea. He proposes a joint survey by Canada, Britain, West Germany, Japan, and the United States to appraise India's real needs with a view to increasing their assistance. Mr. KENNEDY and Senator COOPER are sponsoring a resolution to this effect.

But the essential objective is a larger Development Loan Fund. A DLF capitalization of $1 billion a year for 5 years would amount to only a little more than two-tenths of 1 percent of the gross national product expected during that period. It is incredible that the United States would not set aside that much to help insure the economic success of the free world. We suspect that there would be a good bit of sympathy in Congress for such an effort, but first it will be necessary for the President to ask for an increased sum above the budget. Timidity can only bring neglect of this part of free world defense which is just as important as missiles.

---

[From the Indianapolis Times, Feb. 23, 1959]

INDIA'S PROBLEM

One of the major problems of the non-Communist world is the economy of India in its struggle to improve its very low standard of living.

The danger is that Indians—seeing the tremendous leap forward in Red China but not seeing the slavery that goes with it—will pressure their leaders to go in that direction, too.

Last year the United States and other elements of the free world scraped together enough to save India from collapse. But it was a stopgap.

Now Democratic Senator KENNEDY and Republican Senator COOPER (former U.S. Ambassador to India) are sponsoring an eminently sensible approach—to get away from the sporadic, hit-or-miss, crash type of aid.

Their bipartisan proposal is that the United States invite other friendly nations to join us in a free world mission to India to discuss possibilities for joint action. It would be long range—looking to bolster the current second 5-year plan, which is at the halfway point, and the third 5-year plan.

The Kennedy-Cooper resolution in the Senate anticipates Great Britain, Canada, West Germany, Japan, and others as possible partners in such an undertaking.

"This policy of using money on a crisis basis, from year to year, where difficulty arises, is expensive and ineffective," said Senator KENNEDY.

The Kennedy-Cooper proposal makes sense and we should be prepared to do a great deal to keep India from turning north to China for aid and guidance.

---

[From the St. Louis Post-Dispatch, Feb. 23, 1959]

THE DANGEROUS GAP

It is a wonder that cartoonists, especially abroad, do not depict Uncle Sam as a one-eyed giant, a giant very alert to the missile gap or the military disparities between East and West, and seemingly blind to the economic gap, the disparities between the rich nations of the world and the poor ones.

The second gap got the attention it deserves in a fine speech by Senator KENNEDY of Massachusetts last Thursday. He said:

"Since the truce negotiations began in Korea 8 years ago, it should have been obvious that our greatest danger was no longer military. Since the Russians began their aid and trade penetration of the undeveloped world some 5 years ago, it should have been obvious now that if India were to fall, if Latin America turned away and if the Middle East slid behind the Iron Curtain, then no amount of missiles, no amount of space satellites or nuclear-powered planes or atomic submarines could ever save us."

Senator KENNEDY freely admits that he is by no means the first to raise this alarm, but he emphasizes two ways of responding to it this year: bolstering the Development Loan Fund and giving real help to India.

We cannot afford to extend economic aid only on a crisis basis, from year to year, wherever difficulty arises. This is expensive, and it does not encourage nations to make the sort of effective, long-range plans which alone can meet their difficulties. Emergency bailouts, as Senator KENNEDY said, only mean that the rich get richer and the poor get poorer.

India is the prime example. This is the year in which India, representing 40 percent of the population of the uncommitted world, may have to cut back the goals of its second 5-year plan. Or it can be the year in which it will set even more impressive goals for a third 5-year plan. Prime Minister Nehru has courageously called for new advances, but this courage will be wasted if it is not effectively supported by the United States, Britain, Canada, Germany, Japan, and other free nations. China is making its great leap forward with Russian help. The non-Communist nations have their great opportunity in enabling India to keep pace.

So with Senator COOPER, of Kentucky, Senator KENNEDY introduced a resolution calling on the Government to invite other friendly nations to join in a free world mission to India to discuss detailed possibilities for joint action to assure the fulfillment of India's second 5-year plan and the effective design of its third plan.

In this 10th anniversary year of President Truman's point 4 program, there is one step above all others which the United States can take promptly in extending long-term help and to achieve a better balance between military and economic assistance. This is to provide the Development Loan Fund with the means of achieving its objective: in Mr. KENNEDY's words, "a substantial, long-term program of productive loans to underdeveloped areas from a fully capitalized central fund, capable of working with either independent nations or regional groupings."

The fund never has had a real chance to do its job. Its initial $700 million is committed, and it has a backlog of approved projects running to more than $1,700 million. Neither the administration's supplemental request for $225 million nor the regular budgetary request for another $700 million is enough. The Senate Foreign Relations Committee originally contemplated a capitalization of at least $1 billion a year.

There are other instrumentalities of foreign aid—the World Bank, the U.N. programs of technical aid, and the distribution of our surplus farm products, for example—which should not be neglected. But in the long run—and it is the long run which is all important—no agency could do more than the development fund to close the economic gap which, as Senator KENNEDY says, is even more threatening than the missile gap.

---

[From the Greensboro (N.C.) Record, Feb. 2, 1959]

LONG-TERM TREATMENT

Senator JOHN KENNEDY cites Communist China's economic growth rate as three times that of India last year. He calls for the United States to join other Western Powers and Japan in moving to meet India's need for investment capital. The Development Loan Fund authorized by the last Congress is inadequate and in the face of China's great leap forward, this may be the last year in which the West can effectively aid Indian democracy, the Senator warns.

Meanwhile, there is disturbing news from the Eisenhower administration's foreign aid study group. When President Eisenhower appointed the Draper Committee a few months ago, it was understood that "The Ugly American" had inspired the move. The President wanted to know if the novel's allegedly true scenes of aid mismanagement were typical. Further, he was anxious to

have a study of the relative merits of military and economic aid. The Washington Post says now that the Draper Committee, far from seeking a balance between economic and military outlays, is reported thinking primarily in terms of a $500 million military aid program for North Atlantic Treaty Organization allies. Where are yesterday's visions of a new aid program, suited to the demands of the Soviet economic offensive—the ruble war?

Senator KENNEDY clearly demonstrates the need for economic statesmanship, and the folly of delay in meeting the Communist challenge. The Development Loan Fund should be increased promptly and given long-term responsibilities.

## Support for Establishment of a National Park on Padre Island, in Texas

EXTENSION OF REMARKS
OF
### HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. YARBOROUGH. Mr. President, since I introduced a bill providing for the establishment of a national park on Padre Island, in Texas, I have invited the attention of the Congress to a wide variety of reasons for the passage of the measure.

It would provide a winter playground for the Nation, preserve a portion of our rapidly vanishing public shoreline in its natural state, provide a game preserve for wildlife native to the area, and enable greater recognition of the rich historical significance of the region.

This measure has been backed by a number of groups interested in conservation and other organizations. A bill has been introduced in the House of Representatives of the Legislature of the State of Texas to authorize the State parks board to acquire land on Padre Island for park purposes. In addition, the measure would allow the National Government to acquire land on the island for the same purpose.

The Honorable Commissioners Court of Willacy County, Tex., in a meeting March 9, 1959, adopted a resolution relating to this matter. A portion of Padre Island is included in Willacy County, and these people are in a position to know firsthand the advantages for wildlife conservation, historical preservation, and other benefits which would accrue from establishment of a park on the island.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the excerpt from the proceedings of the Honorable Commissioners Court of Willacy County, Tex., which includes the adoption of this resolution.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas House bill 469, introduced in the Texas Legislature, authorizes the Texas State Parks Board to acquire land on Padre Island for park purposes and authorizes the U.S. Government to purchase, condemn, receive, hold, and acuire title to land for the creation of Padre Island National Park, and

Whereas Senate bill 4, introduced in the U.S. Senate, authorizes the Secretary of the Interior to acquire by gift, purchase, transfer, or otherwise, lands for the purpose of establishing a national park on Padre Island and to construct and maintain therein such roads and improvements as he may deem necessary, and

Whereas the Secretary of the Interior shall take no action until the State of Texas, by appropriate legislative action, has consented to the establishment of such part: Now, therefore be it

*Resolved*, That the commissioners court of Willacy County recommend that house bill 469 be enacted into law, thereby giving legislative consent, by the State of Texas, to the establishment of Padre Island National Park, and be it further

*Resolved*, That our representatives be requested to give active support to the creation of Padre Island National Park and that copies of this resolution be sent to Gov. Price Daniel, Senator Lyndon B. Johnson, Senator Ralph Yarborough, Congressman Joe Kilgore, State Senator Bruce A. Reagan, Representative Carl Conley, and to Representative Roger Daily, author of House bill 469.

## Morality, at a Price

EXTENSION OF REMARKS
OF
### HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Morality, at a Price," published in the Daily Herald of Provo, Utah, of February 25, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORALITY, AT A PRICE

Up until now organized labor has lent unqualified support to the kind of labor reform represented by the current Kennedy-Ervin bill. It accepted the idea that control of rackets and elimination of corrupt practices are fundamental requirements meriting top priority.

But at the Puerto Rico meeting of the AFL–CIO's Executive Council, it was decided to insist firmly upon linking labor reform with concessions to labor through amendments to the Taft-Hartley Act.

As it happens, a few such amendments are now in the Kennedy-Ervin measure as approved by the Senate Labor Committee subgroup headed by Senator JOHN F. KENNEDY, of Massachusetts. Others are due for later study.

But it is one thing for Congress, for government generally, to propose this sort of approach to labor legislation, and quite another for labor to demand it.

Reform obviously is not something to be accepted only at a price. To reform is to attempt to correct wrongs or shortcomings. If these exist, then any organization with standards of decency and honesty—whether union, business or political party—must inevitably commit itself to their correction.

There can be no strings attached, no saying "we will take reform only if you give us this in return."

You do not bargain over the matter of living up to the moral standards of the community. If doing the right thing is something you can offer in trade for some gain or concession, then it is not a standard.

The leaders of labor who have now deflected the federation from its former course seem momentarily to have forgotten that men who live under law and morality do right because they believe in doing right, because it is for the best interests of the whole society, not because they hope to get something by doing it.

## The Importance of People, Not Merely Statistics, to a Correct Appraisal of the Economy

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. RANDOLPH. Mr. President, later this week the Senate will begin the active consideration of S. 722, the area redevelopment bill, which is designed to aid sections of the country in which there are conditions of chronic unemployment.

In this morning's New York Times I read the comprehensive article in which these compelling words were used in the opening paragraph:

Unemployment is a figure in a Government report, as dreary and lifeless as the Federal debt or the death rate.

Yes; there is a human side to this national problem which directly affects more than 4,450,000 workers who are eager to be gainfully employed, but for whom no jobs are available.

Before reading the article in the Times, which is a challenging news coverage on a broad basis, I had been privileged to hear Frank Blair, on the Monday morning Dave Garroway television program, explain, with filmed scenes from West Virginia, and with quotations from statements by the distinguished junior Senator from West Virginia [Mr. BYRD] the plight of the sturdy folk in our hills of home who need work, and need it now.

It was my opportunity to be a part of this presentation and to make a statement, which had been recorded last Friday, in which I told of the distress in West Virginia and of the assistance which would result, in substantial degree, if S. 722 becomes law.

The writer of the New York Times article, Mr. A. H. Raskin, told of the assignment of correspondents of that newspaper to put faces on figures.

In this connection, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article writen by Homer Bigart, relating to the conditions in West Virginia as he saw them, and published in the New York Times of March 16, 1959.

There being no objection, the article ordered to be printed in the RECORD, as follows:

WEST VIRGINIA GRIM

(By Homer Bigart)

CHARLESTON, W. VA., March 10.—Thousands of unemployed coal miners have used up their rockin' chair money and are living

on mollygrub in the coal fields of West Virginia.

Rockin' chair money is the miners' term for unemployment compensation. Mollygrub is the monthly dole of Federal surplus foods.

With about 15 percent of its work force idle, West Virginia is the blackest spot among the Nation's areas of economic distress.

The statistics are grim enough: 45,000 workers have exhausted their unemployment benefits; 280,000 to 300,000 persons are subsisting mainly on mollygrub.

A tour of coalfields south of Charleston revealed that the human tragedy was not yet as stark as in the 1930's, when children fainted in schoolrooms for lack of food. This time the schools are providing free lunches for the desperately poor. And at home the surplus food dole, while deficient in protein and in bulk, is generally enough to support what the natives call a cornbread livin'.

There are no signs of desperate physical distress, not even in Big Coal River Valley, where the expiring communities of Edwight and Highcoal present ghostly rows of boarded-up shacks. In the half-deserted streets and in the tiny yards of ramshackle dwellings, children play who look at least as robust as children in urban slums.

Tensions and despondency bred by long idleness are evident in the hopeless complaining tone of minors who have returned in disgust from job-hunting expeditions in Cleveland, Columbus, and Detroit. The added complaint of racial discrimination was raised by Melvin Smoot, a Negro miner, in Highcoal. "A mine superintendent told me he ain't hiring any colored," Mr. Smoot said.

The mine at Highcoal blew out [shut down] more than a year ago, throwing 82 men out of work. They were the last of a gradually reduced force of about 500. Mr. Smoot, 37 years old, with eight children, was laid off December 31, 1957, the night his wife gave birth to twins. He has had no work since then. He drew the maximum of 24 weeks, plus a special extension of 12 weeks, in unemployment payments last year. Payments in reduced amounts ($21 a week) were resumed a few weeks ago, but Mr. Smoot said he had to use his first two checks to pay the utilities bill.

NO RENT SINCE JULY

The Smoot dwelling is a gray, soot-crusted 4-room house renting at $16 a month. But Mr. Smoot said he had not paid rent since last July. Nor had he been able to buy tubes for his television which failed Christmas Eve.

His monthly mollygrub included 30 pounds of flour, 5 pounds of butter, 10 pounds of rice, and a small quantity of meal. This was not enough for 3 weeks, he said. Supplementing the Federal dole was a windfall of canned milk, canned peas, and a little sugar from Charleston churches following an exposé of Highcoal's plight in the Charleston Gazette.

Despite the dismal outlook, Mr. Smoot said he would remain in the dying town because jobs were scarce in Ohio cities and because "they claim there's going to be a lot of roadbuilding around here."

But up in the road in the white community, Carl Harris had decided to quit the mines and try farming. He had gone to Lincoln County to look for a farm. Meanwhile, Mrs. Harris, carried away by visions of bucolic plenty, had bought 100 pullets for $2. They were cheeping in the kitchen as Mrs. Harris told of the impending move to Lincoln County.

"They do right smart farmin' down there," she said. "They got some little bitsy old mines but mostly farms."

Still she hated to leave Highcoal. "I like the people here: they're friendly," she said.

In nearby Whitesville, shopping center for Big Coal Valley, Quentin Barrett, principal of Whitesville Elementary and Junior High School, summoned his teachers to an emergency meeting.

"Starting tomorrow," he announced, "all children who are completely destitute and look undernourished will be given a cup of cocoa and a hot biscuit at the start of school each morning in addition to the regular hot lunch. Maybe some scrambled eggs, too."

He asked the teachers how many children came to school without having had any breakfast at home. They reported a total of 65. The school has an enrollment of 700.

FREE LUNCH TO DESTITUTE

For the hot lunch the school charges 25 cents. But families on relief pay only 15 cents and the lunch is given free to those described as "penniless and destitute."

The Reverend Jack Weller, director of the mission project of the United Presbyterian Church, said conditions were particularly grim in Edwight, a few miles up the valley. He said the land company that owned the miners' houses had recently turned off the street lights adding to the tension, and there were reports the water supply would be shut when the village school closed at the end of the spring term.

He estimated that "at least 1,800 persons in the valley aren't getting a balanced diet." He recalled that the Whiteville Fire Department, in making up its Christmas list, found that 300 families in the area had no income at all.

In Charleston, Raymond Lewis, brother of John L. Lewis and presentd of District 17 of the United Mine Workers Union, doubted that many miners now out of work would find jobs again in the industry.

He called the current crisis a lot worse than the depression of the thirties.

"The 1930's depression was just the end of a boom period. It was not caused by technogolical advances but by oveproduction. This one here is a different story, an industrial revolution like the one that hit England when the spinning jenny was invented."

Mr. Lewis said scarcity of labor during World War II forced operators into mechanization. "By 1949 new equipment began to come in. Thereafter there was a steady decrease in miners and an increase in production.

"In 1948, West Virginia had 125,000 coal miners. Last year there were only 68,000 men in mines."

Sheriff T. H. McGovran, of Kanawha County (Charleston) said the number of men arrested for nonsupport had risen steadily during the last 14 months of deepening unemployment.

He suspected that in come cases the man was driven by desperation to seek a jail sentence for nonsupport so that his wife could then apply to the State department of public assistance for benefits. "A man who can't support his wife can do it by going to jail," the sheriff explained.

---

## Old Dogs, New Tricks, New Lives

EXTENSION OF REMARKS

OF

## HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a recent article in the 65 magazines entitled "Old Dogs, New Tricks, New Lives," written by Dr. Joseph W. Still, which gives facts disproving many popularly-held ideas on the abilities of our senior citizens.

As director of the Bucks County (Pa.) Health Department, Dr. Still has conducted a constructively critical examination of American education and science which proposes a number of bold new solutions to many problems of the elderly. Our country has need for the services of these older people—to let their skill and experience go unused is a tragic waste of manpower which our economy can ill afford.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

OLD DOGS, NEW TRICKS, NEW LIVES

(By Joseph W. Still, M.D.)

Old adages, like old soldiers, never die. But unlike old soldiers, some of them never quite fade away, even when disproved time and again.

One such adage—"You can't teach old dogs new tricks"—is still with us and doing plenty of mischief, too, for it's being applied to those of us past 40. It discourages millions of men and women from trying or being permitted to try to learn the very tricks they must learn to avoid spending the second half of their lives in boobish boredom.

Why do we accept this innocuous sounding cliche so meekly? One reason is that until recently the number of older people wasn't great enough to make an aging problem. Also, until recently most old people were able to live in rural or suburban areas where they found more to occupy their time than many of today's old people are able to do. Consequently, no one thought much about the validity of the adage. It didn't matter to most people whether it was right or not—for not many people were affected by it.

But when an adage adversely influences employment policies affecting millions over 40, and when it discourages them from learning those things needed to make their later years interesting and happy ones, then it is not just a harmless notion.

Another reason we have accepted this cliche is the common belief that aging sets in at some specific age—most people would probably say about 35 or 40. This view divides our lives into two neat packages—childhood and youth, followed by adulthood and old age.

No one can deny that some important physical changes take place between 35 and 45. Most of us slow down somewhat and gray hairs begin to appear, or on some heads, hair begins to disappear. But many physical changes have been taking place since birth, and continue to occur at all ages throughout life. These physiological facts would hardly be worth discussing, if it were not for the fact that this oversimplified idea about physical aging is being carried over into the psychology realm. Its most subtle presentation is in the form of the "Old dog * * *" adage, so basically fatalistic and pessimistic. This basic attitude focuses all attention on our disabilities and implies that our lives are really complete at about age 35 or 40 and that the remainder is only a sort of grim and stubborn wait for death.

Our bodies and minds are in a continuous state of dynamic change, chemical, physical and psychological throughout life. Consequently, we reach many peaks in our lives. No one age is perfect or ideal as opposed to all others. How then can the different periods of life be compared, for they are too different to warrant close comparison?

As babies, we excel in our capacity to eat, sleep, and grow. We are wonderful vegetables. Psychologically, we are busy forming basic emotional patterns.

In childhood, we reach several peaks as far as auditory, visual and other perceptions are concerned. That is, our full complement of nerves has been formed and organized and our nervous receptivity is at its peak. At this age, we are keen receptors. Intellectually, our attention span is short, and we learn best in frequent but small doses.

In adolescence and youth, we reach peak skills in those physical activities requiring maximum speed and short-term muscle activity, and in the mental ability to memorize abstract information (sense or nonsense).

Sports requiring the greatest stamina and endurance are often dominated by men in their thirties and early forties. This is true especially of marathon running and mountain climbing. In the mental realm, great feats of mathematical imagination have been performed by men in their thirties. In the years 15 to 35 or 40, our various types of physical skills reach peaks. The exact time of occurance of the several peaks varies in different individuals so there is considerable variation within the group. But there is clearly a group difference between the average peak for sprinters, as compared with the average peak for baseball players, for example.

In the forties and fifties, we excel in those activities requiring not only good physical power, but also brainpower * * * the ability to organize others, to lead them, to put in long hours of hard work on abstract problems, to make sound value judgments. These are the peak years for military leaders, engineers, and businessmen. They are action years, but action guided by brain. There is a fusion of brawn and brain, and brain begins to be the more important.

In the fifties and sixties, and beyond, many people begin to see more clearly the large patterns of life. They may describe them and be classed as artists. They may manipulate and try to change them and be classed as politicians. They may study them and be called scientists. In any case, they excel at seeing the large patterns only because they have lived long enough to have studied the whole pattern in more or less detail in many of its smaller areas. They understand quality as well as quantity. Brawn is unimportant in such work * * * brain power has, at this age, become dominant.

Are we going to say the child is growing old at age two because his cells are multiplying less rapidly than at one? Is the marathon champion of 35 or 40 old, because he can't beat the 20-year-old sprinter? Is the sprinter older than the marathon runner because he can't beat him in the marathon?

While, with increasing years, we gradually fall below our peak of physical skills, most of us are able, in the middle years, to maintain our competitive position, even in a total physical sense, by using our brains to spare our muscles. The old pros in sports give us wonderful examples of this. In the later years, good medical care and reasonable amounts of exercise can also do much to preserve our physical capacities at effective levels. Many men are able to do long hours of hard work in their fifties, sixties, and even in their seventies.

As our physical skills change from an emphasis on speed toward greater endurance, our mental capabilities are also changing. If we exercise our intellectual skills they also tend to grow in the direction of toughness to endurance as do physical skills when they are utilized. And we can continue to grow mentally long after physical strength has declined appreciably. Intellectual skills can grow indefinitely * * * so long as severe brain damage does not occur. If a Sophocles, a Victor Hugo, or a Michaelangelo can produce great works of art in their seventies and eighties, then it cannot be argued that age, per se, prevents valuable creative mental activity. The real problem we should be studying is not why we do not have more Michaelangelos at 70, but rather why we do not produce more creative people in the middle years of life. I suspect the reasons will not be found in our genes, but rather in our social attitudes which are discouraging most people from making the necessary effort to develop their mental capacities.

Whether dogs or people learn tricks is a question of motivation. If a dog or a man can be motivated to want to learn, he can and will learn. There are many older people (Grandma Moses is one of the most prominent) who have learned some right clever tricks in all fields in their older years. Many more could and would do so if they were given a little help and encouragement.

In order to understand why some of those who are supposed to be helping our senior citizens are still accepting the "Old dog * * *" idea, we need to look into the business of intelligence testing. Because IQ scores fall with increasing age, it has been widely inferred that man reaches the peak of his intelligence between the ages of 25 and 29. This observation has been interpreted as scientific proof which supports the old adage. Some of the main flaws in this interpretation of these IQ findings are these:

IQ (and most similar) tests and scoring procedures are so constructed that they give maximum advantage to the quick-witted youngster of middle class, northern, white, American background. The slow, deliberate individual or the individual of somewhat unusual background is likely to get a low score. Southern children (Negro and white) get lower scores than northern children. Inadequately stimulated children everywhere get lower scores than those whose minds are stimulated. Edison, Einstein, and Darwin are said to have been rather dull strange children who were not very happy in school. Based on reports of their behavior, it seems quite certain they would not have gotten gifted IQ scores as children. If some of the policies for selecting and segregating the gifted now being so widely and confidently advocated by some educators were then in force, those three great men probably would have had many barriers placed in their intellectual paths. It has been clearly shown that the IQ scores of so-called feeble-minded children, as well as those of underloved children, increase significantly if the environment is properly changed. So the IQ score does not even measure inborn intelligence accurately, even in childhood, much less in adult life.

Another objection to the IQ tests for adults is this. The incentives to acquire the kind of information which dominates in the IQ type tests are strongest in youth. Then you learn such facts and information in order to get passing grades in school so you may later get along in life. It is then very important to learn the definitions of words, various mathematical procedures, historical dates, etc. It is not at all important that most of us retain much of that information, unless we plan a career of being on quiz shows. But the IQ tests penalize the older person when he doesn't remember data that he knows belong in books not in his head.

Finally, IQ type tests do not even attempt to measure the really subtle aspects of mature intelligence which have led to the really great works of art, science and philosophy, so many of which are produced not at age 25 to 29, but in the fifties, sixties, seventies and beyond.

Sweeping scientific and philosophical discoveries can be made and elaborated upon only by people who have lived long enough to collect sufficient data to develop sweeping generalized theories. Although it is said that Darwin had the germ of the evolutionary theory when he was a young man, it took him many more years of searching to amass and arrange and become confident of the evidence, and then to prepare and state his theory in the logical fashion which caused it to be accepted as scientifically proved.

In our other-directed society, most of us tend to act as the prevailing folklore says we should act. Since the folklore (backed by some IQ experts) says we get dumber and dumber as we grow older than age 29, many older people oblige and act the part. Psychologists should be constantly on the alert to protect people from the kinds of damaging misinterpretations I have mentioned. Though many psychologists have always been alert to the dangers inherent in these tests, others have not. Their use has now become so widespread that the abuses could damage a valuable research tool.

One of the most important things to do about the "aging problem" is to challenge and destroy this myth. We must stop saying and thinking "You can't teach old dogs new tricks". We must stop emphasizing the disabilities of people and thereby discouraging them. We must place the emphasis on encouragement of people at all ages to enter into intellectual life and to do the best they can with the abilities they have.

---

## Markle Foundation To Encourage Education

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. NEUBERGER. Mr. President, the Senate soon will be debating appropriations for the National Institutes of Health, in the vital field of medical research. Federal support of medical research is strengthened by all private benefactions in this area. One of the outstanding programs in this respect is that of the Markle Foundation, with its financing of 25 outstanding medical students in the United States and Canada for 5 years each with a sum of $6,000 a year.

An informative and valuable article on the Markle scholarships, with particular emphasis on Dr. Donald E. Pickering, of the University of Oregon Medical School, was published in the Oregonian of Portland, Oreg., of February 8, 1959. The article was written by Jessie Scott, special writer for the Oregonian. I ask unanimous consent, Mr. President, that the article by Mrs. Scott, from the pages of the Oregonian, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOCTOR SHOWS WORKINGS OF ELECTRONIC ANALYZER

(By Jessie Scott)

Three Portland enthusiasts for the Markle Foundation met in the pediatrics department

of the University of Oregon Medical School, Harold S. Hirsch, president of White Stag, was newly back from working for the third time on a Markle Foundation selection committee. With him, to the session in Williamsburg, Va., had gone his wife, Elizabeth.

Oregon's one Markle scholar, Dr. Donald E. Pickering, professor of pediatrics, showed the two a piece of equipment he had helped design.

"Its nickname in the department," mentioned Dr. Pickering, "is the thinking machine."

Actually it is an electronic analyzer. A bit of human tissue, bone development and thyroid problems are under study at present—is taken over by the machine, which renders a report. The Hirsches viewed it with respect. Someone asked if Dr. Pickering was also an engineer.

"No, only a gadgeteer," quipped the doctor.

The $20 million Markle Foundation has, since 1948, shifted its emphasis from projects to men—men with special aptitudes as medical educators. Markle scholars—about 25 chosen annually from 65 qualified medical schools of the United States and Canada—get $6,000 a year for 5 years. This money goes to the medical schools where they will teach, to be used as salary, in research, or for equipment and assistants.

Dr. Pickering, University of California Medical School graduate, came to University of Oregon Medical School faculty as a Markle scholar in 1957 and has 3 more years to go. A previous Markle scholar, Dr. John E. Harris, after a tour of duty with the U.S. medical faculty, has joined the staff of the University of Minnesota Medical School.

It is in the selection of these Markle scholars—few but important, and selected largely on a basis of intangibles such as capacity for original thought, that the five committees of selection come in. They are laymen, not physicians, and are about equally divided between educators and businessmen, bankers, lawyers, and journalists.

HIRSCH REPEATS

Portland's first Markle selection committeeman was the late Henry L. Corbett, who served twice. Each committee, having ended its work, is dissolved. It is considered a compliment to be the layman's ability to judge a candidate's qualifications, when he is asked to serve a further time.

Hirsch, listed in the committee as a manufacturer, served his third time in late January. President Richard H. Sullivan, of Reed College, also a repeater as committeeman, served for the second time in January, but with a different group. Neither was on the committee which considered the candidacy of Dr. Pickering. Foundation officials arrange to have small groups of about a dozen candidates meet with selection committees from a different region and with no previous contacts.

Wives of committeemen are invited to attend these 3-day house-party style committee sessions strictly as silent partners, Mrs. Sullivan and Mrs. Hirsch were careful to point out.

The committees meet at such places as Montebello, Quebec; Williamsburg, Va.; or Colorado Springs, Colo.; and eat, talk, perhaps play bridge together while judgments are being made. Since all candidates are highly qualified or they would not be there, the choice is difficult.

## Political Situation in Hawaii

EXTENSION OF REMARKS
OF
## HON. ERNEST GRUENING
OF ALASKA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. GRUENING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a dispatch from Honolulu by Lawrence E. Davies, the western correspondent of the New York Times, which gives a forecast of the political situation in our shortly to be 50th State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 16, 1957]

HAWAII GIRDS FOR STATE ELECTION; BURNS MAY OPPOSE GOVERNOR QUINN

(By Lawrence E. Davies)

HONOLULU, March 15.—Hawaiian leaders tentatively bill Quinn versus BURNS as the main event of the first election of the 50th State.

This would pit the Territory's Gov. William F. Quinn, a Republican, against the Democratic Delegate to Congress, JOHN A. BURNS, 49, for the governorship.

But neither has announced his candidacy definitely. There are matters not only of personal choice and Territorial party committee preference, but also the national leadership of each major party to be considered.

Delegate BURNS is given much of the credit for building the Democratic Party of the islands into a winning combination that seized the legislature in 1954 after half a century of failures.

He is known to be inclined to run for the Senate. On the other hand, he is a strong party man and more than once has bowed to the wishes of the party leadership.

With some exceptions, the Democratic tacticians in Hawaii would like to see him in the Governor's office at Iolani Palace.

Governor Quinn indicated during the battle for statehood that he wanted to be the first elected Governor of the 50th State.

He has made no flat announcement, however. Moreover, there is speculation here over how the Eisenhower administration is going to respond.

The forthcoming political struggle here could be Alaska all over again. In the 49th State, Walter J. Hickel, Republican national committeeman, was insistent that Mike Stepovich, the Eisenhower appointee as Governor, should run for that office in the State election.

SEATON FAVORED SENATE

The Secretary of the Interior, Fred A. Seaton, confident that Mr. Stepovich would be elected to one of the Senate seats, pressed for his candidacy for that post.

As things turned out, Mr. Stepovich was beaten for Senator by Dr. ERNEST GRUENING and the Democrats made a clean sweep of the five major posts in the first election for State offices last November.

Democrats of Hawaii are confident that Delegate BURNS can take the measure of Governor Quinn or any other candidate the Republicans may offer, either for Governor or Senator.

The question many ask is this: will the national administration leave the political maneuvering to the island Republican leadership or will it seek to dictate strategy from Washington?

BURNS WORD AWAITED

With a few exceptions potential Democratic candidates for major offices under the Hawaiian state constitution are deferring to Delegate BURNS. They want to know his plans before making their own.

One Republican, however, has vowed that he will seek the governorship whether Mr. Quinn does or not. He is Samuel Wilder King, 72, a former Delegate to Congress, a former Governor, and one of Hawaii's veteran workers for statehood.

He is convalescing from an operation performed last week.

Mr. King, who is part Hawaiian, was appointed Governor by President Eisenhower in 1953. This made him the first Governor of Hawaiian ancestry. There was considerable resentment over the manner he was displaced by Mr. Quinn in 1957.

DETAILS RECOUNTED

A friend tells the story:

"Sam got a telephone call from Washington at 11 o'clock one morning and was told his resignation was wanted. There was an element of cruelty in the maneuver and it has left a lot of resentment to this day.

On the Democratic side, should Delegate BURNS decide to seek a Senate seat, 76-year-old William H. Heen, another of the island's political warhorses, is mentioned for Governor.

He is vigorous despite his age. A Hawaiian-Chinese, he was appointed by President Wilson to the first circuit court here in 1917. He resigned after 2 years on the bench and served 32 years in the Territorial senate, 4 of them as senate president.

The party that captures the governorship will be in a highly strategic position in the island for years. The first Governor will appoint the heads of the 20 departments making up the executive branch of the government.

He will name a chief justice and four associate justices of the circuit court. Further, he will designate the makeup of various boards and commissions.

## Melba Philleo, Winner of the "I Speak for Democracy" Contest in Alaska

EXTENSION OF REMARKS
OF
## HON. ERNEST GRUENING
OF ALASKA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. GRUENING. Mr. President, a couple of weeks ago, I had the privilege of addressing a most stimulating gathering, at which were assembled in Washington the winners of the "I Speak for Democracy" contest—boys and girls from the 49 States and the District of Columbia who had won local contests in their home States on this important subject.

The winner of the Alaska contest was Melba Philleo, of Fairbanks, Alaska.

It gives me great pleasure to ask unanimous consent that her contribution, "I Speak for Democracy," be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Melba Philleo, Fairbanks, Alaska)

I speak for democracy? What is democracy? What does it mean to me?

Whenever I think of democracy, I think of a flag. The flag is that of the United States of America. A flag, as composed of threads—thousands of threads, and I think of each thread as representing a group within our society. Each group represents a way of life, and just as each thread is vital to the pattern of the flag, so each group of people and each individual within the group is important in our society. If one thread in the flag is pulled, the entire pattern becomes distorted, and it follows that the entire community feels the effect when one group of people, no matter how small, tries to harm or intimidate another group. Is it democratic to say that one person is inferior to another because of his religion, or because of his lack of formal religious ties?

I am sure that most individuals, if they considered carefully would not say that a Protestant is superior or inferior to a Jew or to a Catholic, but that is exactly what a small, selfish group of bigots are proposing when they bomb Jewish temples, or close schools to Negroes. America is a land of freedom. People who have deliberately closed their eyes to this sort of thing are as guilty of prejudice as are those who have participated actively in such violence. America, the land of the free; this is what we call our land.

But is it really the land of the free? Is it freedom to be kept out of school because of your color? Is it freedom to be forced, because of restrictive covenants, to live in a certain part of a city because you speak with an accent? Of course it isn't, but these are the things the Communists have used and are using to influence people of other countries.

These things that really do happen, that are on radios and in the newspapers, these are the things which make people in other countries wonder if America is really such a wonderful place in which to live. How can we expect people to believe us when we tell them the good things about America?

Even though we do have freedom of speech, freedom of the press, and a right to ballot secretly; even though these things are part of our Government, and the main part, these are surely not the things that are told people in different lands by enemies of the United States. In the preamble of the Constitution is says:

"We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution, for the United States of America."

These were the ideals upon which the United States was founded. Do they still sum up the hopes and aspirations of its people? If they do, each individual must strive to see that these are the things that happen. Each one of us must make sure that the United States of America is, and stays, a democracy.

## Mrs. Lucile Sims, South Carolina Mother of 1959

EXTENSION OF REMARKS

OF

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "1959 South Carolina Mother Is Mrs. Sims," published in the State in Columbia, S.C.

The article in the State of March 13, 1959, reports the news that Mrs. Lucile Howell Sims of Orangeburg, S.C., widow of Hugo S. Sims and the mother of three outstanding sons—Hugo S. Sims, Jr., Edward H. Sims and Henry Sims II—has been selected as South Carolina's Mother of the Year for 1959. This is a very high honor, and one which is well deserved by Mr. Sims. She is a lady of high intellect, dignity, and charm, and has established a record of great public service in religious, civic, and educational affairs in her community.

Mrs. Sims' late husband was one of South Carolina's most distinguished and outstanding attorneys and newspaper editors, who himself performed a great service for his community, State and Nation.

Her three sons, although still quite young, have been very successful. Hugh S. Sims, Jr., has served as a Member of Congress and is presently enjoying a successful practice of law with Henry Sims II, who recently completed his law studies at the University of South Carolina, where he served as president of the law federation. Edward Sims is an outstanding newspaper editor, author, and correspondent, and was recently selected by the South Carolina Jaycees as the Young Man of the Year. All three of these young men have outstanding military service records, Hugo, Jr., having been recommended in World War II for the Congressional Medal Honor.

I commend the State mother committee for their wisdom in selecting Mrs. Sims to represent South Carolina in the National Mother of the Year competition which will be held later in the year.

South Carolina is proud of the fact that in 1958 our State Mother of the Year, Mrs. David R. Coker, of Hartsville, was selected as the American Mother of the Year. We in South Carolina are hopeful that our State may again be honored by having our State mother selected American Mother of the Year. We feel we have a most worthy candidate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH CAROLINA MOTHER, 1959, IS MRS. SIMS

Mrs. Lucile Howell Sims, widow of Hugo S. Sims, of Orangeburg was yesterday named State Mother of the Year for South Carolina.

The mother of three outstanding sons, Mrs. Sims still carries on a host of activities requiring diverse talents. She has long been active in the religious, civic, and educational affairs of her native city. She also continues to write a column for the Orangeburg Times and Democrat.

Possessing boundless energy, a keen mind and a radiant personality, Mrs. Sims has taught for many years in the St. Paul Methodist Church Sunday School, has operated a private kindergarten for preschool children, taught school, served as a director of the American Red Cross, is a past president of the Orangeburg Garden Club, a past president of the Town Players of Orangeburg, has been the Society editor of the Orangeburg Times-Democrat, writes a column, and been active in aiding underprivileged.

The new State Mother of 1959 will be honored at special services at the church of her choice on Mother's Day. She will also receive a special plaque, and will be presented a State Mothers pin.

In addition, she automatically becomes the South Carolina nominee for national mother, and will be entitled to participate in a national conference of State mothers in New York City.

Mrs. Sims will succeed Mrs. David R. Coker of Hartsville as State Mother. Mrs. Coker was also named National Mother last year, and was sent to Europe carrying a message from American mothers to European mothers.

The four men in Mrs. Sims' life have all been eminently successful. Her husband was for many years city attorney for Orangeburg, and the editor of the Orangeburg newspaper.

Mr. Sims was killed in an automobile accident in 1951 while returning from Spartanburg where he had attended a meeting of the board of trustees of Wofford College. He was chairman of the board at the time. Mrs. Sims was badly injured in the accident, and did not fully recuperate for about a year.

Mr. Sims, in addition to his work as an editor and an attorney, was a past president of the Orangeburg Rotary Club, a trustee for the Orangeburg City Schools, and was well known for his speaking ability.

The other three men in the life of this outstanding South Carolina mother are Hugo S. Sims, Jr., Edward H. Sims, and Henry Sims II, born in 1921, 1923, and 1931, respectively.

Hugo, Jr., a graduate of Wofford, entered the service during World War II as a private and came out a much decorated captain.

As a paratrooper, Hugo jumped in Normandy and Holland and was in Bastogne during the siege of that town. He won the Distinguished Service Cross as the leader of the "Incredible Patrol" which went behind the German lines and brought back 33 German prisoners.

The story of the patrol was carried in Life magazine, and he also received medals from Holland, Belgium and France. After release from active duty, he studied law at the University of South Carolina, was elected to the State legislature while in law school, and subsequently became the youngest congressman in that body. He was 26 when elected Second District representative. He made the race for lieutenant governor of South Carolina last summer.

Edward H., the second son, was only recently named Jaycee Young Man of the Year for South Carolina, and his recently published book "American Aces" has gone into its second edition.

In 1947 Edward founded a Washington bureau for daily newspapers (the State uses the service) and also became Washington correspondent for Editor's Copy Syndicate, a national news and feature service started by his father in 1918. He is now editor of the syndicate, and writes a column and has been

on the air with a news analysis program since 1951.

In recent years he has traveled abroad extensively, and has written several articles on foreign and economic policy. He is also editor of the Orangeburg Times and Democrat.

Henry, the youngest son, only recently completed his law studies at the University of South Carolina, where he served as president of the University of South Carolina Law Federation. He is now a member of the Sims & Sims law firm, and an active worker in St. Andrew's Methodist Church.

He spent 2 years in the armed services as a paratroop lieutenant. He was stationed at Heilbronn, Germany, a part of this time.

Mrs. Sims was born in 1894 in Orangeburg, a daughter of the late Charles L. and Jessie Smoak Howell. Her father died when she was 13, and her mother died of cancer in 1914.

She was a sophomore at Winthrop when her mother became ill, and she had to leave school to be with her mother in Florida. Her mother died a few months later.

After teaching school for 2 years in Alabama, she returned to Orangeburg County and taught for a year at West Middle school. In the spring of that school year, she and Mr. Sims, who had just opened his law office and was beginning a weekly editorial syndicate for newspapers, were married.

Later other features were added to the syndicated offerings, four of which were written by Mrs. Sims—"Louisa's Letter," "Screen Stars," "Movie Reviews," and "Fashions." "Louisa's Letter" is still written by Mrs. Sims.

In addition to the columns, Mrs. Sims also served as society editor of the then weekly Orangeburg Sun.

Despite the demands of writing for the syndicate and editing the society page, Mrs. Sims managed to teach a Sunday school class and take part in community projects.

As the depression of the 1930's deepened, she opened a private kindergarten and taught in the school for 7 years.

When World War II came along, Mrs. Sims headed the Women's Civilian Defense unit at Orangeburg .

For the past decade Mrs. Sims has served as chairman of the board of the Orangeburg Day Nursery for underprivileged children, a charitable institution.

The nursery was started in an old store building but now, with three workers, is housed on city property. It is entirely supported by donations and cares for and feeds from 24 to 40 underprivileged children 5 days per week.

Mrs. Sims was instrumental in investigating conditions in the jails for children, and helped publicize a report of these conditions. As a result, a bill was passed establishing a juvenile court and authorizing a probation officer for children.

She has been active in Red Cross work, having served as a director and having completed a canteen course, first aid, and served as a gray lady in the hospital.

She has also served as chairman of the tuberculosis drive, and is a past president of the Orangeburg Winthrop Daughters.

Active in the Orangeburg Garden Club, she is a past State treasurer and a past State historian for the Garden Clubs of South Carolina. She has appeared on television with a program on roses sponsored by the Garden Club of South Carolina. She fills numerous speaking engagements, discussing roses, European travel, book reviews, and community needs.

She had the lead role in "Kind Lady," a Town Players production directed by Murray Bennett of Charleston in 1953, and has played numerous other roles. She is a past president of the organization.

In addition to her other activities, she now has eight grandchildren to help keep her occupied.

Regarding her church activities, her pastor has this to say of the new 1959 State mother:

"She has a deeply religious nature and has imparted spiritual principles to her family, and to others through her writings."

Selection of the State mother was made by the State mothers committee, composed of a number of outstanding South Carolinians and all previous State mothers.

Serving on the committee are Caroline McKissick Belser, chairman; Mrs. B. P. Davies, of Barnwell; Dr. A. C. Flora, of Columbia; Mrs. Archie Schiffley, of Orangeburg; Mrs. Taylor Stukes, of Manning; Mrs. R. D. Wright, of Newberry; Mrs. Solomon Blatt, of Barnwell; Mrs. Robert Coker, of Hartsville, and Mrs. Patrick C. Smith, of Columbia.

Those previously named State mothers include Mrs. J. D. Arthur, Union, 1942; Mrs. Frank Price, Florence, 1943; Mrs. Annie Hudgens Dunlap, Mountville, 1944; Mrs. A. E. Holler, Ridge Spring and Columbia, 1945.

Also, Mrs. Andrew J. Evans, Dillon, 1946; Mrs. John William Thurmond, Edgefield, 1947; Mrs. Constance Furman Herbert, Sumter, 1948; Mrs. Blanche Mobley Creech, Spartanburg, 1949; Mrs. E. P. Kennedy, Aiken, 1950.

Also, Mrs. Lee Muller, Blythewood, 1951; Mrs. John S. Baskin, Bishopville, 1952; Mrs. St. Clair P. Guess, Denmark, 1953; Mrs. Luther Edward Gatlin, Sr., Newberry, 1954; Mrs. Marion E. Carter, Elliott, 1956.

Also, Mrs. Dewitt Talmadge Latimer, West Columbia, 1956; Mrs. Rosalie Ciatt Rayle, Sumter, 1957, and Mrs. David R. Coker, Hartsville, 1958.

## Panama Canal Zone: Focus of Communist Psychological Warfare

EXTENSION OF REMARKS

OF

### HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. WALTER. Mr. Speaker, among the outstanding characteristics of the Communist conspiracy are its worldwide operations so well illustrated by certain recent events on the Isthmus of Panama.

An enlightening article on Panama-United States relations by Edward Hunter was featured in the March 14, 1959, issue of National Review, the well-known journal of fact and opinion published in New York.

Mr. Hunter, an old China hand, and author of "Brainwashing in Red China" and "Black Book on Red China," is exceptionally well qualified to speak on his subject.

Under leave to extend my remarks at this point in the RECORD, I quote the indicated article:

WE'RE ASKING FOR IT IN PANAMA

(By Edward Hunter)

Pigeons come home to roost. This is the plain logic behind much of the news from Latin America. Panama is a specific example. Organized student groups already have demonstrated for a 50–50 split on the Panama Canal tolls, ignoring U.S. expenditures; for a monopoly of canal jobs by Spanish-speaking peoples, which would squeeze out the Yankees; for the return of the canal through nationalization.

The political opposition to the present Panama regime has used students callously as a ferment, incited and guided from the shadows by Communists. The demagogs are hellbent for all the U.S. cash and spoils they see others gathering in Europe and Asia by irresponsible tactics. Why should Panamanians have to work for a living when they have this lucrative canal running through their country?

They see the "Colossus of the North" talking big but ultimately giving in whenever anyone creates trouble. The pattern is simply to raise the roof, then relax in return for concessions by Washington in return for agreeing to negotiate what before had not been considered subject to negotiation; and then to repeat the process as often as convenient. If America's enemies can get away with it, why not her friends?

This is the attitude behind cryptic items that have appeared spasmodically in some of our newspapers, such as a couple of paragraphs in the New York Herald Tribune not long ago, from AP wires, reading:

"The seizure of two batches of arms by the national guard has nipped a plot of students and opposition politicians for a nationwide uprising within a week, official sources said.

"The seizure of arms on Monday and yesterday resulted in 12 arrests, including 4 persons identified as students and 2 prominent in opposition groups. Three other arms caches involving students have been uncovered in the last 2 months."

A subsequent item told of eight bomb explosions in Panama City and of a "call by striking students for a general nationwide strike against President Ernesto de La Guardia's government." Schools were closed, but otherwise the strike fizzled out. There was no issue. Somebody behind the scenes had revived an old issue, created in a week of riots the preceding May when a number of persons, including a student, were killed and many more wounded.

Students, principally high school boys and girls, were seen during those riots, fanning out according to textbook rules for an insurrection. Molotov cocktails were exploded and many buildings badly damaged. Roadblocks cut off sections of the city; all business was suspended; shops were closed; Government offices were besieged; public services, including newspaper publication, were halted.

STUDENTS AS PAWNS

The students were not the prime movers in all this. They were being used. Student representatives protested later that they weren't the people who had started overturning autos on the streets. They declared, too, that politicians had tried to sell them arms. A dirty war was being waged, with children as pawns. This was not in the Latin character.

Witnesses generally agreed that a sprinkling of men in their thirties and forties had mingled with the children and had done most of the actual destruction and shooting. At a certain hour a big gang of hoodlums, brought in from outside, shoeless and raging for loot, were set loose on the capital. All this took planning.

Whose planning it was, behind the students and behind the politicians who would play any game for a chance at power, was shown when one demonstration nearly miscarried. On the afternoon of May 22, mothers and girl students were assembled and started marching toward the presidential palace along a route that would take hours, in a fevered city with snipers wildly shooting about. When they reached the National Bank corner, male students, responding to their true, inner character, spontaneously formed a cordon, linking hands, to march in front as protection. By then more than a thousand mothers and girls were in line. But this was obviously contrary to someone's intent. They had gone only a short distance when a notorious professional student, old enough to be the father of some of the boys, dashed out in front. He was

Cleto Manuel Sousa, a Communist organizer who had made his trek to Moscow for learning. He took charge, made a short speech, called for the singing of the national anthem, and instructed the men and boys to stand aside and let the women go on alone. Procedure having been restored according to clandestine Red planning, he left the scene.

It was all over very briefly; but it takes only a moment for a shade to be blown aside and disclose what lies behind. Professional students are a routine Red device. They are Soviet agents who persist in flunking courses in order to be able to remain in school and carry on Communist activity. This was the tactic used at Yenching University outside Peking, and was responsible for the entire last graduating class in that liberal American university, which didn't believe in interfering with student activities, going over to the Communists.

There are comparatively few Communists in Panama. Everyone agrees that the United States has many true friends there. But it takes only one individual in the right spot—one Hiss—to deflect an organization into a pro-Red line. Communism need never be mentioned. A few Reds, in contact with experienced agents of the Peking-Moscow axis in South America, stand ready to exploit a favorable situation when it arrives, and once more America won't know what has hit its international affairs.

This phase of Communist planning has been carried on patiently for years. It first came to my attention in March 1935 when I was covering a spy trial in Paris for International News Service. The 23 Reds involved were mostly from Eastern Europe, but included a young American couple from East Orange, N.J. They were Robert Gordon Switz, a commercial aviator and Princeton graduate, and his dainty wife, Marjorie Tilley, a Vassar graduate who turned out to be an expert on invisible photography. They turned state's evidence in return for their release. Most of the others got maximum prison terms, which, being only 5 years, couldn't have fazed them less. As I witnessed the trial from day to day, I couldn't help noticing the esprit de corps among them, the way they collaborated, their strange outside contacts, and their triumphantly exchanged raised-fist salute when they were taken from the dock to serve their terms, which they obviously regarded as a brief interlude in their professional activities.

What especially struck me, as an American, was Switz' casual remark to the court that his missions for the Red network included work in the Panama Canal Zone. I asked the judge about this. He said yes, Switz had referred to having spied for Moscow at the Panama Canal; but the matter was not investigated because it concerned America, and the French Government was interested only in what happened on its own soil. Paris had informed the U.S. Embassy, though, and I went over to inquire. The most personable, certainly the most informative man in the American Embassy was a lanky young consul named Bob Murphy, now Deputy Under Secretary of State. He assured me that the tip had been cabled to Washington, but what interest, if any, our Government had shown in it I could never learn. Those were united front days. I tried to trace the Switzes on their release, to ask them about it, but they disappeared.

What also struck me was the way this important news was slurred over in the American press. Time gave it only a couple of paragraphs, making it sound like a joke. Only later, when I joined the Newspaper Guild in New York and found myself in the thick of the fight that succeeded in ending its Red domination, did I learn how successfully the Communists had planted Red cells in our most conservative publications.

What was obvious, too, was that Panama Canal espionage was being directed from outside the United States by American citizens operating abroad. I got another insight into this while covering the Spanish civil war. Every American recruit who joined the International Brigade was at once relieved of his passport, which was never returned. The passports were immediately passed on to Red operatives. Unlimited access to American passports is a very important matter for the Communist world network. I told Murphy about this, too. He nodded. He knew. But what could he do? He was only a consul.

AMERICAN APATHY

There are few subjects in which the American public appears to show less interest—perhaps taking for granted that all is under perfect control—than the Panama Canal. An exception is DANIEL J. FLOOD, Congressman from Wilkes-Barre, Pennsylvania is far from Panama, but what Mr. FLOOD came upon during his routine work in congressional committees so alarmed him that he fortunately made it his personal crusade. The CONGRESSIONAL RECORD is more filed away than read, but anyone who took the time and trouble to look up the speeches and insertions contributed by FLOOD on this critical issue would have a book that might not be a best seller, but would surely be one of the most informative volumes we could have. An entire drawer in a big filing cabinet in his office is stuffed with material on the Panama Canal, and it bears out the premise that the Communist psychological warfare machine is by no means neglecting the Canal Zone.

In overseas Chinese communities everywhere, the utmost pressure is exerted by Peiping, through tactics such as the holding of relatives on the Chinese mainland as hostages, to enforce collaboration in Red objectives. We would be naive to believe that the same thing is not being attempted, and to an unknowable extent succeeding, among the large Chinese community in Panama. Every indication of free world—especially American—surrender to Red demands makes acquiescence in the scheme more probable.

Panamanian officials themselves, from the presidential palace down, taking their cue from Washington's so-called liberal ideological imperialism, are flirting with pro-Reds just in case of further surrender to communism. The Panamanian Government has done so officially in the U.N. In mid-September its foreign minister, in what the Panamanian press called a vibrant speech, reasserted Panama's claim to sovereignty in the zone, which has never been denied; but he left unstated the limitations of a specified, permanent nature set upon this sovereignty by treaty.

Washington seems content so long as the English-language press in Panama remains comparatively restrained. Meanwhile practically the whole Spanish-language press, which the population reads almost exclusively, has been beating the drum for the most extreme demands, including nationalization. This satisfies Moscow, for with a climate of opinion sufficiently doctored, and sufficient propaganda points granted—the latest is the demand that the Panamanian flag fly in the Canal Zone instead of the American—when the time is ripe the issue can be made very uncomfortable for the United States. Doubletalk in the United Nations would be sure to put us in the wrong; this has been the routine, with vehemence in lobby discussions where parliamentary trickery is hatched. And in Panama, high school boys conditioned to participate unthinkingly in demagogic demonstrations can be depended upon for any exploitation the Red interests may require.

That is, if we continue to present a spectacle of surrender made to appear as a concession after a threat, and of weakness in character and policy generally. So long as the evidence shows that foreign countries can take advantage of Kremlin pressure against the United States to obtain grants otherwise unthinkable, that kind of blackmail will continue. No concessions the United States can make will be satisfactory; there will always be new demands for more. When the 1955 agreement was made granting big financial and economic concessions to Panama, a friend of mine connected with that Government was unreservedly delighted. This treaty seemed to settle the issue for years to come. But the ink was hardly dry before voices from the shadows began impugning American motives and insisting on more. A Panamanian President was assassinated. The wheel turned back to where it had started, except that this time agitators became more reckless with the truth in framing their grievances. Why not? Under such circumstances they can hardly lose.

On our part, we consider it illiberal to tell the facts straight. The construction of the Suez Canal was child's play compared to that of the Panama Canal. Its historic background is utterly different. From the start, the Suez Canal was recognized as Egyptian, with a lease that was to end only a few years after Nasser seized the waterway. In Panama, we first had to create a country, which in return granted us canal rights in perpetuity. We had to make the land habitable, by almost miraculous measures of sanitation. Out of this experience a Panamanian character has developed, in some ways much akin to our own, just as determined on freedom as the Filipino. We can be proud, along with the Panamanians, of this development. Why should we, or they, treat it as if it were something to be ashamed of? Let the facts be known to every high-school student in Panama as in America, and they would make short shrift of the Red propaganda.

FIRM POLICY NEEDED

We should heed the warning of the self-avowed Marxist, Diogenes de la Rosa, the Panamanian President's economic adviser and confidant, Director of the National Economic Council. Panamanians, he said, are so unsympathetic to Americans that they might help the enemy in case of war. This could only mean the enemy of their own country as well as the United States, and clearly refers to the Soviet Union. In spite of everything we have done, he declared, "The Panamanians don't believe the United States keeps its promises to Panama." This indicates a dangerous failure in our public relations.

Mr. de la Roca's views echo what many in other Latin American countries are saying, especially our friends. What is needed in this situation is a policy understandable in its integrity to the simplest man anywhere in the world, conducted with the humility, firmness of principle and friendliness that have marked the American of past generations. We must come to believe in ourselves once more before we can expect others to regain trust in us.

---

## We Are Duped With Security

EXTENSION OF REMARKS
OF
## HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. McCORMACK. Mr. Speaker, the recent mandatory controls on oil imports of crude unfinished and finished oil products (which includes residual oil) by order of President Eisenhower is a severe blow to New England, its industries, its workers, and its people.

It is estimated that this will result in increased costs to New England of at least $100 million annually.

Throughout the past 6 years this administration has shown a disregard for the best interest of New England.

For example, within this past few months, in addition to this blow to New England, orders have been issued that will in the near future result in the virtual closing of the South Boston Naval Annex, and of the naval ammunition depot located in Hingham, Mass.

It is only a year ago that an important activity which meant so much to the businessmen of New England and particularly small businesses located at the Portsmouth Navy yard was closed and transferred to another section of the country.

As incidence of the resentment of the people of New England on the recent action taken by President Eisenhower, I enclose in my remarks an editorial "We are Duped With Security", appearing in the March 12, 1959, issue of the Boston Herald, a strong Republican newspaper.

WE ARE DUPED WITH SECURITY

In the deceptive name of national security, the administration in Washington has moved to put New England into a fuel hotspot. Again flagrant protection has been cunningly disguised as defense.

Here's how it goes:

New England uses large quantities of residual fuel oil in industry, in nonresidential heating and in the production of electricity. More than 55 percent is imported, mostly from Venezuela, which produces a crude suitable for topping out other products and leaving this heavy oil.

Domestic crudes are not so well suited, and the prices of other products are so much higher that refineries here operate more and more without any residual. In 1950 residual oil was 27 percent of domestic refinery production; today it is 12 to 14 percent and dropping.

Clearly New England is sharply dependent on imported residual fuel oil. Yet the Government has just announced that it will impose import quotas on residual as well as on crude oil, gasoline, and other products.

In deference to protests from this region, the administrator of the program said, disarmingly, that New England would be affected to only a small degree; that the quota on residual for the country east of the Rockies would be not a great deal less than present imports.

This is a trap. In any competitive field, it takes only a little less than enough to supply the demand to set the price soaring. In the winter of 1947–48 a shortage of only 1 percent sent fuel prices up in New England at the rate of at least $100 million annually.

In other words, the domestic oil producers, whose interest in exploration and development of new petroleum fields is supposed to be indispensable, are to get only a slight lift in demand for domestic residual, but to pay for that, New England is to be stuck with much higher prices.

Does that make sense? Or have the coal interests bilked the Government into contriving a better competitive position for coal in New England?

In this colder than normal winter, substantial additional amounts of heating oils came in to New England from Halifax, Puerto Rico, Venezuela, and California by boat, simply because our usual domestic sources could not meet the demand. But maybe New England is expendable and can be allowed to freeze for the good of security. Or made to pay plenty.

The security angle is the thin nest subterfuge in all this business. Canada is part of our continental defense, yet we slap quotas on her oil. Venezuela would be an ideal source for oil in case of war, yet she is quotaed, too.

The fleets of tankers and the docks and handling equipment were invaluable in the Suez crisis. Do we give them up in the name of a dubious security? Or is security only for Texans?

There should be no restrictions on residual oil imports. New England, too, has a right to security.

## Tribute to Jack Burns

EXTENSION OF REMARKS
OF
## HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. GRUENING. Mr. President, Alaskans are extremely grateful to many people for their great assistance in helping us to secure statehood, and if I were to list those to whom Alaskans feel deeply indebted, I would occupy far more than the 3 minutes at my disposal. But particularly Alaskans feel grateful to delegate JACK BURNS for his statesmanlike attitude during the 85th Congress, in which he resisted all efforts, all political attacks, to push him into a position where he would insist that Hawaiian statehood be considered at the same time or immediately after Alaskan statehood.

We knew, as he did, from past experience that that move would be fatal to the success of both statehood bills. Had he acted otherwise we would not now be rejoicing at the admission of Hawaii as our 50th State.

"His Tactics Paid Off" is the title of an article published in this morning's New York Times about JACK BURNS, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 16, 1959]

JOHN ANTHONY BURNS—HIS TACTICS PAID OFF

HONOLULU, March 15.—Less than a year ago JOHN ANTHONY BURNS was regarded by many Hawaiians as little short of a traitor to his island constituency.

The Delegate to Congress, a Democrat, had advised having Hawaii step aside in its drive for statehood to give Alaska the honor of putting the 49th star on the flag. Republican leaders and some Democrats accused him of lying down on the job, of selling out. They bitterly refused to support his tactics, despite his confidence that Hawaii would be a State before the end of 1959 if Alaska were successful. He even promised that unless Hawaii won statehood at this session of Congress he would not run again.

Now the islanders have seen his tactical move pay off. Political leaders view him as a candidate to be feared by any Republican. And he is expected to be his party's candidate either for Governor or the U.S. Senate.

The Delegate will be 50 years old on March 30. He wears $125 gray suits and polka-dot ties and is an expert politician. Wearing pink carnation leis in a campaign he walks up to the voter and says politely: "My name is BURNS, may I shake your hand?"

The son of an Army regular, Mr. BURNS was born at Fort Assinneboine, Mont. His family brought him to Hawaii when he was 4. He attended the University of Hawaii but had to drop out because of the depression.

At college he worked as a messenger boy, a soda clerk, a newsboy, and a pineapple cannery hand. He also spent a couple of summers in Kansas wheatfields.

FIRST IN POLICE TEST

The depression years helped shape the BURNS philosophy and career. Finding jobs scarce here and on the mainland, he took a Honolulu police examination. He placed first. He started as a patrolman in April 1934, and was a captain when he left the department 11 years later.

Here he won the gratitude and the support of islanders of Japanese ancestry, of whom there are around 200,000. During the war he formed a contact group in the police department dedicated to restoring morale to the frightened Nisei and their parents.

Mr. BURNS' defense of the Japanese-Americans and his belief in a continuation of civil government in Hawaii were openly expressed.

He and his wife, the former Beatrice Van Fleet, have three children, John Jr., Mary, and James Seishiro Burns.

James' middle name—Japanese—is taken from a nurse who attended Mrs. Burns during a long convalescence from a poliomyelitis attack 20 years ago.

Mr. BURNS says he looks at all major issues in the light of "the morality that was instilled in me," and asserts:

"I do what I think is right regardless of the consequences."

## Panama Canal: United States Irritated Over Agitations

EXTENSION OF REMARKS
OF
## HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. WALTER. Mr. Speaker, a recent news story on the cumulating isthmian developments affecting the Panama Canal by Walter C. Hornaday, chief of the Washington Bureau of the Dallas (Tex.) Morning News, was published in the March 1, 1959, issue of that paper.

Statements in it attributed to Representative DANIEL J. FLOOD, of Pennsylvania were made by him in an address on February 25, 1959. It is unfortunate that the State Department, in its extreme desire to placate demagogic and self-serving elements in other countries, quite uniformly pursues the path of least resistance well illustrated in the attitude ascribed to it in the indicated article.

Under leave to extend, I include as part of these remarks the indicated news story:

UNITED STATES IRRITATED BY EFFORTS OF PANAMA TO HIKE REVENUE

(By Walter C. Hornaday)

WASHINGTON.—The tiny Republic of Panama, lying across the narrow neck connecting North and South America, is becoming a soruce of increasing irritation to the United States.

Panamanian politicians seem to stay up late at night thinking up ways to annoy this country and extract tribute from the Panama Canal.

The latest action was a declaration by the Government of Panama that its boundaries extend out into the Atlantic and Pacific Oceans 12 miles, instead of the accepted 3 miles.

The effect of this extension has been to surround with Panama territory a belt 9 miles wide at the entrances to the canal through which ships must pass.

The State Department protested and asked Panama to reconsider, but the Panama National Assembly voted unanimously not to reconsider for any reason whatever.

There have been alarming statements made about the danger of this 12-mile zone to the canal. Representative DANIEL FLOOD, Democrat, of Pennsylvania, said on the House floor last week that the encirclement made the United States-controlled Canal Zone across the isthmus another Berlin.

FLOOD asserted that Panama officials have stated that the country should demand half of the gross revenues of the canal. In asserting sovereignty 12 miles out, it was claimed that Panama could require vessels to display the Panama flag, exercise vigilance over shipping to maintain internal security, and generally harass foreign shipping.

The Congressman declared that the Panama Canal, through this country's diplomatic failures in dealing with Panama, has become the tiny Republic's milk cow. Panama is using the canal as an international relief agency, he said. FLOOD called for the United States to stop playing the part of "Uncle Sap."

FLOOD figured that Panama believes that the canal is a monopoly and that the United States and other shipping must use that route to go between the two oceans. He said investigations are now being made of another location to relieve traffic from the Panama passageway.

The Pennsylvania Congressman, called the watchdog of the canal by his colleagues, deplored the actions of some of Panama's heedless leaders and agitators. He said they seem more determined to follow the example of Egypt in the Suez crisis and Communists rather than the real interests of their country.

"All these radical and impossible demands in Panama can have but one result, that of helping to dig the grave of the Panamanian Republic," commented FLOOD. "Though radical elements may be planning murder, they are actually preparing for suicide."

FLOOD saw the hand of the Communists in the trouble over Panama. He believed the Communist movement in Latin America has been focused on the canal for the purpose of destroying amicable relations between this country and Panama. Complete liquidation of American controls over the canal is the Communist aim, he asserted.

The State Department doesn't take the situation in Panama as seriously as does FLOOD. Officials are annoyed but say they understand.

Heckling the United States is bread and meat for Panamanian politicians, the State Department figures. No politician can hope to get along unless he attacks the United States and tries to get all he can over the fact the Canal Zone and the canal are in their country. It was doubted in diplomatic circles that the agitation was Communist, only an expression of nationalism and self-interest.

"Panama is trying to exploit the canal," the Latin-American experts say. "The outbursts there are harmless, and we are not losing sleep over them."

The United States now gives Panama $1,900,000 a year of the canal tolls. Formerly the payment was $400,000. But Panama naturally wants much more, wants to squeeze out all the juice possible.

The United States has all rights of sovereignty in the Canal Zone, but is not actually a sovereign owner, the State Department said. As for extension of the seaward limit to 12 miles, the State Department didn't believe it would affect shipping. Officials pointed to a treaty with Panama and claimed the little republic can do nothing to obstruct access to the canal.

Panama is a creature of the United States. It was born under the sponsorship of the late President Theodore Roosevelt when it was decided to dig the Panama Canal.

The people of the area had long sought freedom from Colombia and had been successful at times and for a time, but couldn't shake entirely free.

When the last successful revolt occurred, Colombia started troops to quell the rebellion. Teddy Roosevelt ordered American battleships to prevent Colombian forces from entering, on the basis that it would cause trouble.

The United States was granted a zone across the Isthmus, dug the canal, fortified it and has been feeding off the Panamanian objection to presence of the canal and Americans ever since.

## Farmers Union Grain Terminal Association Radio Broadcasts

EXTENSION OF REMARKS
OF

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of four radio broadcasts by the Farmers Union Grain Terminal Association of St. Paul, Minn., dated March 9, March 10, March 12, and March 13.

There being no objection, the texts were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF MARCH 9, 1959

Even in a country as prosperous as the United States there are hungry people today. Even hungry enough to steal. You and I may question this, but it is true.

Where are the hungry people? One place is in the West Virginia coalfields. Technology and the use of new fuels such as oil and gas has hit the coal market hard. A lot of miners are out of work, and it is as difficult for them to find jobs as it is for farmers who leave the land go to the cities.

The tragic irony of the whole thing is that these hungry people exist while our warehouses are stuffed to the rafters.

With 5 million unemployed around the Nation the jobless miners are desperate. News reports say that crime, family desertion, distress, and near starvation are increasing in West Virginia. The sheriff of one coal county says that the miners are not stealing money "they are stealing food. Women with babies come crying to me because their husbands can't find work. One woman yesterday," the sheriff told newsmen, "said her family was starving."

Meanwhile, how about those warehouses full of wheat and corn and cotton and butter and powdered milk? Why doesn't the Government load up some Army trucks and roll them down to West Virginia?

Well, it seems that the legal machinery to do that doesn't exist. Organized charities and school lunch programs get surplus foods because they fit the legal pattern. But the miners haven't got the right kind of organization to qualify. The two West Virginia Senators are trying to do something about it—with special bills they've introduced into Congress. But so far, no food.

One of the big stumbling blocks is: Who's going to pay for processing and distributing the surpluses, for milling the wheat and hauling the flour? Maybe the taxpayers, if they knew the story, would be more than willing to pay. But for the services they might perform, the millers and truckers and wholesalers and storekeepers want money, and that's understandable.

It's also a mighty big item when you look at the figures. That's what Business Week magazine did in a recent issue and it came up with some interesting facts. For example, retail food prices, in the cost of living index, are only 2 percent below what they were a year ago. But at wholesale food prices are 5 percent lower. Some wholesale food prices, Business Week found, are as much as 15 percent lower. Yet the consumer pays about the same. This despite the fact that farm prices are nearly 20 percent lower than they were back in 1952.

So while food itself is inexpensive the cost of processing it and getting it to the table is going up all the time. Still, that doesn't seem to be a legitimate excuse for letting people go hungry—like the unemployed miners and their families in West Virginia—while our national warehouses are filled with farm products. Agriculture abundance is an American blessing and it shouldn't be denied to anyone for the sake of a few dollars.

GTA DAILY RADIO ROUNDUP OF MARCH 10, 1959

Every farmer who borrows money—and what farmer doesn't—knows that it costs a pretty penny to use the other fellow's cash. And if every city man who borrows to buy a house will sit down and figure out what a 25-year mortgage cost him, he'll find that the interest charge is not much less than the original cost of the house.

That may strike some people as fantastic but farmers know from experience that it's true. And interest rates affect each and every one of us. They are high now and going higher because that's the policy of the Federal Reserve Board in Washington, bankers for the Nation.

And every time that the big bankers raise the interest rate, which is the rent on their money, they say it is to check inflation. But to a lot of people it looks like just another way of making more money.

In other words, it is hard to find any real proof—no matter how hard you look—that higher interest rates have ever halted inflation. Maybe it makes money harder to get and more expensive, but people and businesses still borrow and spend. Higher interest doesn't stop inflation. It just means more profit for the big bankers who rent out money and call the tune.

How much? It's coincidence, but the national debt is about as high now as it was in World War II days—some $280 billion. The yearly interest bill then was only $4.5 billion. It's $8 billion today. So you get an idea of how much more high interest costs people, and how much more the banks make. It adds to our bill for new schools and roads and houses. It adds to just about everything, in fact.

But it doesn't halt inflation even though the Federal Reserve Board said that was the reason for raising, last week, the rate charged commercial banks for borrowing Federal Reserve funds.

The Wall Street Journal, the business newspaper, says in its weekly review of fiscal matters that a battle is shaping up over the Federal Reserve's action. The Journal says that a good many businessmen are calling it "economic idiocy" and that it threatens to prevent business expansion. Others approve

the action as one calculated to avert the danger of inflation.

That's a greatly exaggerated belief, says the Wall Street paper. Interest costs "are a very small portion of business costs to start with," it explains, "and on top of that they are cut roughly in half because they are tax-deductible." So it pooh-poohs the idea that boosting the cost of borrowing money cuts back on inflation.

Then what is holding the cost-of-living in line? Actually, the biggest block to inflation so far has been farm prices. They've been carrying the big load.

That's a fact often overlooked by the high-powered economists who keep check on the business pulse of the Nation. And it is almost totally ignored by the top echelon in the U.S. Department of Agriculture. But the Bureau of Labor Statistics says, "The only reason the cost of living is stable is that farm prices are lower."

At least the farmers should be given full credit for the big contribution they are making. That won't buy tires and tractor gas but it might smooth the road a little until farm prices can be made better in Washington.

---

GTA DAILY RADIO ROUNDUP OF MARCH 12, 1959

Are farmers getting 82 percent of parity or are they getting 79 percent of parity? There seems to be some confusion on the point, and the reason for the confusion is that Secretary of Agriculture Benson's office has juggled so many farm statistics that nobody knows what's what.

The official Government price report, that measured farm prices as of February 15, says farmers are getting 82 percent of parity. But on the other hand here's a news release from the office of Senator WILLIAM PROXMIRE, of Wisconsin, and he says that farm prices are at 79 percent of parity.

PROXMIRE explains that "farm prices have dropped to the lowest purchasing power in 18 years although a statistical revision put into effect on January 1 by the Department of Agriculture made it appear that farm prices went up instead."

So right there Senator PROXMIRE pinpoints another step in the statistical juggling that has characterized Secretary Benson's efforts to lower farm prices. It would take a crew of certified public accountants and several months of work to fully analyze how Benson, with his crew of nearly 100,000 USDA employees, has juggled the parity formula. But juggle it he has and the net result has been another drop, this time about 3 percent, in the parity value of farm products. That took effect on January 1—quietly and with no fanfare—so that few people realized that farm prices were being made lower again in Washington.

But farmers have organization offices in Washington and a good many Congressmen keep a close watch on USDA activities. The new gimmick didn't slip by.

Testimony at Senate Agriculture Committee hearings in February brought out the fact that the parity ratio for January dropped to only 79 which is the lowest since August 1940, measured on the statistical standard that was in use before the latest juggling of the figures.

It's a real fooler as far as the general public is concerned. It's like the statistical trickery that's being used to make 50 or 60 percent of parity look like 90 percent. That's what is being done to corn, you know. The price support for 1959 is 90 percent, and that makes the headlines. But 90 percent of what? Why, 90 percent of the last 3 years' average free market price. On the true parity scale it's maybe 60 percent of parity. But in the headlines it's 90 percent.

And who knows but what we'll soon see another attack launched from USDA headquarters in Washington against "90 percent price supports for corn." Remember how it started just that way 6 years ago?

This is the sort of thing, earlier this month, that led Congressman JAMIE WHITTEN, of Mississippi, to demand a full scale investigation of Secretary Benson's administration of farm programs and the U.S. Department of Agriculture. "Termites," he said, "never did a better inside job of destruction."

Well, perhaps an investigation would bring the whole mess out in the open for all to see and serve as a beginning toward a better and more sincere administration of Federal farm affairs.

But meanwhile, keep your co-ops growing. They are on your side all the way—GTA the co-op way.

---

GTA DAILY RADIO ROUNDUP OF MARCH 13, 1959

Down in Washington a group of farm State Senators are working to put together a farm bill that will actually help farmers. At the same time, they want it to be acceptable to Members of Congress who come from city districts. It takes votes to pass any bill, and farm-State Members are in the minority. So they've got to win votes from the Members who might be fearful that retail food prices would go up if farm prices went up.

And farmers will be the first to admit that their prices in the field have some effect on food prices in the grocery stores. Not much, but some.

So the question is, How much would it cost consumers if farmers got a break and regained a little of the price ground they've lost since 1952—say, a 10-percent increase in farm prices? The economists tell us that would boost net farm income by 50 percent. How much would it cost consumers at the grocery stores? Four percent more, the economists say. Four percent more, to take the squeeze off farmers. It's amazing to realize that so little could help so many so much. But it's true.

Now, quite naturally, consumers don't want to pay more for food. They say, "How in the world can we pay more? Food prices have been going up right along.

And food prices have been going up. They are 19 points higher on the Government index than they were 10 years ago. But all consumer items lumped together are up 24 percentage points. That includes things like rent—up 38 points; medical care—up 47 points, and so forth. Consumer items made out of farm products are right down at the bottom of the list as far as inflation is concerned.

So food is one of the big bargains, and 4 percent wouldn't make enough difference to take it out of the bargain class.

On the floor of Congress, farm-State legislators hammer away at points like this, working to convince other legislators that a vote for fair farm prices is well worth the small cost to consumers.

And we think that if people everywhere understood this, they'd be writing to Washington demanding that agriculture be helped back on its economic feet. Maybe you saw the headlines in the newspapers last week to the effect that the 1957–58 recession was cushioned by the climb in farm income last year, small though the climb was.

You get an idea of how important farming is to city jobs and city paychecks when you look at the figures. Agriculture buys more petroleum than any other industry. It buys 6½ million tons of finished steel each year—enough rubber to put tires on 6 million autos; uses 50 million tons of chemicals annually; and more electric power than Chicago, Detroit, Houston, Baltimore, and Boston combined. That adds up to a lot of jobs in the cities. And there would be more if farmers were getting fair prices and decent incomes.

So right now might be a good time to drop a note to your Senators and Representatives in Washington, encouraging them in their battle for a better farm program. That's where farm prices are made, in Washington.

In the meanwhile, builds co-ops by buying and selling, GTA, the co-op way.

---

## Decision of the Supreme Court in the Brown Case

EXTENSION OF REMARKS

OF

## HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Monday, March 16, 1959*

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Part of the Fabric," from the March 12, 1959, issue of the Richmond News Leader.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PART OF THE FABRIC

On Monday of this week, the Supreme Court of the United States upheld the conviction of one Emanuel Brown on a charge of criminal contempt.

The facts of the case are not particularly important to the point we want to make here. Briefly, Brown was summoned before a grand jury in New York and questioned about violations by truckers of the Motor Carrier Act. The act contains a provision specifically granting immunity from prosecution to witnesses reluctant to answer questions. Brown nevertheless refused to answer the grand jury's inquiries. When he persisted in his refusal, a district judge sentenced him to 15 months' imprisonment for criminal contempt.

This is the paragraph in the Supreme Court's opinion that southerners, especially, will find of rather bitter interest:

"The statute which confers immunity upon a witness testifying in a grand jury investigation under part I (of the Motor Carrier Act) was enacted in 1893. For more than half a century it has been settled that this statute confers immunity from prosecution coextensive with the constitutional privilege against self-incrimination, and that the witness may not therefore lawfully refuse to testify. (*Brown* v. *Walker* (161 U.S. 591 (1896)). The context in which the doctrine originated and the history of its reaffirmance through the years have been so recently reexamined by this Court * * * as to make it a needless exercise to retrace that ground here. Suffice it to repeat that *Brown* v. *Walker* has become part of our constitutional fabric. It is thus clearly too late in the day to question the constitutional sufficiency of the immunity provided under part I of the act."

May a remarkable parallel be drawn?

The Brown case decided upon Monday involved a constitutional question, whether a law, in this case a Federal law, contravened the fifth amendment to the Constitution.

Another Brown case, *Brown* v. *Board of Education*, decided May 17, 1954, also involved a constitutional question, whether a law, in that case a State law requiring school segregation, contravened the 14th amendment to the Constitution.

In deciding the Brown contempt case on Monday, the Supreme Court looked back to a key decision of 1896.

In deciding the Brown segregation case in 1954, the Supreme Court also looked back to a key decision of 1896.

And what did the majority say on Monday about the respect to be accorded the precedent of 1896? Why, the Court said the 1896 decisions settled the point at issue. The Court called attention to the context in which the 1896 ruling had originated, and to the consistent reaffirmance of that ruling. The 1896 decision, said the Court, has now become part of our constitutional fabric.

But what did the Court say in 1954 of the 1896 decision as to segregated schools? "We cannot turn the clock back to 1868 when the (14th) amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written. * * * Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson* the finding (that segregation has a detrimental effect on colored children) is amply supported by modern authority. * * *"

What sort of constitutional fabric do our masters weave? Which decisions of 1896 shall one believe?

## Wide-Ranging Editor

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. McCORMACK. Mr. Speaker, I am glad to note that the Chamber of Commerce of the United States has elected as its new president Erwin D. Canham, editor of the Christian Science Monitor, of Boston, Mass. With his excellent experience in journalism and public affairs, Mr. Canham is well equipped to give the greater chamber of commerce an outstanding administration.

Mr. Canham is highly respected for his ability, his refreshingly progressive outlook, and for his nobility of character.

In congratulating Mr. Canham on his election and wishing him every success during his term of office, I also congratulate the members in electing him as the president of their organization.

In my remarks, I include an article "Wide-Ranging Editor—Erwin David Canham," appearing in the New York Times of March 14, 1959.

WIDE-RANGING EDITOR

(By Erwin Dain Canham)

"He is a sort of John Foster Dulles among editors," a colleague said of Erwin Dain Canham. "He is always traveling and making speeches. And he belongs to everything. I do not know when he gets time to do his editing." Mr. Canham has just taken on a new job as president of the Chamber of Commerce of the United States. But he still finds time to edit one of the Nation's best-edited newspapers, the sober, serious Christian Science Monitor. Along with that, he advises the Government on information work and on manpower problems, is a trustee of Simmons College and of Bates College, is an active Mason and Rotarian and is much in demand as a commencement speaker at colleges.

At the age of 55, Mr. Canham can boast of 47 years in newspaper work. He has said that when he was 8 years old he used to stand on a chair in front of an old-fashioned wall telephone and take down items for his father, who was agricultural editor of the Lewiston (Mo.) Sun and Journal.

DEVOTED TO PRINTER'S INK

At 14 he was a general reporter for that paper, when the shortage of manpower in World War I gave him his chance, and he has been with the Monitor for 34 of the paper's 51 years. He is said always to use the back door to the newspaper's $4 million plant in Boston so that he can walk through the pressroom and smell the ink.

His own spacious office has been compared to a quiet, comfortable living room with a big desk in it. It looks out on the Mother Church of the Christian Scientists, and in it, as elsewhere in the building, nobody smokes.

In keeping with his beliefs, Canham neither smokes nor drinks, but he is not looked upon as dull or goody-goody. Newspaper friends call him "Spike" and find that he has a quiet sense of humor under his serious exterior.

In January 1955, he was one of a group picked as mediators by four desperate convicts who were besieged in Massachusetts State Prison after an unsuccessful jailbreak. Holding five guards as hostages, they had threatened to kill them if anybody approached.

HEADED PRISON MEDIATORS

After 3 days they agreed to talk with a committee that they felt they could trust. It included two prison chaplains and the prison doctor, the associate editor of a religious paper, a member of the Governor's council, the president of the Boston Bar Association, and Mr. Canham as spokesman.

After two sessions of discussion the desperadoes were persuaded to lay down their weapons and release the hostages without any promise of concessions.

Mr. Canham, of medium height, has a strong, rather square face and wavy silver-gray hair. He dresses well and soberly and wears rimless glasses that give a touch of severity to his appearance.

Mr. Canham was born in Auburn, Maine, on February 13, 1904, and spent all his youth in that area. His parents were Methodists who joined the Christian Science Church when he was a small boy.

After graduating from Bates College in 1925, he worked for a year on the Monitor before going on to Oxford University as a Rhodes scholar, where he continued to write for the Monitor. At the age of 37 he became its managing editor and 4 years later its editor.

Two of his major interests outside the newspaper have been the U.S. Advisory Commission on Information, helping to shape U.S. policy in the field of information and propaganda, and the Manpower Council. The Council, formed by President Eisenhower when he was president of Columbia University, studies how to make the best use of the Nation's manpower. Mr. Canham heads it.

He is married to the former Thelma Hart. They have two daughters.

## Merchants of Fear

EXTENSION OF REMARKS
OF
### HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pageland Journal, Pageland, S.C., of March 5, 1959:

"If you don't come in this minute, I'll whale the daylights out of you." Such an admonition, addressed to a child, is stated in terms a child whose daylights have been belabored betimes will readily understand.

Later in life, one would hardly expect to be addressed in that manner. Regardless of size of state of physical readiness of the speaker, such a remark addressed to me would arouse a strong inclination to see just whose daylights would get whaled, even in the face of long odds against successful defense. Yet the American public is subjected to a monstrous and continuous dose of threatening, and is held largely under the heel of the tyranny of fear.

We must do something about education because the Russians are getting ahead of us, and if they get ahead we are sunk. We must take vitamin pills or our hair will drop out, our teeth turn green and large lavendar blotches will appear in the vicinity of the flattagus. You must contribute to this or that because the next one to need help might be you. You must come indoors now, Junior, or get your tanny fanned. It's all on the same level, I don't think people realize just what a low level.

It should occur to us that we have a much more compelling reason to improve our educational standards: to meet the changing demands; that vitamin pills have a purpose too; to improve our general health, lengthen our life-span, make us better people to live with, and do business with, and better parents for our children, and that we have a God-given obligation to love others as ourselves, and to care for others to the extent we are able, and not because we hope the poor suckers will help us when we're down. Just a few thoughts that lead up to the conclusion that I'm sick and tired of being threatened and bullied by merchants of fear. Old F.D.R. declared war on it, and whipped it in his day. Madison Avenue has recognized it as a handy device for huckstering everlasting linoleum and retirement homes on the fringes of Elysium. Join the Journal's Society for the Elimination of Scare-Merchants. Down with threats and prophecies of doom. Help stamp out the haunted look.

## Thoughts on French Foreign Policy

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a special article, entitled, "Thoughts on French Foreign Policy," written by the Minister of Foreign Affairs of France, M. Maurice Couve de Murville, which appeared in the American Society Legion of Honor magazine, volume 30, No. 1, 1959. The article follows:

THOUGHTS ON FRENCH FOREIGN POLICY

(By Maurice Couve de Murville, Minister of Foreign Affairs, Republic of France)

In recent years France has suffered from internal difficulties, but there has been a marred continuity in the development of her foreign policy. In tracing the main lines of action, it is necessary to begin with a consideration of a number of constant factors.

France belongs to several distinct spheres of interest. Both geography and history establish her as part of Western Europe. By the standards of the humanistic civilization which she shares with other democracies, she is a part of the larger group which is known as the Atlantic world. On the continent of Africa she has interests and major responsibilities, both in the matter of foreign policy, and with the community defined by the new Constitution. And finally, in view of the special friendly relations she maintains with a number of countries that have felt her influence, and in view of all she contributes to the main channels of trade and cultural and technical exchanges. France is a power with worldwide interests.

In these various spheres, France participates actively in the leading organizations which have been created for the purpose of providing close cooperation among the member nations in each group. Examples of these are the North Atlantic Treaty Organization, SEATO, the Organization for European Economic Cooperation, the Western European Union, the Common Market, and Euratom. With her long tradition of assuming international responsibilities, France, as a part of these organizations, follows a political course whose aim is to balance the two main concerns of safeguarding her own essential national interests and attaining the objectives common to all members of the various organizations. This is the case, for example, in matters which concern the functioning of the Atlantic alliance and the perspectives of European economic cooperation.

After nearly 10 years of existence the Atlantic alliance remains the framework within which expression is given to the determination of the free world to prevent and, should the need arise, to meet aggression. During the period of its history, NATO has given proof of its vitality, as well as of certain weaknesses. Development in technical matters, particularly in connection with atomic weapons of various types which can be integrated into the strategy of the alliance, has very considerably increased the inequality among the member countries, since some possess these weapons and others do not. That is why, in the absence of an agreement on general disarmament, France wishes to acquire the means which will permit her to make a full contribution to the alliance. In political matters, experience has also proved that, when an important question comes up outside the limited field covered by the treaty, the procedure of consultation in force does not rule out actions which may directly affect the security of each of the member countries. Those nations which have responsibilities of their own outside Europe must then concern themselves with meeting them in a manner in accordance with the interests of the entire alliance.

In the field of European economic cooperation, 1958 has been notable both for the coming into force of the Treaty of Rome and for the opening of negotiations within the OEEC to find a means of safeguarding the interests of the nonparticipating European countries. Certain difficulties have developed in this regard, which have not yet been entirely solved. These difficulties could have been foreseen since the problem is to reconcile the unwillingness of certain countries to accept the obligations and possible risks implicit in the Treaties of Rome with the importance of avoiding any creation in Western Europe of different zones.

This is a very brief outline of the problem that the six must solve together. France views it as a matter of priorities, believing that the first need is the maintenance of the integrity of the Treaty of Rome. Second, France wishes, for political reasons, to cooperate fully in the search for any formula that will weaken the effect of the Common Market on the economy of outside countries. The third point in French policy is the feeling that in any such negotiation, where the various needs seem at first sight contradictory, each question coming up for debate must be examined on its own individual merits and not in terms of abstract generalities.

Outside the framework of the various organizations mentioned above, the foreign policy of France has been well defined on the international problems which are of general concern: notably, the situation in the Middle East and the problems of disarmament and of security.

The situation in the Middle East seems at the moment to have become somewhat less critical, but it has not yet been stabilized. The essential principle to be followed, it would seem, is to allow the governments and peoples of this area freedom of choice as to their future course without any foreign intervention. However, to affirm this principle would be to risk the unattainable so long as agreements are lacking on the maintenance of the territorial status quo and on the noninterference, direct or indirect, by powers which are outside the area but which are, at the same time, interested in the development of the various countries which comprise it. France made every effort to make this principle prevail several months ago at the time of the events in Lebanon and Jordan, and remains convinced that one day in the future the problem will have to be squarely faced if there is to be any lasting settlement in this region. It is evident, furthermore, that the peaceful development and the genuine independence of the countries of the Middle East are, to a great extent, linked to their economic expansion. But there again the initiative must come from the countries themselves, since foreign aid cannot, looked at from the long-term point of view, provide a real stability if it appears to be a disguised form of political interference.

As for disarmament and security, these are difficult problems whose technical factors cannot be isolated from the political context. In recent months the trend has been toward the search for limited agreements on certain specific points, such as the banning of nuclear tests and the prevention of surprise attacks. This approach has its merits in that it allows direct confrontation of views and gives us hope for the future, but it also has the serious disadvantage of dissociating the problems from each other and causing us to lose sight of the overall view.

The present diplomatic policies of the Soviet Union are aimed at the preservation of the European status quo and the nuclear status quo. Are such aims consonant with the development of genuine security for Europe and the world? France does not think so. But in spite of reservations, France, wishing to explore all possible methods for controlling preparations for future aggression, is participating actively in the technical conference at Geneva called to consider ways of preventing surprise attacks. She is not participating, however, in the projected political conference on the prevention of further nuclear tests, but her attitude on this matter is already very well known. The halting of such tests is not in itself a step toposite, unless other agreements simultaneously entered into provide for the cessation ward disarmament. It is, in fact, the op- of manufacturing and the reconversion of stockpiles, and unless such agreements are tied to a system of strict controls intended to carry out the successive stages in the arrangements. Without such an overall plan of action the nuclear powers will be free to continue the fabrication of the weapons of mass destruction they have already perfected and nothing will check the growing stockpiles in their arsenals. As a result, the imbalance between the means available for use by some powers and the risks common to all could only be accentuated and political ill feelings increased. Public opinion in various countries would confuse the silence on the proving grounds with security, and the true problems of disarmament would thus be lost sight of and nothing effective would have been even started.

France played a large part in drawing up the western plan of August 27, 1957, which reflected all these concerns. She remains loyal to the concept of the package deal proposed at that time, which not only dealt with all phases of nuclear disarmament, but also with what is known as conventional disarmament. France is keenly interested in a global agreement of that type, but so long as such an accord is not reached, she cannot give up her freedom of action.

These matters do not comprise a full picture of all the aspects of French foreign policy. It is nevertheless possible to draw certain general conclusions from them.

France, whose rising birth rate dates from the period directly after World War II, is now assured of a political stability which was for some time lacking. The modernization of her industrial equipment and the anticipated potentialities of the new sources of energy which are beginning to be developed represent, for France, major assets for the years to come. Thus, she is in a position to contribute more to the alliances and the organizations of which she is a member and, at the same time, the means at her disposal for assuming her international responsibilities become more clearly evident.

French policy is entirely directed towards the maintenance of peace. In the present international situation the pursuit of this objective is impeded by certain factors making for tension which must be realistically weighed if serious consequences are to be avoided. The rivalry of ideologies, the effect of modern methods of propaganda on the state of public opinion in the various countries, the assertion of genuine nationalisms, the legitimate ambition of underdeveloped countries to raise their standard of living rapidly—all these constitute so many forces which sometimes operate independently but more often have combined effects. With a situation as complex as that we face at the present time, patience and, above all, clear thinking are essential if a distinction between the fundamental and the ephemeral is to be made and if illusions are to be avoided. And that is why France, whether the matter at issue be of a local or general nature, feels a particular concern to promote, to the utmost of her ability, concrete solutions firmly based on a realistic appraisal of the facts.

---

## Toward a Court for the People

EXTENSION OF REMARKS
OF
### HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful editorial from the Orlando, Fla., Sentinel of February 26, 1959:

TOWARD A COURT OF THE PEOPLE

The U.S. Supreme Court's friendly attitude toward subversives has been severely criticized by members of its own fraternity, the American Bar Association.

The American Bar Association's house of delegates has not only questioned the Court's rulings on accused Communists but has recommended legislation by Congress

to cure this dangerous situation by which fifth columnists are given more latitude than loyal Americans.

In the light of so clear an indictment of the Supreme Court by the men who help make, enforce, interpret, and uphold the Nation's laws—attorneys themselves—it is inconceivable that Congress will continue to allow the Court to run the country.

Concerned Americans have for several years questioned the Supreme Court's right to loose on the people known criminals because of technicalities; to order all schools to be integrated when the Constitution does not provide this; to forbid individual States to punish sedition against the United States.

The present Court has, in fact, refused to abide by the decisions of earlier Supreme Courts, has not recognized that States have the power to make certain laws for their own protection, and has undertaken by its interpretation of the Constitution to make laws rather than merely rule on their legality.

Congress has authority granted by the people to limit the Supreme Court's activities, to rewrite those laws whose intent has been perverted by the Court's interpretation.

But Congress has been hesitant. It may feel itself on firmer ground now that the august house of delegates of the American Bar Association has spoken.

The Nation prays that it does.

## A Question to McElroy

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a penetrating editorial entitled "A Question to McElroy," appearing in the Boston Herald of March 7, 1959.

A QUESTION TO MCELROY

Defense Secretary McElroy on Friday left an extraordinary session of the National Security Council and presided at a press conference. There he said, among other things, that a surprise Russian attack on the United States was virtually impossible; that the complications of coordinating the various required preparations for such an attack would assure the United States of advance notice.

This is both sensational and disturbing. It is sensational because, if true, it means that the need for 24-hour alert by the Strategic Air Command is gone and our whole retaliatory setup is vastly simplified. We might conceivably be able to get in the first blow—if we were willing to make a tragically perilous moral decision.

It is disturbing because it suggests that the United States is relying in part on intelligence estimates that can be completely wrong, completely misinterpreted, or completely ineffective.

Mr. McElroy has access to material that we do not. He knows better than we do the reliability of U.S. intelligence sources on Russian preparations for attack. We cannot fairly say he is gambling the destiny of the United States on uncertain information. But it is not necessary to have Central Intelligence Agency reports to know that the risk is great.

The risk is involved in two ways: uncertainty about detecting Russian preparations and uncertainty about our response.

If the Soviet delivery of nuclear bombs is to be by bombers, we might get some advance notice when the planes were moved up to advance bases. It would, however, be an ambiguous warning.

The planes might be there for diplomatic reasons, as a device to scare us and nothing else—a show of force. During the Suez crisis, Soviet planes were moved to forward bases, but we did not press the SAC button.

To detect missile preparation is even harder. If we know all the missile bases; if we have reliable data that they are being readied for a countdown and if we have ways of knowing that the intent is attack and not testing or satellite launching, we might feel assured that this was it. Such a sequence of certainties is unlikely.

But having determined that this is it, what can and should be our response? What would we do with the advance notice?

Our retaliatory power is directed at the obliteration of Russian centers of population. We are not equipped to knock out Russian bases and sterilize the Russian capacity for strategic attack.

Could we bring ourselves to the greatest mass slaughter in history, with the accompanying massive fallout throughout the Northern Hemisphere for months thereafter, on anything less than absolute certainty of necessity for it?

Our intelligence is much better now than it was before Pearl Harbor. But it is not yet adequate to deal in anything but probabilities.

If Mr. McElroy is expressing a confidence in intelligence that justifies a reduced capability for a strategic attack, then there is need for a searching reconsideration of the adequacy of our military resources.

A few days' notice of Russian intent would be welcome. But if it gives us nothing more than a chance to grit our teeth in anticipation of doom, the value is slight.

## Caught in the Draft

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. WOLF. Mr. Speaker, now that Congress has rushed through a 4-year extension of the draft under the guise of national security, I hope that it will take seriously the suggestions of certain Members of the House, the Senate and the press who have maintained that a full review of our military manpower procurement policies be carried out either by Congress or an independent Commission appointed by Congress. A terse reminder of our responsibility appears in the Washington Post and Times Herald, March 14. Under leave to extend my remarks I introduce this editorial into the RECORD.

CAUGHT IN THE DRAFT

The speed with which the Senate passed the 4-year draft extension and obtained House concurrence is almost breathtaking. No doubt legislators were moved by the wish to make a gesture of strength in the Berlin crisis—although the effectiveness of the gesture will be diminished by the prospective administration reductions in military manpower strength. In present circumstances there appears to be no satisfactory substitute for an extension of conscription. At the same time, we regret that the Senate did not give more consideration to the proposal of Senators MORSE and FRANCIS CASE to set up a commission to study alternative methods for the future. There is an element of manifest unfairness in a system that has been taking fewer than 100,000 young men a year of the 1.2 million who come of military age; the remainder, except for those who enlist or volunteer for the 6-month training program, are untouched by military obligation. Now that the draft extension has been approved, is it not worth another try in both Houses of Congress to initiate a study of whether there are more equitable means of meeting military needs before another deadline?

## Hungarian Freedom Day

EXTENSION OF REMARKS
OF
### HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. WALLHAUSER. Mr. Speaker, yesterday was the 111th anniversary of Hungarian Freedom Day. By all that is morally and legally right the anniversary of March 15, 1848, should have been a day of great rejoicing. Instead, and because of the tyrants who rule the Kremlin, it was a day of sad contemplation.

We of the free world observed Hungarian Freedom Day solemnly, while those captive people behind the Iron Curtain looked upon it sadly and yet with great hope and yearning for eventual freedom and independence.

It was in 1848 under the leadership of the famed and great Louis Kossuth that the patriots of Hungary boldly bid for freedom after being tied to Austria for centuries. It brought freedom and national autonomy. There was great rejoicing as there was in many years following even though this nation of freedom-loving people experienced many hard and trying days.

Then in 1945, Hungary found its freedom crushed completely through occupation by war-minded Soviet Russia. Yet, the cruel yoke of the Communists could not crush the desires of the Hungarian people for a free and independent nation. It burned steadily in their hearts and in their minds. In the tragic fall of 1956 the Hungarian people again rebelled against foreign rule.

Once again they demanded freedom and independence and fought courageously for it. This time from the tyrants of the Kremlin. Unfortunately, the freedom day victory of 1848 was not repeated. Soviet tanks and artillery proved too much for these inspired and dedicated people.

However, it was a sad event that freedom-loving people of the world never should forget. The shocking end of the Hungarian uprising of 1956 cannot and must not be forgotten. Although physically and ruthlessly crushed by Russia's hideous disregard for the fundamental aspirations and rights of mankind, the patriots of Hungary gave enduring proof that their yearning for freedom remains unquenchable.

Today, as we commemorate an earlier era of Hungarian freedom, we honor all Hungarians for their gallant and tenacious longing for liberty and pray together that the day soon will come when the light of freedom and independence again will be burning brightly in their beloved land.

## National Coordination for Space Exploration

EXTENSION OF REMARKS
OF
## HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Thursday, March 5, 1959*

Mr. CASE of New Jersey. Mr. President, the February issue of the JAG Journal—published by the Office of the Judge Advocate General of the Navy—contains an article explaining the National Aeronautic and Space Act of 1958. The article was written by Paul G. Dembling, Assistant General Counsel for the National Aeronautics and Space Administration.

Prior to the establishment of NASA, Mr. Dembling was General Counsel for the National Advisory Committee for Aeronautics and played a major role in drafting the bill establishing NASA. A member of the District of Columbia bar, he received his bachelor of arts and master of arts degrees from Rutgers University in New Jersey and his doctor of laws degree from the George Washington University Law School. It is a particular pleasure to ask permission to have the article printed in the Appendix because he is not only a native of New Jersey but was born and raised in my hometown of Rahway.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL COORDINATION FOR SPACE EXPLORATION—THE NATIONAL AERONAUTICS AND SPACE ACT OF 1958

(By Paul G. Dembling,[1] Assistant General Counsel for the National Aeronautics and Space Administration)

The age of outer space has begun. It is just a matter of time until manned flights to the moon and planets will be made. The science fiction of space exploration will become as real as Jules Verne's famous submarine, the *Nautilus*. In the perspective of history, the enactment of the National Aeronautics and Space Act will probably be considered the most important legislative event of 1958. The Space Act signals a new field of lawmaking. With the enactment of this act, the United States is launched on a tremendous program of aeronautical and space activities in the interests of general welfare and security.

The National Aeronautics and Space Act of 1958 creates a civilian agency with broad powers to plan and coordinate the efforts of this Nation in matters relating to aeronautical and space activities. The act establishes the basic national policy and the organization to implement this policy. Under this law, exploration of space is a Government program. In declaring the policy and purposes of the act, the Congress stated that activities in space should be devoted to peaceful purposes for the benefit of all mankind and that the general welfare and security of the Nation require that adequate provision be made for aeronautical and space activities. These activities are made the responsibility of and are to be directed by a civilian agency, "except that activities peculiar to or primarily associated with the development of weapons systems, military operations, or the defense of the United States (including the research and development necessary to make effective provision for the defense of the United States) shall be the responsibility of, and shall be directed by the Department of Defense."

The purposes for which the aeronautical and space activities are to be conducted by the United States include (1) the expansion of human knowledge of phenomena in the atmosphere and space, (2) the development, operation, and improvement of aeronautical and space vehicles, (3) the determination of the peaceful and scientific benefits to be obtained from aeronautical and space activities, (4) the preservation of this Nation as a leader in aeronautical and space science and technology, (5) cooperation with other nations in this work and in the peaceful application of the results, and (6) the most effective utilization of the scientific and engineering resources of the Nation.

### CIVILIAN OR MILITARY CONTROL

The question of whether programs or projects were civilian or military arose time and time again during the hearings before the House of Representatives and the Senate and during the debates on the bill on the floor of the two Houses. The Senate-House conference committee recognized that there was a gray area linking civilian and military interests, and unavoidable overlapping. They felt it was necessary to establish machinery at the highest level of Government to make determinations of responsibility and jurisdiction. The machinery created was the National Aeronautics and Space Council. The Council consists of the President, the Secretary of State, the Secretary of Defense, the Administrator of the National Aeronautics and Space Administration, the Chairman of the Atomic Energy Commission, and not more than four others, one of whom shall be from the executive branch of the Government, and the other three "from among individuals in private life who are eminent in science, engineering, technology, education, administration, or public affairs." The Council's functions are to advise the President with respect to the duties prescribed for the President, which are to (1) survey the policies, plans, programs, and accomplishments of all agencies of the United States engaged in aeronautical and space activities, (2) develop a comprehensive aeronautical and space program to be conducted by the executive branch, (3) designate and fix responsibility for the direction of major aeronautical and space activities, (4) determine which activities may be carried on concurrently, resolving differences among departments and agencies as to whether a particular project is an aeronautical or space activity.

A review of the hearings indicates emphasis on securing cooperation and coordination of aeronautical and space activities between the military departments and the new agency. For these purposes, the act provides for a Civilian-Military Liaison Committee headed by a chairman appointed by the President and composed of an equal number of representatives from both the military department and from NASA. The NASA and the Department of Defense, acting through the Liaison Commtitee, will advise and consult with each other on all matters within their jurisdictions having to do with aeronautical and space activities, keep each other fully and currently informed on these activities, and strive to reach agreement on differences which might arise in this area between the two agencies. If the Secretary of Defense and the Administrator fail to reach agreement on any difference, then either official may refer the matter to the President for final decision. The act also provides that the NASA Administrator and the Secretary of Defense may seek solutions to questions of jurisdiction either directly or through the Liaison Committee to hold to a minimum the questions referred to the President and the Space Council.

### NASA FUNCTIONS

The new civilian National Aeronautics and Space Administration is created by section 202 of the act and is headed by an Administrator assisted by a Deputy Administrator. It assimilates into its organization the National Advisory Committee for Aeronautics, the agency which, since its establishment by the Congress in 1915 has been the Nation's aeronautical research establishment. The act provides that NACA would cease to exist as of the date the Administrator of NASA announced that his organization was organized and ready to exercize its powers, but not later than 90 days after approval of the act.

The act provides that it shall be the function of NASA to plan, direct, and conduct aeronautical and space activities, to arrange for participation by the scientific community (both in the United States and abroad) in certain of such activities, and to provide wide dissemination of information concerning such activities.

In carrying out the functions assigned under the act, the Administration is given broad powers. These powers authorize NASA—

To appoint and fix the compensation of officers and employees needed to carry out its functions;

To acquire, use, and dispose of property and facilities;

To accept unconditional gifts of services or property;

To enter contracts, leases, and agreements, without regard to existing prohibitions against the advance payment of money in the absence of authorization by law. The act also provides that contracts shall be allocated in a manner to enable small business to participate equitably and proportionately in the work of NASA;

To use facilities and other resources of Federal and other agencies, and to offer similar cooperation to such agencies;

To appoint advisory committees;

To establish procedures for coordinating activities with related activities by other public and private organizations;

To employ experts and consultants;

To employ aliens when determined by the administrator to be necessary;

To employ retired commissioned officers of the Armed Forces;

To enter cooperative agreements by which members of the Armed Forces may be detailed for duty in NASA to the same extent as they might be assigned in the Department of Defense;

To settle and pay claims against the United States for injury or death resulting from activities of the Administration. NASA may settle and pay claims up to $5,000. Meritorious claims in excess of $5,000 must be reported, without any partial payment, to the Congress for its consideration;

[1] Mr. Paul G. Dembling is Assistant General Counsel, National Aeronautics and Space Administration. In 1958 when he was the General Counsel for the National Advisory Committee for Aeronautics, he was one of the principal drafters of the bill establishing the NASA, as sent to Congress. Mr. Dembling received his A.B. and M.A. from Rutgers University and his J.D. from the George Washington University Law School. He is a member of the District of Columbia Bar.

To make security investigations of NASA employees, contractors, and employees of contractors;

To hold patents and supervise issuance of patents on inventions or discoveries;

To make monetary awards for scientific or technical contributions; and

To engage in a program of international cooperation for peaceful applications of the results of the work of NASA, subject to foreign policy guidance of the President and under agreements made by the President with the advice and consent of the Senate. Thus, section 205 of the act provided a legislative basis for establishing a long-range and continuing program in the field of international cooperation.

TRANSFER OF FUNCTIONS

An important provision of the act is the one relating to the transfer of functions. For a period of 4 years, the President may transfer to NASA "any functions (including powers, duties, activities, facilities, and parts of functions) of any department or agency of the United States, or of any office or organizational entity thereof, which relate primarily to the functions, powers, and duties of the administration * * *." In connection with such transfer the President may also transfer records, property, civilian personnel, and funds. However, after December 31, 1958, any proposed transfer must be submitted to the Congress and would become effective after 60 calendar days unless rejected by the Congress by a concurrent resolution.

PROCUREMENT

Procurement is of major interest in this new field of space activity. During the hearings, witnesses testified that the contracting of the new agency would be vastly expanded over that which NACA conducted. Thus, NASA will occupy an important role in Government contracting. The procurement powers of the new agency are well established, since the NASA is included in the Armed Services Procurement Act. The application of this act to the new agency is accomplished by one short provision in the Space Act which adds NASA to the list of agencies whose contracting is subject to the Armed Services Procurement Act. By applying this act to the NASA, contracting may be accomplished by negotiation as well as by formal advertising under a variety of circumstances. However, the Armed Services Procurement Act establishes certain rules which are now applicable to NASA. This act (a) prohibits cost-plus-a-percentage-of-cost contracting; (b) limits the use of cost, cost-plus-a-fixed-fee and incentive contracts; (c) limits the fee which NASA may allow in its cost-plus-a-fixed-fee research, developmental or experimental contracts to not more than 15 percent of the estimated cost of the contract, excluding the fee; and (d) requires that contracts include a warranty against contingent fees.

While the NASA was included in the Armed Services Procurement Act, the Space Act in section 203(b)(5) appears to grant the administration even broader powers. It is not clear whether it was the intent of the Congress to provide two avenues on which NASA could travel on its way to market. The act states in the section just cited that the Administration, in the performance of its functions, is authorized "to enter into and perform such contracts, leases, cooperative agreements, or other transactions as may be necessary in the conduct of its work and on such terms as it may deem appropriate. * * *" This provision standing alone would certainly have been a much broader contracting authority than exists in the Armed Services Procurement Act. However, with NASA being included in the Procurement Act and the above-cited section also providing contracting authorization, certain inconsistencies appear. In this connection, the Administrator of NASA has announced that the administration would follow the Armed Services Procurement Regulations in every practicable way.

PATENT PROVISIONS

One of the most significant provisions of the act is that relating to "Property Rights in Inventions." The original administration bills contained no provisions relating to patents, leaving the questions of securing rights in inventions to the discretion of the agency operating under the general principles of law and regulations adopted by each agency. There appears no discussion in the congressional hearings of the patent provisions as they were enacted into law. In fact, all of the testimony taken before both congressional committees related to bills not having any special patent clauses.

The administration bill was replaced in the House by a new bill H.R. 12575, which did contain provisions relating to patent rights.

Senate 3609, as amended and reported by the Senate's special committee contained patent provisions similar to those contained in H.R. 12575; these were eliminated from the bill on the Senate floor in order to permit further consideration of the problem in conference.

In conference, the committee rewrote and expanded the patent provisions. The bill containing these new provisions was passed by the Senate and House of Representatives without further discussion to become the National Aeronautics and Space Act of 1958.

The Space Act provides that inventions which are made in performance of work under NASA contracts shall become the exclusive property of the United States whenever the Administrator determines that (1) the person who made the invention was employed or assigned to perform research and development or exploratory work and the invention is related to such work or was within the scope of his employment duties, whether or not the invention was made during working hours or with a contribution of Government funds or facilities or the services of Government employees during working hours; or (2) the person who made the invention was not so employed or assigned but the invention is nevertheless related to the contract or to the work or duties he was employed or assigned to perform and was made during workhours or with Government contributions. The Administrator may waive title to any invention or class of inventions made by any person or class of persons in the performance of any work under any NASA contract if the Administrator determines that waiver would serve the interests of the United States and upon such terms and conditions which will protect the U.S. interests. While the Administrator may waive title, the Government must retain, under the provisions of the act an irrevocable, nonexclusive, nontransferrable, royalty free license for the practice of such invention throughout the world by or on behalf of the United States or any foreign government pursuant to any treaty or agreement with the United States.

The act also provides that "No patent may be issued to any applicant other than the Administrator for any invention which appears to the Commissioner of Patents to have significant utility in the conduct of aeronautical and space activities. * * *" Procedurally, no patent shall be issued for such an invention unless the applicant furnishes the Commissioner within 30 days of his application a sworn statement setting forth the full facts concerning the circumstances under which such invention was made and stating the relationship—if any—of such invention to the performance of any work under any NASA contract. This statement is furnished to the Administrator who may, within 90 days, request that the patent be issued to him on behalf of the United States.

This provision has led some to hold that the act permits the Administrator to take ownership to any invention which has significant utility in the conduct of aeronautical and space activities. It appears to this writer that this subsection should be read in conjunction with the preceding subsections 305 (a) and (b). Thus read, the Administrator could take title only when there was a contractual relationship with the NASA. The conference report appears to support this interpretation since it discusses subsections 305 (c) and (d) as providing a means for determining "any controversy with respect to the validity of the Administrator's claim of title to any invention." If the Administrator requested title to be vested in the United States regardless of any contractual relationship to NASA, it is not clear from section 305 whether the Commissioner of Patents could do so.

The act also provides for notice to the applicant and a hearing before the Board of Patent Interferences and determination by the Board, subject to appeal to the Court of Customs and Patent Appeals. The Administrator may during a 5-year period challenge any applicant's statement as containing a false representation of material fact and request transfer of title to the patent to him. Such transfer will take place unless within 30 days after receipt of notice by the patent owner he requests a hearing before the Board of Patent Interferences.

The act authorizes the Administrator to license others under patents held by him on behalf of the United States and to protect inventions or discoveries owned by him, and to require contractors or persons retaining title under the act to protect such inventions to which the administration has or may acquire a license.

INVENTIONS AND CONTRIBUTIONS BOARD

The act provides for the establishment of an Inventions and Contributions Board within the Administration whose functions are (1) to evaluate and recommend to the Administrator for a monetary award, if any, any scientific or technical contribution which may have "significant value in the conduct of aeronautical and space activities," without regard to the patentability of the contribution or its conception in the performancec of work under any NASA contract; and (2) to recommend to the Administrator action to be taken on proposals to waive title to inventions.

The Board is a very important factor in the granting of waivers of title to inventions, as discussed above. This is so because the act provides that each proposal for any waiver "shall be refefred to the Board." The Board must accord each interested party an opportunity for a hearing and must transmit to the Administrator its findings of fact with respect to such proposal and its recommendations for action taken.

Regarding the other function of the Board, each application made for a monetary award for a scientific or technical contribution must be referred to the Board. The Board must provide an opportunity for a hearing upon such application and must transmit to the Administrator its recommendation as to the terms of the award, if any, to be made to the applicant. The Administrator would make his determination on the basis of the record so made in the light of prescribed standards.

The Administrator is authorized to apportion the award made for any contribution among two or more contributors in proportions determined by him to be equitable. An award made for any contribution must be conditioned upon the waiver by the recipient of any claim which he might have to receive compensation for the use of such contribtuion. The legislative history of the act indicates that one of the objectives of the awards provision was to provide a basis

for payment to an inventor when title to his invention was not waived by NASA. No award exceeding $100,000 may be made until after a complete report regarding the proposed award has been made to the Congress and 30 days have expired after receipt of such a report by the Congress.

CONCLUSION

The establishment of a national program is necessary for reasons of national defense and to insure that in the long run outer space is effectively utilized for peaceful purposes. The National Aeronautics and Space Act of 1958 provides the charter to carry out such a program.

## Joseph Alsop's Reply to Secretary Benson's Letter

EXTENSION OF REMARKS
OF
### HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. JONES of Missouri. Mr. Speaker, under permission granted in connection with the few remarks which I made in the House today, I am presenting herewith copy of a letter written by Mr. Joseph Alsop, which appeared in the March 14, 1959, issue of the Washington Post. It points up, I believe very clearly, why Secretary Benson has failed, and why he has been such a disappointment to those, who like Mr. Alsop, had great hopes for the man upon whom President Eisenhower put such great faith and dependence in to build a strong agricultural economy. It is a letter which every American should read:

MR. BENSON'S MESS

Secretary of Agriculture Benson's March 11 letter deserves and indeed demands a reply.

To begin with, there is Secretary Benson's strange disclaimer of responsibility for everything that has happened in the Agriculture Department during his term of office, on the ground that "a Benson program has never been allowed to go into effect" by Congress. This is pious twaddle.

The great majority of Secretary Benson's requests to Congress have in fact been granted, in whole or large part. What happened in 1954 when the Secretary was dealing with a Republican Congress is perhaps the best test. Benson then requested authority to flex parity payments from 90 percent down to 70 percent. As the President had made contrary promises during the 1952 campaign, the Congress voted a compromise. Flexing to 85 percent in the first year, and 75 percent in the second year was approved.

More recently, additional congressional action has permitted additional flexing. Thus parity payments today now average about 70 percent; and they therefore stand at the lowest level the Secretary originally told Congress he wanted. If the Benson program had been any good, in short, it would now be producing results.

The real truth about this matter of congressional dealings with Benson's program lies even deeper, however. As the Secretary himself very clearly admitted in an interview with John Osborne, published in Fortune in January of this year, Benson has never presented the Benson program he moans about in any clear, complete, and consistent manner. Mr. Osborne, who certainly cannot be charged with lack of sympathy for the Secretary, puts the matter most succinctly.

"Benson's claim that things would be in materially better shape today if Congress had followed his 1954 lead hardly stands up to scrutiny. He not only has never asked Congress for all he believes necessary; he has yet to apply his own doctrine to the full within the limits that Congress has allowed him."

There could be no clearer summary of Secretary Benson's failure. Very early on, Benson must have realized that his remedies were not working. Yet he has let the farm surpluses accumulate fantastically. He has permitted the total cost of the farm program to double and then triple, while prating about economy. He has tolerated the frustration of the only sensible aim of any farm program, the promotion of independent farming in this country. Meanwhile, he has offered no new remedy of his own except for the totally disastrous soil bank, which had soon to be abandoned. Barring the soil bank, his only prescription has been another dose of the same medicine that proved ineffective when he first prescribed it in 1954.

I myself was a strong supporter of Secretary Benson when he took office. Like many others, I supposed that he had the determination and the courage to remove the anomalies of the earlier Democratic farm programs. I am only ashamed that it took me so long to notice that Benson's long suit was pious talk rather than positive performance. His efforts to remove past anomalies and extravagances have in fact produced even greater present anomalies and extravagances. On this point, the really horrifying figures of increase of the Agriculture Department's expenditures under Benson speak for themselves in the loudest possible voice.

I have no doubt that the Secretary is a worthy, religious, and not uncourageous man. But the agricultural mess that he found was much less bad than the agricultural mess that he has made. The fact cannot be denied, so it had better be faced.

JOSEPH ALSOP.

WASHINGTON.

## Overhaul of Our Farm Policy Is Needed

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. WOLF. Mr. Speaker, under leave to extend my remarks I am introducing for the RECORD my sentiments regarding a letter that appeared in the Washington Post on March 14, 1959. This letter was written by the distinguished columnist, Joseph Alsop. He points out that the sincerity and religious conviction of Mr. Benson does not change the fact that he has been an inept Secretary of Agriculture who has created a farm surplus problem that is almost insurmountable. Mr. Alsop clearly implies that a complete overhaul of our farm policy is needed under the leadership of a new Secretary of Agriculture. I heartily concur with these remarks.

## The American's Creed: A Summary of the Fundamental Principles of American Political Faith as Set Forth in Its Greatest Documents, Its Worthiest Traditions, and by Its Greatest Leaders

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mrs. BOLTON. Mr. Speaker, it is significant that "The American's Creed," selected from more than 3,000 statements submitted by Americans from every walk of life, should have been written by a man who at 13 years of age came to work as a page boy in the Capitol of the United States, and stayed on to serve the Members of the House in increasingly important capacities for 61 years. That man was William Tyler Page. At the time of his death in 1942 he was minority clerk of the House of Representatives.

The story of "The American's Creed," how it came to be our national creed, something of its doctrinal origins, and what Members of Congress have said about it, is fascinatingly told by Myrtle Cheney Murdock in her new book, "The American's Creed and William Tyler Page." The author is the wife of the Honorable John R. Murdock, for 16 years a Member of this body from the State of Arizona. Mrs. Murdock, educator, lecturer and writer, has been an official guide in the Capitol Building since her husband's retirement in 1952. Her knowledge of the Government of the United States, her love and appreciation for the Capitol Building and its history, have made her an invaluable friend of the Members of both House and Senate.

Mrs. Murdock was uniquely fitted to write about the American's Creed. She knew William Tyler Page personally, and had drawn from him the hitherto untold story of how the idea of summarizing our basic principles into a brief 100-word creed unfolded in his thinking. He told her of his pride at having worked in the Capitol Building for so many years. He told her he had set aside 1 day each year, Independence Day, to read and reread our great American documents. This systematic study of the Declaration of Independence, the Constitution of the United States, Washington's Farewell Address, Lincoln's Gettysburg Address, the writings of Jefferson, Madison, Hamilton, and other of our Founding Fathers, made him a profound student of the fundamental principles of American political faith as set forth in these documents.

The late Daniel A. Reed, our beloved colleague from the State of New York, came to Congress soon after "The American's Creed" was accepted in 1917. He sensed the true meaning of Mr. Page's effort when he said:

Crystallized within this patriotic creed is the very spirit of a free people. It breathes freedom in every word. This great document has entered the sacred archives of our Republic as a worthy companion of the Declaration of Independence and the Federal Constitution.

At this point in the record, Mr. Speaker, I should like to quote "The American's Creed" as given to us by Mr. Page.

THE AMERICAN'S CREED

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution, to obey its laws; to respect its flag, and to defend it against all enemies.

Mr. Speaker, our national patriotic organizations have been untiring in their efforts to keep "The American's Creed" alive. We in the Congress of the United States have an opportunity and a responsibility to see that the creed and the inspiring story of its conception is introduced into the schools and libraries of our respective States. Along with many of my colleagues, it has been my practice for some years to present parchment copies of the creed to each graduating student of the high schools in my district. Other Members may have utilized the creed in even more effective ways.

I was gratified to receive a gift copy of Mrs. Murdock's book, "The American's Creed and William Tyler Page," this past week. I am happy to know that she has presented a copy to every Member of the Congress. This and other books written by Mrs. Murdock are on sale in the House stationery room at discount prices to the Members. Her books about Washington are: "Your Uncle Sam in Washington," "Your Memorials in Washington," "Constantino Brumidi, Michelangelo of the United States Capitol," "National Statuary Hall in the Nation's Capitol."

Mr. Speaker, I ask unanimous consent that many of my colleagues who may wish to speak about Mrs. Murdock's gift may be given 5 days in which to extend their remarks in the RECORD.

---

## Matthew Fontaine Maury: Man of Genius

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. FLOOD. Mr. Speaker, the U.S. Navy has produced many illustrious leaders whose fame extended beyond the confines of the naval profession. Preeminent among such men was Matthew Fontaine Maury.

In view of recent navigational achievements of U.S. submarines in crossing the Arctic Ocean under the icecap, it is indeed timely that Shipmate, the well-known monthly magazine of the U.S. Naval Academy Alumni Association, in its February 1959 issue, should feature an admirable article on the Navy's first great navigator by Ruby R. Duval.

Miss Duval is a native of Annapolis, Md., and was long connected with the U.S. Naval Academy as secretary to the head of the department of English, history, and government. She bears a name distinguished in the history of Maryland, Virginia, Kentucky, Florida, and Texas.

In order that the indicated article may have a wider circulation over the Nation at large and be permanently recorded in the records of the Congress, under leave to extend, I include its text.

MATTHEW FONTAINE MAURY—MAN OF GENIUS

(By Ruby R. Duval)

Why is it that the U.S. Government publishes monthly through the Navy Hydrographic Office in Washington, great pilot charts bearing at the top of each the notation "Founded upon the researches made in the early part of the 19th century by Matthew Fontaine Maury, while serving as a lieutenant in the United States Navy"? This is a recognition paid to no other naval officer and these charts perform a service, and have for over a century performed a service without parallel among government publication. Something that Maury thought and something that he did have plainly become the heritage of the ages and this heritage has grown rather than diminished with every passing year.

Born near Fredericksburg, Va., January 14, 1806, Matthew Fontaine Maury entered the U.S. Navy as a midshipman in 1825. His naval service commenced on board the frigate *Brandywine* at the time she was ordered to convey our national guest, General Lafayette, back to France and then to cruise in the Mediterranean. Two years later Maury joined the sloop-of-war *Vincennes* aboard which he was destined to circumnavigate the globe, and it was not until June 1830 that this vessel returned to the east coast of the United States.

It was during this long and useful cruise—an absence of 4 years—that young Maury arranged the material for his valuable work on navigation, "a volume of the greatest usefulness to the young man of our Navy and of the highest order of merit," wrote an officer of our Navy in 1841. "It is hardly possible for students on land to estimate accurately the merit of Maury's exertions in the preparation of this work, for the quiet and leisure so essential to deep study are seldom experienced on a man-of-war," continued the officer in his appraisal of this look on navigation published early in 1836. Almost immediately this publication displaced all rivals and remained for many years the authoritative textbook on the subject. And it is fitting to recall that when the Naval Academy was established at Annapolis in 1845—another reality of Maury's constant urging—one of the textbooks adopted for instruction given midshipmen was his "New Theorectical and Practical Treatise on Navigation."

In June 1836 Maury was commissioned a lieutenant in the U.S. Navy; in September of the following year he was appointed astronomer for the exploring expedition to the South Seas! and in 1839 he was selected as assistant to the hydrographer in carrying on the work of examining and surveying southern harbors with the view of establishing a navy yard in the South.

It was while returning from a month of leave to visit his family in the fall of 1839 that Matthew Fontaine Maury's leg was broken in a stagecoach accident, and he was relieved temporarily from active duty. During his enforced leisure he turned to the pen to expound the needs of the Navy and in a series of articles published in the Southern Literary Messenger under the nom de plume Harry Bluff, USN, he offered his "Scraps from the Lucky Bag."

"Every man-of-war, you know, has her lucky bag containing a little of everything, and something belonging to every body * * *" wrote Maury in 1840. "The bag which I am about to overhaul, has been open for 15 to 20 years. The facts collected about the Navy during that time—hints dropped by messmates—opinions, notions, etc. have been picked up and carefully preserved in this big. * * *

"The great interests which this arm of national defense was designed to guard and protect, demand that it should be placed upon a better footing; for it has not kept pace with the improvements of the age. * * * Nearly a half century gone by, Congress passed an act for the building of six small frigates; and without any settled policy or fixed principles as to a Navy, the Government upon the most simple and economical plan, organized a mere handful of officers for those ships. To correspond with a Navy upon so small a scale the ladder to promotion in it had but a few steps—lieutenant, commander, captain—and the officer stood on the topmost round. * * *

"Times have changed since then. The maintenance of a Navy is no longer a matter of doubtful expediency. * * * The very interests which point to the necessity of a Navy, and which brought it into existence, require for it a vigorous and healthy system. But many of its laws are wrong—many of the principles engrafted upon it, have, by the changes of time, become defective. Experience points out many amendments and improvements which should be made; and necessity calls loudly for reorganization."

Maury went on to cite colorful incidents in this country's naval history since Congress had authorized the building of the *Constellation*, the *Constitution*, the *United States*, etc., and again and again plainly pointed out the need for expansion to keep pace with the times. In reference to personnel, he alluded to the want of grades in the scale of promotion. He wrote in part: "We have a Navy respectable in force—sending its squadrons to different seas—boasting of the largest ships and the finest specimens of naval architecture in the world. True policy and self-respect require that that Navy and those squadrons should be commanded by officers similar in rank and equal in grade to the officers of other navies. * * * Their want of rank often places American officers in embarrassing situations."

On gala days and at parades; at public fetes and in official ceremonies, in presentations and court etiquette, and in the eyes of nations; honors, attention, respect, civilities, and privileges are paid to the English, or to the French, or to the Russian admiral, while the American captain may expect such courtesies in vain, wrote Maury. He went on to explain that an officer of rank to correspond with that of admiral in other services was essential to a complete organization of the Navy—the efficient management and discipline of a fleet—as that of major general was to a grand division of the Army.

Harry Bluff wrote at length and the arguments which he employed were forcible and convincing. He clearly revealed that the immediate and pressing demands of American commerce, the interest of American citizens, and the dignity and honor of the American Nation, all required that a larger naval force than was then (1840) maintained, should be kept in commission.

In another offering under the caption "Scraps from the Lucky Bag," Maury raised the question as to whether, for the true interests of the service, the officers should be adept and proficient in one particular branch of science that had a bearing on their profession—or whether each officer should understand something of all—a man of real solid parts, well grounded in mathematics and sufficiently indoctrinated in the elements and principles of the other branches of science to pursue in after life his favorite department of science, with advantage to himself and the service. Further, that the officer's attainments be such as to enable him to put into practice, whenever the exigencies of the service should require it of him, the principles of any other branch of science which may have formed a part of his studies on board the schoolship. Examples of occasions that he knew vividly emphasized his recommendation that the foundation of a school for the Navy officer should be on the most substantial basis—broad, solid and comprehensive—not too deep, lest the means defeat the end.

In July 1841, a contributor to the Southern Literary Messenger, identified as "A Brother Officer," wrote in part: "'Scraps from the Lucky Bag' have turned the attention of the whole Nation toward the Navy, and have won for their author an enviable and lasting reputation. * * * Facts were brought before the public, connected with the abuses of the Navy, which produced universal astonishment. His 'Scraps from the Lucky Bag' produced an enthusiasm throughout the whole extent of the country, which has not subsided and will not subside until the whole Navy is reorganized. These 'Scraps' will, in the end, save millions to the country and give an efficiency to the Navy that will be a guarantee to it of future renown."

Three months later an editorial note in this widely read magazine reveals the trend of that period in our history: "Our columns are open to the officers of the Navy; and we here again repeat our invitation to them to discuss the measures and means for putting the Navy on a proper footing. We have hoisted the flag of reform to the Navy and nailed it to the mast. Under it we mean to fight as long as there is 'Scrap in the Lucky Bag,' or as a sailor would say, 'a shot in the Locker.'"

For a long time nobody knew who the author of "Scraps From the Lucky Bag" was and the criticisms of the Navy, though severe, were so wisely constructive that naval officers welcomed them and set about embodying them in a new and better organization. Out of the reforms inaugurated there can be little doubt that the Naval Academy, founded at Annapolis in 1845, is the product of the suggestions made by Maury in his articles. At first, he had proposed merely a schoolship for the instruction of midshipmen but after his articles were so well received he let it be known that he would welcome the establishment of a naval school ashore, a parallel to the Army's Military Academy at West Point.

Matthew Fontaine Maury was sent to Washington in 1842 and placed in charge of the Depot of Charts and Instruments which some years later became officially known as the U.S. Naval Observatory and Hydrographical Office. He was destined to make this office or bureau the observed of all observatories, and he was to prove to all scientists and to the masters of vessels at sea that the ocean is as law abiding as the land. The method that he pursued was that of cooperation. He had blank forms—abstract logs, as he called them—prepared and sent out to all ships that would use them. These called for a sort of recorded diary of temperatures, air pressures, depths, winds, and currents over every surface of every sea that was traversed. The sea was having its biography written.

The effect on navigation was immediate and dramatic. From the thousands of logbooks returned to him, Maury studied, arranged, and charted the data; and he soon began to issue his "Wind and Current Charts and Sailing Directions," pointing out to mariners the natural paths of sea travel. He published also his "Physical Geography of the Sea," which was translated into many languages and included in the curriculum of numerous European schools.

Maury, as the representative of the United States, attended the International Meteorological Conference at Brussels in 1853. This was a memorable occasion not only for navigation but for sponsoring international good will and cooperation. It was the first League of Nations and at its close Maury's meteorological charts had been unanimously adopted and the greater part of the shipping of the world had come within the compass of his beneficent design. His research in oceanography led him to publish the first depth map of the North Atlantic and to point out the pathway for the laying of the first Atlantic telegraph cable in 1858.

There are always some people jealous of the achievements of others and it is a matter of record that a considerable number of Maury's fellow officers were resentful of his achievements and of the acclaim he was receiving from all over the world. In February 1855 an act of Congress was passed to promote the efficiency of the Navy, and a board of naval officers was directed by the President to make a careful examination of the personnel of the Navy and to report those found incapable of performing promptly and efficiently all their duty both ashore and afloat. The following September Maury was notified that his name had been placed on the reserved on leave of absence pay list. He was further advised that he was not detached from the Naval Observatory, but was to continue on his present duty. This action of the board was taken as a severe blow and he tried to ascertain from the Secretary of the Navy and from members of the board just what was the accusation in regard to his service to his country. Replies to his inquiries were evasive and the action of the board produced a very demoralizing effect on the naval service.

Meanwhile Maury's real friends and the press of the country had taken up his cause, but 2 years passed before justice was done. The President of the United States not only restored him to the active service list but also promoted him to the rank of commander, retroactive from September 14, 1855.

Maury was 55 years of age when in 1861 a tragic call sounded throughout the country—the War Between the States. All was changed and, like Robert E. Lee and other loyal Virginians, he resigned his commission in the Federal service and offered his sword to his beloved State. In the summer of 1861 he was appointed Chief of the Confederate States Naval Bureau of Coast, Harbor, and River Defense, and began to plan the construction of submarine mines to be placed in the rivers and harbors of the South. It was in a house still standing on Clay Street in Richmond that he invented the electric torpedo in 1861–62. Later he was sent on a diplomatic mission to England and he did not return to his native land until 1868. In that year he declined the directorship of the French Imperial Observatory and accepted the call to head the department of physics at the Virginia Military Institute at Lexington, preferring to give himself to the service of his impoverished State. There he could be in close proximity to his illustrious countryman, Robert E. Lee, then president of Washington College—later to be known as Washington and Lee University.

Now began still another contribution to Maury's fellow men. The thought of helping the farmers, especially the cotton planters, by the establishment of a more effective Weather Bureau in Washington, motivated him with enthusiasm that knew no bounds. He traveled and lectured in every section of the United States. European countries were soon sending him resolutions of thanks for the stimulation of agriculture that his far-flung addresses had inspired.

Maury's abundant energy finally overtaxed his strength. When he returned to his home from a lecture in St. Louis in the fall of 1872 he realized that his career was near its close. He must have realized also that victory had been won, that the task of interpreting nature in terms of help rather than of hindrance had been permanently advanced by his methods, and that his "Scraps from the Lucky Bag" had awakened and inspired the urgings which eventually resulted in the reorganization of the old Navy. Alfred Thayer Mahan, the historian, had found real food-for-thought in Maury's extensive writings, and an incentive to his (Mahan's) fond objective which was to establish the fact that maritime strength was a determining factor in the prosperity of nations. He was able, therefore, to reinforce his argument that the future interests of the United States required a departure from the old traditional policy of neglect of naval-military affairs.

During his long illness, Maury's resolute faith displayed itself and he became resigned to the inevitable. The end came quietly on February 1, 1873. "Do I drag my anchors?" he asked with a smile. "Yes," said his son Richard. "All is well," he replied.

---

## The International Dilemma

EXTENSION OF REMARKS
OF

### HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. McINTIRE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address:

THE INTERNATIONAL DILEMMA

(By Spruille Braden)

From a Yankee mother I inherit so enduring a pride in my New England ancestry, as always to make returning to Boston a happy homecoming. It is an especial honor to be invited by the Associated Industries of Massachusetts to address so distinguished an audience. I am deeply grateful.

Your officers have asked me to take a good hard look at the international situation. This is difficult because the international scene changes so rapidly and many of the actors are so shifty and evasive that the eye hardly can follow them. And the subject is so vast that tonight I can touch on only a few of the dilemmas confronting us.

Many of these are the result of history, of our past sins of both omission and commission—of our failures to catch and settle problems at their inception, when it could have been done readily, sensibly and permanently.

Too often we Americans get into trouble because we are guided mainly by sentimentality—by almost schoolgirl crushes—instead of by intelligence and experience. After all, the record shows that it has been weakness from within, and not an enemy's

power, which usually has caused nations and civilizations to fall.

Obviously, the international situation is grave. Therefore, like our forebears at Bunker Hill, we must act speedily, courageously and intelligently, with full knowledge of the facts, of our opponents, the so-called neutralists, and of our allies. Above all, we must know ourselves.

History shows that if a nation is to survive, realism and self-interest must be the dominating, almost the sole, considerations.

We must end the self-delusion that we are a uniquely practical and far-seeing people. In foreign affairs, we are no such thing. On the contrary, we are the most sentimental and naive Nation in the world.

Mistakenly, we are prone to attribute to others those virtues we like to think we have. Americans really are eager to do right. No other nation has rushed so generously as we to help stricken peoples all over the world.

This is fine, so long as it is done privately and voluntarily. It becomes disastrous if imposed on us by government for any length of time.

Our emotional enthusiasms have led to mistaken and fickle or vacillating policies which often make us look foolish, and have taken us into wars and other misfortunes.

In 1940, our sympathies were all with little Finland, who paid her debts and was being attacked by a large and cruel aggressor. Twelve months later, that Soviet aggressor had become our great and noble ally. Twice since my young manhood, the Germans have been portrayed as the arch villains of all time. Now they are our esteemed allies. Our history shows change after change from friendship to enmity, and back again.

One of our more harmful waverings has been with the neighboring 20 American Republics, who are natural allies, because their interests and political traditions are similar to ours, and they have the same need to defend this hemisphere as we. The State Department loved them dearly for a time and called them our "good neighbors." Then it forgot about them until its memory was jolted by what happened to Vice President NIXON. Now, in an attempt to win back their friendship, we propose to flood them with extensive grants and loans, which will injure both them and us.

Sentiment makes us fall for any high-sounding cliche: "Make the world safe for democracy." That took us into the First World War.

Many of us were thrilled by Wilson's dictum about "Open covenants openly arrived at." Yet, the only effective procedure is to have open covenants secretly arrived at by representatives of intelligence and complete integrity. The resulting agreements, of course, before final ratification, must be subjected to the most searching scrutiny by the American people, the press, and Congress.

In the musical comedy, "The Bells Are Ringing," Judy Holliday sings that she was taught, "Be they neighbor's keeper," and "mind your own business." Our sentimental propensity for trying to be our neighbor's keeper, even against his will, and for dispensing charity on an enforced government-to-government basis, instead of voluntarily as individuals, has increased our country's disposition for meddling in other people's affairs. This is not the way to make friends and favorably influence people.

Let us consider a concrete example: Our present predicament in the Near East stems largely from a sin of omission during the years following World War I. Justifiably stirred by pity and a desire to help millions of cruelly persecuted Jews, our motives were splendid; but we went about things the wrong way, when we first countenanced talk about the establishment of a Zionist state in Palestine, and, after World War II, helped set it up. If anyone is going to throw a million people out of their country and homes, and seize their properties, he must cast morality aside and ruthlessly exterminate and suppress them and all their brethren, as we did the North American Indians. Of course, we had neither the desire nor the ability to wipe out millions of Arabs. Now, it is too late to reverse matters without causing a major catastrophe. Thus, the establishment of Israel, as it was done, was bound to bring trouble. If our leaders had had the integrity to resist Zionist pressure in domestic politics, I doubt that there presently would be a fertile field for Soviet influence and the threat of war in the Middle East.

Pouring hundreds of millions of dollars under the Eisenhower doctrine into that area has not cleansed us of our sin in condoning and helping to rob Peter to pay Paul.

Probably the most inexcusable and disastrous of all our sins of omission occurred in Korea, when MacArthur and our other generals, who had victory within their grasp, were not permitted to win the war.

Historically speaking, dictators usually fall by assassination, revolution, or defeat in war; witness Caesar, Louis XVI, and Napoleon, or, in our time, Hitler and Mussolini. Thus the defeat of Mao Tse-tung and his hordes well might have wiped communism out of China and discredited it everywhere.

Pray God. Our policy from now on may be expressed in the words of Capt. John Parker to his Minute Men at Lexington, 183 years ago: "Stand your ground. Do not fire unless fired upon, but if they mean to have a war, let it begin here."

Another dilemma or diplomacy is that realistic decisions usually cannot be clean cut for good or bad, but must be taken between two or more unsatisfactory alternatives. Unless the diplomat has been wise or lucky enough to solve a problem at its birth, the best he may later hope for is to choose the lesser evil. In making these close decisions, it is perilous to be swayed by any sentiment, other than patriotism and simple morality.

In 1956, the Suez Canal incident seemed to present such a choice of the lesser evil. Nasser flagrantly breached Egypt's solemn commitments. Whereupon, the British, French, and Israelis, in violation of the U.N. Charter, resorted to force to protect their rights. All were guilty. But each did what every country (if not overwhelmed by superior strength, subverted by socialism, or weakened by sentimentalism), will and should do in a crisis; they acted to defend their national interests.

The choice for us seemed hard. Yet, both our national interest and basic morality lay on the side of enforcing respect for international agreements, the sanctity of a legal contract, and the protection of private property, and defeating Moscow's maneuvers in the area. Also, it would have been wiser to stick with our allies. By joining Khrushchev to side with Nasser, we lost another chance to clean up the Near Eastern situation.

I should add, parenthetically, that allies will remain together only so long as their interests are parallel or of such a nature as to make it worthwhile. Always, to count on allies when the chips go down is foolish sentimentality. The validity of George Washington's farewell advice remains unaltered by time, space, or science, because it rests on the facts of life and human nature. He counselled: " 'Tis our true policy to steer clear of permanent alliances, with any portion of the foreign world."

Everyone respects power, and nothing succeeds like success. If we will make the United States as strong as possible spiritually, economically, and militarily, other nations will feel that their best interests will be served by being on our team, and to this end, will make themselves strong. This is the best way to get responsible partners.

Among our other historical sins have been: our establishment of diplomatic relations with the U.S.S.R.; our not letting Stalin and Hitler kill each other off like the Kilkenny cats; our failing to take advantage of Stalin's death, and of Russian internal crises; and our not backing resistance forces behind the Iron Curtain.

But enough of the past. Instead, I shall list just a few of our present sins and sentimentalities which, since their inception, have grown into serious threats to our security. Fortunately, it still is not too late to wipe them out and so strengthen ourselves both at home and abroad.

Both Democratic and Republican administrations have made peace almost the sole objective for their foreign policies. Of course, we want peace. But I submit that honor and honesty, freedom and decency, self respect and respect of others, are infinitely more important.

There is no sense, at the summit or anywhere else, in talking about peace or coexistence with Communist governments. They may squabble a bit amongst themselves, but every one of them is dedicated to the annihilation of both our faith and our Nation.

They will stop at nothing to enslave and debauch mankind. Unless we act on these cold facts, they will bury us as Khrushchev prophesied. Either we destroy communism, or it will destroy us.

Let us cut out the sentimental farce of cultural, agricultural or scientific and other interchanges with Communist-controlled nations. They, and not we, will benefit. Also, by thus lending prestige to the Communists, we set a bad example, which others follow.

It is a mortal sin to tolerate Communists anywhere. But above all, it is a sin to tolerate them in our Government. Witness the statement by Lt. General Trudeau, the Army's Chief of Research and formerly of Intelligence, that the Soviet's rapid military advances reflected successful espionage within the United States, rather than scientific prowess within the U.S.S.R.

It is only a somewhat lesser sin to allow in critical government and civilian posts socialists, well-intentioned idealists, unidentifiable theys, and others who too often are ready dupes for the Communists. The career Foreign Service, as I have known it so intimately, by and large was a fine body of trained and competent diplomats. Unfortunately, the Service has been submerged by swarms—literally thousands—of outsiders brought into the State Department, the International Cooperation Administration (ICA), and other Government offices. Probably a majority of these are loyal citizens, but some just do not know the traditions and real meaning of the United States. A few of these, having risen to policy making or influencing posts, often speak for the State Department, and so can and do distort or ignore those basic precepts by which this Nation has been guided until recent years.

Another mortal sin is that following Lenin's plan, we are bankrupting the United States, making us easy prey for the Soviet and a Communist takeover. Khrushchev gloated that our grandchildren would live in a socialist America. My friends, already we have traveled far down that path toward ruin. No socialist or welfare state, with all its inherent weaknesses, can be defended against the ruthless power of communism.

Extravagance and inflation are bad enough at home, but since 1946, over one-fourth of our $285 billion national debt has been loaned or given away to foreign governments. Some of this may have been essential. But much of this approximately

$70 billion has been squandered in useless grants and dubious loans.

About $3 billion of our hard-earned tax money has been used to reduce the taxes and national debt of other countries.

We have helped communism, the anti-Christ, by giving billions to Tito and Gomulka, and encouraged and financed socialism elsewhere.

ICA personnel has grown from 571 employees in 1948 to 12,586 in 1957, plus 7,000 or 8,000 more engaged on this same work in defense or other Government agencies. In addition, Senator BYRD reports 212,423 foreign nationals working for U.S. military agencies abroad.

A congressional committee unanimously reported: "Loose, slipshod, and unbusinesslike spending of more than $250 million—a quarter of a billion dolalrs—in Iran" and added, "It is now impossible with any accuracy to tell what became of the funds."

On June 26, 1958, the House Committee on Government Operations criticized ICA because:

"The administration of major construction projects * * * had been inadequate, indifferent, and incompetent * * * as a consequence * * * cost to U.S. taxpayers has been increased and the dignity and prestige of the U.S. Government * * * has suffered. * * * There was virtually no supervision of engineering or construction contractors * * * which opens the door for collusion."

ICA personnel discussed their own future employment with contractors under their supervision. The Congressmen, amongst other transactions, report that:

"ICA permitted the construction contractor on the Cambodian road to purchase about $1 million of used equipment from himself. Approval of this unusual procedure was based on the contractor's assertions that similar new equipment was not available. As ICA could have determined, this was not the case.

"The contractor sold his used equipment to ICA at a price substantially higher than that at which he had been offering it—unsuccesfully—on the world market for 6 months previously."

Further shenanigans enabled the contractor to evade taxes on $500,000 profit from the sale. He also ignored ICA requirements to report commissions on the sale of his used equipment, paid to persons who had rendered no service to the Government.

Last January, this same Committee on Government Operations[1] officially asked, "How much of the $24 billion appropriated by the Congress for this (military aid) program has been wasted?" This is nearly $3 billion more than the assessed value of all of the real and personal property in the 6 New England States (please see table on page 9a) amounting to approximately $21.2 billion. It is twice the anticipated $12 billion Federal deficit for fiscal year 1959.

The Comptroller General also reports similar goings-on by ICA.

The fiscal 1958 Federal deficit of $2.8 billion could have been wiped out with $\frac{1}{2}$ billion left over, had we kept our direct foreign giveaway money for this year at home.

The 2,000 members of your own Associated Industries of Massachusetts, by sweat and sacrifice, intelligence and initiative, have accumulated a capital investment in plant, machinery and current assets of approximately $3,936 million. But this is chicken feed for the bureaucrats, who induced President Eisenhower to ask for almost exactly this amount for foreign aid this year, exclusive of at least $1$\frac{1}{2}$ billion for the farm disposal program abroad, $2$\frac{3}{4}$ billion for the World Bank and Monetary Fund, and $2 billion additional for the Export-Import Bank.

If your A.I.M. industrial payrolls of $2,737 million per year were devoted entirely to foreign aid, they would pay barely the annual carrying charges on the $70 billion given away overseas since 1946.

One would expect the recipients of our bounty to be enthusiastic about it, but listen to what just a few of the many statesmen and other leaders of this hemisphere have written to me:

"From a predominantly free enterprise and private economy, there will emerge, due to foreign aid, a system of public ownership, planning, and compulsory saving similar to that in Russia.

"I cannot resign myself to thinking that we must depend on foreign aid * * * it is demoralizing our youth and promoting laziness and corruption.

"As a Latin American, I am ashamed of the begging policy, coupled with aggressiveness and ingratitude.

"This aid is humiliating. Each country must resolve its own problems * * *. If it (needs) aid from the outside, it should start by creating such favorable conditions as to attract the aid from private sources.

"The cold indiscriminate aid given because your Congress authorizes it is a corrupting and impoverishing influence."

I entirely agree with a U.S. engineer who has operated successfully all over the world when he writes to me:

"We definitely are doing ourselves no good. The policy of Government personnel doing this work is playing the Kremlin's game. * * * Waste and inefficiency is the rule, rather than the exception. * * * It is definitely international socialism. Consciously or unconsciously, a majority of the personnel administrating the aid program abroad is antagonistic toward American private enterprise."

Since 1940, the forces laboring to get Uncle Sam to give away everything he has, have grown extraordinarily effective. Some of our World War II giveaway may have been essential, but others, as in Latin America, were silly and useless. Then came UNNRA; we put up the money, but Stalin and Tito got the thanks. After 1946, help had to be given on a so-called temporary basis to devastated Europe—yet we are still giving. Later, we said our aid was to defeat communism, although we had invited the Soviet to be a beneficiary of the Marshall plan. Now, the sentimentalism is advanced that morally we are obligated, as a matter of Christian charity, to help the underdeveloped nations industrialize and raise living standards at a speed, anyone with a speck of common sense, knows is unattainable.

Egging us on in this quixotic misadventure are the Communists, abetted by Socialist and do-gooders, plus thousands of bureaucrats, anxious to continue a luxurious living to which they fast are becoming accustomed.

From the start, proposals were advanced for the U.S. Government to finance equity investments and make increasingly soft loans. One official committee after another advocated these global giveaways. A rear guard action against these programs has been fought by U.S. investors, assisted by the still sound managements of the International (World) and Export-Import Banks. At least a show of businesslike procedures and protection of private property had been retained until lately.

Now, the defense is weakening. Inevitably, 12 years of government-to-government loans and grants have eroded the resistance and common sense of both the executive and Congress. Many private business leaders either are uninformed or subjected to the strongest kind of political and other pressures. Some accept each successive step as an alternative to something worse. Valuable contracts are offered by ICA as enticements to both employers and labor leaders.

The Development Loan Fund has been formed to make soft loans payable in local currencies, with which already we are surfeited. These loans are so dubious that no existing private or official institution would be allowed to make them. In addition, there are plans for similar funds in the Middle East and Latin America, to which we would be the main contributor, but without management control. Under Greshanis law, these bad credits will drive out the good, with dire consequences for both lender and borrowers. This is confirmed by the Fairless committee appointed by the President to study foreign aid. It said this type of loan was "undesirable and should be terminated."

From the outset, these Statists, Socialists, and Communists have tried to set up these programs in the United Nations under their control, but with Uncle Sam footing the bills. For a time, SUNFED (Special United Nations Fund for Economic Development) was blocked. But the victory was short-lived. The trend is toward U.N. control. President Eisenhower has suggested the organization of an International Development Association as a soft loan affiliate of the International

Source: Moody's Municipal and Government Manual.

Bank and Secretary Dulles declared at the U.N. Assembly opening: "We propose that the nations dedicate the year 1959 to these purposes of economic development."

A continuation of our vast giveaways will be disastrous, but with the U.N. Communists and Socialists, neutralists, and supplicants for aid more and more directing the spending of your and my money, world ruin through inflation and bankruptcy will become inevitable. There will be no incentive for countries to put their houses in order and balance their budgets, stop inflation, and create favorable environments to attract private investment. Poverty, dissatisfaction and socialism will spread, while we in the United States will face ever bigger deficits and taxes and an ever smaller dollar.

This alarming and tragic outlook readily can be reversed by returning to the provenly successful methods of private enterprise, which have brought far greater and more widespread benefits to everyone concerned than governments ever could. I know firsthand what magnificent jobs have been done by the great mining and other companies throughout Latin America, including your own Boston-born United Fruit Co., which has performed miracles, converting uninhabitable jungles and swamps into valuable farmlands and raising the standard of living.

Those who beg for aid should remember how an undeveloped New England became a rich center of industry and finance. It was not by loans or grants from abroad, nor even because of its own natural resources. It was by courage and character, the initiative and moral qualities of its sturdy citizens. The great economist, Luigi Einaudi, former President of Italy, made this clear when he wrote:

"The heart of American wealth has not been in the rich Southern cotton regions, in the fruitful middle western plains, in the coal, iron, or oil regions. It lay in the New England States, in the inhospitable stony regions between New York and the Canadian border where the land yields little because of the profusion of rocks, where even the forest grows with difficulty, where there are no minerals of any kind, indeed where everything is lacking except the indomitable energy of man."

The only sensible thing, the Christian thing for us to do, is to give the indomitable energy of man a chance to work.

"Love thy neighbor as thyself implies that a rational love of self is the basic standard, measure, and gage which must guide us."[1] Charity does begin at home in our Christian-Judaic religions.

One should neither sin or bankrupt himself for the sake of his neighbor, however pressing the latter's needs may be. The head of the family's duty is not to engage in futile sentimentality but first to care for his own, however pitiful may be the appeals for charity or help from others.

In our times, the future of all civilization hangs upon the integrity and security, solvency, and prosperity of the United States. If, through the continued and growing abuses of foreign aid, we bleed to death, liberty, order, and peace, will be extinguished everywhere.

I pray that we start solving our problems at their beginnings and that soon we purge ourselves of the sins of both omission and commission and of the sentimentalities, so barren of real moral content, which now plague us. I pray that we quickly return to the honesty, realism, and high principles of the Founding Fathers, the courage of the minutemen, and respecting ourselves, demand and merit respect from all others. Truly, there is no other road to survival.

## The Role of the American Citizen in Our Foreign Policy

EXTENSION OF REMARKS
OF

## HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. KASTENMEIER. Mr. Speaker, the role of the American citizen in the formulation of our foreign policy was clearly outlined in a recent address by a distinguished colleague, the Honorable LEONARD G. WOLF, of Iowa, to the delegates to the Midwest Democratic Conference in Milwaukee, Wis. Mr. WOLF's thought-provoking speech stimulated the conference delegates to a healthy discussion of the foreign policy issues confronting us today. Under leave to extend my remarks in the RECORD, I include the following address by the Congressman from Iowa:

It is a pleasure to be attending the Democratic Midwest Conference here in Milwaukee. As some of you know I was born and raised in Wisconsin. This meant that during my youth, I considered Milwaukee the hub of the universe. My feeling for this city carried over through my undergraduate days at the University of Wisconsin and now I admire Milwaukee and Wisconsin because it is the home of so many truly great liberal leaders in Congress.

I might say in passing that there are no districts in this country that are better represented in Congress than Milwaukee by HENRY REUSS and CLEM ZABLOCKI. There are no more dedicated and effective Members of Congress than Congressman REUSS, ZABLOCKI, JOHNSON, KASTENMEIER, and FLYNN. There is no better or harder working Senator than BILL PROXMIRE. He has become the conscience of the Senate just as not so long ago Bob La Follette fulfilled this role for his State and Nation. Yes, the Wisconsin Democratic delegation are legislators of whom we may all be proud. They are men of principle fighting for those liberal ideals which we hope and know will become the policy of the new Democratic administration in 1961.

Milwaukee is, of course, a fitting place to talk about the problems of foreign policy. Here, in such plants as Allis-Chalmers, machinery is built which is used around the world. Machinery which has aided the underprivileged of this world to build homes in place of hovels, roads in place of paths, and factories in place of sweatshops: machinery which has resulted in cultivation of crops in areas where there were no crops. The world has much to thank Milwaukee for, and everyone thanks Milwaukee except the old Boston Braves fans.

In the future as a result of the St. Lawrence Seaway, Milwaukee will take on even added significance in its role as a world city similar in importance to Paris, New York, and Rome.

I am here today to talk about one of my favorite topics. And that is, how the average citizen in this country can participate in decision making in an era when it appears that the important decisions of public policy are vested more and more in the hands of a few. This is a tremendous problem and unless we as citizens of this country solve this problem, we will have, through laxness, indifference and irresponsibility, lost the most prized possession that a democracy can bestow on its citizenry—the right to be heard, to be listened to, and to affect the decisions of its Government.

We cannot allow a few men the right to decide the issue of peace or war,

We cannot allow a few men the right to decide the issue of atom bomb testing,

We cannot allow a few men the right to continue outmoded 19th century colonial policies toward the people of Asia and Africa.

In this past year we have gone from brink to brink on the international front. In June of 1958, American troops were sent to Lebanon. In October of last year Mao Tse Tung and Chiang Kai Shek had us trapped in a Chinese puzzle box called Quemoy and Matsu, a box which could have become the world's casket. Now we are involved in an even more difficult crisis—the Berlin question with all of its attendant problems, such as German reunification, the problem of NATO, and the arming of West Germany with nuclear weapons. Any one of these problems can lead to world war. And make no mistake about it, the present Berlin question, if handled carelessly, dogmatically, and without imagination or knowledge of what our objectives are in Europe, could very well involve us in a world war—a war which will not be limited if nuclear weapons are used. A war that could, if not destroy the human race, return humanity to precaveman days. The stakes are high. The issues are great.

No one can disassociate himself from politics. Every citizen in this country must commit himself to politics. That is why it is more important than ever that each and every citizen fight to make his opinion felt in the public arena. That is why rational discussion about public issues is more important than ever. That is why there must be a full scale debate on the floor of both Houses of Congress on issues such as the Berlin crisis and nuclear bomb tests.

But it is not only in those hallowed halls that there should be fuller discussion—and I am sad to report that there has not been fuller discussion—there should be fuller discussion in our universities, colleges, and churches. Let us for a moment take the Milwaukee area. Milwaukee is blessed with a number of great educational institutions, among them Marquette University and the University of Wisconsin. These universities should hold open debates on the great ideological and moral problems that nuclear science and communism have brought in our time. Thus, in this city could there be the beginning of the great dialog our beloved Adlai Stevenson talks about. These meetings must not be one-shot haphazard affairs; they must be part of a determined campaign by the Milwaukee Journal, the University of Wisconsin, Marquette University, the AFL–CIO, the chamber of commerce, and all church groups to work together jointly to create the atmosphere for debate and discussion. They must be wide-ranging discussions such as the role of the military in our foreign policy, nuclear testing, what should be our attitude toward Communist nations, the question of Red China. These are questions that should be talked about all over this country, not in television commercial terms but in terms of rational, serious comprehensive discussions. I assure you that your representatives in Washington follow all public discussions and public sentiments with interest. It is your job to create something that these men can listen to. Congress not only needs consent from the governed—it needs direction from the governed.

Finally, in considering the citizen's role in foreign policy, we should attract men—and encourage our most brilliant minds to speak out on issues of foreign policy. If possible, we should attract them into government. These men should be allowed to seek truth wherever they think they can find it. And, just as important, they should be allowed to speak the truth as they see it. If any of you have ever been in an organization, you will know how difficult this is to do.

We as citizens must destroy any ill-conceived notions or time-honored prejudices about the people in Asia and Africa.

We as citizens must think of them as fellow human beings who we must aid and accept just as we aid and accept our next door neighbor.

We as citizens must be tolerant of people in other lands.

We must give aid to all emerging nations in their struggle for freedom and material well-being, for if we do not, communism will conquer these areas without firing a single shot.

We as citizens should know that in complicated international situations one side has never had, nor I daresay ever will have, a complete monopoly of the right, and the other side a complete monopoly of the wrong.

We as citizens must encourage greater contacts between people on more than an official level. It is in this way that we will better be able to understand our neighbors.

We as citizens should train ourselves to keep our heads in time of crisis. For if we do not do this during this period of history we shall never have to worry about keeping our heads during any other future period.

The citizen must encourage and demand from his Congressman that he speak out on foreign policy issues.

In this most difficult of times the discouraging fact is that there is no leadership in foreign policy in the administration. This very fact puts a heavy burden on Congress. Because of this lack, you as citizens have the right to demand of your Congress that it take a more creative role in foreign policy. The public is bewildered. It has been stunned into apathy by this administration's futile foreign policy. Therefore, it is incumbent on the Congress to carry a good share of the responsibility for informing the public and offering constructive alternatives to an administration that is completely bewildered and confused. The average Congressman is reticent about speaking on foreign affairs; unless he knows that his constituency demand it of him. The Congressman in foreign affairs is as informed and aware as his constituency demands him to be.

And finally, the citizenry must keep vigilant and demand of its Government that insofar as is possible, and this means almost all the way, the Government take its people into its confidence about the matters of foreign policy. The people should never forget that government is a creature of the people and not the people a creature of the government. Because of this, upon every citizen in this country rests the responsibility of achieving the goal of peace, freedom, and justice. This is the price that a citizen must pay in a free nation. Thank God, that because we have a free Nation, we have the chance to pay such a price.

## Greater Wilkes-Barre Junior Chamber of Commerce Observes Anniversary

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday, March 12, 1959:

The Greater Wilkes-Barre Junior Chamber of Commerce came of age last night when it observed its 21st birthday anniversary with fitting ceremonies. It was a milestone for the community as well as the organization, the city and its suburbs being the chief beneficiaries of the Jaycees' program.

Robert Eyerman, one of the founders of the junior chamber in 1938, had the distinction of being its first president. Two years later, he helped organize the Pennsylvania Junior Chamber of Commerce and became its first president also. Subsequently, like so many other Jaycee alumni, he was active in the parent organization, serving on its board of directors and important committees, thus continuing to serve the community as well. The current president of the senior chamber of commerce, Sam Wolfe, is a former Jaycee, as were two of his predecessors, Edmund Poggi and Toby Armstrong.

The junior chamber of commerce, now headed by William Strey, is open to men 21 to 35 years of age. To carry out its program effectively, it maintains its membership between 200 and 250. Because of "graduations" by reason of age, new blood is sought annually, adding to its effectiveness.

The Jaycees are primarily a working organization, although they mix a lot of fun with their activities. The fact that they put so much time, effort and talent into it explains why the record of achievement is so impressive. Projects like the Parade of Progress and the Orphans Shopping Tour just don't happen.

Wilkes-Barre and neighboring boroughs and townships are deeply indebted to the junior chamber of commerce for spearheading so many undertakings that have as their objective the betterment of the community. If it is in the public interest and they are not engaged otherwise, the Jaycees lend a helping hand.

The members themselves derive no financial rewards for their service, but are compensated in experience and contacts which make it very much worth their while.

On this occasion, it is a privilege to extend congratulations and best wishes on behalf of a grateful community.

## Statement on the Area Redevelopment Act

EXTENSION OF REMARKS
OF
### HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. EVINS. Mr. Speaker, recently Mr. Herbert J. Bingham, executive secretary of the Tennessee Municipal League, appeared before the Banking and Currency Committee to testify on H.R. 3505, the Area Redevelopment Act, on behalf of the American Municipal Association as well as the Tennessee Municipal League. Because in his testimony Mr. Bingham so cogently sets out some of the problems the municipalities face in attempting to assist in the economic development of their cities in the interest of their residents, I include Mr. Bingham's testimony in the Appendix of the RECORD. The statement follows:

TESTIMONY BEFORE HOUSE BANKING AND CURRENCY COMMITTEE ON H.R. 3505 BY HERBERT J. BINGHAM, EXECUTIVE SECRETARY, TENNESSEE MUNICIPAL LEAGUE, NASHVILLE, TENN., ON BEHALF OF THE TENNESSEE MUNICIPAL LEAGUE AND THE AMERICAN MUNICIPAL ASSOCIATION

I am Herbert J. Bingham, executive secretary of the Tennessee Municipal League. I am testifying also as a representative of the American Municipal Association, which, through its affiliated State leagues and cities, speaks for virtually all of the municipalities in the Nation.

The bill before this subcommittee today has as its primary purpose the redevelopment, or development for the first time, of the most economically depressed areas of our country. That development can come about only through industrial growth, and this bill recognizes that.

My principal point is that industrial growth is largely dependent upon whether standard municipal services and sound municipal government are present in the community. Almost without exception, industry locates or expands within an incorporated city or near enough to a city to avail itself of municipal services.

Industry nowadays can be, and is, highly selective in its choice of plant sites. Plant locators weigh carefully the local situation with respect to water and sewer service, streets and roads, fire and police protection, schools, libraries, recreational facilities and various other services—most of which are the direct financial responsibility of the local municipal government. The municipal governments in the depressed areas of our country are trapped within this vicious circle: They are not attractive to industry because they are deficient in the services and facilities industry demands. At the same time, they desperately need industry, and the payrolls and tax base which industry provides, in order to supply such services and facilities.

The only practical way to break out of this circle is to make available Federal aid, such as that proposed in this legislation, and give these depressed areas at least a fighting chance to save themselves from utter bankruptcy, and the destruction, through abandonment, of enormous investments in private and public facilities used by people and business in these areas.

There is ample evidence that municipal governments—even those in the strongest financial positions—must have help from the Federal Government. They receive help through such great and beneficial grant-in-aid programs as urban renewal and public housing, aid to airports, sewage treatment plant grants and the like.

Other Federal legislation, such as the Small Business Investment Act of 1958, has recognized the fact that local communities must have better means of financing new and expanding industry than is now available through private banking and investment channels.

This point has been made so many times, in hearings before committees of the Congress and in the action of Congress itself, that I will merely reaffirm complete agreement with this finding of fact, and the provisions in this bill to provide loans for industrial building and equipment.

The relationship between industrial growth and adequate municipal facilities has been of particular concern to us in Tennessee for a long time. The Tennessee Municipal League and various State government agencies—and two Governors—have made a thorough study of this matter and we have reached certain fundamental conclusions.

One result of our thinking and planning has been the Tennessee community progress program, administered by the State government at the request of the municipal officials of my State. Under this program dozens of communities in Tennessee are making a thorough analysis of the adequacy of facilities and services and resources to support industrial growth, and then preparing an intelligent long-range community progress plan to remedy the deficiencies they discover in making their self-inventory.

We believe this program is the first of its kind in the country. It is comprehensive, thorough, and as scientific as we could make it.

We have set up some 250 definite standards for facilities and services in communities of all population classes, and we have listed about 500 individual items and methods for measuring the community against the standards. We are trying to go about this business of getting ready for industrial growth in the soundest, most fundamental way possible.

Before the State formally launched the community progress program, we tried it out experimentally in seven test cities. Later, three cities went one step further and drew up plans for progress based on the facts disclosed in their inventories. Our experience proves that such a program for community development and industrial progress is practical and workable—provided the necessary money is available in the community.

I will leave with you copies of the Tennessee handbook for a community inventory and progress plan, and of the first three community progress plans made. I hope you will find the time to examine them closely. You will note that they cover almost every conceivable subject matter field related to industrial development. We feel that this is indicative of a sincere and earnest local effort to help ourselves, economically. I hope you will note particularly the fact that most of the really expensive items in a community progress program of this kind—and therefore the major financial responsibility—falls upon the municipal government.

One of the most alarming deficit areas in our public life today is that of municipal services and facilities. We were not up to current needs and demands when World War II came along, and we have by no means caught up in the intervening years. The municipal league made a partial survey last year of urgently needed public facilities in Tennessee cities. This survey indicated that by a very conservative estimate there was a backlog of unmet needs that would cost $500 million. Practically all of this backlog relates directly to the requirements and demands made by new or expanding industry upon its home city. And, of course, much of this backlog of unmet needs is in the prospective urban and rural redevelopment areas contemplated in this pending legislation.

I believe it is fair and relevant to refer in some detail to Tennessee as we consider the probable benefits of this bill, because much of Tennessee is economically depressed. Three of our largest cities, at least 6 smaller industrial centers, and some 54 of our 95 counties (including the municipalities in them, of course) have chronic unemployment or underemployment problems of such magnitude that they might expect some assistance under this bill.

The conditions in the economically depressed areas of Tennessee are not unique. Unfortunately, they are instead typical of the conditions in similarly afflicted areas throughout the country. Each one of these pockets of economic strangulation and frustraton represents not only human misery, but a chink in our national armor as we wage economic war with the Communist bloc of nations. These distressed areas should be making a positive contribution to the welfare of their own States and regions, and to the Nation as a whole. Without help, they will continue to be an economic liability.

The depressed areas of Tennessee, and I believe many of these in other States also, are turning to the Federal Government for aid as a last resort. They have given up hope for help from State government, which by and large is either uninterested in the problem, or unwilling to make the necessary efforts, or both.

Our State government in Tennessee has declared a policy of no increased taxes. This automatically claps a lid on expanding State activities directed at economic development, and on local government activities financed by shares of State-collected taxes. The cities of Tennessee concluded that they could not fulfill their obligations and responsibilities, to industry and to their citizens, by sitting tight or by further taxes upon property. They did not ask the State government to change its announced policy on tax increases. Instead, the cities merely asked for the authority to broaden their local tax base and shift some of the burden from the property tax to more modern and more equitable sources of revenue. They even proposed that no such local tax could become effective until approved by referendum.

Gentlemen, when our tax bill came before the Tennessee General Assembly a few days ago, every interested group in the State descended upon it, knives sharpened and poised.

The cities of Tennessee had an excellent case—a fair and logical case for expanding local government revenue authority to provide facilities to improve their economic situations. But it soon became obvious that no self-help local revenue bill could be enacted.

The same lobbies, the same pressure groups and business interests which have consistently opposed Federal aid, including H.R. 3505, and which have halted action at the State government level, have succeeded in depriving cities in my State of the opportunity to make themselves more attractive to industry.

I know that this situation is typical of State-municipal relationships throughout the country. Experience in the 48 States indicates State governments will not take effective action to remove the basic causes of our depressed areas. I believe municipal government, by and large, are willing to do the job needed in their communities—although at present they are severely limited in revenues and in authority by sovereign State governments.

They have tried every other approach, and now they come to the Federal Government as their best and last hope for the necessary help.

I was surprised by the President's reasoning last year when he vetoed a bill similar to this one. His veto message questioned whether Federal loans for construction of industrial buildings in rural areas would be proper or effective.

We in Tennessee, with perhaps as much rural depressed area as any State in the Union, know very well that adequate financing for industrial buildings and equipment and public facilities in rural areas is effective—and essential. We are not talking here about building a huge heavy manufacturing plant at an isolated crossroads. We are talking about rural areas and their small towns and cities which can provide the labor force and the municipal services required for industry if the financing is available. Just as "urban" does not refer solely to a metropolitan center such as New York or Washington, "rural" does not refer only to very sparsely populated farmland or wasteland.

Let me cite two examples of such rural areas in Tennessee, and the small cities which are their trading and manufacturing centers, to show how this legislation would improve economic opportunity. I would like to file for the record of the committee hearings, to appear after my testimony, statements by Mayor Dwain Peterman of Livingston and Mr. Hugh Heatherly, city recorder, of La Follette.

These communities—and they could be duplicated many times in Tennessee alone—are two relatively small towns in the eastern part of the State. Both are situated in areas of chronic and persistent underemployment. They are in counties which have lost populations at an alarming rate, because there were no jobs to keep the young people at home. They are in extremely poor areas, where the average per capita income is in the neighborhood of one-third of the national average. They are, in short, exactly the kind of communities which this legislation proposes to help. And they are not beyond help—yet.

As part of their efforts to help themselves, the citizens of La Follette and the surrounding community formed a development corporation and raised $90,000 to buy land for industrial sites and for construction. When one industry needed a $40,000 loan to go into business there, the directors of the corporation borrowed it from local banks and got 40 persons to sign notes in the amount of $1,000 each.

Thanks to this kind of community spirit, LaFollette added four new industries in 1958 and one plant expansion occurred there. But despite this local effort, fewer than 600 jobs were created for the entire community and the town's financial resources were strained to the breaking point.

The other town I want to mention, Livingston, has only about 2,500 population. The citizens of that community have raised $282,000 in private and public funds to finance industrial buildings and otherwise try to attract industry. The little town has incurred a bonded debt of $538,000 to help finance industry and to provide the necessary municipal services for industry. As a result of these efforts, there are about 1,800 industrial jobs available in an area which, by any definition, is rural. This little town is providing virtually all the nonfarm jobs and supporting the economy of an astonishingly large section of our State in relation to its size. Only 3 percent of the industrial workers employed there live inside the town of Livingston, and 30 percent of them live in some other county.

Livingston has gone about as far as it can go in financing industry by public subscription and bond issues. It has critical shortages in municipal facilities and services which somehow must be met if it is to support the industry now located there.

Another small town in that same general area of Tennessee, Oneida, is in a similar situation. The citizens of this town of approximately 3,000 have voted for bond issues amounting to $400,000 or more to finance buildings for new and expanded industry. A financial obligation of this size necessarily limits the services and growth of a small city.

These obligations were incurred locally only because there was no other means of even beginning to secure capital to attract industry. It was a case of trying to ward off complete economic collapse.

In Tennessee, we have concluded that public financing of industrial growth is the only answer to the problem in certain depressed areas. The municipalities of Tennessee have advised the State government, and in these hearings they are advising the Federal Government, that their debt capacity and financial resources will not permit an expansion of local financing programs. I believe this also is true of the cities in other States which would be affected by H.R. 3505.

Tennessee municipalities have assumed the major public responsibility for industrial financing by obtaining legislative authority to issue both general obligation and revenue bonds for this purpose. General obligation bonds are not entirely satisfactory at best, and we have issued about all we can without damaging our credit ratings. Revenue bonds must be bought locally in most instances, and this has absorbed nearly all of the available capital in those communities which have resorted to them. What other source is left, except Federal aid?

Some people may try to tell you that the private credit corporation can provide the industrial financing needed in these depressed areas. Such an unrealistic approach

was taken by the U.S. Chamber of Commerce at a Senate committee hearing recently on this same legislation.

I think there is a place for a private credit corporation in the overall program to save the depressed areas. In fact, the municipalities of Tennessee sponsored State legislation this year to authorize formation of such a corporation in our State. Tennessee municipalities also are proposing a further step, never tried in any other State, through a bill which would authorize both city and county governments to buy the capital stock of a development credit corporation. But the private development credit corporation alone is not the real solution to our problem.

In the first place, it can do nothing whatever about providing or improving the public facilities which industry must have and which the employees of industry must have.

Secondly, the private credit corporation has proved to be of very limited assistance and effectiveness in the States which have experimented with it. It has been very difficult to sell the necessary capital stock—which is one reason the cities of Tennessee are offering to help out in this respect—and the interest charges usually have been higher than those on loans from conventional private sources. In fact, a survey made for the Tennessee Legislative Council indicated that in most cases the interest on loans from private credit corporations is at least 6 percent because of the greater risk usually involved and the relatively high cost of capital.

I have made a personal, on-the-scene study of the private credit corporations in the six New England States and in North Carolina, and I do not see how anyone can seriously expect them to do a job of this magnitude. The credit corporation idea, you will recall, originated in Maine. From there it spread throughout New England, and to various other States. Already Maine, New Hampshire and Rhode Island have found the private corporation inadequate and have acted to provide direct financing by the State government. Other States, such as Arkansas and Pennsylvania, have concluded that public financing is the only practical way to meet this need.

But we cannot sit on our hands and wait for this philosophy to take hold in all of the States, and wait for the various State legislatures to recognize the problem and perhaps, some day, do something about it. While we wait, debate and procrastinate, men are out of work, children are hungry, entire communities and regions of our Nation are drying up before our eyes—because they lack the essential ingredient for industrial growth—capital.

In conclusion, I would like to cite one fact which justifies, and makes urgent the enactment of the provisions of this bill to assist depressed agricultural areas.

An exhaustive study conducted by our State government on outmigration and industrial development revealed that in the period from 1950 through 1957, the State experienced a net loss of homegrown people through outmigration of 255,000, and that 90 percent of these were in the productive age group from 18 to 34. Tennessee's loss was the gain of other States.

By the most conservative estimate, an investment of some $10,000 or more is required to feed, clothe, educate, and otherwise provide for a young Tennessean until the productive age of 18 to 22 years. Thus, the economy and the people of our State lost an investment of more than $2,500 million by exporting 255,000 of our young men and women. Thus, it is clear that the chief economic product of my State is productive manpower sent out without cost to staff the offices, laboratories and factories of other States and areas of our Nation.

We believe that this bill offers the first practical means to permit the rest of the Nation to return some of our investment by financial assistance to increase the industry and employment opportunities in these areas, mostly rural and agricultural, which have every resource and opportunity to industrialize except access to the necessary financial resources.

---

## Due Process of Law, Yesterday, Today, and Tomorrow

EXTENSION OF REMARKS
OF
## HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. DAVIS of Georgia. Mr. Speaker, the Georgia Bar Journal is a publication issued quarterly by the Georgia Bar Association. The November 1958 issue carried an article by Mr. R. Carter Pittman, entitled "Due Process of Law Yesterday, Today, and Tomorrow."

The ability of Mr. Pittman as a student and exponent of constitutional law has been recognized nationally as well as locally.

I think that all who are interested in proper application of the due process clauses in our Constitution will find this article well worth reading. Under unanimous consent of the House I insert Mr. Pittman's article herewith:

DUE PROCESS OF LAW YESTERDAY, TODAY, AND TOMORROW

(By R. Carter Pittman [1])

Speaking of the due process clauses in the 14th and in the 5th amendments, Chief Judge Biggs of the 3d Circuit Court of Appeals had this to say in 1951:

"The reach of the 14th amendment is not coextensive with that of the 5th. It may in fact be broader or narrower but it is not identical. * * * The area is not a tidy one for history has been a bad housekeeper and there is some disparity between what the framers intended by the amendment and what it accomplished." *U.S.* v. *Warden of New Jersey State Prison* (187 F. 2d, 615, 619) (citing *Adamson* v. *California*, 332 U.S. 46).

That which appeared to be untidy as a result of history's bad housekeeping back of 1951 appears to be chaos in 1958.

Advocacy of order under law, in the midst of a strange judicial revolution is an ungrateful task. Here, as in all other areas of life, we cannot chart a course straight ahead without knowing the course we came over to get where we are. Straight ahead is in any and all directions, unless the course is set by that from whence we came.

The first section of the 14th amendment is:

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States, and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

[1] Of the Dalton Bar.

We are here concerned only with the due process clause which says: "* * * nor shall any State deprive any person of life, liberty, or property, without due process of law."

In construing that clause, as any other, we must follow the precept of Ex Parte Bain (121 U.S. 1), quoted approvingly by Justice Black in *Adamson* v. *California* (332 U.S. 46, 72):

"It is never to be forgotten that in the construction of the language of the Constitution * * *, as indeed in all other instances where construction becomes necessary, we are to place ourselves as nearly as possible in the condition of the men who framed that instrument."

Those who wrote the 14th amendment in 1866, applicable only to States, simply lifted the due process clause from the 5th amendment, written in 1789, which applied only to the Federal Government. It had been transplanted many times before, as we shall notice hereafter. As stated in the 5th amendment:

"No person shall * * * be deprived of life, liberty, or property, without due process of law";

Both the history and language of the first 10 amendments, which we call our Bill of Rights, show that they were adopted solely to limit the powers of the new Federal Government. The history and language of the 9th and 10th amendments show that they were adopted in order to reaffirm and reemphasize, (1) that the enumeration of certain rights in the Constitution did not have the effect of denying or disparaging other rights retained by the people, and (2) that the powers not delegated to the new Government by the Constitution, nor prohibited by it to the States, are reserved to the States or to the people. All of the 10 amendments affirm in one way or another that human rights are the gift of God—not governments—and that the powers of governments are only such as are delegated by people in constitutions that constitute governments.

In order to understand amendments to the Constitution, one must first understand the Constitution. In section 9 of article I and section 2 of article IV there is an "enumeration * * * of certain rights" just as there is in the first eight amendments. That accounts for the extreme caution evidenced by the ninth amendment in making it plain that to mention one or a hundred didn't affect the tenure with which others were held.

Section 10 of article I catalogs certain things that States may not do. On June 8, 1789, James Madison sought to include a provision in the Bill of Rights enlarging the prohibitions on the States, such as were set forth in section 10. His proposal was to prohibit violation by the States of the right of jury trials, freedom of religion, and freedom of the press. Specifically, Madison's proposal was:

"That in article 1st, section 10, between clauses 1 and 2, be inserted this clause, to-wit: 'No State shall violate the equal rights of conscience, or the freedom of the press or the trial by jury in criminal cases.'" (Annals of Congress, First Congress, vol. 1, 452.)

The proposal was rejected with apparent ridicule. The restriction or limitation of the powers of State governments was not on the agenda of the First Congress in 1789. The chief purpose of that meeting was to restrict the power of the Federal Government. The very first line of the first amendment makes that plain:

"Congress shall make no law respecting an establishment of religion."

The second amendment, for another example, reaffirms that rights are God-given—not Government-given. It says:

"The right of the people to keep and bear arms, shall not be infringed."

On and on they go securing—never giving—rights.

Nevertheless, it became necessary for Chief Justice Marshall in the case of *Barron* v. *Baltimore*, 7 Peters 243, 247 (1833), to say again what the framers had said, to the effect that the first 10 amendments limit Federal powers—not State powers.

The "due process of law" clause in the fifth amendment is due process of Federal law. The right to due process of Federal law is merely one in the catalog of rights enumerated successively in section 9 of article I, article IV, and in each of the first eight amendments to the Constitution.

In the Adamson case (1947) Black, Murphy, Douglas, and Rutledge, insisted that the 14th amendment, like Aaron's rod, had swallowed up the first 10 amendments, and that its due process clause was the vortex which sucked them in. A precarious majority of one, Vinson, Frankfurter, Jackson, Burton, and Reed, saved the Bill of Rights from absorption into the 14th amendment. If "due process of law" as set forth in the 14th amendment should be given the meaning that Justices Black, Murphy, Douglas, and Rutledge contended for in the Adamson case, all of section 9 of article I, a part of article IV, and all of the first eight amendments, except the due process clause of the fifth were superfluous.

Ten years after the alleged ratification of the 14th amendment, in the case of *Davidson* v. *New Orleans* (96 U.S. 97 (1878)), Justice Miller said of the due process clause:

"It is not a little remarkable, that while this provision has been in the Constitution of the United States, as a restraint upon the authority of the Federal Government, for nearly a century, and while, during all that time, the manner in which the powers of that Government have been exercised has been watched with jealousy, and subjected to the most rigid criticism in all its branches, this special limitation upon its powers has rarely been invoked in the judicial forum or the more enlarged theater of public discussion. But while it has been part of the Constitution, as a restraint upon the power of the States, only a very few years, the docket of this Court is crowded with cases in which we are asked to hold that State courts and State legislatures have deprived their own citizens of life, liberty, or property without due process of law. There is here abundant evidence that there exists some strange misconception of the scope of this provision as found in the 14th amendment."

That strange misconception bristles from the pages of Adamson and scores of other cases decided in recent years.

In *Hurtado* v. *California*, 110 U.S. 516, 535, Mr. Justice Matthews contrasted the meaning of the due process clause in the 14th amendment with that in the 5th amendment and in doing so quite accurately recognized a distinction that we may well recall:

"Due process of law in the latter (5th amendment) refers to that law of the land which derives its authority from the legislative power conferred upon Congress by the Constitution of the United States, exercised within the limits therein prescribed, and interpreted according to the principles of the common law. In the 14th amendment, by parity of reason, it refers to that law of the land in each State, which derives its authority from the inherent and reserved powers of the State, exerted within the limits of those fundamental principles of liberty and justice which lie at the base of all our civil and political institutions, and the greatest security for which resides in the right of the people to make their own laws, and alter them at their pleasure."

It should be added that due process of law in the fifth amendment has reference not only to the acts of Congress authorized by the Constitution, as stated by Justice Matthews, but also to the Constitution iself and to treaties made before the adoption of the Constitution, in acordance with the Articles of Conferedation or international law, or made after the adoption of the Constitution in accordance with section 2 of article II of the Constitution. Thus the "due process of law" clause of the fifth amendment guarantees, as against Federal power, that no person in America may be deprived of his life or his liberty or his property by any contrivance or process except due process of law embodied either in the Constitution, in statutes enacted by the Congress or embodied in treaties mad by the President—(after 1788) "with the advice and consent of the Senate."

This view of the matter is demanded by the judiciary provisions of the Constitution. Section 2 of article III extends the judicial power to "Cases . . . arising under this Constitution, the laws of the United States, and treaties made [theretofore], or which shall be made, [thereafter] under their authority" (meaning the "authority" of the Confederation or the President with Senate approval as granted in section 2 of article III).

The only cases that Federal courts were given the power to try, which involved any other kind of law, were (1) those "affecting Ambassadors"; (2) those affecting "other public ministers and consuls," "cases of admiralty and maritime jurisdiction"; and (4) "controversies to which the United States shall be a party" and (1) "between two or more States"; (2) "between a State and citizens of another State"; (3) "between citizens of different States"; (4) "between citizens of the same State claiming lands under grants of different States"; and (5) "between a State, or the citizens thereof, and foreign states, citizens or subjects."

It is therefore clear that the Federal judicial power was not extended generally by article III or any other provisions of the Constitution to cases arising under the common law or arising under the laws of States. The only cases not involving the Federal "law of the land" as defined in article VI as delineated in article III were those which might involve the law of nations, the law of the sea, or any law applicable in cases or controversies between States and citizens of different States. Thus the "law" involved in the 5th amendment is that article III and article VI "law" written into the Constitution, into statutes enacted and treaties made under constitutional authority.

The "law" involved in the 14th amendment is both the written law embodied within the constitutions and statutes of states and the unwritten (or common) law of States, whose vitality stems from common consent inherent in the ageless customs and mores of a people, but not yet enshrined in statutes enacted by representatives, except by adoption as "common law."

As was held in *Erie R.R. Co.* v. *Tompkins*, 304 U.S. 64, 78:

"Except in matters governed by the Federal Constitution or by acts of Congress, the law to be applied in any case is the law of the State. And whether the law of the State shall be declared by its legislature in a statute or by its highest court in a decision is not a matter of Federal concern. [There is no Federal general common law. Congress has no power to declare substantive rules of common law applicable in a State whether they be local in their nature or 'general,' be they commercial law or a part of the law of torts. And no clause in the Constitution purports to confer such a power upon the Federal courts.]"

The doctrine of Hurtado and Erie is fully sustained by history and is unquestionably right.

Now let us take a brief look at some of that history. The 29th chapter of Magna Carta provided:

"No freeman shall be taken, or imprisoned, or disseised of his freehold, or liberties, or free customs, or be outlawed or exiled; or otherwise destroyed; nor will we pass upon him, nor condemn him, but by the lawful judgment of his peers, or by the law of the land."

The ink on Magna Carta was not dry before it became necessary to reaffirm it. It was reaffirmed at least 40 times between 1225 and the American Revolution in 1776. (DeLolme, "The Constitution of England," (1784), p. 155).

The necessity to reaffirm Magna Carta so many times verifies Lord Acton's sad assertion that "power tends to corrupt and absolute power corrupts absolutely."

In a monarchy tyranny tends to beat down the fences that are set around it. In Republics tyranny tends to leap over fences. Edward I was a pretty good King, yet he beat down the fences of Magna Carta repeatedly. The people of England forced him to reaffirm Magna Carta 11 times in the course of his reign (LeLolme, supra, p. 29).

During his reign it was enacted by Parliament that whatever should be done contrary to Magna Carta should be null and void; that it should be read twice a year in all cathedrals; and that the penalty of excommunication should be denounced against anyone who should presume to violate it. But violated it was.

On June 7, 1628, the tyrant, Charles I was put in duress by the petition of right. After citing the 29th chapter of Magna Carta and its recent violations, the petition continues:

"And in the 8 and 20th year of the reign of King Edward the Third, it was declared and enacted by authority of Parliament, that no man of what estate or condition that he be, should be put out of his lands or tenements, nor taken, nor imprisoned, nor disinherited, nor put to death, without being brought to answer by due process of law" (Gardner, "Constitution Documents of the Puritan Revolution," 3d ed., p. 67).

The petition continues:

"And whereas also by authority of Parliament, in the 25th year of the reign of King Edward the Third, it is declared and enacted that no man shall be forejudged of life or limb against the form of the Great Charter, and the law of the land; and by said Great Charter and other laws and statutes of this your realm, no man ought to be adjudged to death; but [by the laws stablished in this your realm, either by the customs of the said realm of by acts of Parliament]." (Gardner, supra, p. 68.)

Those quotations from one document are enough to illustrate what "the law of the land" and "due process of law" had meant for 400 years prior to 1628. "Customs of the realm" were common laws that came into being by "common consent." That is where the word "common" came in as the progenitor of "law."

Acts of Parliament were laws that came into being by consent given by the citizens through representatives. Edicts however royal or majestic—decrees of courts, however solemn, could never serve for law in England—not for long anyway.

For attempting to reestablish edicts and decrees as laws, Charles I was executed on January 27, 1649. His death sentence recited "that * * * Charles Stuart * * * being trusted with a limited power to govern according to the law of the land, and not otherwise—design[ed]—to rule according to his will." (7 Rushworth, Historical Collections, 4418–19 (1721)). Indeed, it was edicts and decrees of kings and courts that were responsible for the "law of the land" and the "due process of law" clauses playing the most vital part in our fundamental laws.

The Virginia Declaration of Rights, adopted on June 12, 1776, 3 weeks before the Declaration of Independence, expressed the prevalent concept of due process of law like this:

"That no man be deprived of his liberty except by the law of the land, or the judgment of his peers."

Other Colonies threw off the yoke to become sovereign States with law of the land clauses expressed in their Declaration of Rights much like Virginia's, successively, as follows:

Pennsylvania (August 1776): "Nor can any man be justly deprived of his liberty, except by the laws of the land or the judgment of his peers."

Maryland (August 1776): "That every freeman * * * ought to have justice and right according to the law of the land."

Delaware (September 1776): "That every freeman for every injury * * * ought to have remedy by the course of the law of the land."

North Carolina (December 1776): "That no freeman ought to be * * * deprived of his life, liberty, or property, but by the law of the land."

New York (April 1777): "No member of this State shall be * * * deprived of any * * * rights or privileges * * * unless by the law of the land, or the judgment of his peers."

Massachusetts (March 1780): "No subject shall be deprived of his life, liberty, or estate but by the judgment of his peers, or the law of the land."

New Hampshire (1784): "No subject shall be * * * deprived of his life, liberty, or estate, but by the judgment of his peers or the law of the land."

South Carolina's Constitution (March 1778): "That no freeman * * * be * * * deprived of his life, liberty, or property but by the judgment of his peers, or by the law of the land."

No State used the phrase "due process of law."

George Mason, who wrote the Virginia Declaration of Rights refused to sign the Constitution in Philadelphia, because it didn't contain a Bill of Rights restraining Federal power. He prepared proposed amendments for the minority in the Pennsylvania Ratifying Convention in late 1787. Paragraph 3 of their proposal contained the clause in these words:

"That no man be deprived of his liberty, except by the law of the land, or the judgment of his peers." (Dumbauld, "The Bill of Rights" (1957), p. 173.)

Mason prepared the amendments proposed unanimously by the Virginia Ratifying Convention in June 1788. That famous document copied Magna Carta's 29th chapter in its paragraph 9, as follows:

"That no freeman ought to be taken, imprisoned, or disseised of his freehold, liberties, privileges or franchises, or outlawed or exiled, or in any manner destroyed or deprived of his life, liberty, or property but by the law of the land." (Dumbauld; supra, p. 184.)

On June 9, 1778, 3 weeks before being submitted to the Virginia Convention, Mason sent a copy of his Virginia proposals to the New York Ratifying Convention where it was substantially copied. (Pittman, The Fifth Amendment, ABA Journal, vol. 42, p. 509, 588 (June 1956).) The New York Convention rephrased Mason's proposal slightly and for the first time in history used the phrase "due process of law" in a proposed constitutional document. It said:

"That no person ought to be taken, imprisoned, or disseised of his freehold, or be exiled or deprived of his privileges, franchises, life, liberty, or property but by due process of law." (Dumbauld, supra, p. 190.)

North Carolina's convention copied the Virginia proposal word for word in August 1788. (Dumbauld, supra, p. 200.)

The amendment proposed by the committee of which Madison was chairman in the First Congress in June 1789 followed the New York variation: "No person shall * * * be deprived of life, liberty, or property, without due process of law." (Dumbauld, supra, p. 207.) The select committee made no changes. (Dumbauld, supra, p. 211.) Thus it was that the clause "due process of law," lifted from the act of Parliament of 28 Edward III, went into the 5th amendment in lieu of the clause "the law of the land," from the Magna Carta of 9 Henry III 29, but they meant the same thing as they had for 500 years.

As we have seen, the word "law" in the due process of law clause of the fifth amendment is synonymous with and is restricted to "the law of the land" defined in article VI, and as we have likewise seen, the Federal judicial power is restricted in article II to cases involving such "law." Common law, civil law, natural law, and unwritten law of any nature is proscribed as the basis for Federal jurisdiction.

As we have seen also, the word "law" as used in the 14th amendment necessarily refers to the laws of the States, which includes "the customs of the realm" or the "common," or unwritten law, adopted either in the constitutions or by the statutes of the several States or by custom. Customs of a people are not broken by revolutions. They live on until no longer common or customary.

As applied to Louisiana, 14th amendment "due process of law" includes the civil law in the exact measure it has been adopted in Louisiana. Changing the flag didn't change customary law.

The word "law" in the due process clause of the 14th amendment now seems to mean all things to all judges. As far back as the conservative case of *Twining* v. *New Jersey*, 211 U.S. 78, due process of law became not something fixed but something to be "ascertained from time to time by judicial action." In *Moyer* v. *Peabody*, 212 U.S. 78, 84, the court set itself adrift without chart or compass, saying: "What is due process of law depends upon circumstances." The State assemblies and supreme courts are whipped with unreasoned assertions that their acts and decisions invade "fundamental rights." The standard variously stated in cases in that State action, approved by State courts was, "so acute and shocking that our policy will not endure it," or "it violates those fundamental principles of liberty and justice which lie at the base of all our civil and political institutions," or it violates some concept "basic to a free society" or "implicit in the concept of ordered liberty," or "civilized standards of law * * * for judgment in the progressive evolution of the institutions of a free society." *Palko* v. *Connecticut*, 302 U.S. 319; *Adamson* v. *California*, supra; *Malinski* v. *New York*, 324 U.S. 401.

In Adamson, Justice Black pointed out some of the instances in which the court had used and abused the 14th amendment, as follows:

"This Court has now held that the 14th amendment protects from State invasion the following 'fundamental' rights safeguarded by the Bill of Rights; right to counsel in criminal cases, *Powell* v. *Alabama*, 287 U.S. 45, 67, 53 S. Ct. 55, 63, 77 L. Ed. 158, 84 A.L.R. 527, limiting the Hurtado case; * * * at the very least, certain types of cruel and unusual punishment and former jeopardy, *State of Louisiana ex rel. Francis* v. *Resweber*, 329 U.S. 459, 67 S. Ct. 374; the right of an accused in a criminal case to be informed of the charge against him, see *Snyder* v. *Massachusetts*, 291 U.S. 97, 105, 54 S. Ct. 330, 332, 78 L. Ed. 674, 90 A.L.R. 575; the right to receive just compensation on account of taking private property for public use, *Chicago, B. & O. R. Co.* v. *Chicago*, 166 U.S. 226, 17 S. Ct. 581, 41 L. Ed. 979. And the Court has now through the 14th amendment literally and emphaticaly applied the 1st amendment to the States in its very terms. *Emerson* v. *Board of Education*, 330 U.S. 1, 67 S. Ct. 504."

In Adamson the majority held that the due process clause of the 14th amendment forbids State compulsion to testify "by fear of hurt, torture or exhaustion." No reason was stated for giving the 14th amendment such content.

In his dissent (p. 91) Justice Black made the following pertinent observation:

"To pass upon the constitutionality of statutes by looking to the particular standards enumerated in the Bill of Rights and other parts of the Constitution is one thing; to invalidate statutes because of application of 'natural law' deemed to be above and undefined by the Constitution is another. 'In the one instance, courts proceeding within clearly marked constitutional boundaries seek to execute policies written into the Constitution; in the other they roam at will in the limitless area of their own beliefs as to reasonableness and actually select policies, a responsibility which the Constitution entrusts to the legislative representatives of the people.' *Federal Power Commission* v. *Natural Gas Pipeline Co.* 315 U.S. 575, 599, 601, n.4, 62 S.Ct. 736, 749, 750, 86 L.Ed. 1037."

Whether we proceed with the minority and adopt the standards set forth in the Federal Bill of Rights for the strange new "law" of the 14th amendment, or proceed with the majority and adopt natural laws or other undefined standards not a part of the "law" in the particular State involved, we are proceeding without—not within—clearly marked constitutional boundaries, seeking to execute policies that are not written into or delineated in any applicable written document, but which are in the minds of men, who by some hook or crook became judges. In both instances courts roam at will in the limitless area of their own beliefs as to reasonableness and actually select policies, a responsibility which the Constitution entrusts to legislative representatives of the people, in both State and Federal assemblies.

Commenting on the views of the minority in that case Justice Frankfurter said that their construction of due process would "tear up by the roots much of the fabric of law in the several States." The estimates of Black and Frankfurter as to the doctrine of the other are eminently correct.

Whether the plain, unambiguous and restricted meaning of "due process of law," appearing in 14th amendment, be evaded under the "natural law doctrine" or under the doctrine of "absorption of the Bill of Rights by the 14th amendment," the result is the same. Neither doctrine is supportable by any argument except the arbitrary will of judges. All of the ill things said by the majority about the reasoning of the minority and by the majority about the reasoning of the majority, in Adamson, are close to the kingdom of truth. In that decision both the majority and the minority leaped the bounds of the 14th amendment and the Constitution. But that is a habit now. All stand triumphant over a broken Constitution and a shattered Bill of Rights.

In *Crocker* v. *California*, (decided June 30, 1958) 357 U.S. 433, 78 S.Ct. 1287, the court by the common majority of one declined to release a college-educated lawyer-murderer for California's delay of 14 hours in providing him with free counsel. Yet the majority opinion by Justice Clark says:

"The right of an accused to counsel for his defense, though not firmly fixed in our common-law heritage, is of significant importance to the preservation of liberty in this country. (See (1) "Cooley's Constitutional Limitations" (8th ed.) 696–700; (2) "Story on the Constitution" (4th ed.) sec. 1794.) That right, secured in state prosecutions by the 14th amendment guaranty of due process includes not only the right to have an attorney appointed by the State in certain cases, but also the right of an accused to 'a fair opportunity to secure counsel of his own choice.' *Powell* v. *State of Alabama*, 1932, 287 U.S. 45, 53, 53 S. Ct. 55, 57, 77 L. Ed. 158."

For himself, Warren, Black, and Brennan, Justice Douglas made a powerful defense of the legally trained murderer, declaring in the last feverish words of the dissent:

"The demands of our civilization expressed in the due process clause require that the accused who wants a counsel should have one at any time after the moment of arrest."

If the right of an accused to free counsel was held by California courts not to be a part of common-law heritage in California, and was held by California courts not to be a right under the statutes or constitution of that State, where could the supreme court find it to be fundamental law in California that an accused be furnished counsel? If it is a law in California it is either old or new. Where is it? "There is no federal general common law," says Erie, and every school child should know that.

The entire nine men of the supreme bench are now giving to the word "law" in the due process clause of the 14th amendment just such content as one may dream and four approve. Now, the will of Supreme Court judges is the law of the land, and might makes right.

Fourteenth amendment due process of law in California is the same as the due process of law required by California's Constitution. It differs from due process of law in Oregon in such measure as Oregon law differs from California law.

The due process of law clause of the 14th amendment commands the Federal judiciary to respect and apply the written and unwritten laws of the States, adopted with the consent of the people of the States. The due process clause of the fifth amendment commands the Federal judiciary to respect and obey the written laws of the land as defined in the Federal constitution. What "due process of law" is, is ascertainable in any case by a simple reference to applicable laws which judges must find—never make. A constitution that guarantees to each State a "republican form of government" cannot impose a judicial oligarchy too.

In a republic the exertion of the powers of government is confined to cases where home-made rules are expressed by laws in being. That the was meaning of the 29th chapter of Magna Carta. The well understood words of Magna Carta moved across six centuries into the 5th and 14th amendments. Once they were our freedom—now they are our chains. Once they restrained power—now they are made to confer power. Our limited Constitution has become an unlimited Constitution. The revolution is a fact accomplished. It was simple and bloodless.

The first 12 amendments to the Constitution say nothing about who shall enforce them. History shows clearly and conclusively that the judiciary was left free to do it. "Madison's Writings," vol. V. 385; "Jefferson's Works," vol V, 461; "Annals of Congress," vol. I, p. 457. But the enforcement of the 13th and 14th amendments was not left to the judgment of judges. Each in its last words confers the power on the Congress "to enforce this article by appropriate legislation." Note well: The word is "enforce"—not "enlarge." All that these amendments left to judges was simply to obey their oath "to support this Constitution" as written.

Perjury becomes a privilege annexed to the office of judge in the last stages of depravity. Speaking of the Roman Empire as it was disintegrating near the time of its fall, DeLolme, supra, p. 233, pointed out to our forefathers 3 years before the Constitutional Convention in Philadelphia and 5 years before the fifth amendment was framed in New York, how at last it came to be that:

"The judges proved as corrupt as the magistrates had been oppressive. They equally betrayed, in their own province, the cause of the republic with which they had been entrusted; and rather chose to share in the plunder of the consuls, the praetors, and the proconsuls, than put the laws in force against them.

"New expedients were therefore resorted to, in order to remedy this new evil. Laws were made for judging and punishing the judges themselves; and, above all, continual changes were made in the manner of composing their assemblies. But the malady lay too deep for common legal provisions to remedy. The guilty judges employed the same recourses, in order to avoid conviction, as the guilty magistrates had done; and those continual changes, at which we are amazed, that were made in the constitution of the judiciary bodies instead of obviating the corruption of the judges, only transferred to other men the profit arising from becoming guilty of it. It became a general complaint, so early as the times of the Gracchi, that no man, who had money to give, could be brought to punishment. Cicero says, that in his time, the same opinion was universally received; and his speeches are full of his lamentations on what he calls the levity, and the infamy of the public judgments.

"The laws and public judgments not only thus failed of the end for which they had been established; they even became, at length, new means of oppression added to those which already existed. Citizens possessed of wealth, persons obnoxious to particular bodies, or the few magistrates who attempted to stem the torrent of the general corruption, were accused and condemned while Piso, of whom Cicero, in his speech against him, relates facts which make the reader shudder with horror, and Verres, who had been guilty of enormities of the same kind, escaped unpunished."

## Wilkes-Barre Post, No. 132, of the American Legion, Observes 40th Anniversary of Its Founding

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday, March 12, 1959:

FORTY YEARS OF SERVICE

Wilkes-Barre Post 132, of the American Legion will anticipate the 40th anniversary of the founding of the organization March 15–17 with a program tomorrow night to be highlighted by the presentation of a distinguished service award to Robert W. Johnson, editor of the Wilkes-Barre Record. Starting on Sunday and continuing through Tuesday, the general observance will be held, with 17,000 posts and 14,000 auxiliaries participating.

Although the Legion came formally into existence on March 15, 1919, in Paris, the idea of a veterans' organization to represent the citizen soldiers of the United States was developed in a conversation between Lt. Col. Theodore Roosevelt, Jr., and Sgt. William Patterson while they were convalescing in a base hospital in the French capital in midsummer, 1918.

When hostilities ended, General Headquarters authorized 20 National Guard and Reserve officers to confer with Regular Army representatives in Paris. A meeting was held on February 15–16, 1919, and recommendations were drafted and arrangements made for a caucus on March 15.

A lot of water has gone over the dam since that historic gathering. The whole world has changed, along with the Legion which has expanded into an organization, representing the veterans of three wars. But its ideals and objectives remain the same—the preservation of American and service to its defenders.

The American Legion, dedicated to God and country, has reason to be proud of its record during the four momentous decades that have elapsed since it was formed. Its impact on America and the world has been tremendous. Not only has it been in the front ranks in the defense of freedom, but it has sought to raise the standards of living in this country and to enlighten the populace. Communities, as well as the country as a whole, have benefited.

Today, it is a high privilege to join in a salute to the American Legion and wish it well in the challenging years ahead.

## The Need for a Free Market for Gold

EXTENSION OF REMARKS
OF
### HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a letter from Donald I. Segerstrom, publisher, Western Mining and Industrial News, Sonora, Calif., and a letter from L. L. Huelsdonk, secretary-treasurer and general manager of Best Mines Co., Inc., Downieville, Calif., commenting on the President's recent message on U.S. participation in the International Monetary Fund and the International Bank for Reconstruction and Development, particularly in relation to our gold reserves and policies.

They have made a very thoughtful analysis of the problem which ties into legislation I have introduced calling for a free market for gold. I have requested a meeting with officials of the Treasury Department to see what might be worked out toward solving the general problem and hope these gentlemen will be able to appear as they are experts in this field.

Their letters follow:

WESTERN MINING AND INDUSTRIAL NEWS,
*Sonora, Calif., March 5, 1959.*

Hon. HAROLD T. "BIZZ" JOHNSON,
*Member of Congress, New House Office Building, Washington, D.C.*

DEAR "BIZZ": Thank you for the copy of the Presidential message of February 12 and the accompanying book on the U.S. participation in the International Monetary Fund and in the International Bank for Reconstruction and Development.

I read the whole thing over with intense interest for it pointed up with considerable force the fact that international inflation has slaughtered the American dollar overseas and the size of the two above mentioned institutions must be doubled simply to fill the gaps created by inflationary pressures both at home and in all the countries participating.

If you could devote the considerable time needed to reading the document over, you will note that the bill would propose to add 344 millions more in U.S. gold to the Fund plus an X number of dollars in credit. The bad part about the outflow of this amount of gold is that it comes on top of the anticipated outflow of more than 3 billions in gold expected due to adverse trade balances in 1959. This will thus create a situation where the gold outflow will be more than a serious thing and if 1959 ends up as anticipated, the value of the dollar represented by Treasury gold in the United States will be just 8 mills on the dollar. As you know, in these parts we would call that a helluve note.

It is a hypothetical thing, and probably an obscure chance to take, but I would think that if an amendment was tacked on to this measure that would resupply the United States with gold from domestic sources, the problem could at least be pointed up for public consumption. My suggestion would be to ask the Congress to apply the Canadian theory to the purchase of Treasury gold to assure a constant supply of new gold to replace, in part, the vast outflow. The idea in Canada, in a nutshell, is this: They pay a premium of up to $7.50 per ounce of newly mined gold in any case where the cost of production of each ounce of newly mined gold exceed $25 per ounce. A variation of this then might be to reduce the size of the premium to any mine producing more than 100,000 ounces per year. But, at any rate, the gold would be mined and most certainly would firm up the gold backing of the dollar, at home and abroad.

As you know, the Canadian dollar is now the firm measure of value in the entire world and it is simply because they have continued to mine gold to back their currency.

An argument against this premium payment for gold would certainly be that which is presented against any subsidy, that it is costing the taxpayers dollars to buy their own Treasury deposits. However, in this instance such an argument is not valid in that the more gold present in the Treasury, the more credit can be extended to the banking system to make more dollars and at the same time making those dollars possess constantly increasing gold backing. Thus, we would avoid what seems to be a great fetish against going back on the gold standard.

Of all the gold bills present in the hopper, your bill for a free market has the most merit. However, I think that the Eastern thinking on such a measure is that outside gold will flood the United States via illegal entry and the effect of a free market here would not last long enough to get mines going to supply newly mined domestic gold. Thus, I am inclined to think that a gold subsidy amendment to the International Fund bill might stir up at least enough interest that such a measure, by itself, would get enough support to pass. I, for one, would like to see a gold bill of some kind or other, at least get out of committee one of these sessions.

Those are my thoughts, rather poorly put to be sure, but I very much appreciate the opportunity to put them down here for your consideration.

Most gratefully yours,
DONALD I. SEGERSTROM,
*Publisher.*

BEST MINES CO., INC.,
*Downieville, Calif., March 11, 1959.*

Hon. HAROLD T. JOHNSON,
*The House of Representatives*
*Washington, D.C.*

DEAR "BIZZ": Thanks for your letter of February 23d with the enclosed report on the problems of the International Monetary Fund. I am very pleased to see the interest that you are taking in this matter and feel that if all Congressmen would do the same, a sane monetary policy could be worked out that would not only relieve the United States from "holding the sack," but would also mean permanent prosperity to world over commensurate with economic growth—with no periodic setback adjustments necessary to compensate for over-issued currencies.

In commenting on this report I would like to begin by saying that I would be opposed to increasing quotas of the International Monetary Fund or the International Bank for Reconstruction and Development unless provisions are first written into the Bretton Woods Agreement (and ratified) that will either prevent or compensate for the depreciation of the U.S. dollar. My reasons for this are very simple. Under paragraph (a) of section 1 of article IV of this agreement gold and the U.S. dollar are tied together as a common denominator to set the value of the currency of each member of the Fund. This means that U.S. dollars have been set up to act with and as gold as a standard for the other member nation currencies—and therefore, because the relative value of gold and the dollar is not being held as an equivalent—a double standard is being continually created. Such a situation can only lead to perpetual confusion and frustration. It might be pointed out that since this agreement was ratified in 1945, the dollar has lost over one-half of its purchasing value and yet it is being used on a par with gold and as gold as a standard in foreign monetary reserves.

I would like to cite the following example to show why this double standard works to the disadvantage of the United States and leaves us as the scapegoat:

When the foreigner gains one of our dollars, he can do one of three things: he can buy American goods with it; he can monetize it (that is, use it as and with his gold reserve as backing for the issuance of his currency); or he can redeem it in gold from our Treasury Department at the standardized ratio of $35 per fine ounce.

When our goods are priced higher than comparable foreign goods, he will not use his dollar holdings to buy American goods. If he monetizes these dollars, he inflates his own currency proportionately to the degree that the dollar has lost purchasing value in relation to its original fixed (so-called standard) value with gold.

From an American viewpoint, we can readily see that if we purchased 35 foreign pocketknives at $1 each in 1945 (when this agreement was ratified, the foreigner would be in a position to collect 1 ounce of our gold (if he chose redemption) against the one-fourth ounce of gold that was used to issue the $35 (25 percent gold reserve requirement). Even in this regard, such a loss to the United States is significant when gold and dollars which were considered on a par (according to the Bretton Woods agreement) have redemption discrepancies. From a practical viewpoint it means that on a trade basis the Bretton Woods Agreement was set up in 1945 to force the United States to sell its gold to member nations for $8.75 per fine ounce as a means of redistributing monetary gold reserves.

Today the problem has grown much more serious because when we now negotiate to purchase 35 foreign pocketknives, the foreigner tells us that our dollar is not as good as it was in 1945 by one-half. He therefore collects $70 for 35 pocketknives and is in a position to claim 2 ounces of gold. Bluntly speaking, when he redeems his dollars, he is now buying gold from us in trade for $4.375 per fine ounce. At home—our gold is currently worth only $17.50 per ounce in dollar-purchasing value by using the same indices. This is the real reason that we are holding the "sack" and our gold is flowing out and will continue to do so in spite of all the pressure that is currently being exerted to stop it. These pressures may hold the line for short periods of time (such as at this time when the order of the day is to force these increased quotas), but in the long run, economic facts will prevail and the outflow will resume at full speed.

In going over the special report of the National Advisory Council, I would like to point out on page 4 (near the bottom of paragraph 3) that although export trade increased in dollar value by nearly 7 times from 1937 to 1957, the volume increase was less than 3 to 1 for the same period. Also on imports, the dollar value ratio increase was about 5.2 times as against a volume increase of less than 2 times. The difference, of course, reflects inflation and points to the evils of a double, inconsistent standard (such as is being practiced under the Bretton Woods agreement where one factor—the dollar—is allowed to become a variable and upset what should remain a constant between gold and dollar value for the purpose of creating a fixed standard for the establishment of a stable exchange-value rate for all currencies.

The anticipation of further future increased quotas are graphically forecast in line 3 of the next paragraph. "These large increases in postwar values have substantially reduced the adequacy of the fund quotas." This statement is very true and there will be no end to future demands for increased quotas until and unless the value of the dollar can be controlled. It is evident that large increases in values of the will continue so long as a cure is being sought by neglecting the cause, and working only on the symptoms.

On page 6, paragraph 2, an ingenious method of dollar inflation is illustrated. If memory serves me right, this transaction occurred just prior to July 1957, when the Treasury was short of dollars (more so than the Fund) to meet payments on maturing bonds. In such a case $150 million worth of gold (25 percent gold reserve requirement) produces $600 million, which purchases $600 million worth of gold from the Fund; which in turn (again on the 25 percent gold reserve requirement) produces $2,400,000,000 in Federal Reserve dollars for bank deposits; which under the average fractional reserve deposit requirements of about 15 percent, produces about $12 billion of money supply through the commercial banking system with only 80 percent of the deposits working. Thus, with all of the deposits working, $150 million worth of gold (proper money) can be used to produce $15 billion in money supply (improper money) or at an inflationary ratio of 100 to 1. Such money supply—which is worth only 1 cent per dollar in gold—can draw 100 cents worth of gold per dollar from

our Treasury when it is credited to a foreign government or central bank account. This is one of the reasons that we are losing gold and this is one of the reasons we should not increase our quotas unless some protection is given to us through the Bretton Woods agreement.

The inadequacy is not in the quotas—it is in the international monetary gold reserves and these cannot be built up by redistribution because the buildup of one reserve means the teardown of another. These can only be built up through adequate gold production and value.

Under the present setup the United States can only lose gold and in the long run it is bound to sink to a low-rate nation, if something is not done by Congress to stop the giving away of our assets.

On the bottom of page 1 of the special report in the last two sentences it states: "These repurchases must be made with gold and dollars, or other convertible currencies as defined by the Fund. Up to the present, all repurchases have been made with gold and dollars." I would like to call attention to the fact that in spite of 14 years of operation, no currency has been made strong enough to repurchase drawings. Dollars have been used, because the United States underwrites her dollars at the ratio of 1 to 3 in gold. During this same period—if efforts had been directed toward building up adequate international monetary gold reserves—all member nation currencies would now be strong enough to repurchase drawings and there would be enough gold in the Fund to ably unify all exchange rates.

I am sorry for being so late in making these few comments, but my schedule has been rather full lately. I realize that the subject matter is a complex one and therefore warrants much more detailed study. I have withheld comment on the increased quotas for the Bank, because my objections stem from the same source. In short, I would object to an increase in either of these quotas unless and until the dollar is tied realistically to the situation. I hope what I have said will serve a purpose in helping to alert Congress to some of the dangers that are facing this country today.

Congratulations on the good work that you are doing and best wishes.

Sincerely,

L. L. HUELSDONK.

## Pure Pork

EXTENSION OF REMARKS

OF

### HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford (Ill.) Morning Star, of March 13, 1959, entitled "Pure Pork":

PURE PORK

By a vote of 9 to 6, the Senate Banking Committee has approved one of the worst pork-barrel bills introduced in the 86th Congress, a measure that would provide $389 million in loans and grants to so-called depressed areas. Senator DOUGLAS, of Illinois, manager of the legislation, and other proponents of the Democratic-backed bill, have turned a completely deaf ear to President Eisenhower's plea for economy and a balanced budget.

The bill, which would carry pump priming to extremes, provides for a $100 million loan fund for construction of community facilities; a $100 million revolving fund for low-interest loans for projects in urban areas; a fund of the same amount and for the same purpose in rural development areas; and $75 million in direct grants to communities for public facilities such as sewer and water systems.

Under the measure, the Federal Government would provide up to 65 percent of the cost of land, building, and machinery in each instance. The localities or State would put up 10 percent, and private sources 25 percent.

Republican members of the banking committee fought the bill as unworkable and socialistic. The measure is patterned closely after one vetoed by the President last year as unsound because of its heavy reliance on Federal responsibility in relieving economic distress of communities.

The proposed legislation provides for establishment of an area redevelopment administration which would designate depressed areas in accordance with a formula based on the percentage of unemployment for periods ranging from 12 to 24 months. The proposed new Area Redevelopment Administration would be set up in the Federal Housing and Home Finance Agency. Loose loan terms and criteria for Federal grants are provided in the bill.

Such legislation, even the more modest $53 million administration program for so-called depressed areas, is wrong in principle. It ignores the importance of local responsibility and local efforts and would subsidize inefficient and mismanaged operations. Such pump priming is particularly unwarranted at a time when every effort needs to be made to reduce rather than expand Federal programs.

## Restrictions Urged on Importation of Foreign Oil

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Monday, March 9, 1959:

FOR EARLY ACTION ON IMPORTS OF OIL

We may be headed for early action to restrict the imports of foreign oil. Friends of the coal industry, and particularly anthracite at this crucial juncture in its history, will hope so. In the Anthracite Bulletin of March 4 we find this statement: "The Federal Government has for years permitted the ruinous importation of foreign oils and their derivitives, a practice which has been, and still is, vigorously opposed not only by the coal industry, but by many domestic oil and gas producers as well."

Tomorrow has been set by the Eisenhower administration as a deadline for deciding whether to replace the voluntary oil import quotas with a mandatory system that would slash quotas of all major importers.

As reviewed by many students of the question the choice—at least in part—is between cheap foreign oil or cheap money. We have had strong tastes of the evils of both and to the extent that one is the cause of the other the argument for restriction on imports of oil is strongly supported.

Voluntary curbs were to have expired February 28. But on February 27 the President's Special Committee on Fuels received a report from the Office of Civil and Defense Mobilization, as it is now named, finding that imports of crude oil and major petroleum products threaten the national security.

The President ordered a 10-day extension of the voluntary restraints while a study was being made of the inflationary effect of imposing mandatory curbs. These would impose a further cutback of about 20 percent.

The coal industry and the independent oil producers are plumping for the mandatory quotas. So is the railroad industry, which reacts quickly to anything that may hurt coal output. Unbridled competition of residual oil imports with coal is seen by Howard E. Simpson, president of the Baltimore & Ohio Railroad. "Unless the coal industry is healthy," Simpson declared on February 25, "railroads won't be healthy either."

But big oil companies that import cheap Mideast oil oppose mandatory curbs in whole or in part. They threaten to go to the courts or have them nullified.

## Let Us Constantly Remind the World of the Aspirations of the Polish Nation

EXTENSION OF REMARKS

OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD, the text of a press conference held by the Honorable Stanislaw Mikolajczyk, chairman of the Polish Peasant Party:

Question. Mr. Mikolajczyk, what is your opinion of the present international situation in connection with the Berlin problem?

Answer. I do not believe that Khrushchev wants to start a third world war at the present time. He still thinks that by spreading communism he will gradually subjugate the whole world without war. What Khrushchev wants at the present time, blackmailing the West with the Berlin question, is to obtain at least the silent consent of the West to the integration of the captive nations behind the Iron Curtain into the Soviet Union. For, no matter what will be the form or the agenda of the forthcoming international conferences they will of necessity affect the most vital interests of the Polish Nation as well as those of other European captive nations which have been deprived of freedom and independence by the Soviet imperialism and Communist dictatorship.

Question. Why then the problem of Berlin?

Answer. Berlin is a pretext. The problem of Berlin cannot be dealt with separately. It is closely connected with the whole problem of Germany and the problem of European security in the same manner as the security of Europe and peace of the world are connected with the fate of the countries behind the Iron Curtain.

It is necessary, therefore, to remind the Governments and peoples of the West that their obligations to the Polish nation are of a much earlier date than those to the German nation. The obligations of the West to the Polish nation were undertaken as a natural and logical result of joint fight of the Allies against the German aggression. These obligations are found in the promises

made to the Polish nation by the Western Powers during and after the Second World War as well as the international agreements concluded by them with the Soviet Union. The forthcoming international conferences between the West and the Soviet Union, therefore, should have in first place on their agenda also the question of Poland and of the other nations of Central Europe. Having violated all mutual pledges and the international agreements, the Soviet Union and its agents deprived these nations of freedom and independence, falsified their will and imposed on them a dreadful system of Communist dictatorship.

Question. What is your opinion of the question of a peace treaty with Germany?

Answer. I am in favor of the conclusion of a peace treaty with Germany as soon as possible.

I cannot forget, however, the aspect stressed some time ago by the Polish National Democratic Committee, that at the present time the Polish nation would be deprived of free representation at such a conference, because the representatives of the Warsaw Communist regime represent only the interests of the Community Party, bound with the policy of the Community Party of the Soviet Union, and not the interests and the will of the overwhelmingly anti-Communist oriented Polish nation. Nevertheless, I consider that a peace treaty with Germany should be concluded as soon as possible. This peace treaty should contain the guaranties of security, freedom, and peace to Poland and to other nations behind the Iron Curtain. It should ratify finally the present western frontier of Poland at the Oder and Lusatian Neisse Rivers. It should make impossible any rise of Germany revisionism and imperialism as well as continuance of the pretenses that the Soviet Union and its satellite Communist parties in the countries behind the Iron Curtain are the only defenders of Poland and other captive nations in the international arena.

Question. Much has been constantly written and said of the necessity of mutual concessions in case of an East-West summit conference. What do you think about it?

Answer. So far as Poland is concerned, the Western Powers, without consulting the Polish nation, made all concessions to the Soviet Union at the expense of Poland in the international agreements concluded with the Soviet Union toward the end of the Second World War and after the cessation of the hostilities. The Soviet Union took advantage of all these concessions and at the same time violated the entire agreements, refusing to fulfill any of its own obligations.

The last concession which the West could still make to Khrushchev would be a silent acceptance of the violation by the Soviet Union of all the international agreements regarding the captive nations, resulting in depriving Poland and the other nations behind the Iron Curtain of freedom and independence, and the invitation to the forthcoming international conferences only and exclusively of the representatives of the Communist parties and Communist regimes to speak in the name of their captive victims.

Question. There is the probability that the true voice of the Polish nation will not be heard at the forthcoming international conferences. What should be done in this situation?

Answer. The present international situation creates an opportunity for the Western Powers—the United States, Great Britain, and France—as well as for the United Nations to initiate action on the basis of existing international obligations and to make some proposals which could lead to realization of the true objectives of the Polish nation.

It is necessary, therefore, to keep reminding the Western Powers and public opinion of the free world of the real aspirations of the Polish nation at the present moment.

Question. What are these real aspirations of the Polish nation at the present moment?

Answer. The basic aspirations of the Polish nation are:

1. The final recognition of the frontier on the Oder and Lusatian Neisse Rivers;

2. Withdrawal from Poland of all Soviet functionaries and military units;

3. Relieving Poland from the obligation of the Warsaw Pact and obtaining from the West guarantees of security against German revisionism and against the possibility of repetition of German aggression, as well as assurances of joint action against a possibility of a new Soviet-German agreement similar to that in 1939;

4. The restoration of freedom of the press, freedom of speech and assembly, and the right of organizing of independent political parties, professional, cultural and youth organizations in Poland;

5. Free democratic elections under the control of the United Nations;

6. Repatriation of all the Poles from the Soviet Union;

7. Assisting the development of the Polish economy which is in the present situation impossible without considerable material aid from the West.

We should all strive for placing these aspirations of the Polish nation on the agenda of the forthcoming international conferences and continually and under any circumstances fight for their realization.

## Pope John Honors Bishop Martin J. O'Connor of Wilkes-Barre

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday, March 12, 1959:

POPE HONORS CITY BISHOP

In confirming the Most Reverend Martin J. O'Connor as president of the reorganized Pontifical Commission for Motion Pictures, Radio, and Television, which now becomes a part of the Vatican Secretariat of State, Pope John XXIII paid an impressive tribute to the former pastor of St. Mary's Church of the Immaculate Conception, Wilkes-Barre, who left here in 1946 to become rector of the North American College.

Thus, Bishop O'Connor is the ranking American prelate in the Curia, the central administration of the Roman Catholic Church, of which the Secretariat of State is the highest administrative office. Also, he serves as an unofficial ambassador in Rome for some 30 million American Catholics.

The late Pope Pius XII appointed Bishop O'Connor to the Pontifical Commission for Motion Pictures in 1947. Later, the Commission was expanded to include television and radio, putting Bishop O'Connor in charge of mass media for the Catholic Church throughout the world, in addition to his duties as head of the North American College.

In 1958, Pope Pius renewed the appointment for a 6-year term and now, in continuing Bishop O'Connor in the presidency, the new Pontiff enlarges his duties and the scope of the Commission. The fact that Pope John, in connection with the announcement, saw fit to issue a pastoral letter, calling on the hierarchy throughout the world to cooperate, emphasizes the importance attached to the Commission.

Wilkes-Barre knows Bishop O'Connor not only as a dedicated and modest churchman, but an administrator of tremendous capacity. His achievement in reestablishing the North American College under the most difficult circumstances, in itself, adds lustre to a career, already outstanding, but, obviously, it is not to be the climax in his case. No distinction that might come to Bishop O'Connor will surprise this community because of its knowledge of his zeal and capacity.

## Bolivians Teach Us a Lesson—Anti-U.S. Riots Prove You Can't Buy Friends

EXTENSION OF REMARKS
OF
### HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to bring to the attention of the Members an editorial taken from the Charlotte (N.C.) Observer of March 15:

BOLIVIANS TEACH US A LESSON—ANTI-U.S. RIOTS PROVE YOU CAN'T BUY FRIENDS

(By John S. Knight)

Views on the news:

All who believe in hemispheric unity must be deeply distressed over the recent anti-American riots in Bolivia.

When mobs burn the U.S. flag, wreck Cochabamba's USIS library, stone the point 4 office in La Paz and march upon our embassy, it is fairly obvious that our efforts to promote friendship have failed.

The excuse for the demonstrations was a pettish paragraph in Time magazine which the proud Bolivians regarded as an insult to their country.

But the underlying reasons for Bolivia's sensitivity can be found in the failures of its own economic program.

Bolivia was once a feudal land dominated by the tin barons. Its people were either very rich, or very poor.

In 1952, a revolution ousted the old order and Bolivia's new leaders launched a series of reforms including nationalization of the tin mines.

Bolivia's welfare state was supposed to give the people higher pay, more job security, grants of land and in general, a better standard of living.

Unfortunately, things didn't turn out that way. Tin production dropped, agricultural workers quit when their simple needs were satisfied, inflation got out of hand and welfare costs mounted out of all proportion to the country's resources.

In such a climate of failure, leftist Bolivian leaders visited their resentment upon the United States.

In a land that is 68 percent illiterate, it was fairly easy to incite the people against the "Yankee octupus" and the "imperialists."

Few Latin American countries are prepared to accept the responsibility for their own mistakes, and Bolivia is no exception.

SUBSIDIES BRING FRIENDSHIP?

The Bolivian outbursts against the United States are unfortunate and undeserved.

In the last 6 years, Bolivia has accepted $129 million in U.S. aid. This amounts to $43 a Bolivian, the highest per capita figure of any nation receiving our assistance.

Currently, the U.S. plans to make up a 30 percent deficit in Bolivias budget, so that it may be brought into balance.

The only thing that Bolivia rejects is our friendly advice.

How long must we cling to the fanciful notion that our subsidies bring friendship?

How long must our citizens be taxed to pay for economic mismanagement throughout much of the world?

How long do we bear the insults to our flag, the pillaging of our buildings, the reviling of public officials?

It seems to me that even the most consecrated advocates of foreign aid would begin to question the wisdom of a program which has brought us not friendship, but enmity in many parts of the world.

We are told that foreign aid is essential to combat communism in the underdeveloped countries.

But when we give it, we are accused of having imperialistic designs.

## Socialized Farming Here To Stay?

EXTENSION OF REMARKS
OF
### HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to an interesting editorial appearing in the February 28, 1959, issue of the California Farmer, entitled "Socialized Farming Here To Stay?":

SOCIALIZED FARMING HERE TO STAY?

In this issue you will find the complete text of the President's message to Congress on January 29 regarding the farm program. That message produced very little stir in the press, yet we thought it was one of the most shocking indictments of our price support program that we had ever read.

You might argue with the general philosophy of price supports, but how can anyone argue with the figures?

The President is putting it pretty mildly when he says, "The price support and production control program has not worked." Then he proceeds to outline some of the failures of the program briefed as follows:

We produce some 250 farm crops in the United States, of which 12 are supported at minimum support levels. But of the 12 products, only 3, namely wheat, corn, and cotton, account for 85 percent of the huge rotting stockpile owned by the Government.

Nearly a million and a half farms produce wheat, but half of those farms grab off 90 percent of the price support money.

Nearly a million farms produce cotton, but only a fourth of those farms receive 75 percent of the price support money.

The lion's share of the price support farmers with allotments of 100 acres or more average $7,000 a year in price support money for wheat, $10,000 per farm for cotton, and $10,000 a year for rice.

By the middle of this year, the Government will have $9.1 billion invested in farm commodities. The political "sweetheart" crops of wheat, corn, cotton, rice, peanuts, and tobacco will get $7.5 billion of that $9.1 billion total.

It costs the taxpayers of this Nation a billion dollars a year just to store and manage this huge surplus of food and fiber.

During the present fiscal year we will tax ourselves to buy another $5.4 billion worth of farm products with $4.3 billion going to the favored 12 products.

Eisenhower says, "Heavy costs might be justifiable if they were temporary, if they were solving the problems of our farmers and if they were leading to a better balance of supplies and markets. But unfortunately this is not true."

The President points out that this is the fourth time he has sent a special plea to Congress, and the Secretary of Agriculture has hammered the point continuously that we should move ourselves out of this high support program.

It amazes us that this farm program has been tolerated so long by the taxpayers and by the majority of farmers who in no way benefit.

We read a series of interviews with new Congressmen just taking office, as reported in the U.S. News & World Report. The thing that struck us was the way these men reacted to questions about their views on agriculture. There seemed to be a great uncertainty in their minds about the subject of price support levels. We find this encouraging, as previously the uninformed thought the higher the price support the more prosperous would be agriculture. Now they are beginning to look at those huge expenditures and those huge piles of wasted foods in warehouses and they are beginning to wonder about the wisdom of high price supports.

## Commissioner David B. Karrick

EXTENSION OF REMARKS
OF
### HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. AUCHINCLOSS. Mr. Speaker, it is reassuring to learn that David B. Karrick will stay in public life as one of the Commissioners of the District of Columbia. To know that the District government will continue to enjoy the selfless service and devotion to high principle embodied in this man is indeed good news. Mr. Karrick takes his job seriously and gives of himself and his talents with an unselfishness that is outstanding. He is aware of the responsibilities that are his and executes them straightforwardly and with keen judgment. He gets things done without noise and ostention and he is unafraid to face any problem.

Mr. Karrick has a host of friends who cherish their relationship with him and who are proud of his loyal service to our Nation's Capital. A man of his character and capabilities is not found often in the public service and by his example he gives others courage to make the sacrifices that are demanded of faithful public servants. He is an inspiration to us all and has done much to benefit the government of the Capital City of our Nation.

I am pleased to include in my remarks the following editorials:

[From the Washington Star, Mar. 14, 1959]

GOOD NEWS FOR CITY

It is good news that Washington will continue to have the services of Commissioner David B. Karrick for another year or so, at least. President Eisenhower is to be commended for urging Mr. Karrick to stay on the job at the District Building, and Mr. Karrick deserves the thanks of the community for accepting the appointment tendered him by the President—although with the proviso that he might have to resign toward the end of next year.

Commissioner Karrick's knowledge of District affairs and his valued administrative ability are needed in these crucial days, when vast public works projects are underway or planned and when increased governmental services are in demand, despite a continuing financial crisis. It would have been a serious blow to the city if Mr. Karrick had insisted on returning to private life at the expiration of his term on April 6.

[From the Washington News, Mar. 14, 1959]

THE CITY AND DAVID KARRICK

District Commissioner David B. Karrick's decision to stay on the job—for another 18 months at least—is grand news.

This is a time of many and vexing problems for our town, and we're sure that every thoughtful citizen shares our elation that Mr. Karrick's firm, sensible, modest and extremely able leadership will continue.

It is a tribute—and a justly deserved one—to the man that the very thought of his leaving resulted in an almost universal plea for him to stay, and the draft Karrick movement—we're proud of our part in starting it—finally left him little choice.

"Despite my original reluctance to accept this new appointment," Mr. Karrick told the President, "I certainly will not be a reluctant Commissioner."

From his past performance we know this is true. We hope the things Mr. Karrick can and will accomplish for this city in the months ahead will compensate him for what he must give up in order to respond so selflessly to the almost unanimous plea that he continue his tour of duty.

## Commemoration of the 20th Anniversary of Slovak Independence

EXTENSION OF REMARKS
OF
### HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. PILLION. Mr. Speaker, it is a distinct privilege for me to add my small voice to the growing demands for freedom on the part of the millions of Slovaks and other nationalistic groups who are being kept in a captive status under the Soviet Communist rule.

Although, Premier Nikita Khruschev continues to boast of the military strength and the economic advances of the Soviet, he fails to recognize that this apparent strength is based upon a compulsive labor economy that is held together by fear, by military tanks and guns, and by the cloak, spy, and dagger machinations of the select Communist Party membership and leadership.

I am sure that the spirit and the desire for freedom on the part of the Slovak people cannot be quenched and will continue to grow. The nationalistic spirit and the desire for freedom on the part of millions of people under the domination of the Soviet Socialist Republic will continue to be a fatal weakness in the miscalculations of Mr. Khruschev and his Politburo Bureau.

I join with the Slovak League of America in their celebration of the 20th anniversary of Slovak independence on March 15, 1959. I join with the 2 million Americans of Slovak origin in their aspirations for the liberation of the Slovak peoples.

## H.R. 5549, To Amend the Garnishment Laws of the District of Columbia

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. MULTER. Mr. Speaker, on Wednesday, March 11, I introduced H.R. 5549, to amend the District of Columbia code of laws relating to attachment and garnishment of wages.

The following is my statement before the House District Committee today in support of this measure:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE SUBCOMMITTEE NO. 3 OF THE HOUSE DISTRICT OF COLUMBIA COMMITTEE CONCERNING H.R. 835, H.R. 836, H.R. 2329, AND H.R. 5549, MARCH 16, 1959

Mr. Chairman, I appreciate the opportunity to present this brief statement in connection with the amendment of the District of Columbia code of laws relating to attachment and garnishment of compensation of judgment debtors.

H.R. 835, which you have before you, I believe is identical with H.R. 7035 of the 85th Congress. Both bills were introduced by our distinguished chairman, Mr. MCMILLAN, of South Carolina.

H.R. 835 limits attachments of compensation to 10 percent of the judgment debtor's gross earnings. Obviously this is a marked improvement over existing law.

H.R. 836, I think, is the much better statute because it provides for a 10 percent levy on the first $200 a month of earnings, 20 percent on the next $300 of earnings, and 50 percent of any earnings in excess of $500 per month.

H.R. 2329, introduced by our distinguished colleague from Texas [Mr. DOWDY], prohibits attachments on debtors' compensation. This, I hope the committee will agree, would be a step in the wrong direction.

My bill, H.R. 5549, takes all of H.R. 836 and then adds on to it additional provisions. It is my hope that, regardless of whether the committee goes along with the provisions of H.R. 835 or H.R. 836, it will add as an amendment to whichever bill is reported, the additional provisions of my bill.

I have lifted these provisions bodily from the New York State statute which has worked extremely well since the date of its enactment many years ago. Briefly, what it does is simply this. In addition to the statutory provision permitting a garnishment or attachment of up to 10 percent of the gross earnings of a debtor, as permitted by New York law, any judgment creditor may apply to the court for an order requiring the debtor to pay out of his earnings an additional sum over and above the amount of the garnishment. It does more. It permits the court, upon determining the facts, to require payments by a judgment debtor who, while actually working and earning compensation, pretends to be working for nothing or for unreasonably small compensation for an employer who actually is himself under the guise of a corporation or the business of a friend or relative.

At first blush it would appear that this will load the courts down with additional litigation. In practice it has had the opposite effect in New York. Debtors there have learned that they cannot make themselves judgment-proof and prevent the collection of just debts by doing business under corporate names and paying themselves low salaries, nor can they any longer establish in the name of or transfer to friends and relatives businesses which are actually their own. Upon establishment of the facts, the court is permitted to go behind the shell or color of the transaction and fix a sum to be paid by the debtor commensurate with his earnings and his needs. In cases where the debtor is working for substantial compensation the court has a right to determine how much he needs for the maintenance of himself and his dependents and then fix a fair sum payable out of the excess that he earns, to be paid by him to a judgment creditor.

Knowing that the creditor has these judicial proceedings available to him, the debtor invariably works out a fair settlement with the creditor outside of the courtroom.

I respectfully urge the committee to add the provisions of my bill to any bill that it reports.

Thank you for the opportunity to present this statement.

## From Guns to Missiles

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. McCORMACK. Mr. Speaker, in my remarks, I include an editorial appearing in the Washington Star of March 2, 1959, entitled "From Guns to Missiles," giving credit to our friend and colleague the gentleman from Maryland [Mr. LANKFORD] for the important part he played in canceling by the Navy Department of the Naval Gun Factory. As the editorial well said, "Credit for the Navy's change in plan should go largely to Representative LANKFORD, of Maryland."

The important part Congressman LANKFORD played in saving the Naval Gun Factory, with continued employment for those employed there, and happiness to their families, as well as the significance of this to the city of Washington and vicinity, illustrates the sincere and effective character of service he renders in the Halls of Congress.

FROM GUNS TO MISSILES

The Navy Department has shown good sense in canceling plans to let the Naval Gun Factory here pass into oblivion, along with the big guns which it once built and repaired. It is good news that the 158-year-old plant on the Anacostia River is to be given new contracts which will keep it busy for at least 18 months and probably for three more years. By that time the factory should have become well established as an essential facility in the age of missile warfare.

The decision by some Navy officials to curtail or abandon operations at the big heavy-machine plant was severely criticized in and out of Congress, in view of naval plans for building new plants elsewhere or awarding contracts to private firms. It was pointed out that the local factory had proved capable of doing complicated work on missile components and that the Government might save money by converting the plant from gun work to missile contracts. Credit for the Navy's change in plan should go largely to Representative LANKFORD of Maryland, the Washington Board of Trade, and various union and civic groups which joined in a save-the-gun-factory drive.

With the conversion to missile operations, the old plant ought to be given a new name, more in keeping with its modern mission. Known originally as the Washington Navy Yard (it then built ships as well as armament), the plant was renamed the Naval Gun Factory in 1945. So a further change of name in tune with the changing nature of naval warfare would follow precedent.

## Doing Well Enough

EXTENSION OF REMARKS
OF
### HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford (Ill.) Morning Star, of March 12, 1959:

DOING WELL ENOUGH

American Farm Bureau Federation has made a strong case against an expanded program of Federal aid to education in a statement submitted to a House education subcommittee. The farm bureau recognizes the need for continual improvement of our educational system, and its members are active in the work of school districts throughout the Nation. They are a strong force in the fight to keep the public schools a State and community responsibility.

An important part of the work of the farm bureau is studying educational problems through workshops within the organization and participation in school affairs. These studies have convinced this great farm organization that there is no need for a new program of Federal aid to education. The farm bureau is confident that States and local communities will continue to provide adequately for public education.

Anyone who has traveled throughout the Nation, the statement said, must be impressed by the new schools that are being constructed in almost every community. Counties and communities throughout the Nation, it was pointed out, are spending unprecedented sums for new schoolroom construction and are making earnest efforts to increase teachers' salaries and improve overall conditions of our schools.

Local people, the farm bureau is convinced, understand this challenge and will meet it through local taxation and without Federal controls. The point is made that Federal aid could slow down this process by taking away some of the initiative of local communities to improve their own schools.

Cited in the statement are a report from the U.S. Office of Education that 71,600 classrooms were completed during the 1957–58 school year and figures compiled by the Investment Bankers Association of America showing that local communities issued $2.3 billion worth of school bonds in 1958.

The administration school-aid bill, under which the Federal Government would pay

principal and interest on such bond issues on a 50–50 matching basis, runs the risk of overstepping the bounds of the Eisenhower economy program. The Democrats have a more liberal bill providing for an outlay of $1.1 billion in the next fiscal year.

The farm bureau federation believes that these programs would prove to be a great disservice to our public-school system. Local responsibility, rather than Federal aid and domination, is all important to the good functioning of our schools.

## Robert C. Vance Cited for Nike Aid

EXTENSION OF REMARKS
OF
### HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. KOWALSKI. Mr. Speaker, on Thursday of this week the Department of the Army will pay tribute to one of Connecticut's distinguished citizens when it awards a citation and medal to Mr. Robert C. Vance, editor and publisher of the New Britain Herald.

The award will be made in appreciation of patriotic civilian service by Mr. Vance in promoting mutual understanding between the civilian population and members of Army Nike units in Connecticut.

Thanks in large part to Mr. Vance's efforts, the relationship between the military personnel and the community and State has been one of harmony and mutual good will.

A veteran of service with both the French and American Armies in World War I, Mr. Vance was one of the founders of the American Legion. He has always maintained a keen and understanding interest in military and veterans' affairs. The New Britain Herald, under his leadership, has earned respect, extending far beyond the borders of my State, for its public service.

I join the Army in saluting Mr. Vance, and in order that this recognition of his work may be permanently recorded, I submit for publication in the CONGRESSIONAL RECORD the following account of the award announcement from the New Britain Herald of Wednesday, March 11, 1959:

HERALD EDITOR CITED BY ARMY FOR NIKE AID: HELPED PROMOTE UNDERSTANDING WITH PERSONNEL

The Department of the Army as cited Robert C. Vance, editor and publisher of the New Britain Herald in appreciation of patriotic civilian service.

The announcement was made today by Col. Vester M. Shultz, commanding officer of the 63d Artillery Group, in charge of Nike defense posts throughout the State, with headquarters on Rocky Hill Avenue here.

The citation is the only one of its kind presented through the group in Connecticut, and is signed by Lt. Gen. Charles E. Hart, commanding general, U.S. Army Air Defense Command, and Wilber M. Brucker, Secretary of the Army.

A lapel pin is included as part of the citation.

Tentative plans call for official presentation of the award next week.

Colonel Shultz pointed out the citation underscores something relatively new hereabout in an "era of peace with need for strong emphasis on defense"—the stationing of military personnel in the midst of the civilian population.

The colonel was quick to note that mutual understanding is vital to the success of this kind of undertaking.

He added that New Britain and Connecticut are particularly noteworthy in this regard for these reasons:

1. Military installations have not been known to this area for many years.

2. Despite this, civilian-military relations are outstanding.

Another key factor is that newspapers traditionally play an important role in mutual understanding.

With the center of the Nike statewide command located in New Britain, the selection of the editor of the New Britain Herald followed because of the leading role played by the Herald in promoting and encouraging this understanding, Col. Shultz indicated.

The certificate of appreciation reads as follows:

"Mr. Robert Cummings Vance, editor and publisher of the New Britain Herald, New Britain, Conn., distinguished himself by exceptionally meritorious service to the U.S. Army druing the period April 15 1956 to January 31, 1959. The acceptance of the U.S. Army as an integral part of his community is attributed largely to the sincere interest and efforts of Mr. Vance. His excellent editorials depicting the organization, purpose and mission of NIKE installations have been invaluable in promoting good will and understanding between the military and civilian population, and have contributed immeasurably to the successful accomplishment of the mission of the 63d Artillery Group (Air Defense).

"In addition to rendering unstinting support in his newspaper and community activities, Mr. Vance has been a stanch and enthusiastic supporter of the U.S. Army in its role in the Air Defense of the New England area. Mr. Vance's outstanding efforts in furthering community relations earned the respect and appreciation of civilian and military members alike throughout the entire State of Connecticut."

Mr. Vance, who served with the French and the U.S. forces in France during World War I, has the distinction of being one of the founders of the American Legion.

One of the first American Legion posters shows three men just returned to civilian clothes. Mr. Vance is one of the trio and his collection of mementos includes the photograph from which the poster was drawn.

Since 1918, Mr. Vance has been active in national, State and local veterans' affairs and, from time to time, has been honored for this activity.

In addition to the American Legion, he has been close to the Veterans of Foreign Wars and other veterans' groups.

His other memberships include the Moose and Elks, along with several other organizations.

## A Farm Poll on Supports

EXTENSION OF REMARKS
OF
### HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks, I include an article from the Des Moines Register of Des Moines, Iowa, relative to a poll that was taken in my own home county among 99 farmers on their ideas relative to farm support.

A FARM POLL ON SUPPORTS

AUDUBON, IOWA.—Future Farmers of America chapter here has completed a survey of 99 Audubon county farmers to get their opinions on Government price supports and farm subsidy proposals.

Five choices were given, and here is how the farmers answered:

The largest group—27 percent— favored removing the Government entirely from the farm program—no price supports of any kind, no controls and free markets.

Twenty-four percent favored only emergency supports, with a suggested price floor, of 50 percent of parity in times of extreme hardship, and no production controls.

Twenty-four percent favored adjustment supports, such as 90 percent of the 3-year average of market prices, and moderate production controls.

The other 25 percent approved production payments, under which the Government would allow farm prices to seek their own level in the market place and then pay the farmers in cash to make up the difference between market prices and the support level.

Results of the survey were announced by James E. Hamilton, FFA chapter adviser.

## A Congressional Report—Private Enterprise and the "Ruble War"

EXTENSION OF REMARKS
OF
### HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

A CONGRESSIONAL REPORT—PRIVATE ENTERPRISE AND THE "RUBLE WAR"

(By Representative STEWART L. UDALL)

If there is no thermonuclear war, it is likely that the whole future balance of world power will largely depend on what has been called "the ruble war"—the struggle for supremacy between the two dominant economic systems in the world today.

Nearly one-third of the world's people have achieved independence during the last 15 years. Of course, these people want above all to establish stable governments and develop economic systems which will improve their lot.

The Kremlin is already bidding for the minds of these people by ruble loans, offers of trade, and mission of technicians who invariably speak the language of the host country and are ready with resource development programs.

The central question, then, may well be whether these nations believe our way, or that of the Communists, offers the best hope for a decent standard of living and the solution of their problems.

To date, the free world countries are offering economic assistance at two counters: Hard loans through the World Bank; and soft loans (repayable at low interest rates over long periods of time) from the Development Loan Fund administered by our Government as part of the foreign aid program. The Loan Fund, established by the last Congress, has yet to establish a history that will permit us to pass judgment on its

adequacy, but it is already clear that insufficient development capital is available to underwrite the bare minimum economic growth rate required.

Some students of history point out that the strength of the British Empire last century was due, in part, to the fact that the British businessmen of that era were advanturous exporters of capital—both within and without the Commonwealth. Some of us have been wondering here whether America should not take a cue from the British, and encourage American private enterprise to carry its know-how abroad and help build up the economies of the underdeveloped areas.

Congressman HALE BOGGS of New Orleans pointed out to Congress this year that our foreign investment policy actually discourages expansion by private enterprise abroad. He believes our tax laws should be reconstructed to encourage foreign risk capital as an essential part of our long run national security program.

Last week I joined with Representative BOGGS in sponsoring a bill designed to drastically revise these laws. This legislation would enable private enterprise to do business in foreign countries on a competitive basis with investors from other countries (through a new class of foreign business corporations). If enacted it should galvanize our business leaders toward meeting the Soviet challenge on the economic front by conferring tax advantages on earnings abroad. Its success would make it possible to substitute private investment for some kinds of foreign aid, and thus encourage a new American program of economic aid.

It seems to me that we have become preoccupied with the military race with the Communists, and have neglected competition in economic fields where the ultimate test may come.

Who can say that our businessmen might not hit a homerun in the "ruble war" if we gave them an inning at bat? Indeed, why not give them a chance now?

## Forgotten Investigation

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD Appendix an editorial from the Washinton Post and Times Herald of Sunday, March 8, 1959, on the remarks made on the floor the other day by the able and distinguished gentleman from Massachusetts, Mr. O'NEILL.

This editorial shows that the people of the United States and, indeed, editorial opinion make clear that an investigation of this matter in accordance with the resolution adopted by the House of Representatives on the opening day of the First Session of the 86th Congress should be carried out.

FORGOTTEN INVESTIGATION

Representative O'NEILL'S question about what has happened to the proposed investigation of the election of Dr. DALE ALFORD is timely and pertinent. The House's Special Committee To Investigate Campaign Expenditures unanimously called for such an inquiry. A majority recommended that Dr. ALFORD be denied a seat until all questions in regard to his election could be cleared up. The House rejected this course, but as Mr. O'NEILL has said, there was an implied agreement that the investigation would go forward. The first week in March has passed with nothing being done. Is the investigation to be delayed until the term of the Congressman from Little Rock has expired?

Mr. O'NEILL reviewed enough of the evidence presented to the special committee to indicate the seriousness of the charges in this case. In fairness to Dr. ALFORD and to former Representative Hays whom he defeated, the House has an obligation to determine whether this derogatory evidence is valid. It has an even greater obligation to protect its own integrity against illegality and fraud in the election of its members. The House has a responsibility to the country to do its duty in this matter in ample time to make its decision meaningful.

## Reply to American Bar Association

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter addressed to the New York Law Journal in reply to a letter from the President of the American Bar Association addressed to me and published in the March 4 issue of the New York Law Journal. The text of my letter follows:

MARCH 10, 1959.

Mr. JUDSON F. FALKNOR,
*Editor, New York Law Journal,*
*217 Broadway, New York, N.Y.*

DEAR MR. FALKNOR: The March 4 issue of the New York Law Journal carried the text of a letter to me from President Malone of the American Bar Association, in which he challenged my criticism of the recent action by that organization on the report and recommendations of its Committee on Communist Tactics, Strategy, and Objectives.

Mr. Malone maintains that the action of the house of delegates in approving a number of recommendations calling upon Congress to overrule by legislation certain decisions of the Supreme Court was a responsible expression of professional criticism. He further maintains that since the house of delegates specifically disclaimed any intention to censure or attack the Supreme Court, my statement condemning the ABA for maligning the Supreme Court was wholly unjustified.

As Al Smith used to say: "Let's look in the record." The recommendations approved by the House of Delegates came before it as part of the report of its Committee on Communist Tactics, Strategy, and Objectives. The essence of that report is that communnism is a danger to the United States and that the Supreme Court is soft to Communists, has encouraged Communist activity, and has caused the paralysis of our internal security.

Let me quote directly from the report:

"Many cases have been decided in such a manner as to encourage and increase Communist activity in the United States."

The report goes on to say:

"The paralysis of our internal security grows largely from construction and interpretation centering around technicalities emanating from our judicial process."

Is this the temperate, reasoned, thoughtful approach to difficult problems which we have a right to expect from a convention of lawyers?

I think that it is not and I believe that Mr. Malone agrees with me. Last Friday, he and I appeared over the CBS network on "The Leading Question." I asked Mr. Malone whether he thought the report of the committee represented a fair and justifiable criticism of the Court. Mr. Malone candidly replied that he would not have written the report that way.

Aside from its tenor, the report is objectionable for several other reasons. First and most important, it is unconcerned with the preservation of individual liberties. Here and there lipservice is paid to constitutional guarantees. But unfortunately the Committee on Communist Tactics, Strategy, and Objectives, created to deal with the problems of communism, did not allow its thinking to become confused with any real concern for the effect of its solutions on civil liberties.

Secondly, the conclusion of the committee that the decisions of the Supreme Court in the 24 cases discussed in the report have paralyzed our internal security is totally unsubstantiated. Taken either individually or together, it is difficult to see how decisions like *Pennsylvania* v. *Nelson*, *Watkins* v. *U.S.*, *Gold* v. *U.S.*, *Kent* v. *Dulles* could destroy America from within. Rather, I feel that were it not for some of those decisions we might, in our search for complete security, have put ourselves well on the way to destroying ourselves.

Mr. Malone argues, however, that the ABA cannot be held responsible for the report of its committee, since the action of the house of delegates was only on the recommendations. While this distinction may have some relation to the niceties of ABA procedures, it has none to the realities of the situation. The fact is that it is the report which provides the reasons for the recommendations. It is the report which reveals the level of deliberation which produced the recommendations. And it is the rhetoric of the report which characterizes the ABA's attitude in the public mind and in the press. I believe that the report is no more separable from the recommendations than are the roots from the tree, and that the ABA must accept the unhappy responsibility for both.

Very sincerely,

EMANUEL CELLER, *Chairman.*

## Hawaii Statehood

SPEECH
OF
### HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill ( S. 50) to provide for the admission of the State of Hawaii into the Union.

Mr. PIRNIE. Mr. Chairman, Hawaii has the population, economy, and proper respect for constitutional government to support statehood. As a Territory, its people have demonstrated a firm adherence to our common American ideals and practices. On the battlefields of Europe, the Pacific, and Korea, the loyalty of the people of Hawaii, as Americans, has been indelibly written into the pages of world history. I am proud to support the bill to admit Hawaii into the Union as our 50th State.

## Poison in Your Water—No. 42

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial on pollution entitled "Pollution Wreaks Quick Havoc Here" from the Olympia (Wash.) Olympian of October 16, 1957. Pollution in the Des Chutes River destroyed thousands of salmon. This was waste, not only of an esthetic value or of a thing enjoyed by conservationists and fishermen, but it was waste of a valuable economic resource.

I hope this and other articles which I have been inserting into the CONGRESSIONAL RECORD on the subject of pollution in our rivers and streams will have some small effect in making America aware of the need for vigorous action to do away with pollution and the horrible waste and degradation of a vital American asset, water.

POLLUTION WREAKS QUICK HAVOC HERE

(By Mike Contris)

Conclusive evidence was given to all of us here the other day of the destructive force of pollution in our rivers. A few hours of sewage pumping station failure and the toll of migrating spawning salmon was a tragic one. Estimates of the fish that died as a result of having sewage flow directly into the Des Chutes River are staggering ones because only a few days before, those of us interested in this great salmon experiment at Tumwater Falls, had been told that a record number of chinooks was expected to take to the river for spawning.

Previous to the object lesson in pollution, most of us had thought of fish kills by toxic wastes as something that happened elsewhere. Closer to us was the problem of the Olympia oyster and its near extinction from some reason or other. But we had not experienced the devastating effects pollution can have when it fouls up a river or stream and fish become involved, not so close to home anyway.

The pump failure was definitely an accident. There have been similar failures before and accidents will always happen, of course. It is too bad that when the pump fails the wastes should get into the Des Chutes. Perhaps this can be remedied so that future failures do not result in marine life casualties. The accident should point up, too, the reason for the sometimes seemingly overemphasized cautions about pollution in our waters. Capitol Lake, for instance, is eagerly sought as a site for a swimming pool. Now we should realize why health officials are so cautious about declaring it ready for recreational use.

Maybe the pollution that caused the death of the spawning salmon would not cause similar results among humans. We certainly would not want to have our youngsters test to find out. The presence of even a small amount of human sewage is worry enough as a source of potential disease among those who might swim or play in such contaminated water.

And our Capitol Lake is going to have this sort of pollution so long as raw sewage is dumped into the bay. This raw sewage is from a portion of the city's sewer system that is as yet not connected to the sewage disposal plant. And this, in our opinion, almost erases the good that the disposal plant is doing and has done. The job is incomplete and so long as it is incomplete the bay, and now the lake, is not yet the play area it could and should be.

LET'S HOLLER OUT LOUD

From our conversations with many parents and other adults in the community, we gather that there is much disappointment about this continuing pollution problem after the job supposedly was all done. In fact, there is much more than disappointment, there is actual chagrin that this fault should have been allowed to go undetected and unpublicized before this. When lake cleanup men found a sewage outlet in Capitol Lake they were surprised. But they realized that there would be a remedy for it. When Milo Moore took over Capitol Lake as a pilot fish farm, there was considerable unhappiness and grumbling by those who had hoped to turn the lake into a city swimming site for next summer.

These persons were satisfied, however, when Moore said that the mixture of fresh and salt waters should have no effect whatever on the use of the lake for swimming or boating. Almost on the heels of that explanation, however, there came the news that the bay itself was still polluted by raw sewage, especially near the dam where salt water was permitted to move into the lake for the fish farm project. Pollution in the bay now became pollution in the lake.

It is our humble opinion that this killing of salmon and the presence of human sewage in the bay around the Capitol Lake dam will make many parents hesitate about turning to the lake for swimming. Consider, too, that had the pumping station failure in Tumwater occurred last summer when youngsters were swimming at the Deschutes Swim Beach beneath the bridge, there would have been great danger.

We hope there is no one who still maintains that this business of pollution in waters here is overemphasized. It doesn't take much to kill off the fish. And it wouldn't take much to cause serious illness among youngsters of this area, either. We should resolve to urge even tighter control of sewage and other wastes in so far as they concern our streams and the bay.

## Democrats Lack Tax Courage

EXTENSION OF REMARKS
OF
### HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. ALLEN. Mr. Speaker, under leave to extend by remarks, I include the following article entitled "Democrats Lack Tax Courage," by Gould Lincoln, which appeared in his column "The Political Mill," in the Washington Evening Star of March 14, 1959:

THE POLITICAL MILL

(By Gould Lincoln)

DEMOCRATS LACK TAX COURAGE

Democrats are demanding large increases in the national defense program, running from $2 to $5 billion above President Eisenhower's budget. The $5 billion figure was produced by former Secretary of State Dean Acheson of the Democratic Advisory Council. He produced no detailed list of increased expenditures. Just a good round sum.

None of these Democrats has suggested increases in Federal taxes to pay for these additional expenditures, running far beyond President Eisenhower's $40.9 billion defense budget. Deficit spending, with its devastating increases in the $283 billion national debt, apparently means little to them. They merely argue that defense is more important than a balanced budget. They appear intent on convincing the country they are for a strong defense, provided in advance of war, which they failed to provide before any of the last three wars—especially the latest, the Korean war.

This is not all. The Democrats want to increase greatly so-called domestic expenditures above the President's estimates and balanced budget. Already the Democratic-controlled Senate has passed a housing bill and an airport bill exceeding the Eisenhower budget recommendations by hundreds of millions of dollars. The Democratic House may still further increase these items of Federal expenditures. But no one has suggested increased taxes to met these deficit expenditures.

*President gave answer*

President Eisenhower's exasperated comment at his Wednesday press conference, when he had been asked about the Democratic slogan that defense should come before a balanced budget, was well made and well directed. He said, speaking directly of the protest by Democrats against his proposed reductions of 55,000 men in the Army and Marine Corps: "Why doesn't anyone have the courage to get right up and say 'I want 55,000 men'—and maybe they want them sometimes because they will be stationed at nice convenient places—why don't they say: 'But we want the taxes to pay for it (the retention of the 55,000 men whom the President does not believe are needed for our modern day defense)?'"

With an election of national proportions coming up next year, are the Democrats likely to demand increased Federal taxes? They are not—short of war, when anything goes. The President has made it exceedingly clear he does not put a balanced budget ahead of national defense. His defense budget, he insists, is ample—all the money he can spend and believes he should spend. He arrived at this budget after conferences with the best military brains in the country—and after taking an overall look. Indeed, a balanced budget is in reality an important part of national defense. If the credit of the Nation goes up in the smoke of overspending, the Nation becomes weak economically and less able to defend itself or aid its allies. The Berlin crisis is the immediate reason around which the Democrats are building their clamor for billions more for defense. The President replies that we have to learn to live with such crises for years to come, indeed, as long as the Russian Communist dictators wish to create crises.

*Rockefeller sets example*

However, if the Democrats in Congress are intent on big spending, far beyond the present and expected Federal income, they should not let politics interfere. They should submit a program of taxation which will bring in increased revenue to meet their proposed expenditures. They could well take a leaf from the book of a Republican Governor, Nelson A. Rockefeller of New York. Mr. Rockefeller, recognizing that increased revenue is needed to pay the debts incurred by the Democratic Harriman administration of the last 4 years and also to meet expenditures for some improved services to the people of New York, came forward immediately after the opening of the legislature with a State budget in excess of $2 billion—the first such in history—and at the same time proposed a program of increased taxes. This took courage. He realizes as well as any other political leader that spending is always popular and taxation is never popular.

Governor Rockefeller, despite the moans of the taxpayers and the gloomy prognosti-

cations of the politicians, has won a material victory. He has reduced his spending budget a few million, but he has won nearly all the increased taxes for which he asked. He is more fortunately situated than President Eisenhower. He has a Republican-controlled legislature. The President has a Democratic-controlled Congress on his hands. But if the President had a Republican Congress to deal with, he still would maintain his position that the fiscal policies of the Government of the United States must be sound as well as its programs for national defense. The present Democratic program for Federal spending could cause great inflation, and great inflation could be the ruin of us.

## Union Tactics in Princeville, Ill.

EXTENSION OF REMARKS
OF
## HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. MICHEL. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received from Mr. L. E. German, president of the village of Princeville, Ill., together with a resolution adopted unanimously by the Board of Trustees of the Village of Princeville at the regular meeting held Monday, March 2, 1959:

VILLAGE OF PRINCEVILLE,
*Princeville, Ill., March 9, 1959.*

Hon. ROBERT H. MICHEL,
*Old Office Building,*
*Washington, D.C.*

DEAR MR. MICHEL: I am enclosing a copy of a resolution, passed by the Village Board of the Village of Princeville, which I have been instructed by the board to forward to you.

The local feeling is very much against tactics that are being employed by these unions in forcing this company to meet their demands. We feel local help should be permitted to work on this plant. We feel the unions of Peoria are completely out of line in their demands and their tactics in trying to force themselves upon the people of Princeville.

Princeville, generally speaking, is mainly an agricultural town even though we do have some light industry. Being of this nature, we therefore are not use to having our community upset by tactics used by these unions in forcing their demands.

We feel our situation is not unlike the many situations that are occurring throughout the Nation. Therefore, we would appreciate you as our Representative, make it known to the congressional committee investigating this type of crime of our situation. We would appreciate if you would make this letter known to Congress and if posible made part of the congressional minutes. The citizens of Princeville do not like to have this sort of conditions forced upon them any more than any other peace loving community of these United States.

Very truly yours,
VILLAGE OF PRINCEVILLE,
L. S. GERMAN, *President.*

The following resolution was unanimously adopted by the president and Board of Trustees of the Village of Princeville at the regular meeting of said board held Monday, March 2, 1959:

*"Resolved,* That the president of this board advise Congressman ROBERT H. MICHEL of the following situation which has developed, detrimental to the best interests of the village of Princeville, by reason of unwarranted labor union activity within the village of Princeville, which area historically has been nonunion:

"1. Through efforts of the community leaders, during the spring and summer of 1958, Lester L. Smith was persuaded to construct a new plant at Princeville for the fabrication of aluminum products. Eighteen thousand dollars of village revenue funds were expended to extend water and sewer facilities to the site, all without cost to Mr. Smith. It had been anticipated that the village of Princeville would benefit from the increased employment and business activity gained through the construction of Mr. Smith's plant.

"2. Construction of the plant was started in the fall of 1958 and contracts let to both nonunion and union contractors and building trade workers in, accordance with the long standing custom followed in construction projects in the community. Specifically, the general contract for the building itself, was let to a union contractor from Peoria, and a contract for all plumbing, heating, and wiring was let to a local contractor. Within the past 4 years a new post office, a library, and a manufacturing plant have been constructed in Princeville through joint efforts of union and nonunion (Princeville) labor.

"3. On Wednesday, February 25, 1959, the building trade unions stopped work of the general contract because of nonunion labor being employed in electrical, plumbing, and heating work which was being carried forward by Princeville workmen. Mr. Smith was advised that work would not be resumed until such time that all nonunion people were withdrawn from the job. In effect, this meant that work would not resume until all Princeville people were put off the job. As a matter of fact, the old contracts have been cancelled and new contracts have been let, so that all local workmen are now denied employment on the job.

"4. Mr. Smith advises he had been forced to cancell the contracts under which Princeville people were employed because of union threats to establish picket lines around the construction project and also around his plant now in operation in Peoria, and further threatening Mr. Smith that his products will be blacklisted from use by union building tradesmen throughout the country. Mr. Smith has further advised he has been warned of future union demands and conditions regarding removal of his operation from Peoria to Princeville."

## Hail to the Chief

EXTENSION OF REMARKS
OF
## HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Hampton Union and the Rockingham County Gazette, Hampton, N.H., of March 12, 1959, entitled "Hail to the Chief."

HAIL TO THE CHIEF

Like a breath of spring after a hard winter comes the state visit of President Jose Maria Lemus, chief executive of El Salvador, the smallest nation—but far from the least important—in the continental Americas.

No "banana republic," El Salvador has a stable, thoroughly democratic government that has outlawed communism and enthroned free enterprise and the homely virtues of thrift and economy. President Lemus' country—a sun-filled land of lakes and volcanoes on the Pacific coast of Central America—not only balances its budget, but has stacked up monetary surpluses for many years. Its remarkably stable currency has maintained the same dollar ratio since 1934. And President Lemus did not come here for a handout.

About the size of Massachusetts, El Salvador is one of the world's leading producers of coffee and does most of its business with the United States. With about 2,300,000 people, it is perhaps the most densely populated country in the Western Hemisphere. And with the prospect of all Central America doubling its population in 25 years, the Lemus administration is hard at work developing both industry and agriculture to provide tomorrow's jobs and thus checkmate Communist infiltration.

tIshould be noted also that nowadays the small nations have a big voice in world affairs through the U.N. and other international organizations. El Salvador has consistently supported the views of the West and has not only led the Central American bloc in the U.N. but has also provided the example for expanding democracy in Latin America.

In welcoming President Lemus we do honor to one of our best friends. As he comes here to learn still more about us and our methods, know-how that he can transplant in his own country it is our opportunity to learn more about El Salvador, and to demonstrate to the world that U.S. respect for its littlest ally is as profound and as warm as for the very largest.

## Honors Bestowed on George Peabody, Esq.

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 26, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article from the Peabody (Mass.) Times for February 19, 1959, which will be of interest to the readers of the RECORD, about George Peabody, Esq., the man after whom Peabody, Mass., was named.

HONORS BESTOWED ON GEORGE PEABODY, ESQ.

(By Edward J. O'Connor)

Yesterday, February 18, marked the 164th anniversary of the birth of George Peabody, Esq., the man after whom this community was named. In February of 1957, I wrote an article about the solemn funeral of this man and several weeks later a short biography of Mr. Peabody. (Editor's note: These two articles were subsequently reprinted in the CONGRESSIONAL RECORD by Congressman LANE.) In 1958 I wrote an article to show the vast extent to which the money gifts of Mr. Peabody were used for public benefaction both in the United States and in England.

This year I would like to point out the high regard in which George Peabody was held by his fellowmen while he lived. This man re-

ceived so many high honors and decorations that it is difficult to know with which one to start. Since we hold in trust the priceless miniature portrait of Queen Victoria in our local Peabody Institute, this seems to be a good one with which to begin.

As Mr. Peabody's life started to draw to a close he wanted to dispose of his fortune in bequests that would benefit large numbers of people over long periods of time. In England, where he made the bulk of his fortune in international banking, he decided to give a large portion of his wealth for the poor of the City of London. To give one's fortune to the poor was practically unheard of at that time.

After George Peabody had made this generous gift of over $2 million, Queen Victoria felt that she must show to Mr. Peabody her gratitude by offering him a title of knighthood. Mr. Peabody refused this honor because of the value he placed on his American citizenship. In the refusal of the Queen's titled gift Mr. Peabody in no way alienated her affection for him. In place of the offer of an English title the Queen decided to have a portrait of herself painted and baked in enamel. To this end, she commissioned an artist to do the work.

After the portrait, mounted on velvet and surrounded by elaborate gold ornamentation, was presented to Mr. Peabody, he decided to place it on public display. He contacted the trustees of the Peabody Institute at South Danvers (now Peabody) and entrusted to their care this priceless work of art. The trustees had a special fireproof brick vault constructed for the reception of the Queen's portrait. Today, if you should pay a visit to the Peabody Institute on the main street of this city, you can view this portrait under glass highlighted by a special spotlight. The portrait itself is on a rolling dolly which is pushed back into the vault each evening. This protective action is to prevent the portrait from being ruined by fire or taken by art thieves.

Along with this priceless portrait Mr. Peabody presented to the trustees of the Peabody Institute, Peabody, Mass., the letter of transmittal that he received from the English monarch, Queen Victoria. This letter may also be seen by anyone if they wish to view an original communication written in the Queen's own handwriting. This letter is locked up in the vault because of its great value plus the all important additional fact that it could never be replaced.

Underneath the Queen's portrait are some of the medals bestowed on George Peabody, Esq., during his lifetime. Included there is the Gold Medal given to Mr. Peabody by the Congress of the United States. This award was accompanied by a congressional resolution of praise for Mr. Peabody's great contribution to help reconstruct education in our Southern States after the Civil War.

Also under the portrait are two gold boxes. The first is the award to Mr. Peabody of the freedom of the city of London. This high honor has been bestowed on only five Americans, namely; George Peabody, Gen. Ulysses S. Grant, Theodore Roosevelt, Gen. John J. Pershing, and Gen. Dwight D. Eisenhower. The second gold box is a gift from the Fishmongers Co., an ancient London guild.

Perhaps some of the less known facts about Mr. Peabody are that the President of the United States, Andrew Johnson, considered him for the position of Secretary of the Treasury in his cabinet; that he received honorary degrees from Harvard and Oxford; and that he had a private audience with Pope Pius IX.

At the Royal Exchange in London in 1869 a statue of George Peabody was erected by public subscription. His Highness, the Prince of Wales officiated at the unveiling ceremonies.

Today in Nashville, Tenn., there is located an outstanding college named George Peabody College for Teachers. Some years after his death Mr. Peabody's name was given to this southern college in appreciation for his contribution to education in the South.

In the year 1900, 29 of the most famous Americans up to that time were elected to the Hall of Fame which is located in New York University. Among the persons elected was George Peabody, Esq.—he ranked 16th from the top of the list, or 15th if you take into consideration that Mr. Peabody was tied with Henry Clay of Kentucky. They each received 74 votes out of a possible 97—showing the high esteem in which he was held by his countrymen years after death.

These were some of the honors received by George Peabody to whom we are endebted for the public library and its many priceless treasures.

## Poison in Your Water—No. 41

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Cleveland (Ohio) Plain Dealer on December 1, 1957, entitled "'Ohio's Foul Streams."

One particular aspect of pollution in Ohio waters is treated in this particular article, acid mine drainage.

The cost to the citizens of the State was estimated to be $2 million in 1940 from this one form of pollution alone. The article says it is undoubtedly much greater today.

The article closes with one remark which I think characterizes the problem Americans face:

We simply cannot ever learn to live with poisoned water.

However, we can learn to live with better opportunities for all of us if we will but clean up the filth which we constantly dump into our waters everywhere. There will be more and better fishing, hunting, boating, and recreational use of our rivers and streams. The cities will have to spend less on purifying their waters for municipal purposes. Industry will find more needed pure water to use for making better things for all of us. The article is as follows:

OHIO'S FOUL STREAMS

"And all the waters that were in the river were turned to blood. And the fish that was in the river died; and the river stank."

Thus Aaron stretched his rod over the Nile and created, with Jehovah's assistance, what was probably the first historical instance of stream pollution. It was so described in the "Book of Exodus."

In Biblical days they had no idea what caused the phenomenon, and so far as one major source of fouled waters in Ohio today is concerned, we're still almost as much in the dark.

The mystery has been acid mine discharges. Toxic sulfuric pollutants affect streams over an area covering one-fourth of Ohio. From a technical standpoint it has been a baffling problem ever since the 1890's, when fish kills first were noted in Pennsylvania rivers adjacent to mines. And the situation opens up involved questions of legal responsibilities, since acid stems from both active mines and abandoned ones, whose ownership now is debatable.

For southeastern Ohio the situation has turned out to be a sort of Janus-faced monster. The coal attracts new industry which would boost the economic level of this section. Simultaneously coal's unpleasant by-product ruins the fresh water so badly needed by the same operations. They are forced to turn away from where they'd like to be.

That's part of the intangible damage, which also extends into lowered property values along rivers, as well as loss of recreation and wildlife. The direct injury can be measured in costs of obtaining—sometimes by trucking—decent water, or in corroded boats and bridge underpinnings. Back in 1940 these tangible losses were estimated at $2 million yearly for this State; it's undoubtedly much greater today.

Is there any hope of a cure? Happily, yes. Ohio State University, in cooperation with the State Board of Pollution Control and the Ohio River Valley Water Sanitation Commission, has analyzed the causes and effect. The Ohio State University study found bacteria to be an important contributing factor to the generation of sulphuric acid. It also came up with a series of recommendations as to ways to stop the process; they are now being tested in the field.

Whatever the eventual recommendation, we can be certain that it won't be a simple or cheap remedy. And we can't go running to Washington for help because the U.S. Public Health Service is limited in its efforts.

As we see it, the situation is pretty much like that which existed in this country prior to the passage of the bill authorizing construction of the Federal Interstate Highway System. It became clear to the public that they really were losing more through inadequate roads than it would cost to build new ones.

Once we all arrive at the same attitude regarding pollution, we'll make a major stride toward curing it. So let's make it everyone's business to see that the State pollution control authorities get the money they need, or further legislation if necessary. We simply cannot ever learn to live with poisoned water.

## Foreign Aid and You

EXTENSION OF REMARKS
OF
### HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. SCHERER. Mr. Speaker, today the Citizens Foreign Aid Committee has issued its first report entitled "Foreign Aid and You.

This committee is composed of the following distinguished Americans: chairman, Mr. Walter Harnischfeger, Milwaukee, Wis.; Hon. T. Coleman Andrews, Richmond, Va.; Hon. Spruille Braden, New York, N.Y.; Mr. Frank C. Brophy, Phoenix, Ariz.; Hon. Howard Buffet, Omaha, Nebr.; Mr. F. Gano Chance, Centralia, Mo.; Mr. Robert B. Dresser, Providence, R.I.; Mr. E. M. Elkin, Pittsburgh, Pa.; Hon. Guy George Gabrielson, Benardsville, N.J.; Mr. Luther O. Griffith, Huntington, W. Va.; Mr. Robert M. Harris, Forest Hills, N.Y.; Mr. A. G. Heinsohn, Jr., Knoxville, Tenn.; Mr. R. A. Hummel, New York,

N.Y.; Mr. Clarence Budington Kelland, Scottsdale, Ariz.; Hon. James S. Kemper, Chicago, Ill.; Hon. J. Bracken Lee, Salt Lake City, Utah; Mr. William Loeb, Reno, Nev.; Mr. R. Chesley McCormick, Wichita, Kans.; Mr. William L. McGrath, Cincinnati, Ohio; Mr. Sterling Morton, Chicago, Ill.; Mrs. Ruth Murray, Oshkosh, Wis.; Hon. Gerald P. Nye, Cooperstown, N. Dak.; Hon. Samuel B. Pettengill, Grafton, Vt.; Mr. J. Howard Pew, Philadelphia, Pa.; Chief Justice M. T. Phelps, Phoenix, Ariz.; Mr. Henning W. Prentis, Jr., Lancaster, Pa.; Col. Willard F. Rockwell, Pittsburgh, Pa.; Mr. Hubbard S. Russell, Maricopa, Calif.; Lt. Gen. George E. Stratemeyer, Winter Park, Fla.; Mr. Ernest G. Swigert, Portland, Oreg.; Mrs. Garvin E. Tankersley, Bethesda, Md.; Dr. Charles C. Tansill, Washington, D.C.; Mr. E. McL. Tittmann, New York, N.Y.; Gen. Albert Wedemeyer, Boyds, Md.; Hon. Burton K. Wheeler, Butte, Mont.; Gen. Robert E. Wood, Chicago, Ill.; Dean Clarence Manion, legal counsel, South Bend, Ind.; Brig. Gen. Bonner Fellers, study coordinator, Washington, D.C.

In view of the extremely high caliber of the committee membership, its report should be given careful study and serious consideration by every Member of the Congress before he votes in the next few weeks on the continuation of our mutual security program. This report is most timely in view of the fact that on last Friday the President of the United States submitted his message to the Congress on this subject.

It is my feeling that representatives of this committee should be called upon to testify at the hearings on this year's foreign-aid legislation and that the report which follows should be made a part of the hearings.

The report follows:

FOREIGN AID AND YOU—A FIRST REPORT BY THE CITIZENS FOREIGN AID COMMITTEE

I. OUR FOREIGN AID

We Americans have always had a historic policy of service to mankind. It is part of our heritage and our religion. For a century and a half and to all parts of the world, we have sent funds, supplies, missionaries, doctors, teachers, and technicians to lend a helping hand to those in need.

Reflecting this humanitarian spirit, our Government has extended aid when and where the need arose. As early as 1794 the Congresss voted relief for the victims of the Haitian Massacre. In 1812 relief was voted for earthquake victims in Venezuela. In 1921 to 1923, despite a hostile Kremlin, the Congress authorized relief for Russian famine sufferers. According to Russian leaders of that time this disaster aid, directed by Mr. Herbert Hoover, saved 20 million lives. Although relations with Japan were strained in 1923, the Congress authorized generous relief for victims of Japan's worst earthquake.

Person-to-person aid, together with governmental disaster relief, lifted American world prestige to unprecedented heights.

After World War II, however, our Government's attitude toward aid abroad changed drastically. Its foreign aid is now continuous and has been expanded until it has become global, with heavy commitments made for years ahead.

To rehabilitate the war-torn countries in Europe our Government launched the $13.5 billion Marshall plan. This was superseded by the present mutual security program which extends foreign aid to more than 70 countries. In the process of this expansion, the North Atlantic Treaty Organization (NATO) was created to strengthen Western Europe against the Red threat from the east.

Current fiscal appropriations for foreign aid are authorized under the Mutual Security Act, Public Law 853, 85th Congress. As part of foreign aid, Public Law 480, 83d Congress authorizes disposal of agricultural surplus commodities.

Foreign aid is divided into two major classifications: Military assistance and economic aid.

Military assistance includes: Military hardware, military training, offshore procurement (military material bought in foreign countries), special weapons development in allied countries.

Economic aid includes: Grants-in-aid (cash or commodities), point 4 (technical assistance), contributions to the United Nations, surplus agricultural products, development loans.

President's special assistance and contingency fund. This varied and complex foreign-aid program has now become an instrument of foreign policy. As such it should have one purpose only—to provide for the common defense and promote the general welfare of the United States. When foreign aid impedes our welfare, the Congress has no lawful power to appropriate.

In 1948 some 450 people were employed to administer and distribute foreign economic aid. Ten years and $41 billion later this staff has grown to 12,000 directing 2,000 projects. In addition, some 9,000 persons are engaged in the military-assistance program which has totaled $23 billion. As of December 31, 1958, there were a total of $6.6 billion in unexpended foreign-aid funds.

II. FOREIGN AID AND DEFENSE

Proponents of foreign aid argue that it offers the best means of avoiding war. They remind us that since NATO came into being the Soviets have not taken one square foot of Western Europe.

Whether or not the Soviets, with their 175 regular divisions and the world's largest air force, intended to occupy Western Europe is not known. Obviously Western Europe's 21 NATO division defense, with insufficient air support, is not an effective war deterrent. If the Soviets ever entertained invasion plans, one weapon alone has deterred them: the U.S. Strategic Air Command (SAC).

Meanwhile Western Europe, more prosperous than before World War II, is not carrying its proportionate share of the NATO defense effort. But we are carrying far more than our share. We have stationed five American divisions and some tactical air units in Europe. These forces spend and require substantial sums for their support and maintenance. This is not foreign aid money but it supplements foreign aid in that it places more American dollars at the disposal of foreign governments.

Despite our huge defense contribution, European NATO strength in comparison to that of the Soviets is almost negligible.

The population of prosperous European NATO countries is 50 percent greater than ours. But our eager assumption of a heavy defense role in Western Europe has caused our allies somewhat to disregard the Red threat and to rearm reluctantly. To stimulate them into creating more military might for their own defense we should advise them that it is not our policy permanently to garrison Europe. There should be a systematic withdrawal of American troops, particularly in the lower echelons, as fast as these can be replaced by European NATO members.

To bolster morale after Sputnik I, President Eisenhower promised nuclear Intermediate Range Ballistic Missiles (IRBM) to our NATO Allies. The plan was to establish a line of 36 IRBM squadrons from England through Southeast Europe and on into Turkey. More than a year later only four IRBM squadrons had been accepted. These are being based in Britain. Administration leaders had placed great faith in Europe's use of the IRBM as a war deterrent. This cool Allied reception of the IRBM, Britain excepted, is considered by some military experts as the greatest failure in our postwar defense planning.

There is a good reason for this reluctance. In an allout nuclear war the Kremlin forces, unless prevented by SAC, have the capability of destroying Western Europe in a matter of minutes. The European defense against Red bombers and missiles is inadequate. We cannot afford to provide Europe with even a reasonable defense. Accordingly, this understandable fear of Red nuclear incineration may in the event of war force our European NATO Allies into neutrality. If that happens, we may be denied the use of many of our overseas bases and the United States and Canada would be left to face the Soviets, while the remainder of NATO is neutral.

A number of the Central European, South Asian, and Far Pacific countries have received in all more than $10 billion in military assistance. Yet some of these recipients are hostile to the United States. So it is possible that some of our own weapons might one day be turned against us. This has happened before.

Limited military information makes it difficult for the American people to know our true defense position. It would appear that the Red Air Force challenges SAC; we have yet to gain missile ascendancy; we have undertaken to defend the free world; our forces, deployed globally, are overextended; our own continental defense against bombers and missiles is inadequate.

So far as the survival of the American people is concerned, military assistance to European and Asiatic countries is not essential. Authoritative studies show convincingly that the Western Hemisphere can be defended and made self-sufficient both in peace and in war.[1]

In the past 12 years we have spent about $23 billion for foreign military assistance. In addition, our overseas military men are spending more than $3 billion annually. Suppose dozens of our cities are wiped out in an all-out nuclear war. What excuse can our political leaders who survive offer for such a tragedy, if we continue to arm other nations while neglecting adequately to defend our own people?[2]

III. IMPACT OF FOREIGN AID ON POLITICAL SYSTEMS

One of the main benefits claimed for foreign aid is that it helps prevent the growth of communism. Actually, it has tended to promote philosophies akin to communism.

The Marshall Plan greatly assisted Britain's recovery from war's devastation. But the fact that Britain instituted and carried out her industrial nationalization program at the very time that our foreign aid funds were being received, is more than mere coincidence. The $7 billion foreign aid which we have contributed to Britain's economic program, directly or indirectly, has helped to nationalize the Bank of England, and the gas, electric, railway, canals, and coal mining enterprises of the United Kingdom. Our dollars also have assisted Britain to adopt socialized medicine. Thus, Britain has taken a long stride toward total socialism. Through too much foreign aid, too long continued, we have done Britain, our ally, a great disservice.

But this is not all. In a like manner our aid has helped to strengthen the nationaliza-

Footnotes at end of speech.

tion processes in Norway, Austria, France, Italy, Turkey, Pakistan, India, Indonesia, and even in Communist Poland and Yugoslavia.

Nationalization of industry and state capitalism have been fostered in countries receiving our funds. Our dollars and credits have gone mostly to foreign governments and provided the means to start state enterprises or to take over privately owned businesses. In many cases as a condition upon which we granted foreign aid, we have encouraged the recipient governments to move into industrial operations with programs similar to the Soviet 7-year plan. In so doing, our foreign aid is helping to establish the very system of state slavery we set out to combat.

American-financed nationalization does more than merely put a foreign government in business. It serves to destroy the free enterprise of the recipient country. Nationalization both here and abroad reduces the tax base and therefore raises taxes for others. Government business is subsidized by our continuing foreign aid; most free enterprises do not enjoy such subsidy. For the free enterprises which survive our aid, there is always the threat of expropriation.

By assisting recipient countries to nationalize their industries, foreign aid contributes materially to the creation of governmental systems and institutions hostile to those which have been derived from our Declaration of Independence and our Constitution.

The argument is advanced that by raising living standards foreign aid prevents the spread of communism. It is a mistaken idea, however, that communism breeds on poverty. There is no proof that a high standard of living is the enemy of communism.

All of the eastern European countries, except Czechoslovakia, have always been relatively poor. Czechoslovakia, however, has long been among the most prosperous countries of Europe. Yet, Czechoslovakia through political intrigue went Communist. In Central and western European countries communism has thrived in the prosperous industrial areas. In the relatively poor countries the population has usually resisted Communist influence.

Communism has been imposed by Red armies aided by local traitors and fifth columnists.

For instance Communists are strongest in Italy and France. In Italy the Communists are stronger in the prosperous northern industrial areas, while in southern Italy, where the people are poorer, the conservatives have built a stronghold. In France the Communists are stronger in the prosperous cities; they are weaker in the poorer rural areas.

In Ireland, among the least wealthy countries of Western Europe, the Communists have made little headway.

In India, which has received substantial aid, between 1952 and 1957 the Communists increased their vote from 4 million to 12 million. Today the Communist Party is the second largest in the Indian Parliament and actually controls the government in the State of Kerala.

Many Americans will be astonished to learn that strong encouragement for foreign aid originally came from Joseph Stalin. His "Marxism and the National Colonial Question," pages 115–116 reads in part:

"It is essential that the advanced countries should render aid—real and prolonged aid—to the backward nationalities in their cultural and economic development. Otherwise, it will be impossible to bring about the peaceful coexistence of the various nations and peoples—within a single economic system that is so essential for the final triumph of socialism."

Through foreign aid the United States is following Stalin's spending prescription for the establishment of "a single economic system that is so essential for the final triumph of socialism." From the start the Kremlin has been determined to make capitalism pay for its own funeral.

IV. FOREIGN AID AND FREE WORLD ECONOMY

In a recent speech Mr. William McChesney Martin, Chairman of the Federal Reserve Board, said:

"One distressing experience (during a recent trip abroad) was to find among intelligent and perceptive men in those countries a growing distrust over the future of the American dollar."

At home, this growing loss of confidence in the dollar is evidenced by the current flight of gold from U.S. ownership. Foreign governments and banks with dollar credits in the United States can demand and receive payment in gold. But our Government will not redeem in gold, dollar credits owned by U.S. citizens.

Foreign governments, partially with the aid of credits made available to them through our foreign aid, have been salting away American gold, or piling up dollar balances in our American banks. In addition, individual foreigners, again with the help of our foreign aid, have become heavy investors in American securities. It is estimated that there are about a billion in market values of U.S. securities held abroad. This could all be converted into foreign central bank demands on our gold stock.

At the beginning of 1958 our gold reserve amounted to $22.9 billion. During 1958 alone, $2.26 billion in gold has been taken from us by foregin countries. Should this loss of confidence in the dollar continue, the gold outflow could collapse our currency.

Since 1950 dollar deposits in this country by foreign governmental agencies have increased from $3.9 billion to $8.7 billion. In addition, foreign individuals and foreign banks now have dollar deposits in our banks of $5.8 billion. This total of $14.5 billion in foreign holdings is convertible into gold upon demand of the holders. In other words, 70 percent of our gold reserve is subject to foreign demand.[3]

There is no evidence in 1959 that this flight of gold has ceased.

Our gold stock reduction menaces our economy. Today the U.S. gold ratio to our own money has actually declined to a figure lower than that during the depth of the 1933 depression.

The Federal budget of the United States has been balanced only five times in the last 27 years. The Federal debt is now $283 billion. This crushing American debt, borne by only 6 percent of the world's population, is greater than the combined national debts of all other countries in the world. More than a fourth of our Federal debt has resulted from budget deficits caused by our foreign aid programs. Annual interest on the aid portion of our debt is about $2 billion. This interest, together with foreign and appropriations totals some $7 billion annually. Thus our past and present foreign aid programs are consuming the equivalent of 20 percent of our personal income tax collections.

It has been reported that a major portion of foreign aid money is spent within the United States and thereby strengthen our economy. Doubtless Government contracts for foreign aid materials have brought profits to U.S. corporations and may have influenced them and their workers to support foreign aid. However, when the manufacturer's product is given away, rather than strengthening our economy, it siphons off our wealth. Money spent for goods and services to be used as foreign aid creates consumer buying power but not consumer goods for Americans. Hence such foreign aid is by its very nature inflationary.

It is alleged that foreign aid is responsible for the employment of 600,000 American workmen. This claim ignores the fact that American workmen are already suffering from unemployment resulting from foreign aid grants to competitive industries abroad. Moreover, the International Cooperation Administration (ICA) purchases frequently discriminate against American production. For example, in 1957, our ICA textile expenditure was $96.3 million, of which only $7.2 million was spent for American textile products. Today we have nearly five million unemployed; foreign aid has been a contributing factor.

Administration propaganda seeks to minimize the impact of our foreign aid burden by emphasizing that it is a mere one percent of our gross national product. What this propaganda does not tell is that foreign aid facilitates the flight of gold from U.S. control and consumes the equivalent of 20 percent of our personal income tax.

The administration is eager to keep foreign aid and all foreign policy strictly on a bipartisan basis in the Congress. In the last three presidential campaigns, candidates of both major parties carefully avoided making foreign aid an issue. As a consequence, taxpayers in our Republic have never had an opportunity to express themselves on foreign aid at the polls.

Unfortunately, our acknowledged Federal debt is only a fraction of our real debt. It has been reliably estimated that our true Federal debt obligations amount to about $838 billion. This figure is reached by totaling existing legislative commitments of $105 billion, social security obligations of $350 billion, and a Federal Reserve contingent liability of $100 billion,[4] together with the Federal Treasury debt of $283 billion.

In addition to the $838 billion Federal debt obligations, our private individual debt is $238.5 billion. Our net private corporate debt is $236.1 billion. The State and public local debt is $50.9 billion.[5]

The inflationary result of these enormous debt burdens, coupled with confiscatory income taxes, is fast undermining our economy.

To illustrate: Because of taxes and inflation, in 1957 it took an income of $4,806 to match in purchasing power a 1939 income of $2,000; $13,004 to match a 1939 income of $5,000; $30,971 to match a 1939 income of $10,000; and $333,377 to match a 1939 income of $50,000.

"If things go during the next 18 years like they went during the past 18—and the spenders seem to be determined to have it that way—the dollar will be worth less (in 1975) than 25 cents and it will take an income of: $10,538 to match a 1939 income of $2,000; $33,240 to match a 1939 income of $5,000; $92,141 to match a 1939 income of $10,000; $835,393 to match a 1939 income of $50,000." [6]

As a result of this dollar devaluation and the increased velocity of money circulation, in the past 20 years the value of fixed incomes, of all bank accounts, insurance policies, Government, State and municipal bonds, and all other indebtedness has been cut in half. Thus the losses already inflicted on the American people are enormous. The same processes continue and the end is not in sight.

The impact of our foreign aid on the economy of nearly all of the recipient countries is likewise inflationary and damaging. Many times foreign aid has financed new producing and manufacturing facilities without coordinating secondary industries and markets. This has resulted in dislocation and the need for further gifts. With the exception of Germany, every country receiving our foreign aid in the past 10 years has found that its currency is softer than before the aid was given.

The initial aid which the United States extended to countries devastated by World War II unquestionably accelerated their recovery. However, it is utterly impossible for the American taxpayer to transfuse the

Footnotes at end of speech.

economy of the free world, with a new money bloodstream, except temporarily. The recipient country begins to live on the transfusion; its economy becomes geared to an income which it cannot, by itself, sustain.

The time has arrived when free world countries must help themselves. They must establish sound, enduring economies of their own lest they perish, the victim of predatory socialistic forces. For us to continue foreign aid is a disservice to the recipients. The longer this aid is extended, the longer will be their delay in establishing self-sufficiency.

V. FOREIGN AID ADMINISTRATION

The field supervision of 2,000 economic aid projects scattered about the globe is a prodigious undertaking. It involves the allocation of large quantities of grant aid (money); it involves engineering and technical assistance. Qualified specialists to manage and operate so many foreign projects of widely varying nature are impossible to obtain.

On the planning and policy level in the ICA and the Department of State, the practical experience of the personnel has not qualified them to manage what is actually the largest engineering, supplying, and banking operation in the world. Men who would be able to handle such jobs enjoy good positions in private enterprise and are unwilling to serve under the direction of Federal bureaucrats.

In the past decade the agency administering economic aid has had its name changed several times, quite possibly in the hope that the American people would forget its past record. During that time, the economic aid agency has had eight directors. No director has held office for more than 2½ years and one served only a few months.

This rapid turnover results in the directors becoming captives of what is now recognized as a self-perpetuating bureaucracy. It operates on the principle that no matter how wastefully money is spent, if enough is spent it will do some good. This lack of competent personnel has resulted in innumerable instances of waste running into many billions of dollars.

A few among numerous examples will illustrate: A total of $3 billion foreign aid funds has been granted to foreign powers to help reduce their national debts and to balance their budgets. To extend this aid, we ironically had to borrow the money. There are instances of U.S. Government checks having been turned over to foreign officials for budget support with no record of how the money was spent. Foreign aid has given more than $2 billion to governments that are hostile to the United States. This includes the Soviet Union, Yugoslavia, and Poland. To build an American exhibit in Moscow to be completed in July 1959, $3.2 million foreign aid has been authorized. Last year India received $325 million in foreign aid. A substantial part of this aid was given to support India's second 5-year plan. Our dollar credits enabled the Indian Government to purchase equipment with limited Indian commitments to buy American goods. Point 4 was originally established to export American know-how to the underdeveloped countries. Instead, point 4 has become inextricably involved with industrial development, lush engineering contracts, and surveys that have no relationship to the original purpose.

From an official report on foreign aid to oil-rich Iran, the "U.S. aid and technical assistance programs in Iran which, between 1951 and 1956, totaled a quarter billion dollars, were administered in a loose, slipshod, and unbusinesslike manner * * * it is now impossible—with any accuracy—to tell what became of these funds." [1] The official in charge of Iran foreign aid was later promoted and is now head of foreign aid in Korea, where our spending obligations are greater.

In 1953 our Government made $745 million, almost three-fourths of a billion dollars, available for the support of the French and their allies in the prosecution of the Indo-China War. Our arrangements with the French for the control and accounting for this money were cumbersome and loose. Only a part of the $745 million had been spent when the French surrendered. Because of poor accounting and auditing the United States does not know how all of the $745 million was spent. After many months of attempted audit and negotiation the United States was able to recover only $95 million.

Our financial support of the British military aircraft program in the fiscal years 1953–54–55 was approximately $450 million. The planes being financed were unduly delayed in development. By the time full production was achieved, the planes were obsolescent. The London Financial Times wrote in December 1954, that our offshore financing of these British aircraft was in fact just a rather clumsy method of making a grant of cash. Actually part of this cash served to make possible a British Government subsidization of its commercial jet transports in competition with U.S. manufacturers.

A New York Times dispatch from Karachi, Pakistan, dated Feberuary 18, 1959, discloses that corruption and inflation are rampant; that "of the $839 million received by Pakistan in foreign aid, of which $703 million came from the United States, only $186 million according to an official admission was utilized on 'constructive works'."

The Development Loan Fund is a new foreign aid device for extending development assistance to foreign countries. It will make what amounts to second mortgage loans and accept soft local currencies in payment for loans in dollars. The Development Loan Fund also lends money to assist American business in the establishment of oversea factories.

The ICA will provide insurance coverage on private oversea investments against certain exchange losses and expropriation and other risks. Thus, American taxpayers' dollars subsidize oversea factories, the products of which compete with those of our American workmen.

The Fairless Committee, which was appointed by the President in 1957 to evaluate the foreign-aid program, adversely criticized the concept of the Development Loan Fund and soft-currency loans.

No comprehensive and independent audit of foreign-aid expenditures seems ever to have been instituted.

The Congress votes foreign-aid appropriations; the executive branch of the Government handles the apportionment and disbursement of funds. Once funds are in the hands of our executive branch it appears that the Congress exercises almost no control over management, expenditures, and projects.

The Congress has a responsibility to its taxpaying constituents. It should assert control over expenditures of foreign-aid appropriations. It should make its appropriations more specific. It should further limit the power of the Executive to effect the transfer of foreign-aid funds. Too much flexibility amounts to writing a blank check.

The Congress should create a bipartisan congressional committee or Hoover-type Commission with sufficient funds to conduct a thorough investigation of foreign aid. This should include a check on the programing and expenditures for foreign-aid projects and should continue until all foreign aid is terminated.

VI. MORAL AND PSYCHOLOGICAL ASPECTS OF FOREIGN AID

A large part of foreign-aid support in the United States stems from some of our religious leaders. Good samaritans that they are, they associate foreign aid with the religious obligation of individuals to help others. It is a moral act for a person to make a voluntary contribution of money or effort to help another person. By extending aid religious leaders seek to kindle an inner light in those to whom help is given.

This is, of course, in accordance with the Christian concept that reform of societies is a revolutionary process which starts by a change of heart from within the individual. However, this Christian teaching is the direct opposite of the Marxist theory, which our governmental concept of foreign aid parallels.

Marx held that societies are changed from without and that individuals change, not from within, but rather in accordance with their external environment through things material.

Frederick Engels, Marx' collaborator, wrote: "The ultimate causes of all social changes and political revolutions are to be sought not in the heads of men, not in their better insight into eternal truth and justice, but in the changes in the methods of production and exchange; they are to be sought not in the philosophy, but in the economics of a particular epoch."

Our foreign-aid program, curiosly for a Christian people, follows the Marxist teaching. Foreign aid is expressed in terms of money, production, and materialism. The money for foreign aid is not a gift from our people to foreign peoples. Foreign aid is money extracted from the American people by confiscatory income taxes and then bestowed by our governmental bureaucrats upon a foreign government to do with it as it pleases.

Missionaries serving in countries receiving foreign aid report grave concern about the adverse effect of our aid among the people with whom they work. One is compelled to conclude that our religious leaders endorse governmental foreign aid only because its materialistic motivation has not yet been disclosed to them.

Americans are crusaders. It is our American trait to endeavor to create others in our own image. Whether or not other peoples want to reflect our image fails to deaden our zeal. Through foreign aid we have attempted to superimpose our modern, highly industrialized, fast moving system upon underdeveloped countries with less complex living standards, slower tempo and different cultures. It has taken us 175 years to reach our present standard of living. Foreign aid seeks to lift underdeveloped countries to a parity with us in a decade or two. It is most unrealistic.

Foreign aid reflects a patronizing attitude toward foreign peoples. It is a sly attempt to buy their allegiance, which is presumed to be for sale.

In the recipient countries, our foreign aid program results in confusion, misunderstanding and sometimes chaos. After nearly 15 years of foreign aid we are probably the most disliked nation in the world.

There is also a human principle which strongly influences the reaction of recipients to our foreign aid program. If one country is made a recipient, how can aid to others be denied? If one recipient is granted more than others, all recipients then clamor for more. The war devastated Philippines, our trusted wartime ally, is now understandably in turmoil for the reason that others less deserving are higher on our foreign aid totem pole.

Unless foreign aid is soon terminated, our country faces economic peril. This peril is inevitable because neither this nor any other

Footnotes at end of speech.

Congress will reduce or restrain spending at home so long as it votes colossal foreign handouts.

Our Congressmen know that so long as they dissipate billions of dollars overseas, to be reelected they must also continue expensive domestic benefits. Foreign aid is a street without end—unless the street is barricaded. If long continued, it will result in an ever-expanding bureaucracy of careerists dedicated to passing out American taxpayers' dollars all over the globe.

The fate of our foreign-aid program is a matter which the American people must decide now. No matter how much we spend, it is clear that we cannot buy world leadership and good will. If we are to lead, we can lead only by example. We cannot force our image upon others. We must resume our progress and pursuit of liberty under the Constitution. Then and only then will others respect us.

VII

From the foregoing, the following facts are inescapable:

1. That our Government intends that foreign aid shall be continuous and global.

2. That the threat of Communist aggression rules out our continuing to dispense lavish foreign aid when our own economy is threatened and our defenses are inadequate.

3. That in a number of recipient countries our foreign aid helps to strengthen political systems hostile to our own.

4. That our foreign aid speeds rather than retards the growth of communism; it inflates our economy; it is partially responsible for the alarming flight of gold from our control; it is destroying our foreign markets and increasing unemployment among American workers.

5. That by the very nature of the foreign aid we extend, it must be inefficient and wasteful.

6. That our governmental foreign aid program is unsound in principle.

VIII

To remedy these conditions we recommend the following:

1. That our traditional generous private charity and governmental grants to relieve disaster be continued; that we encourage the expansion of our private missionary efforts.

2. That in countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance—for the time being—should be continued but on a realistic basis.

3. That foreign aid which directly or indirectly promotes governments that are hostile to our constitutional concepts of government be terminated immediately.

4. That so long as governmental foreign aid is continued the recipient should pay a part of the cost of the proposed project; that our aid should terminate when the conditions on which that request is based have been remedied; that private technical, scientific and educational assistance be extended only to friendly peoples who seek our aid on a cash or loan basis.

5. That until foreign aid is terminated, the Congress take steps properly to exercise close supervision and control over the manner in which all foreign aid funds are being spent; that all future economic aid, plus what can be salvaged from unexpended foreign aid funds be diverted to and handled by the Export-Import Bank.

6. That the $3.9 billion requested by the President for the fiscal year 1960 be reduced $2 billion, and that each year thereafter foreign aid be substantially reduced until terminated within 3 years.

[2] Due to rapid obsolescence in weapons, it is of great importance to eliminate waste and duplication and to make every U.S. defense dollar produce the maximum. Our ability to be able to finance an adequate defense program over many years may be the key to our survival.

If our arms program were properly orientated, we could have better defense for far less than we are now spending. See Air Force Magazine, March 1959, "Where We Stand," by Brig. Gen. Bonner Fells, U.S. Army (ret'd).

## Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. METCALF. Mr. Speaker, the Committee on Interstate and Foreign Commerce reported H.R. 1011 the other day to provide for amendments to the Federal Airport Act. This bill would authorize Federal aid for airports in the the amount of $297 million over the next 4 years.

The hearings and the report on this legislation make out a good case for the bill, but I failed to find where the talents of the Secretary of Health, Education and Welfare have been utilized. Had he been consulted, perhaps we could save almost $300 million.

Secretary Flemming is the author of a formula for the construction of 75,000 of the 140,000 classrooms the children of the Nation need by a Federal program resting upon changes in the State constitutions of many of the States, changes in statutes and debt limits in other States and changes in the whole tax systems of many of the States and and local districts. He anticipates this will be done in time to get some of the boys and girls in school next September even though the elections for the changes won't take place, if at all, until November 1960, and even though many of the State legislatures have completed their legislative sessions not to meet again for 2 years. But these minor obstacles of time and space do not bother Dr. Flemming.

An application of the Flemming formula to our airport problems would take care of the stacking up over airports by simply changing the aeronautical definition of a stall from "the loss of necessary airspeed to maintain altitude and control" to "a place for parking airplanes in midair." This would keep the planes waiting to land from having to circle the field and thus endangering other traffic. Long runways could be eliminated by passing legislation requiring planes to land and take off vertically and much valuable land that is now being used for runways could be used for storage or administration buildings or parking space for automobiles. All that the plane manufacturers have to do is equip their planes with antigravity stabilizers and vertical landing gear and all of our problems will be solved. Or better yet just repeal the law of gravity.

## School Lunch Program Needs

EXTENSION OF REMARKS
OF
### HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. JOHNSON of Colorado. Mr. Speaker, I call to the attention of the Members certain facts about our school lunch program and its needs. I quote from a letter I have just received from Mr. Charles W. Lilley, Colorado State director and chairman of the State Directors and Supervisors, American School Food Service Association:

I am chairman of the State Directors and Supervisors so I know the situation in Colorado is rather typical of the Nation.

Without additional financial assistance, our schools will have to look for ways to cut costs and raise income. Some schools will lower the quality of the meal or reduce size of servings, others will try to reduce the number being fed free or at a reduced charge, and others will simply raise the charge. Any and all of these devices hit the child from low-income families hardest.

More State funds for education will have to be found for matching Federal funds provided in the National Defense Education Act of 1958, which makes it more difficult to get additional State funds for school lunch.

Because of increasing participation, we have been inclined to think that everything was fine in the lunch program. A closer look will reveal that in many instances participation has fallen off in the older established programs as the charge has been increased. Also, quite a number of schools have dropped out of the program, finding it more profitable to operate an independent program with no requirements as to the type of meal served or provision for free meals. These schools are being reimbursed 3 cents for serving only a half-pint of milk, while schools under the national school lunch program agreement must serve a complete type A meal including a half pint of milk and receive only 4 cents reimbursement per meal. Anyone interested in children's welfare could not help but deplore such a trend. There is good profit in pop, potato chips, frozen dairy custards and such stuff, but very little food value.

While the national increase has been under 10 percent, ours has been around 20 percent this year. It takes at least a year, and often two, before increase in population is reflected in an increased allocation of funds. The donated commodities are allocated on actual participation which is adjusted twice a year, so we fare better on commodities than on cash reimbursement. Nationally, daily participation will exceed 12 million children.

We feel that a reimbursement of at least six cents per type A meal is necessary to keep the schools in the program meeting

the meal type requirement, taking care of the needy and keeping the price in the range that the majority can afford. In addition to the six cents, we need donated commodities to the extent that will represent a meal raise of about 10 cents.

## Poison in Your Water—No. 43

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Boise (Idaho) Statesman on April 27, 1958, telling about pollution in the waters of the State of Idaho.

This article just shows how careful we must be of pollution which gets into our waters.

From one simple, small accident which occurred, some hundred people have been taken ill in a wave of vomiting, headache, and diarrhea due to what was apparently a form of dysentery.

[From the Boise (Idaho) Statesman, Apr. 27, 1958]

HEALTH AUTHORITIES TRACE POLLUTION OF WILDER WATER TO HUMAN CONTAMINATION

The water supply at Wilder Saturday night was suspected of contamination from human refuse from the community's jail. A number of children and adults were ill with a diarrhea-like illness.

Samples of water tested by the State health department laboratory at Boise showed presence of an intestinal type of contamination, said A. W. Klotz, lab director.

The town jail is built on a concrete floor above a 72,000-gallon underground storage tank. C. J. Hammond, of Nampa, State health department sanitarian for the southwest Idaho area, said he found evidence of human offal around the edge of the jail building and directly above the tank where the town's drinking and cooking water is stored.

Reports indicated that from two dozen to a 100 persons have been taken ill in a wave of vomiting, headache, and diarrhea that has swept the town since Wednesday. Memorial Hospital at Caldwell reported the 2-year-old child of a migrant laborer in critical condition, and two others who had been taken off the critical list.

DYSNTERY INDICATED

Specimens taken from the patients showed preliminary indications of the presence of bacillary dysentery, Klotz said. He said the illness usually spreads because of poor sanitation.

First of the specimen tests completed late Saturday night in the health department laboratory showed the presence of shigella flexerni an organism causing bacillary dysentery, Klotz said, and a sample of water taken from the Wilder storage tank was contaminated.

Klotz noted that the State laboratories were able to complete the culture tests on specimens so quickly because of some of the preliminary culture work done at Caldwell Memorial Hospital laboratory before the specimens were received here.

No toilet facilities are available in the two cells of the jail, and the human offal left in the cells had been washed out with a hose, Hammond said.

Harlan Formo of Boise, State public health engineer, said the State health department had recommended several times to city officials that the storage tank be abandoned, and that a deep well turbine pump be used to pump water directly into the city water system.

CHLORINATOR INSTALLED

The department had advised against use of the storage tank, he said, and had told the Wilder community it should chlorinate its water. An emergency chlorinator was installed in the system Friday night. Officials warned that for about 5 days, all drinking and cooking water must be boiled. It will take about that time for the system's water to be fully treated.

State Health Administrator Terrell O. Carver said at Boise, "maybe this unfortunate situation will serve to point out some shortcomings in sanitation practices in other cities."

Hammond said he was attempting to collect specimens from a half dozen former inmates of the jail. He said if bacteria found in the specimens are similar to that found in the patient's specimens, a connection could be established.

Hammond said his investigation also showed that one wall of the storage tank was broken and although it had been repaired with boards, it allowed possible contamination from material from animals or surface water.

He said he also found a cross-connection at the Wilder School between a school well which had been contaminated and used only for toilets, and the city water system. There was a possibility of a faulty operation which might allow seepage into the city system, he said.

## Think It Through

EXTENSION OF REMARKS
OF
### HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mrs. ST. GEORGE. Mr. Speaker, the following article by E. F. Hutton appeared on the financial page of the New York Herald Tribune on March 14, 1959.

Mr. Hutton spells out the deficits in six of our largest, most populated, most powerful and richest States. The reading is not very cheerful. The idea of putting a bean in the horse's ear to make him forget the pain in his tooth is an interesting comparison.

The State and county taxes and deficits are supposed to make the citizen forget the Federal taxes and deficit. This is fine, but sometimes the horse was driven crazy and smashed the wagon and killed the driver. We may be driving the taxpayer crazy, too:

THINK IT THROUGH

(By E. F. Hutton)

Up in north country, it's a sovereign remedy for a horse with a toothache to drop a bean down his ear. That makes him forget his toothache and pull real good.

And so, dearly beloved, when the pain of Uncle's income tax becomes acute on April 15 think of the many other tax beans that are being dropped down your ear.

States, counties, cities and towns are having hard sledding and need your help real bad. They followed the Pied Piper of Washington to the brink. Look at their deficits: New York, about $191 million; California, $68 million; Massachusetts, $35 million; Michigan, $110 million; Pennsylvania, $100 million; Texas, $65 million.

These are some of the richest States in the Union. They want you who live in them to pay their creditors for them, as they, for a thousand excellent reasons, spent more than they had.

So they, and most of the others, are asking you to kindly pay more taxes on your income, gasoline, cigarettes, pipe tobacco, beer, soft drinks, restaurant meals, horse rake, real estate and your inheritance from Aunt Maud.

By spreading it around thin—this way—you will scarcely feel it! Of course, none of them will reduce spending as they know you want whatever they decide you should have.

But, neighbor, don't worry. If they finally take all you've got, Uncle will take care of you.

## Your Hidden Food Bill

EXTENSION OF REMARKS
OF
### HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to a particularly fine editorial from the Monterey Peninsula Herald, Monterey County, Calif., on the subject of "Your Hidden Food Bill":

YOUR HIDDEN FOOD BILL

By June 30 of this year, the U.S. Government will have on its hands surplus crops which it has bought up at a cost of $9 billion.

And for this type of farm relief, it's not only the cost but the upkeep that must be considered. It is costing the Government a round billion dollars a year for the storage, interest, and clerical work on this unwanted food.

These figures mean that every man, woman, and child in the country, on the average, has $51.42 tied up in this food and, not being able to eat it, is paying $5.71 a year storage charges on it.

In 1958 alone, the Government bought 489 million bushels of wheat alone—about one-third of the record total crop. It now owns outright 786 million bushels of wheat, for which it paid $2.2 billions in support money to farmers.

Also placed in storage last year were almost 98 million bushels of soybeans, almost 100 million bushels of grain sorghums, and 108 million bushels of corn.

Government farm relief payments now amount to about 40 percent of the total net income of all farm operators in the country.

Our farm relief program has two net results: (1) It saves farmers from themselves; and (2) it makes the rest of us pay more for the food we buy, in addition to the taxes we must pay to support the system.

Insane as the system seems to be, there are arguments for continuing it in some form. If it were eliminated overnight, a large part of our farm population, numbering 20 million, would be bankrupt and no longer able to buy Cadillacs, TV sets, and red flannel underwear.

This would cause a major depression and bankrupt us all.

It's obvious that we mustn't allow this to happen.

It's equally obvious, however, that our present system of farm relief can't go on forever. If a man from Mars were to show

up, he would hardly rate it as other than incredible.

We shall have to revise our thinking about farmers.

Joseph Alsop is fond of telling us that we must save the small farmer. The farm family is our most valuable asset, he says. The farm family has raised most of our great men, our national leaders.

That is true, but perhaps the main reason for it was that most of them were raised in days when most families were farm families. In 1900, for example, more than half the population of the country was farm population—as against about 12 percent today.

Building character and training leaders among the young people of our nonfarm population is something we must do if we are to survive and prosper regardless of what we do about farm relief. And we know of no reason why young people cannot be adequately trained in cities.

If we are growing 50 percent more wheat than we can possibly use or even dump abroad without upsetting world economy, the sensible thing is to grow less wheat—and not to continue to grow more, have the Government buy it up and store it.

If we are to grow less wheat our wheat acreage must be reduced. And the most sensible way to reduce it is to eliminate the marginal areas where its production costs are highest. This, to a large extent, means eliminating smaller farmers.

This is a sad thing to do. It should be done, of course, gradually and in an intelligently planned way so that it will be as painless as possible. The eliminated farmers must have the possibility of turning to other work.

Despite the pangs that may be involved in tearing families away from the soil, in the long run it will be better for everybody, including the families themselves, than the present highly uneconomic system of farm relief.

## Simpson-Keogh Bill, H.R. 10

EXTENSION OF REMARKS

OF

## HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. SAYLOR. Mr. Speaker, among the progressive groups in the medical field are the Cambria County Medical Associations. Their sincere effort to keep themselves not only well informed on the latest advancements in their own field but also in allied fields is to be commended.

At the meeting of the Cambria County Medical Society in Johnstown, Pa., on Thursday, March 12, an invitation was extended to the Honorable RICHARD M. SIMPSON, ranking Republican on the House Committee on Ways and Means, to discuss the major legislation which would be considered by the present Congress.

Representative SIMPSON is the dean of the Pennsylvania Republican delegation and has been the chairman of the Republican congressional committee for several years.

However, Mr. SIMPSON, while a strong party man, has always placed the interest of his country first in attacking any problem. He is a man of strong convictions and one whom I am privileged to call a friend.

In view of the consideration of H.R. 10 by the House of Representatives today, I want to draw attention to the statement made by Representative SIMPSON in Johnstown last Thursday evening, and herewith include it as part of my remarks.

REMARKS OF THE HONORABLE RICHARD M. SIMPSON BEFORE THE CAMBRIA COUNTY MEDICAL SOCIETY, JOHNSTOWN, PA., THURSDAY, MARCH 12, 1959.

I am privileged to express appreciation for the honor that you have extended to me by your kind invitation to visit Johnstown this evening for the purpose of addressing the distinguished membership and honored guests of the Cambria County Medical Society.

When your capable and experienced Congressman, JOHN P. SAYLOR, asked me to come to Johnstown, he had planned to accompany me but other legislative duties have prevented him from being here. As the ranking Republican on the important House Committee on Interior and Insular Affairs, JOHN SAYLOR'S official duties have placed great demands on his time. You may be assured that if JOHN could have been here tonight, he would have been. He did ask that I convey his regret and he sent to you his warm greetings. As one who knows whereof he speaks, based on personal observation and association, I will categorically state to you that the 22d Pennsylvania District is fortunate to have a man of the stature and dedication to duty that JOHN SAYLOR brings to his responsibilities as your Representative in the Congress of the United States.

In addition to renewing acquaintanceships with the many old friends I have found in your presence and making the acquaintanceship of new friends, my purpose in being here tonight is to discuss with you a legislative subject that is of very genuine interest to all self-employed Americans and their families. Because it represents a matter of tax equity and tax principle, it should also be of interest to every American. I refer to what is presently denominated as the Simpson-Keogh bills, H.R. 9 and 10, legislation to provide deferment of tax liability on earned income from self-employment paid into certain defined retirement programs.

In the next few minutes I would like to present briefly some background information with respect to the proposal and then provide a general outline of the provisions and purpose of the current version of the bill. In parlance of the medical profession I will endeavor an analytical diagnosis as to the identity and then undertake a prognosis as to legislative prospects. I will not endeavor a technical discussion of the bill and I offer that to you as a solemn promise.

The importance of the need for the self-employed to provide for their retirement security is somewhat shockingly demonstrated by a study conducted in the spring of 1958 by the Bank of New York. That study indicated that fewer than 3 of every 10 self-employed taxpayers—by their own admission—now have a planned retirement program of any kind.

The genesis of the Simpson-Keogh proposal can, in my judgment, be traced to two basic causes.

The first of these is the steep progression of the existing individual surtax schedule. If we were blessed with a more modest surtax schedule that did not take one-fifth (20 percent) of a taxpayer's first dollar of taxable income, that did not begin to take one-half (50 percent) of his taxable income at $16,000, and that did not take more than nine-tenths (91 percent) of his taxable income in excess of $200,000, we would not today have the agitation for the type of tax equity proposed in the Simpson-Keogh bills. Thus, the first basic consideration bringing about the creation of this tax deferment idea is the onerous character—the confiscatory character, if you will—of the tax burden that is presently imposed on our citizens.

The second cause on which is based support for the Simpson-Keogh proposal is tax equity—equity that does not exist in the present tax structure with its discrimination against self-employed individuals who by law are not eligible to participate in employer-established qualified pension plans. Under section 404 of the Internal Revenue Code of 1954 an employer deducts as a cost of doing business amounts he pays into a qualified retirement program; the employee is not taxed currently on what his employer pays into the fund in his behalf, even though it is in the nature of additional compensation for his services. The employee is taxed only when he gets the money at retirement, as and when it is received.

The estimated 10 million self-employed persons in the United States, such as farmers, professional people, and shopkeepers, cannot benefit from these tax-favored pension plans since technically they are not employees. It is in the interest of achieving tax equity and opportunity to provide for retirement security for these self-employed that we find the second basic cause motivating support for the Simpson-Keogh proposal.

The impact of these two causes—high taxes and tax equity—can be demonstrated by an examination of a hypothetical but not untypical case. Assume the case of a 40-year-old taxpayer who has a taxable income of $13,000 so that the top tax rate applicable is 40 percent. Assume also that he decides to set aside $1,000 each year until he reaches age 65 and assume an interest rate of 4 percent compounded annually.

The $25,000 of out-of-pocket savings which he would accumulate at the rate of $1,000 a year for 25 years on a tax-deferred basis would grow to $41,646 before taxes. If, on the other hand, tax deferment had not been allowed so that he was saving tax discounted dollars, his accumulation would amount to less than half as much, $20,717. The reason for the disparity in tax-deferred accumulation and tax-discounted accumulation is an obvious one. If tax deferment had not been allowed, his original $1,000 of annual saving would have been reduced to $600 that was left for investment; the investment rate is reduced to 2.4 percent instead of the assumed rate of 4 percent. The tax-deferred dollars would be fully employed at the full assumed rate of investment and would have the privilege of tax-free accumulation. Consequently their growth from year to year would be accelerated.

I would like to turn now to a brief examination of the historical development of the Simpson-Keogh proposal. This examination takes us back for its beginning to the early years of the post-World War II period. At that time a small group of lawyers met informally in New York to consider the problem of the self-employed professional people in providing for their retirement. This group met intermittently during the ensuing few years in an attempt to develop a solution to this problem. Concurrently numerous plans for tax deferment an investment in various forms of retirement security were being developed and publicized.

It was on June 7, 1951, during the 1st session of the 82d Congress, that the original version of what is now known as the Simpson-Keogh plan was introduced. The original proposal would have allowed all taxpayers to deduct a portion of their income paid into a restricted retirement fund, with the limitation that the annual deduction could not exceed the lesser of 10 percent or $7,500. In May 1952 this legislation received its first formal congressional consid-

eration in public hearings held by the House Committee on Ways and Means.

With the convening of the 83d Congress this legislation was again introduced in the House of Representatives. In August of 1953 the legislation again received consideration in public hearings by the committee. Subsequently further hearings were held in 1955 and 1958. In May 1958 I joined as a cosponsor of the bill and introduced it in the House of Representatives. Two months later the Committee on Ways and Means finally favorably reported the legislation to the House and it was passed by voice vote in that body. Regrettably the little time remaining in the session and the resulting adjournment rush did not permit Senate consideration of the proposal.

In the current 86th Congress Congressman KEOGH of New York and I have again joined as cosponsors of the legislation and as you know it was favorably reported to the House of Representatives on February 24, 1959.

Before I undertake the prognosis of legislative prospects that I promised you, it might be well if we look briefly to the substantive provisions of the bill in the form in which it was reported by the Committee on Ways and Means.

As I previously indicated the basic purpose of the bill is to allow a deferment of tax liability on limited amounts of net income earned from self-employment. Thus, the coverage of the proposal would be limited to self-employed persons and would not be available to any self-employed person who during the taxable year received an amount any portion of which was attributable to an employer contribution under an employee plan. Furthermore, a special limitation on the lifetime deduction contained in the bill is imposed on individuals who have previously received a payment or acquired nonforfeitable rights to employer contributions under a qualified pension, profit-sharing or stock-bonus plan.

The amount on which tax deferment can be claimed has both an annual limit and a lifetime ceiling. The annual deductible limit is 10 percent of net earnings from self employment or $2,500, whichever is lower. The maximum lifetime limit is $50,000. There is a stepped-up annual rate of exclusion for individuals who are over 50 years of age on the effective date of the act. For such individuals the limitation on the annual deduction would be increased by one-tenth for each year that his age exceeds 50 on the effective date so that if an individual were 60 years of age on January 1, 1959, the annual limit on his deduction would be 20 percent of self-employment income not to exceed $5,000.

The participant in this self-employed retirement program has certain prescribed alternatives with respect to the disposition of the annual amounts he is setting aside for his retirement For example, he may undertake to invest the proceeds in an annuity or an endowment policy issued by a domestic life insurance company. If life insurance benefits are included in such a policy, the life insurance features may not extend beyond age 70. This policy must be nonassignable. The deduction annually available is limited to so much of the yearly premium as is allocable to the restricted retirement benefits under the policy.

Such a participant may also invest in what is known as a face-amount certificate as defined in the Investment Company Act of 1940.

The participant may alternatively elect to pursue an investment course of placing deposits in a restricted retirement trust fund with the requirement that the trustee must be a bank. There are of course special restrictions placed on all of these investment alternatives so as to assure the validity of the retirement program and to prevent the tax deferment privilege from becoming a short-term avoidance device. I will not undertake to detail these restrictions other than to the extent that I have already referred to them. You may be assured that the savings institutions such as insurance companies, banks, and other activities authorized under the act to be depositories for these retirement funds will have trained experts to advise the individual participant with respect to the necessary procedures he must follow to stay within the limits of the act.

Having considered the questions of individual eligibility and investment alternatives, it is now appropriate that we should examine the aspect of the proposal relating to when and how the proceeds eventually are taxed. The bill provides rules relating to the income tax treatment of such receipts. Generally speaking, amounts received from the fund or policy are included in gross income when received. Special rules are set forth prescribing when income shall be considered as received and special rules prescribe the tax treatment of such income. If the self-employed individual undertakes to make withdrawals from his accumulated fund prior to reaching retirement age, the bill provides that a penalty tax will apply. On the other hand, liberalized rules are provided in the case of the lump-sum withdrawal after reaching retirement age and in the case of a lump-sum distribution to beneficiaries upon the death of the self-employed individual. The retirement income credit under section 37 of the Internal Revenue Code is not available with respect to amounts received from the restricted retirement fund or policy. No tax deferment on payments into a retirement plan is allowed to a taxpayer for any year beginning after the year in which he attains age 70, and it is required that the individual must begin to take withdrawals from the accumulated fund upon attaining age 70.

I have touched on the general principles and highlights of the proposal contained in the House-passed version of this legislation. I trust that I have outlined the principal mechanics of the manner in which H.R. 10 would at least in some measure add to the retirement security of the self-employed.

To this point I have deliberately undertaken to cast this proposal in a favorable light. However, any frank discussion of the subject requires at least a brief recognition of the factors that argue against its enactment. In the interest of brevity I will mention the two most compelling.

The first of these possible objections to the legislation is the fact that while it tends to correct a tax inequity that exists with respect to self-employed individuals—a group numbering approximately 10 million—it purports to do nothing for the 30 million Americans who are employed but who are not covered by a qualified pension and profit-sharing plan. I am referring to such persons as the employed clerks in a small retail store, an employed filling station attendant, and employed persons in similar occupations. This exclusion is an acknowledged serious shortcoming, and it is a matter to which we all must give earnest attention.

Without disregarding the need for taking care of this latter group, there are at least four reasons why it is appropriate to enact H.R. 10 so as to take care of the self-employed group. The first of these reasons is that many of the occupations covered under this proposal are precluded by the respective State laws from practicing their professions in an incorporated form.

A second reason for enacting this measure in its present form is that to do so will encourage the sole proprietor or partner who cannot benefit from a plan under section 401 to establish a 401 plan for his employees in view of the employer's entitlement to make comparable provision for himself under the terms of this bill.

A third reason for the enactment of H.R. 10 in its present form is that the retirement problems of the low income individual do not stem primarily from his tax burden.

A fourth reason supporting this legislation is that it reduces the number of American citizens who under present law are being discriminated against. The fact that it does not go far enough is a point on which we can agree, but at least it represents a step in the right direction.

The second argument against the enactment of H.R. 10 is the revenue loss that would be entailed. The Treasury Department has estimated a revenue loss in excess of $360 million in the first full year of operation. In this day when it has become fashionable to speak about Government finance in terms of billions, such a revenue loss may not seem a formidable obstacle. However, I would point out to you that the Federal budget projected for fiscal year 1960 is in balance only by a margin of $100 million in surplus and the estimated revenue loss from this bill, assuming all other estimates are correct, would mean another year of deficit financing.

We must also realize that the Congress this year will likely be called upon to provide another increase in the statutory debt limit. This mounting public debt constitutes a deferred tax increase that we are imposing not only on ourselves but also on succeeding generations. When we defer through fiscal policy until tomorrow the bills that we should pay today, we are in effect saying that the taxes of tomorrow will have to be increased to a level in excess of what they would otherwise have to be.

Also, in connection with the consideration of the fiscal implications of this legislation we must realize that if retirement savings are to mean anything in terms of purchasing power, we must protect the integrity of those savings against the onslaught of inflation.

To place this budgetary objection to the enactment of H.R. 10 in some perspective, I would call attention to the fact that the amount of revenue loss is a highly speculative matter. The revenue loss magnitude depends on several variable factors, such as the number of people who will participate, the extent to which they will participate, and the tax brackets in which they find themselves at the time of their contributions. It is my conviction that rather than retain unjustifiable discrimination in our tax structure against any group, we should seek a more equitable apportionment of the tax burden among all the taxpayers.

The revenue loss consequences of this proposal should also be examined in the light of experience with similar measures in other countries of the free world. The previously existing inequity in the position of the self-employed was terminated through legislative action in Great Britain in 1956, and in Canada and New Zealand in 1957. The Honorable Walter Harris, Minister of Finance in Canada, observed in this 1957 budget speech that the annual yield of the income tax could be reduced by as much as $40 million through the enactment of the Canadian plan. The actual Canadian experience was a revenue loss of only $7 million. The English and New Zealand experiences also found the revenue losses less than had originally been projected.

I have mentioned inflation in the context of need to eliminate deficit financing if we were to preserve the integrity of our retirement savings. I would like to mention inflation in another context, this time arguing in support of the enactment of H.R. 10. The distinguished chairman of the Federal Reserve Board, William McChesney Martin, and the distinguished Secretary of the Treasury, Robert B. Anderson, have both expressed the view that inflation is one of our principal

concerns. Secretary Anderson has gone on to say that savings by the public must be relied on "to the greatest extent possible" to help stabalize the economy. The chairman of the President's Council of Economic Advisors, Dr. Raymond J. Saulnier in a speech before the National Press Club on Friday, February 27, also labeled inflation as one of our greatest dangers and stated that one of the factors necessary to combat it would be an adequate accumulation of funds for capital investment. I submit that the necessary efforts to combat inflation and to provide augmented capital funds are entirely consistent with this legislation and would be strengthened by its enactment.

Money is like any other commodity and the price for its use is responsive to the factors of supply and demand. By encouraging thrift we will be increasing the availability of funds for capital investment and thereby tending to depress interest charges. This will serve to reduce the forces of inflation while at the same time increasing business expansion with the resulting greater economic opportunity for all that results from such expansion.

In closing I have promised to express my prognosis as to the legislative prospects of H.R. 10. For what it is worth, I will express the view that this legislation will pass the House of Representatives and the Senate during the 86th Congress. Because it would be inappropriate for me to do otherwise, I will not speculate as to what action the President might take in the event that the legislation reaches his desk for approval or disapproval.

I will observe that budget-busting and unrestrained spending activity by the "Spendocrats" in Congress will seriously jeopardize prospects of Presidential approval. Accordingly, if the Congress will act with restraint during its consideration of money authorizations and appropriations bills, the chances for approval of this legislation will be greatly enhanced.

I can assure you that consistent with my stand on Government economy in the past, I will vote for sufficient economy in Government to more than make possible the enactment of this meritorious proposal. It is my hope that a sufficient number of my colleagues in the Congress will join with me in this effort for economy so as to make possible the realization of the tax equity represented by the Simpson-Keogh proposal.

May I, in closing, thank you for being a wonderful audience and reiterate my appreciation for your thoughtfulness in permitting me to join with you tonight.

## University of Notre Dame's Laetare Medal Awarded to Career Diplomat Robert D. Murphy

EXTENSION OF REMARKS
OF
### HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. BRADEMAS. Mr. Speaker, every years since 1883 the University of Notre Dame has awarded the Laetare Medal to an outstanding American Catholic layman.

Members of Congress will, I am sure, be pleased to learn that the 77th recipient of the Laetare Award will be the distinguished Deputy Under Secretary of State, Mr. Robert D. Murphy, a career diplomat who has served our country in posts of high responsibility for a period of 40 years.

I am glad to insert in the CONGRESSIONAL RECORD an article in the South Bend Tribune of March 8, 1959, containing the announcement by the president of the University of Notre Dame, the Reverend Theodore M. Hesburgh, C.S.C., of the Laetare Medal for 1959 to Mr. Murphy:

LAETARE MEDAL GOES TO DIPLOMAT MURPHY

Deputy Under Secretary of State Robert D. Murphy will receive the University of Notre Dame's Laetare Medal for 1959, it was announced Saturday night by Rev. Theodore M. Hesburgh, C.S.C., university president.

The veteran career diplomat is the 77th recipient of the award which has been presented annually since 1883 to an outstanding American Catholic layman. Industrialist Frank M. Folsom received the Laetare Medal last year, and Clare Booth Luce, recently named U.S. ambassador to Brazil, was similarly honored by Notre Dame in 1957.

LONG CAREER

Father Hesburgh, in announcing the selection of the key State Department official, said:

"Robert Murphy's diplomatic career spans 40 years of distinguished service to his country, from World War I to last summer's conflict in Lebanon and the current crisis over Berlin. With brilliance and courage, in peace and in war, he has articulated American foreign policy in posts of increasing responsibility. Moreover, his public record and his private life reflect the highest ideals of his Catholic faith. The University of Notre Dame is proud to ward to Secretary Murphy the Laetare Medal, the highest honor within its power to bestow."

The Laetare Medal is generally regarded as the most significant annual award conferred upon Catholic laymen in the United States. The recipient is named on Laetare Sunday, the fourth Sunday of Lent, but the actual presentation takes place at a later date. Recent Laetare Medalists have included Gen. Alfred Gruenther, labor leader George Meany, actress Irene Dunne and former AEC commissioner Thomas E. Murray.

TOP NEGOTIATOR

Murphy, who holds the rank of Career Ambassador in the Department of State, led negotiations credited with averting all-out war in the Middle East last summer. As America's top negotiator in the Lebanon crisis, he conferred with officials there as well as heads of state in Jordan, Iraq, Israel and Egypt. His recommendations based on these negotiations, formed the basis for American proposals and subsequent United Nations action to bring stability in that area.

A native of Milwaukee, Murphy was educated at Marquette University there and at George Washington University where he rereceived a law degree. During World War I he held a clerical post at the American legation in Bern, Switzerland. His experience there prompted him to take Foreign Service examinations which led to his first diplomatic assignment as vice counsel at Zurich in 1921.

Between the two World Wars Murphy held diplomatic posts at Munich, Seville and Paris where he became counselor of the American Embassy in 1940. With the fall of France in June of that year, Murphy became American chargé d'affaires accredited to the French government at Vichy. He played a key role in making preparations for the Allied landings in North Africa in November 1942. A month later he was awarded the Distinguished Service Medal and appointed President Roosevelt's personal representative with the rank of Minister to French North Africa.

Murphy became U.S. political advisor on German affairs in 1944, ambassador to Belgium in 1949, and the first postwar American ambassador to Japan in 1952. He was appointed Assistant Secretary of State of United Nations Affairs in 1953 and served as political adviser to the United Nations Command on the Korean armistice negotiations at Panmunjom. In the same year he was nominated by President Eisenhower to be Deputy Under Secretary of State and was given the newly created rank of Career Ambassador, a diplomatic rank equivalent to five-star general or admiral.

Murphy received an honorary degree from the University of Notre Dame last June and has been honored by several other institutions. He is married to the former Mildred Taylor of Kansas City, Mo.

## Construction of the 291-Mile Keystone Shortway in Pennsylvania Would Relieve the Unemployment Situation in 13 Labor Surplus Areas in 29 Counties of the State

EXTENSION OF REMARKS
OF
### HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. VAN ZANDT. Mr. Speaker, with area development legislation occupying a prominent position on the legislative agenda of the 86th Congress, the significance of the 291-mile Keystone Shortway in relationship to Pennsylvania's acute unemployment problem is explained in the following letter I wrote on March 12, 1959, to the Honorable Lewis L. Strauss, Secretary of the U.S. Department of Commerce.

In a few words, the letter reveals that if the U.S. Department of Commerce and the Commonwealth of Pennsylvania agree to construct immediately the Keystone Shortway which cuts directly across Pennsylvania from Stroudsburg to Sharon, the unemployment in 13 labor surplus areas of the 29 counties traversed by the shortway will be alleviated. In my district alone, the construction will cost $1 million per mile, and it will provide employment for 1,200 persons for a 3-year period. In addition, the construction of this 70.2-mile stretch will provide additional employment in industries which manufacture and transport the material.

Mr. Speaker, here is a wonderful opportunity for the Department of Commerce and the Commonwealth to spend funds already allocated for highway construction in Pennsylvania on a project that will alleviate a lot of Pennsylvania's chronic unemployment.

The letter to Secretary Strauss follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., March 12, 1959.*

Hon. LEWIS L. STRAUSS,
*Secretary, U.S. Department of Commerce, Washington, D.C.*

DEAR SECRETARY STRAUSS: As you know, of the nearly 5 million unemployed in the United States, 508,000 of them are located in the State of Pennsylvania representing 10 percent of its labor force. Most of this unemployment in Pennsylvania has existed for years and is of great concern to the State and Federal Government. The result is that the problem has been attacked on the State and national level and at the present time, this vexing unemployment problem in Pennsylvania is involved in the area redevelopment legislation now being considered by Congress.

The purpose of writing you on the subject of unemployment in Pennsylvania is due to the fact that included in the Department of Commerce is the Office of Area Development as well as the Bureau of Public Roads, with both agencies having a relationship to the proposed construction of the 291-mile Keystone Shortway in Pennsylvania. This shortway with dual lanes cuts directly across Pennsylvania.

According to the Pennsylvania Department of Labor and Industry, the Keystone Shortway traverses 13 labor market areas whose unemployment ranges from 8.6 percent to 16.6 percent. In these areas, there is a total of 115,800 unemployed workers, many of whom would find ready employment on construction of the shortway.

According to the Bureau of Public Roads, from a cost standpoint the national average shows 1 mile costing $1 million. Therefore, the immediate construction of the 291-mile Keystone Shortway in Pennsylvania would provide employment to most of the 115,800 unemployed persons in the 13 labor market areas previously mentioned. In addition, Pennsylvania's coal mines, cement plants, steel mills, and other industries including transportation will indirectly provide employment to many of Pennsylvania's 508,000 unemployed.

In my own congressional district in Pennsylvania comprising the counties of Blair, Centre and Clearfield, 70.2 miles of the shortway would be constructed. To give you some idea of the effect such construction would have on unemployment, it will require 3 years to build the shortway and meanwhile provide employment for 1,200 persons for each of the three 9-month years. In a few words, this employment and accelerated employment in related industries could have a tremendous and favorable impact on the unemployment in my congressional district. If this is the case in my congressional district, think of the benefits to be enjoyed by areas with pockets of unemployment throughout Pennsylvania.

According to the Bureau of Public Roads, the Federal Government has allocated to the Commonwealth of Pennsylvania for highway construction $117,103,237 for fiscal year 1959 and $101,440,250 for fiscal year 1960, making a total of $218,543,487. In general, this amount represents the Federal Government's contribution of 90 cents of every dollar spent by the Commonwealth of Pennsylvania on its Interstate System of Highways. While this fund will not entirely cover the entire Federal aid necessary in paying the overall cost of the Keystone Shortway, it represents roughly 75 percent of the amount needed.

From the information furnished, you will readily see that the Federal Government's financing of the Keystone Shortway in Pennsylvania could alleviate a lot of chronic unemployment in 13 labor market areas. Therefore, it is my thinking that the U.S. Department of Commerce should prevail upon the Commonwealth of Pennsylvania to construct the Keystone Shortway immediately as part of a Federal-State effort to alleviate chronic unemployment in the 13 areas of Pennsylvania affected.

Over a period of years, former Governor Leader of Pennsylvania advocated area redevelopment legislation and now his successor and present Governor, David Lawrence, is doing the same thing. While it is true that the construction of the Keystone Shortway is not the complete answer to the unemployment problem, it will have a favorable effect on wiping out unemployment in 13 labor markets in Pennsylvania. Therefore, a Federal-State program that would bring about immediate construction of the shortway should merit Governor Lawrence's undivided support.

In conclusion, may I point out that in the northern part of my congressional district and elsewhere throughout Pennsylvania the lack of adequate highway transportation is a handicap to the industries that we now have in that area and if we are to rehabilitate and diversify the economy of the area through an area redevelopment program, modern highways like the proposed Keystone Shortway are the answer to our problem. This is a compelling reason why the Keystone Shortway should be constructed before Congress approves an area redevelopment program because adequate transportation is vital to the development of any area.

Thanking you for the consideration of my proposal and with best wishes, I am,

Sincerely yours,

JAMES E. VAN ZANDT.

---

## Washington Report

EXTENSION OF REMARKS

OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 14, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

Hawaiian statehood was the big debate of a lively week. The Territory consists of eight major islands (six well developed) and many smaller ones stretching 1,900 miles, 2,200 miles southwest of the United States. The present population includes approximately 168,000 military and Federal employees and dependent, leaving 445,000 native population of whom 23 percent are Caucasion, 37 percent Japanese, 17 percent Hawaiian, and the rest Filipino, Chinese, Korean, Puerto Rican, or others. Thirty-five percent of the marriages mix races, accounting for the dwindling number of pure Hawaiians.

Arguments for: (1) If Alaska, then Hawaii; (2) they deserve statehood because they want it, the people believe in our Constitution and form of government, and the islands are economically sound; (3) the House previously passed Hawaiian statehood several times (1947, 1950, 1953) and both parties have pledged support.

Arguments against: (1) Islands are spread out and noncontiguous to the United States (also noncontinental, which Alaska is); (2) 445,000 people will have 2 Senators (and 1 Representative) who can nullify New York's 16 million, California's 14 million, Texas' 9 million, or each of the other States; (3) the International Longshoreman Workers' Union leaders are Communist-influenced, if not controlled, and could through strikes cut off and isolate Hawaii, totally dependent on ocean trade (and also our Pacific Fleet Command Headquarters). There were many other able presentations, but these are the basic ones. The bill passed 323 to 89. For my part, the arguments against could not be wished or rationalized away.

The Ways and Means Committee work continues ceaselessly. (1) The minerals depletion hearings ended. I was most critical of the endless litigation of the Treasury Department, whose zeal for collecting revenues transcribed fairness and equity, it seems to me. Additional tax suits were filed repeatedly against minerals industries by the Internal Revenue Service after court cases were lost time after time. This is unfair expense to the Nation's taxpayers and to the businesses sued. (2) The Keogh-Simpson bill (retirement help for self-employed through tax deferment) and temporary unemployment compensation bill will soon be before the House. Our committee agreed to terminate the Federal part of TUC except for tapering off those who have claims filed. Now it's up to the House and Senate to follow through.

Bills I introduced this week: (1) The Defense Facilities Protection Act of 1959 seeks to protect our own defense effort from the subversive efforts and dangers of Communists. Without this bill the Defense Department cannot rid itself of the Communist-controlled union which handles the Pentagon's own messages, coded or otherwise. Nor can the 2,000 or more identified saboteurs employed in vital defense plants be removed. Surely Congress will take action. (2) The natural gas bill is the same one I cosponsored before. It simply will restore Congress' intent (overturned by the Supreme Court) of the 1938 law, specifically exempting gas production from Federal Power Commission control.

The Defense budget debate, and our military preparedness in view of Berlin and other danger spots, has taken on some very political, and therefore dangerous, overtones. Those who seek to discredit the President's leadership for political gain are playing with dynamite. As to the arguments—obviously we cannot match the enemy in manpower, so a cut in our armed personnel is not the crucial point some are seeking to make it. It's our total destructive potential that deters, because this is what wins wars. For the same reason, we cannot agree to fight "brush-fire" type wars with one hand tied behind us, namely, by agreeing not to use our nuclear weapons. On both counts the President deserves our support. Strength not weakness, firmness not vacillation, unity not division, are what are needed now, not political maneuvering for the 1960 election. It's one thing to argue merit of conflicting viewpoints—it's entirely another to criticize loosely or seek political advantage by demanding more expenditures. Forgotten by some is this—our defense strength is no stronger than our economic strength.

Defense needs and their costs come first, completely overshadowing other Federal services, particularly the welfare services so unnecessary by comparison. Here's a partial list of areas where the Democrats are already planning spending beyond the budget, besides defense—housing, airport construction, space, atomic power, public works, school construction and education, depressed areas, water pollution, and educational TV. The total cost—billions beyond the $77 billion budget. Who pays? John Doe. How? Through increased taxes, or, more likely, through Government's deficit financing and a watered dollar, which means less buying power for John Doe. My contin-

uing guidelines: (1) Stop increasing Federal Government size, control and spending; (2) reduce or eliminate Federal Government in places where it has no place being (business operation, for example), (3) return power to States wherever possible; and (4) remember the Declaration of Independence and the Constitution.

## Indian Problem on South Dakota Reservations

EXTENSION OF REMARKS
OF
## HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD two letters with regard to the Indian problem on South Dakota reservations. One is from R. P. Benedickt, Hot Springs, S. Dak., the other is from Jake Herman, a member of the Pine Ridge Tribal Council. These two letters shed a little different light on some of the problems than is frequently expressed. The letters are as follows:

BURNETTE CERTAINLY NOT WELL INFORMED

It has been called to my attention after reading the Rapid City Daily Journal, that there are many pointers that could be given to the public relative to the pending investigation of Indian reservations in South Dakota, by a congressional committee.

I feel well qualified to inform you of some of the malfunctions on the Pine Ridge Reservation because I lived there from 1929 till 1956 when I moved to Hot Springs to accept the position of director of equalization for both Shannon and Fall River Counties.

My first conclusion to be stated is, taxpayers should know why a certain race in our State should be chosen to be constantly subsidized by a specific Bureau. In this day and age, it is quite obvious that no group of Americans should be singled out and granted special rights and privileges because of cultural backgrounds or other reasons too numerous to mention.

It also appears that the younger generation of Sioux Indians are no better off than their parents, in spite of the millions of tax dollars spent, because they have been led to believe that they are incompetent, so that more jobs could be created year by year in the Indian Bureau. It has been decided quite recently in Federal courts that the Oglala Sioux Tribe is considered to be a legal governing body within the confines of their reservation. They have levied taxes and are collecting them both from nonmembers and members of their tribe. If this government is this sound, why are the taxpayers paying millions of dollars each year to supervise and subsidize a supposedly sound organization? This again tends to prove the Indian is capable of handling his own affairs.

Mr. Burnette, in recent statements made in Washington, certainly was not informed well enough to appear before an important committee, crying discrimination and should study South Dakota's laws more thoroughly. I am unable to find a basis for his panic, except he is looking for more unnecessary Federal appropriations.

The Indian Bureau, in their spending, are usually criticized by the Indian for supplying too little too late and the lion's share going for salaries. This, I can say, is true in the Bureau's determined efforts to make a rancher out of an Indian regardless whether he was suited for the job or not. Most of the cattle loans would have been nearly impossible for an interested, experienced rancher to accept and work out in these days of high operating costs.

The question of whether full scale State law and order should be applied on South Dakota raises many arguments pro and con. It has been stated by some of the Bureau and tribal personnel that the Indian is not ready to accept the State law. Again they are asking for special privileges to allow more immoral and inhuman ideas to be instilled into the minds of the Indian people. Mr. Burnette states they are confused and don't understand State law and are herded into prison like cattle. I wonder if Mr. Burnette watched Indian people perform and serve, as I did, in our Armed Forces. Military law undoubtedly is the toughest a man can be subjected to and very few Indian Service men had any trouble under the jurisdiction of it. They were proven outstanding in many cases.

The word "discrimination" can be used in many ways and cast blame sometimes in the wrong direction. In my years of association with the Sioux people, I find they did not ask to be placed on reservations and many are now asking to be unharnessed and set free. They have found by working in surrounding cities that the white man isn't necessarily always a green-eyed monster ready to pounce and penalize them because they are Indians. These same people are asking that the barbed wire be removed from around them so they might come into American society and be responsible citizens of both South Dakota and our great United States of America.

In recent findings I know many Indians that would enjoy receiving a final settlement from the United States Government for the many things they say it owes them. I think the millions appropriated to continue and prolong their problems should be used in final payments of claims, if they are considered to have compensatory moneys due them.

Another slant in the meaning of discrimination can readily be detected in the past determination to pay Indian families for damages and hardship they encountered as a result of the military condemnation of the aerial gunnery range in old Washington County, S. Dak. Thirty-five hundred dollars per family was granted to the Indian families and records show many were paid that never lived in the area. Many white families just as bad off in 1941, also were told to move. They received a big round of applause and were told they would receive no compensation to the courts. This action in time of war is considered unpatriotic, consequently damage and hardship payments were not paid because they were taxpayers and should know their rights.

Sentiment expressed by American Indian Councils, church protective agencies and like organizations would have the white farmer and rancher living on Indian reservations classed as criminals and deadbeats, hiding from the law among the Indians.

Many and most of these families are of the same stock that won the West and have taught the Indians by living among them how to work and take care of their families. Some groups feel those same ranchers have stole the land they live on. Again they have been misinformed. The land these people own was sold to them under the Indian Bureau's supervision and they paid a satisfactory price or they wouldn't own it. The policies regarding land purchasing are conflicting, if they don't want the Indian's land sold, why is it constantly being put up for bid?

In summation, it certainly appears as though a great deal of tax dollars are being thrown down a well in South Dakota. The administration's cry for economy certainly can't be taken seriously when the taxpayers of South Dakota see millions spent annually to support and supposedly correct the Indian problem.

The Sioux Indian landowner in South Dakota has asked by petition for the abolition of the tribal councils and have also stated many times they would appreciate handling their own business like any other citizen. It now becomes evident that the Indian is asking to be a full fledged competent citizen of both State and Nation and common sense tells us the supervision and subsidizing should be slowed up and give these people a chance. Final settlements should be studied by Congress and granted, somewhat ending the problems the Government has created for the Indian people.

R. P. BENEDICKT.

HOT SPRINGS, S. DAK.

LITTLE ROCK NOT ON PINE RIDGE RESERVATION

Recently the Rapid Daily Journal carried an Associated Press story about Robert Burnette, chairman of the Rosebud Sioux Tribal Council, who went to Washington, D.C., and testified before a group of Congressmen that the Indians in South Dakota were being shoved around. He got the Congressmen all worked up.

Now the civil rights commission of South Dakota has announced that they will study the two minority groups in South Daokta—the Indians and Hutterites.

Fred Cozad, of Martin, who is the chairman of the civil rights commission, said they will study the Hutterites first, then us poor Lo's are next.

Hey, pal Fred, many of us Indians do not understand our civil rights and know little or nothing about the Hutterites. You've got us fogbound, running in circles like a blind jackrabbit.

All I know about law is outlaws and mother-in-laws.

About Indians marrying whites, history will tell you that shortly after Columbus discovered America came John Smith. A chief gave his daughter, Pocahontas, to John Smith. They got married and since that time there has been intermarriage between the whites and Indians up to now. Why make these romantic love affairs a big issue?

Every white grandmother and every Indian grandmother who ever held a half Indian and half white child on her lap loved these innocent little souls. I am sure every white or Indian grandmother would say this: "I love you even though half of your ancestors came over on the *Mayflower*, while the other half of your ancestors were on the reception committee to welcome them."

I know a grandfather who was talking to his little half Indian and half white grandson. He said, "Remember Jim Thorpe, the great all-American, was half Irish and half Indian, and someday I'll be proud of you if you become a great Thorpe."

There is very little that I know of this religious group known as the Hutterites.

I don't claim to represent the rank and file of Indians here on the Pine Ridge Reservation. This is my own personal viewpoint and I am not authorized by anyone to speak for the Pine Ridge Indians. Just a smalltime hick reporter for the Shannon County News, I have no comment to make on this religious group, the Hutterites, knowing that they have their freedom of religion. I am talking only about the Pine Ridge Reservation.

Within the Pine Ridge Indian Reservation we have one organized county and two unorganized counties. The whites and Indians are both landowners within this reser-

vation. The nonmembers are taxpayers subject to their State laws. Tribal members who live on restricted land held in trust for them by the Federal Government are subject to our tribal Federal laws.

I don't think that it was ever the intention of the whites and Indians to deprive each other of their civil rights.

At least that's the way it should be. We Indians know our tribal members have held important county offices in the three counties—sheriff's deputy, sheriff, justice of the peace, road commissioner, school boards, county superintendent of schools, etc. Every resident of this reservation knows that.

Why, folks, we even had a Sioux Indian boy as a dogcatcher in Rapid City.

We Indians have tribal-owned land on the reservation set aside by the treaties of 1851 and 1868 by the Congress of the United States.

My people gave up 100 square miles of the richest land in the United States so we could make more room for our white brothers. And we want to live together as good neighbors.

Right now we Indians do not have collective ranches or farms, nor do we all eat on the same tables out of one same pot.

We are not conscientious objectors. Our Indian GI's have established a war record of enlistment compared to any group.

Now only us older people have our individual allotments. Our GI sons, daughters, and grandchildren are landless.

Our land is decreasing fast. The Indian population is increasing.

Our hopes and dreams for our younger future generation is that we want them to have land and homes when we are gone, as a last stomping place for them as human beings.

Just the same as the residents of South Dakota who own the State park known as Custer State Game Park, and the Federal-owned park known as the Wind Cave National Park, to preserve the wild game of our noble creatures.

We have a game refuge for wildlife on the Lacreek Dam.

This is one of the reasons why many of the Indians oppose the selling of the tribal-owned land to the State of South Dakota for a park in the Sheep Mountain area.

Grandpa Kick A Hole in the Soup, the grand old philosopher, said, "Remember the war of 1890 when we Indians stomped to the stronghold in the badlands near Sheep Mountain. And," he added, "if the next world war comes, I'll bet my tommy hawk everybody will run for the badlands to hide. Let's keep her that way."

Here in Pine Ridge, every Sunday whites, Indians, halfbreeds, and people of different nationality worship in the same church. The same thing applies to our public school, including the Federal schools and Holy Rosary Mission where nobody is barred—rich, poor, color, or creed.

So, listen, you Congressmen and the State Civil Rights Commission, if someone should ask you where Little Rock is, just say its not on the Pine Ridge Indian Reservation.

Yours,

PTA-SAN-WASTA (JAKE HERMAN).

## March 15—Hungarian Freedom Day—A Chance To Be Free

EXTENSION OF REMARKS

OF

### HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. McDOWELL. Mr. Speaker, in commemoration of yesterday's celebration of that day in the 19th century when Hungary proclaimed its independence from Hapsburg rule, I, under unanimous consent, insert in the CONGRESSIONAL RECORD the following observations.

One hundred and ten years ago, the Hungarian Parliament dethroned the Hapsburgs, issued a declaration of independence and elected Kossuth, president. As we pause to commemorate that declaration of freedom, we find our feelings mixed; it is difficult to rejoice when, in Hungary today, there can be no rejoicing. Sadly enough, the short lived period of Hungarian independence which we commemorate today is the only real chance for freedom that the Hungarians have had in the last five centuries. It almost seems that the fluctuating factors underlying the world's history have worked deliberately against the establishment of that freedom which Hungarian peoples have so long desired.

The Magyars, as the Hungarians call themselves, settled in the middle Danube Basin at the end of the 9th century. The holy crown which to this day represents Hungarian sovereignty and tradition was obtained from Pope Sylvester II by King St. Stephen in the year 1000. This crown was not only a symbol of "all things Hungarian," but also represented the highly developed level of civilized western culture which Hungary had attained.

In spite of the Hungarian people's desire for continued peaceful independence, there has been little time since 1453 when Hungary has been free from the sound of clashing arms. This stems from the fact that every great continental power with imperialistic tendencies has attempted, in the early stages of its imperialism to dominate the Danube Valley—in which Hungary is located. The Turks of the Ottoman Empire, after fighting the Hungarians for nearly 100 years, defeated the Magyar army in 1526 and occupied two-thirds of Hungarian territory while the Hapsburg dynasty ruled the rest. After the Turks were defeated in 1683, the Hapsburgs extended their power over all Hungary. When in 1849 the Hungarian peoples proclaimed themselves independent, the Austrian Emperor called upon Czar Nicholas to help stifle the insurrection. The Russian efficiency in this type of work has historical roots, and they were successful in defeating Hungary. The odds against her were just too great.

It was within this forced relationship with the Austrian Empire that Hungary entered the First World War, but revolutionary movements broke out in Hungary during those war years. The Communist regime of Bela Kun resulted from the seizure of power by one of these rebel groups which developed leadership restricted to a circle of Lenin's terrorist henchmen. Yet, even though the Communists controlled the Hungarian Government, they could not dominate the Hungarian people, for these people fought in the only way they could—by effective, passive resistance.

After much upheaval, a freely elected national assembly in 1920 repealed the measures of the Communist regime, reverted to the monarchial constitution and established Admiral Horthy as regent. But, the Treaty of Trianon had been imposed upon Hungary. This was based upon the Allies' belief that a defeated belligerent nation should pay for the war (a philosophy stemming from a lack of understanding of the true causes of war). We are thankful that the Western Powers abandoned such a philosophy after World War II for we see the results of the difficulties in which that type of approach had placed Hungary in 1920. The Treaty of Trianon stripped that country of much of her territory, and created a general air of discontent. Essentially it had sown the seeds of the Second World War.

In spite of this, order was restored in Hungary between the wars. Under the premiership of Stephen Bethen, Hungary joined the League of Nations, signed the Kellogg-Briand Pact and concluded many treaties of conciliation and arbitration. But all was not well—the Russians loomed as an ominous shadow on one boundary and the Germans, after the Anschluss of Austria, touched Hungary not only geographically but economically. Nazi political pressure was great—and the final blow to any further independent action on Hungary's part was the Molotov-Ribbentrop agreement. This established such a friendly relationship between Hungary's neighbors, that she could move in no direction.

Despite German domination, the bulk of the Magyars openly defied Hitler. As the war progressed, Hungary became a haven for increasing numbers of refugees, especially from Poland; but the Nazis began tightening their control and forcing devastation upon the country. As the Nazis left, the Red army came, bringing with it 160 Communists—Hungarian in origin, but all Russian citizens. These men, known as the Muscovites, formed the Hungarian Communist Party from the remnants of the Nazi Party. The outcome was a form of government detested violently by the Hungarian peoples. They demonstrated their distate by a revolution which shook world communism to its very foundations—revolution so fervent that the U.S.S.R. resorted to outright slaughter to temporarily control the fire of freedom which is demonstrated.

As we look upon Hungary in its historical perspective; as we see it suffering today, we may come close to comprehending the true meaning of the cost of freedom. There is no nation, no group of people, which has paid more dearly for a chance to be free.

## The Steel Companies and Inflation

EXTENSION OF REMARKS

OF

### HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. McGOVERN. Mr. Speaker, I am becoming increasingly alarmed by the so-called administered price practice of leading industrial corporations. This is the practice under which corporations raise prices even in the face of falling demand and reduced output. I am convinced that unreasonable administered

price increases by the steel industry, particularly, have been a major cause of both the recent recession and our present inflation. This is the reason for the paradox of recession and inflation.

Following the strike settlement of 1956 which gave steelworkers a wage increase of approximately 19 cents an hour including fringe benefits, the steel companies upped their prices $8.50 per ton. This was done in spite of the fact that wage increase had them only about $2.50 per ton. Yet, 6 months later they added another price increase of $5 per ton and followed with a third increase of $6 per ton in July 1957. Thus, a wage increase costing the company $2.50 per ton was used as an excuse to raise steel prices an unbelievable $19.50 a ton.

In 1956 United States Steel sold 23 million tons of steel for a net profit of $348 million, but when their production declined 2 percent in the following year, profits rose to $419 million, an increase of 20.4 percent.

United States Steel's net profit per ton in 1957 was $17.91 compared to $14.56 in the previous year. The tremendous profit increases in the industry are better realized when one considers that in the decade of the 1940's, excluding the war years, the average steel profit was only $6.78 per ton.

Given the brazen price-gouging practices of the big steel companies, it is not surprising to learn that the directors of these great corporations have compenstated themselves in a most handsome manner. In 1955 the 16 directors of Bethlehem Steel, voted the tidy sum of $5,683,709 to be divided among themselves. Net profits of the corporation that year were $180 million. The following year, the profits of the corporation dropped by $19 million, but the directors saw fit to increase their own personal share of the take to $6.5 million, an increase of $882,618 over the previous year. Little wonder that of the 18 highest paid men in the Nation, 11 were directors of Bethlehem Steel.

In commenting on this situation, the Senate Judiciary Subcommittee on Antitrust and Monopoly said:

> An average compensation to each officer-director in a steel company of $468,000 in 1 year acts as a challenge, a red flag, to labor unions and individuals to seek all they can. And it is difficult to persuade labor to hold a wage line when it knows the generous manner in which officer-directors compensate themselves.

Mr. Speaker, I am convinced that the basic cause of inflation is the administered prices of the biggest industries combined with the endless round of wage increases which such price practices cause.

It seems to me that Congress and the administration must take effective action to correct this dangerous threat to our economy. I have introduced legislation which is designed to bring the force of public opinion to bear on this problem by requiring huge corporations to justify proposed price increases in public hearings before the Federal Trade Commission.

I am entirely in accord with the suggestion by Senator KEFAUVER that consumers should use every resource including their pencils to urge steel industry and labor union leaders to hold the line against further wage-price increases at this time.

We all know that every time steel prices jump, the cost of automobiles, farm machinery, refrigerators, washing machines, and countless other items also jump. The combine which cost the farmer $4,500 10 years ago now costs $9,000. Labor and management each blame the other for price increases, and the consumer is caught in the middle. In the long run labor and industry cannot profit from this continuous wage-price spiral which has already had the effect of slowing down our rate of production and putting nearly 5 million people on the unemployment rolls.

Inflation is a threat to every family, but it is especially painful to older persons and white-collar workers living on fixed incomes. It has hit hardest of all our farm families who since 1952 have experienced a 20-percent drop in the prices of what they have to sell while the cost of what they buy has gone up $3.7 billion. It is no accident that 4 million people have left the farms of this Nation during the 5 years following 1952. Thanks to the cost-price squeeze that grips our farm population, net farm income dropped from $15.1 billion in 1952 to $10.8 billion in 1957.

Mr. Speaker, Bernard D. Nossiter, of the Washington Post, has done a remarkable job in reporting on the problems of inflation and administered prices. I call to the attention of the Congress his article appearing in the Washington Post of March 14, 1959, which I include at this point in the RECORD:

INFLATION LAID TO STEEL FIRMS

(By Bernard D. Nossiter)

An investment adviser yesterday blamed the recent inflation and recession on profit-minded executives of steel companies.

Eugene Havas drew this conclusion for the Senate Antitrust and Monopoly Subcommittee.

His views about the importance of steel price increases have drawn partial or full support this week from a wide spectrum of economists. Among them were Raymond J. Saulnier, chairman of President Eisenhower's Council of Economic Advisers; John Kenneth Galbraith, of Harvard, a key adviser to Adlai Stevenson; Woodlief Thomas, economic adviser to the Federal Reserve Board; Gardiner Means, former New Deal economist and author of the administered price theory; and Ralph Young, Research Director for the Federal Reserve Board.

Havas said:

"The steel companies are overtaxing our economy and are responsible for the 1957–58 recession for choking off demand by their price exactings since 1955–56."

Havas said that holding the steel price line was not enough, that steel prices must be rolled back. This, he said, would revive the choked off consumer demand, would relieve unemployment, and would help to find jobs for most of the unemployed of automation.

Havas said the steel company executives had a vested interest in pushing up prices because this pushed up profits. And, he observed, as profits go up, Wall Street puts higher prices on companies' stock. The executives, Havas noted, cash in on this by giving themselves stock options. Thus, the steelmakers can buy their companies' stock at a price far below its market value, sell it and get taxed no more than 25 percent.

In the case of United States Steel Corp., the industry's price leader, Havas said that net profits divided by total shares of stock jumped from $2 in 1948 to $7.33 in 1957 and fell to $5.13 in the slump last year. Currently, per share earnings of United States Steel are estimated at record levels. Meanwhile, the stock has jumped in price from a low of $10.12 in 1949 to a high this year of $99.87.

According to United States Steel's forthcoming annual report, some 258 executives have this prospect—because of stock options outstanding on January 1: They can make a few calls and divide about $19,300,000. And this income of about $75,000 per man is subject to a top tax rate of 25 percent.

Roger M. Blough, whose option claims are considerably higher than the average $75,000 because he is Steel's board chairman, could not be reached for comment on Havas' analysis. Blough's New York office said he was not available.

Havas suggested lowering top bracket personal income tax rates to 75 percent and introducing a graduated corporate excess-profit tax to dampen the increasingly popular stock option device.

Because stock prices and prices generally are driven up, he observed, investors don't want bonds, including the Government's, with their fixed return and price.

Moreover, in the past 7 fiscal years, Havas said, the Treasury has lost $46 billion in taxes it would otherwise have collected because of tax loopholes for corporations.

All these devices, Havas said, make it virtually impossible for the steel companies and other corporations to resist union requests for wage increases.

However, the harassed steel industry finally came up with a defender at the hearings. He was Simon Whitney, chief economist for the Federal Trade Commission. Whitney decried the emphasis on steel because, he said, it accounted for only 3.5 percent of the Nation's total 1957 output.

Whitney blamed price increases on wages and said big steel and auto corporations should not be broken up. His agency is charged with safeguarding the public from monopoly.

John Blair, chief economist for the subcommittee headed by Senator ESTES KEFAUVER, Democrat, of Tennessee, analyzed the price-profit-wage picture. He noted that:

Between 1953 and 1957, the wholesale price per ton of steel went up 30 percent. But the payroll cost of production workers per ton of steel went up 14 percent or less than half.

So, for United States Steel, after-tax profits per ton jumped from $7.47 in early 1953 to $19.31 at the end of 1953. Moreover, steel production was going full blast in early 1953 and was running at about three-quarters of capacity at the end of 1958. Profits went up nevertheless because the industry has become much more efficient through the use of labor-saving machinery.

From the end of 1957 to the end of 1958, productivity, or tons shipped per worker, has jumped 7.0 percent. As a result, even though the industry is now nearing full production, it is doing it with far fewer workers.

## Operation of the Unemployment Insurance System

EXTENSION OF REMARKS
OF
## HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 24, 1959*

Mr. REUSS. Mr. Speaker, I include the following study of unemployment insurance which was prepared by the University of Michigan's Subcommittee on Income Maintenance, Mr. William Haber, Fedels S. Fauri, and Wilbur J. Cohen. This study supplements a related study titled "Impact of the 1957–58 Recession in Relation to Unemployment Insurance" and should be read in connection with the earlier study which appeared in the CONGRESSIONAL RECORD for Friday, March 13, 1959.

II.—OPERATION OF THE UNEMPLOYMENT INSURANCE SYSTEM

Available information from official governmental sources indicates that about $4 billion was paid out through the various State and Federal unemployment insurance programs (Federal civilian and military personnel and railroads) to unemployed persons during the 12-month period, October 1957–58.

Total contributions collected by all State unemployment insurance programs during this period was $1.7 billion and benefits paid out were $3.4 billion. Total reserves of all States on October 31, 1957, were $8.7 billion Thus there was a total of about $7 billion in unemployment reserves to the credit of the various States as of October 31, 1958. From the standpoint of the unemployment insurance system as a whole, about half of the total benefits paid out during this period came from current tax collections and about half from reserves.

The financial data for State programs for this period are as follows:

| | *Billions* |
|---|---|
| Total State unemployment insurance reserve funds as of Oct. 31, 1957 | $8.7 |
| Plus contributions and interest | 1.7 |
| Funds available | 10.4 |
| Minus benefits paid | 3.4 |
| Total State unemployment insurance reserve funds as of Oct. 31, 1958 | 7.0 |

Financial resources of the State unemployment insurance programs varied widely. All State reserve funds taken together equalled 6.4 percent of taxable wages, as of October 31, 1958. However, this varied from 10 to nearly 12 percent in Montana, (11.7 percent) Washington, Idaho, and Arizona to less than 5 percent in Rhode Island, Delaware, Maryland, Pennsylvania, West Virginia, Florida, Tennessee, Michigan, Illinois, Minnesota, Oklahoma, Alaska, and Oregon (2.6 percent).

Unemployment insurance benefits averaged $30.45 a week in October 1958 equivalent to about 37 percent of the previous wages of persons covered by unemployment insurance. In view of the fact that over one-third of all the unemployed did not receive any unemployment insurance benefits and many exhausted their benefits, unemployment insurance benefits replaced only about 20 to 25 percent of the wage loss incurred by unemployed persons during the recession.

Over 2,200,000 persons were still out of work after they exhausted their unemployment insurance benefits during the 10 months ending October 31, 1958. The average unemployed worker who exhausted his unemployment benefits drew payments for about 21 weeks.

At the end of October 1958, about 1.2 million persons had drawn temporary unemployment compensation benefits in 36 jurisdictions. About 418,000 of these had exhausted their full entitlement to temporary benefits by the end of October.

III.—THE IMPACT OF THE RECESSION ON DIRECT RELIEF PROGRAMS

Federal grants are available to the States for assistance to the needy aged, blind, disabled and dependent children. The residual category of relief—general assistance, also referred to as direct relief or home relief—is financed solely by State and/or local funds without any Federal aid. In October, 1958 there were about 6.7 million persons receiving some kind of assistance under the five categories of aid.

In October, 1958 1,058,000 persons in 385,000 families received general relief. The average family consisted of about three persons and received $64.27 for the month.

The total number of individuals receiving general relief was:

The incidence of general relief varied widely among States during the recession.

About three-quarters of 1 percent of the U.S. population under the age of 65 was receiving general assistance in June 1958.

Michigan and Indiana had the highest rates—about 2 percent of the population under age 65.

Other States with heavy caseloads above the national average in June 1958 were:

*Percent of population under age 65 receiving direct relief, by State*

| | |
|---|---|
| Ohio | 1.88 |
| Illinois | 1.19 |
| Rhode Island | 1.17 |
| Washington | 1.13 |
| Maine | 1.04 |
| Delaware | .96 |
| Wisconsin | .88 |
| Connecticut | .85 |
| New York | .80 |
| New Hampshire | .78 |

| Month | 1957 | 1958 |
|---|---|---|
| September | 679,000 | 1,037,000 |
| October | 713,000 | 1,058,000 |
| November | 777,000 | 1,086,000 |

The number of cases receiving general relief increased 30 percent from October 1957 to 1958. The total amount paid out increased about 45 percent.

About 30 percent of all the direct relief cases in the Nation were in 18 large cities.[1] Over 40 percent of all expenditures in the Nation for direct relief were in these 18 cities.

IV. IMPACT OF UNEMPLOYMENT BY LABOR MARKET AREAS

Reports of the Bureau of Employment Security of the U.S. Department of Labor show that 83 major labor market areas in November, 1958, in 25 different States, had 6 percent or more unemployment and 188 smaller labor market areas—throughout 35 States also had 6 percent or more unemployment.[2]

In nine labor market areas in November, 1958, unemployment was 12 percent or more. These were: Detroit and Muskegon, Mich.; Buffalo, Altoona, Erie, and Johnston, Pa.; Wilkes-Barre and Huntington, W. Va.

V. IMPLICATIONS AND RECOMMENDATIONS

Both unemployment insurance and public assistance programs made an important contribution to meeting some of the hardships and economic losses caused by unemployment during the recession.

Unemployment insurance benefits and all public assistance payments (for all five categories) totalled $7 billion for the 12 month period. About $4 billion was for unemployment insurance and $3 billion for public assistance. The increase in total disbursements above the level of a year before was, however, only about $2.1 billion.

Unemployment insurance benefits in October 1958 were about $2 billion above the annual rate of August, 1957 while general assistance payments were at an annual rate of about $100 million above the August level.

Unemployment insurance benefits, nevertheless, fell substantially below the 50% of average wages recommended by President Eisenhower. The amount and duration of benefits was too limited and coverage too restricted.

While over 2 million persons exhausted their unemployment insurance benefits in the 10 months January–October 1958, the total amount of State reserves for unemployment insurance at the end of October 1958 was $7 billion—or about twice the $3.5 billion in benefits paid out in the previous 12 months.

If unemployment insurance benefits had been paid at a rate of 50% of average wages instead of the approximately 37% actually paid, and, if coverage had been broadened, and the maximum duration of benefits had been 39 weeks in all States for the entire period of the recession—about $1.5 to $2 billion additional would have been disbursed to unemployed individuals.

General relief was not available in all localities to meet the needs of able-bodied unemployed persons. In some localities no relief was available to employable persons. In some communities, residence and settlement requirements made it impossible to give aid to some needy unemployed persons or their families.

In 16 States, the localities had to supply all needed funds and thus the potential expansion of the program to meet the emergency was severely limited by the fiscal resources of the particular locality.

Although Federal funds were available to the States to help persons who became needy through unemployment when the individual was aged, disabled, blind, or where there was only one parent in the home, no Federal aid was available for direct relief to other groups.

*Recommendations*

The experience of the recession indicates that the existing builtin stabilizers in our income maintenance programs were not—and still are not—satisfactory to meet another similar reoccurrence. A free enterprise economy must make more effective provision than we now have for meeting the unemployment hazards which occur from the free play of economic forces in the market place.

The full potential of our unemployment-insurance system was not utilized during the recession for the alleviation of hardship and the support of our economy.

The tragic part of the situation was that there was $7 billion in unemployment insurance reserve funds which were not touched during the recession. If State and Federal unemployment laws had been more adequate and had permitted $1.5 to $2 billion of these reserves to be used to pay benefits to the unemployed, many personal

[1] Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Detroit, District of Columbia, Los Angeles, Milwaukee, Minneapolis, New Orleans, New York, Philadelphia, Pittsburgh, Rochester, St. Louis, and San Francisco.

[2] In Michigan these areas were as follows:

Major areas: Battle Creek, Detroit, Flint, Grand Rapids, Lansing, Muskegon, and Saginaw.

Smaller areas: Adrian, Allegan, Ann Arbor-Ypsilanti, Bay City, Benton Harbor, Escanaba, Holland-Grand Haven, Ionia-Belding-Greenville, Iron Mountain, Jackson, Marquette, Monroe, Owosso, Port Huron, and Sturgis.

hardships could have been avoided. There would still have been about $5 billion of reserves left if unemployment insurance benefits had been more adequate.

Among the most urgent improvements in Federal and State legislation which are vitally needed while the lessons of the recession are still fresh in our memory are:

1. Coverage should be broadened to cover all persons who have a substantial attachment to the labor force including the 1.8 million persons in small firms who are not covered in 33 States and some of the hired farm laborers and other groups not now covered.

2. The maximum duration of benefits should be increased to at least 30 weeks in a benefit year in all States. Provision should be made for longer duration whenever the average unemployment in a State reaches recession levels of say 6 to 9 percent.

3. Steps should be taken to establish an equalization fund in order to reduce the excessive costs of unemployment insurance in States suffering from a high incidence of unemployment caused by national economic conditions.

4. The great majority of eligible claimants should receive at least one-half of their normal full-time gross weekly earnings. States and employers should be given a period of 6 years to accomplish this objective. The great majority of eligible claimants in a State should receive at least 40 percent of their normal full-time gross weekly earnings for the first 2 years following the effective date of the standards; for the next 2 years, not less than 45 percent, and after that not less than 50 percent. In order to provide benefits at these levels, States would have to make changes in their benefit structure including increasing the maximum weekly benefit amount.

5. The Federal temporary unemployment compensation law which expires March 31, 1959, should be extended until permanent Federal standards and supporting State legislation are enacted to improve the benefit duration and financing arrangements of State laws.

6. Since a major impact of the recession was on younger workers with families, it was especially unfortunate that most State unemployment insurance laws did not provide for benefits in relation to the number of dependents. Only 11 States had such provisions.[3] Dependents benefits should be included as an integral part of each State unemployment insurance program.

7. Because a social insurance system does not protect all individuals from want during extended periods of unemployment, Federal and State funds for direct relief should be made available to assure all needy persons a floor of protection against want in all localities. Such a program should be designed to assist needy individuals to become self-supporting.

*Acknowledgments*

The data reported in part I of this report were obtained from a special survey undertaken in October 1958 as part of the Survey Research Center's "Survey of Consumer Attitudes and Intentions To Buy." George Katona and Eva Mueller directed the survey, and Donna McLeod of the coordinating committee staff, and Robert Hsieh of the center staff, assisted in the project.

The study was the second of a series of special studies on unemployment made possible through the cooperation of the Survey Research Center and the coordinating committee on social welfare of the university, of which Fedele F. Fauri of the school of social work is chairman, and its committee on income maintenance and social security whose chairman is Professor Cohen. A full report on the study will be available in 1959.

The Institute of Labor and Industrial Relations, Wayne State University—the University of Michigan and the University of Michigan department of economics initially assisted in financing the project through Professor Haber and the Ford Foundation faculty research funds.

## Columnists Praise Hon. John McCormack's Position

EXTENSION OF REMARKS
OF
## HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. PRICE. Mr. Speaker, under permission to extend my remarks, I enclose an editorial entitled "The First Blow," written by David Lawrence and appearing in U.S. News & World Report on March 16, 1959. Also, an editorial entitled "Striking the First Blow," which appeared in the Catholic Standard, Washington's archdiocesan newspaper, on March 15, 1959; together with a transcript of certain testimony involving questions by Congressman JOHN W. MCCORMACK, House majority leader, and answers thereto by the Secretary of Defense Neil H. McElroy at hearings held by the House Committee on Science and Astronautics, on March 2, 1959:

[From U.S. News & World Report, Mar. 16, 1959]

THE FIRST BLOW

(By David Lawrence)

The Secretary of Defense, Neil McElroy, at a hearing last week, was asked by Representative JOHN MCCORMACK, Democratic leader of the House, whether it is still the military policy of the United States that "under no conditions will we attack first." Mr. MCCORMACK inquired whether this isn't an untenable position in the event of a grave emergency.

The Secretary agreed that it is a very difficult thing militarily. Then he explained that the policy not to attack first is currently true, and added: "Whether that will always be true, I think, could be something else."

Representative MCCORMACK promptly said he was glad to get such an assurance of possible change. For he believes that America should say it reserves to itself the same freedom of action as the Soviets now enjoy.

Thus, at least, there has come into the open a phase of Communist tactics which is largely responsible for the cockiness of the Soviets in the cold war.

For Moscow has known that the U.S. policy is to accept the first blow and that, indeed, Chicago, or Detroit, or New York, or Washington—or perhaps many of our air bases—could be destroyed before any retaliatory blow would be struck.

What is truly involved is the official strategy adopted by the Soviet Union in 1955 when, through the influence of Nikita Khrushchev, the military policy of attacking a potential enemy first was formally decided upon in the councils of the Kremlin. This was not termed preventive war but preemptive war.

The policy has been fully set forth by high military officers of the Soviet Union in its military journals. Excerpts from these articles and comments by western military men were published in U.S. News & World Report on June 10, 1955, December 13, 1957, and February 7, 1958.

The preemptive war doctrine now should also be adopted by the United States in its own defense. This is perthaps the best way to prevent war from ever happening. The doctrine, as the United States could pursue it, was outlined by Capt. W. D. Puleston, retired naval officer, who, in an article in this magazine on December 13, 1957, wrote:

"Our Government should also make it equally clear to the Soviets that we will not stand idly by and wait to be attacked—that we will not permit any nation to prepare and mount a surprise attack upon this country or any of its allies.

"If Russia—or any other nation—should give positive evidence that it is preparing such an attack, the United States should immediately:

"1. Alert its Armed Forces and deploy them for an instant attack upon the threatening nation.

"2. Serve immediate notice upon the threatening nation that, unless it dismounts the attack preparations within a specific brief period of time, the United States will attack in self-defense, without waiting to be hit first.

"Then, if the Russians or their satellites should defy this warning, the United States would be in a position to get at least an even break. If the enemy should attack, we could attack simultaneously. If the enemy should persist in its preparations to attack, we could—with honor—attack first, and thus gain the initial advantage instead of conceding it."

The frank discussion of this terrifying contingency is a healthy sign. There must be a resumption at once of the international conferences, recently suspended at Geneva, dealing with the subject of "surprise attack." Although the United States has said it would accept the "first blow," it is clear now that our Government may wish to consider a change. This fact—even though no change has as yet been decided upon—at least moves the problem nearer to solution.

For at the moment the Soviets have a free hand. They can bluff us out of Berlin and out of our bases in Europe. They can threaten to destroy our big cities. They can threaten us everywhere with their new missiles. And we are supposed to wait for the first blow, however devastating it may be, and then conduct our massive retaliation with most of what you have left, as Secretary McElroy said to Mr. MCCORMACK.

Mr. McElroy told his press conference last week that preparation for an attack by bombers or missiles in the foreseeable future would be so complex that they would most certainly be discovered by the free world before the blow could get underway.

But what do we do when we discover it?

In self-defense, we should announce now that we will interpect or forestall the first blow. We have the same right to apply the doctrine of preemptive force that our adversaries do. To avow this is to hasten the day when an ironclad agreement can be made to insure against the mobilization of missiles and bombers by either side. For such a mobilization itself can be a signal for the outbreak of war, even as it has been in the past. This is the most pressing problem before the world today.

[From the Catholic Standard, Mar. 15, 1959]

STRIKING THE FIRST BLOW

A deadly matter is being discussed these days. Is it morally permissible to strike the first blow in a nuclear war? The recent incisive questions at a hearing, proposed by House Majority Leader JOHN MCCORMACK

(whose line of questioning we highly approve) focused attention on this point.

Behind the matter stands the erroneous but generally accepted opinion that the first blow will obliterate the enemy population and perhaps a large segment of the nonbelligerent population. Related to this opinion is the false idea that a war must necessarily involve total surrender.

In relation to these questions, the church has always taught that a nation can use sufficient force to repel an aggressor and that if an aggressor shows clearly his evil intentions adequate measures can be taken for thwarting an aggression. This does not mean, even with nuclear weapons, that it is necessary to obliterate the enemy to forestall an attack and many of our experts have spoken clearly and eloquently on this. Thomas E. Murray has steadily contended that a development of a full graduated system of nuclear weapons would enable us to deal with each situation according to its severity and thus relieve us of the awful predicament of a sudden war of obliteration of the enemy. Total annihilation or unconditional surrender is not and should not be considered the only objective in a war. Furthermore, a graduated use of force would be, it is hoped, a sufficient deterrent since the enemy realizes our full potential for destruction. Henry Kissinger, another expert, has supported in general, this thesis. Father John Courtney Murray, S.J., has also written eloquently on it.

The majority leader also indicated at the congressional hearing that it would be better not to inform the enemy that we would never strike the first blow. We feel that this is eminently wise, especially since the first blow need not be total destruction of the enemy but only a stern and adequate warning.

Now is the proper time to think about these grim questions particularly for eradicating the erroneous opinions that a war must be fought to unconditional surrender and must involve, with today's weapons, a holocaust for the enemy.

---

The CHAIRMAN. Mr. McCORMACK.

Mr. McCORMACK. Well, Mr. Secretary, what you have said in substance is that our whole military position is predicated upon the policy that under no conditions will we attack first.

Secretary McELROY. Our policy is that we will not attack, first, Mr. McCORMACK.

Mr. McCORMACK. Rather an untenable one from a military angle in case of grave emergency, is it not?

Secretary McELROY. I think it is a rather difficult one but I think it is the one that would be supported by public opinion in this country.

Mr. McCORMACK. Well, public opinion is not going to win wars. We are coming down to leadership.

Secretary McELROY. In any case——

Mr. McCORMACK. Public opinion is important, but other things win wars.

Secretary McELROY. I agree that this is a very difficult thing militarily, Mr. McCORMACK.

Mr. McCORMACK. Well, we are tied to that.

Secretary McELROY. That is our policy.

Mr. McCORMACK. That is described by the President, by the Executive Branch. That is correct, is it not?

Secretary McELROY. That is currently true. Whether that will always be true I think could be something else, Mr. McCORMACK.

Mr. McCORMACK. Well, I am glad to get that latter now because that is a little relaxation. Could you see conditions under which that would not apply?

Secretary McELROY. This would again be a matter of national policy which would take quite high review. I think I must begin back where I began, which is, for the present and the indeterminate future our policy is not to attack with the big weapons first.

Mr. McCORMACK. What do you mean not to attack with the big weapons first, would we attack with other weapons first?

Secretary McELROY. No, I think we would not attack first even with other weapons.

Mr. McCORMACK. So no matter how powerful our military might be we are strictly in a defensive posture.

Secretary McELROY. Yes, because we are not aggressors.

Mr. McCORMACK. I just want to have that established. Now our main reliance, of course, is SAC. That is correct, is it not?

Secretary McELROY. Yes, our principal deterrent is the Strategic Air Command. We have other very major elements.

Mr. McCORMACK. Well, that is true but you have already said on a number of occasions—only in the U.S. News & World Report a few weeks ago, that our principal reliance at this time is on the heavy and medium bomber capacity of the Strategic Air Command, that is certainly number one.

Secretary McELROY. That is correct, that is true.

Mr. McCORMACK. Well, suppose they have a defense against our bombers, what then?

Secretary McELROY. Well, of course, if they have a defense against anything that we have then it makes our problem just that much tougher but I think we have some right to judgments on whether or not they can have a defense against our bombers that will keep us out and I think that the belief of our military people is that they will not keep us out any more than we can keep all of their bombers out if they come at us.

Mr. McCORMACK. Well, of course it is not a question of keeping them out, it is a question of the attrition rate.

Secretary McELROY. Yes, there would be some attrition.

Mr. McCORMACK. If the rate is too high there is the question of sustaining the attack?

Secretary McELROY. There would be a question of sustaining but I think in this kind of war you are likely to use most of what you have in your initial strike.

Mr. McCORMACK. We are going to strike after we are hit?

Secretary McELROY. Yes, but you are going to use most of what you have left.

Mr. McCORMACK. You have also stated that within a year or two you expect the Soviet Union to be considerably ahead of us in intercontinental ballistic missiles.

Secretary McELROY. I do not expect that they will. I consistently say that they can be. The intelligence that we have, of course, does not get inside the Russian mind to know what they are going to do. The only thing we can judge is what they could do with their facilities of scientists, facilities of materials, their facilities of production, manpower, and so on. Now then, there is one of the interesting points really that is under discussion in this general debate. We do assume in what we are preparing to do with our own forces that they will make use of their top scientists and their material facilities and their production facilities to make this quantity of weapons but we do not say they will produce these. We say they could produce these if they had the national decision to do so.

Mr. McCORMACK. Well, it is reasonable to assume they are going to do what they think they ought to do.

Secretary McELROY. Yes, but the interesting point in retrospect on that, Mr. McCormack, lies in the history of what they did on heavy bombers.

Mr. McCORMACK. I know. You refer to that in this article here. You refer to General Twining's views when he came back from Moscow. Is that what you have reference to?

Secretary McELROY. Yes. General Twining—and he can speak for himself at any point here if you would like him to—came back from Moscow feeling that the Russian capability to manufacture heavy bombers was such that we could expect really to have a superiority of heavy bomber capabilities by Russia over the United States. This was very disturbing to the country. He had this capability but he did not produce it. Why, I do not know. Everybody has his own theory as to why he did not do so. In addition to a capability to do you have to have a national decision to do. The only thing we can say in our intelligence is that he has the capability to do; whether he is going to make the national decision to do we do not know.

Mr. McCORMACK. Might it not be that they concentrated on missiles rather than bombers realizing that the perfecting of missiles would more or less outmode bombers?

Secretary McELROY. The thing that makes that doubtful is our observation of new bombers in the air over there, so they have not given up bomber aircraft. They have an advanced bomber, we believe, in test.

Mr. McCORMACK. I do not want to appear to be in a position of cross-examining any of you gentlemen because we are all Americans, we all want to do the best we can.

Secretary McELROY. Surely.

Mr. McCORMACK. We have our limitations up here. We can appropriate money, but we can't compel it to be spent. We have seen that in the Army and the Marine Corps in the last year.

By the way, do you think the reduction in our Army, in the light of the situation today, was wise?

Secretary McELROY. We think the size of the Army is adequate.

Mr. McCORMACK. That isn't answering my question.

I will leave it there.

The CHAIRMAN. Mr. Fulton.

Mr. McCORMACK. No, I have just one or two more questions.

The CHAIRMAN. Excuse me.

Mr. McCORMACK. For the benefit of the people, what is your opinion as to the relationship of the Soviet Union and our own country in the development of the intercontinental ballistic missile? Are they ahead of us?

Secretary McELROY. My judgment is—and when I say "my judgment," let me say that this is a distillation of the views of the intelligence community and of our own scientists, so that I am not talking as an individual, I am simply reflecting a combined view—my judgment in that context is that developmentally we are very close to each other in the development stage of the ICBM.

Mr. Khrushchev announced, I would guess maybe a couple of months ago, maybe not quite that much, that their ICBM was in serial production. This was a term not commonly understood here. It was interpreted by some to mean mass production, and you all may have read recently that a Russian scientist who was in this country explained—and this was reported in the New York Times—that "serial production" is not mass production but is production that is in between prototype production and mass production.

I can read it right here, if the committee would be interested.

This is in the New York Times of Friday, February 13, and this was a meeting of scientists.

The questioning lifted momentarily as Mr. Lebedev explained the "serial production" of the intercontinental ballistic missile. He said this was an intermediary stage—I guess intermediate is what should be here—I hate to correct the New York Times. Maybe I better not do that. He said this was an intermediate stage between the "specimen" or "prototype," and mass production. It means, he said, the production of limited quantities.

Now, of course, the Atlas is in serial production in that kind of sense, because I be-

lieve that this committee has visited the production facilities of the Atlas, has it not? I know that you have been down at Cape Canaveral and at Huntsville.

In any case, if you have observed this, the Atlas missiles are moving through on what I would consider in this way serial production, but whether we are in serial production or not doesn't make much difference to me.

I think in answer to your question, sir, that the evidence seems to me to be that there is very little difference in the development stage of their missile and ours from everything that we can judge.

Mr. McCORMACK. Would you express an opinion, either you or General Twining—I know when you express your opinion, it is the collective judgment of many others—as to how long the SAC will be our main reliance so far as retaliatory action is concerned.

Secretary McELROY. Well, in answering this, I think we should make clear that the intercontinental ballistic missiles are being assigned for deployment to SAC, so I think your question has to do with SAC bombers.

Mr. McCORMACK. I am talkink about the bombers now.

General TWINING. Well, I think it will be several years, certainly until sufficient quantities of the ICBM's are not only in stockpile but on launchers and of proved dependability. Then it will be a combination of the two. The bombers will stay as the missiles come in. Even though the ICBM's may be perfect, we still want the capability from the manned bombers, for I would say 10 or 15 years, but not just the bomber. It will be the missile too, a combination of both. But SAC will still be the unit, as the Secretary said, that is the deterrent force for the country. It will always maintain the deterrent, with a combination later on of both the missile and the airman.

Mr. McCORMACK. Is it fair to assume that might be discoveries through tests and a satisfactory bomber might be used more effectively than now; whether there might be a capacity to project a weapon a longer distance than they can now toward the target?

General TWINING. The Hound Dog is an example of that. I am thinking of that when I say the bomber will stay with us 10 to 15 years. The bomber can carry a great load of nuclear power and pinpoint targets, and you will need that capability.

Mr. McCORMACK. The greater the increase in the mileage from the target, the more effective the bomber will be in the future?

General TWINING. It can stand off a thousand miles from a target, keep out of a heavily defended area, and launch a missile from a bomber.

Mr. McCORMACK. Is it reasonable to assume there is a capability of 500 miles?

General TWINING. Definitely. We are encouraged on that.

Mr. McCORMACK. Mr. Secretary, you said a few weeks ago that the danger from the Russian conspiracy is about the same: "I think they intend to destroy us if they can, one way or another."

You remember you said that in the interview with U.S. News & World Report.

Secretary McELROY. Yes.

Mr. McCORMACK. That is still your opinion today?

Secretary McELROY. It is my belief.

Mr. McCORMACK. Have the events of the past week, the visit of the representative of a friendly ally of ours, caused you to change your opinion?

Secretary McELROY. If anything, it has reaffirmed my opinion.

Mr. McCORMACK. Just one more field.

Is there any consideration being given to the establishment of one agency in the field of outer space to take over military and civilian research and development?

Secretary McELROY. There is nothing current in that direction. It is our belief in the Department of Defense that the agency that has been set up, and the Space Council which has been se up to give common direction to the overall program can best do its work along with the military as carrying a portion of this responsibility.

We think that it would be a quite doubtful thing for the military use of space to be assigned outside of the military for development, with all that could mean—not necessarily would mean, but all that it could mean, of difference in point of view on the part of the military and of the other agency as to the importance militarily of certain use of outer space.

Mr. McCORMACK. Well, you have used very guarded language, which I understand, I think.

In other words, you think it would be a great mistake if military research and development was to be transferred to an agency embracing both military research and development and civilian?

Secretary McELROY. I think the present setup is a good setup and will be workable.

Mr. McCORMACK. Well, there are many twilight zones on some of those questions, I would judge?

Secretary McELROY. Yes, there are, but I don't see why we can't work this out as reasonable men working together, and in the aeronautical field, Mr. McCORMACK, when NACA was the agency, the Department of Defense really had no problem in working out the division of functions as between the two groups.

Mr. McCORMACK. But the powers of the two are different now. You have more power in NASA than in NACA. They are more competitive.

Secretary McELROY. They have somewhat more power, but I think the legislation was very well written to reserve to the military the military use of space.

Mr. McCORMACK. Well, take the twilight zone, don't you think the doubt should be resolved in the world of today on the side of the military?

Secretary McELROY. I think I would prefer to say, Mr. McCORMACK, that the President, as the Chairman of the Space Council——

Mr. McCORMACK. I was chairman of the committee.

Secretary McELROY. I know you were, sir. I think it was a wise conclusion that any doubts that there are as to jurisdiction should be resolvable at the highest executive level through the Space Council, of course, which is chairmaned by the President.

Mr. McCORMACK. We put language in our bill that the Congress further declares that such activities shall be the responsibility of and directed by a civilian agency exercising control over aeronautical space activities sponsored by the United States, except that activities peculiar to or primarily associated with development of weapons systems, military operations, or the defense of the United States, and, in brackets, making it stronger, including the research and development to make effective the defense of the United States, shall be the responsibility of and shall be directed by the Department of Defense, and that determination as to which such agency has responsibility for and direction of such activity shall be made by the President in conformity with section 201(e).

That is pretty strong language there, and we made it just as strong as we could. In other words, if there is a situation that develops in the world of today—tomorrow it might be different, but in the world of today we have to consider these things. What might be military today may not be in a peaceful world, we recognize that, but in case there is any attempt to transfer what is considered to be of vital importance to our country in the military field, are you prepared to fight for the retention by the military of those things you consider to be essential for our preservation?

Secretary McELROY. Without any hesitation, and I think on the other side that I am unlikely to need to fight, because the man who is the head of NASA is a man who is, I think, a very reasonable man and a very good man. I think the point was excellent, and I don't anticipate any problem at all in working these out with Mr. LANHAM. But if for some reason or other there is an honest difference between him and me, I would certainly be quite prepared to fight, yes.

The CHAIRMAN. Mr. FULTON.

## Correcting Inequities Applicable to Fishing Catch in Puerto Rico

EXTENSION OF REMARKS

OF

### HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. KING of California. Mr. Speaker, I have today introduced a bill to amend the Internal Revenue Code of 1954, as amended, for the purpose of correcting inequities in existing law applicable in Puerto Rico, which I believe were not the intent of Congress when the law was enacted. It is intended also to encourage the development of fisheries and their allied industries in that great Territorial commonwealth, which has encouragement and backing of our Government.

Under sections 931 and 933 of the Revenue Code of 1954, mainland citizens of the United States who establish bona fide residence in insular possessions such as Puerto Rico are entitled to certain tax exemptions, all designed to promote the industry and welfare of the people of such possessions. As a condition under section 931(a)(2)(B), it is required of the citizen to be entitled to this exemption that "50 percent or more of his gross income—computed without the benefit of this section—for such period or such part thereof was derived from the active conduct of a trade or business within a possession of the United States, either on his own account or as an employer or agent of another."

Usually this condition is entirely fair. In the instance of a fisherman catching fish on the high seas, however, the Treasury Department has ruled that the actual catching of fish, the active conduct of a trade or business is not conducted within the possession. The facts that the citizen is a bona fide resident of the possession, sells his fish in and receives payment therefor within the possession, and in every way contributes the economy of the possession just as though he spent all of his time on shore, are disregarded. The unfair consequences are as follows:

(a) The citizen does not receive the exemption from U.S. Federal taxes in accordance with the intent of the law.

(b) The fisherman is subject to having withholding taxes deducted from his wages, salary or other compensation both

under the Federal income tax law and the tax laws of the Commonwealth of Puerto Rico. Although he makes eventual recovery of the Puerto Rico deductions, he is deprived of the use of his own money until reimbursement is made. This makes it difficult for a boatowner to employ such citizens.

(c) Should the fisherman have income from properties on the mainland subject to Federal income taxes, by the inclusion of Puerto Rican income in his tax return he becomes liable for taxes in higher income tax brackets.

(d) Puerto Rican personal income taxes are somewhat lower than Federal income taxes, which again operates to the disadvantage of the citizen.

(e) Should a fisherman catch all of his fish in waters within the 3-mile limit of the possession, he would receive the full benefits of the exemption. If he spends more than 50 percent of his time outside of the 3-mile limit he is deprived of the exemption.

It is submitted that the fisherman is just as important to the economy of Puerto Rico as the one who works in the cannery that buys and packs such fish; in fact, even more so because without his fish the cannery employee would have nothing to do. For all practical purposes the fisherman's income is derived from sources within Puerto Rico, because that is where his fish are delivered and sold.

The amendment to section 933 has been so worded as to make it clear that the exemption applies to a proprietor or partner as well as to an employee, as is the case under section 931. The requirement of bona fide residence remains unchanged.

Section 3401(a)(8)(C) is amended to conform to the amendment to section 933.

Mr. Speaker, under unanimous consent to extend my remarks, I include the bill in the RECORD, at this point as a part of my remarks:

H.R. —

A bill to amend the Internal Revenue Code of 1954 with respect to income derived from fishing where the catch is landed in Puerto Rico

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 933 of the Internal Revenue Code of 1954 (relating to income from sources within Puerto Rico) is amended by adding at the end thereof the following new sentences:

"For purposes of this section, income derived (either on his own account or as an employee or agent of another) from the conduct of a fishing venture shall be treated as income derived from sources within Puerto Rico, if the catch of fish is landed, sold, or delivered in Puerto Rico. For purposes of the preceding sentence, the term 'fish' means fish, whether in the round, gilled and gutted, filleted, split, salted, iced, or frozen, and includes shellfish and crustacea, whether whole, headed, salted, iced or frozen."

SEC. 2. Section 3401(a)(8)(C) of the Internal Revenue Code of 1954 (relating to withholding tax on wages) is amended to read as follows:

"(C) for services for an employer (other than the United States or any agency thereof) performed by a citizen of the United States within Puerto Rico, or in connection with a fishing venture where the catch of fish (within the meaning of the last sentence of section 933) is landed, sold, or delivered in Puerto Rico, if it is reasonable to believe that during the entire calendar year the employee will be a bona fide resident of Puerto Rico; or."

SEC. 3. (a) The amendment made by the first section of this Act shall apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954.

(b) The amendment made by section 2 of this Act shall apply to wages paid on or after the first day of the month after the month in which this Act is enacted.

## A Study of the Unemployed

EXTENSION OF REMARKS
OF
### HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. SANTANGELO. Mr. Speaker, while the Bureau of the Budget has based 1960 revenues on an expanding economy, indications are that unemployment is rising and today is the No. 1 domestic problem. The regular joint report of the Federal Labor and Commerce Departments showed 4,749,000 unemployed and 62,722,000 employed. The total of idle was 424,000 below the figure for the recession month of February 1958, but 1,628,000 above that for the prerecession month of February 1957.

In the last 14 months of slump and recovery, more than 3 million workers have exhausted all the unemployment insurance to which they were entitled under regular State programs. Nine hundred thousand of these long-term unemployed went on to use up all the extended protection available to them under the temporary Federal program, which went into effect 9 months ago. No official estimate has been made of how many of these workers are still jobless.

The Federal program is scheduled to expire March 31 of this year, and the Ways and Means Committee has recommended a 3-month tapering-off period. This would prevent an abrupt cutoff in payments to the 300,000 who will still be on the emergency benefit rolls at the end of this month. In addition to this group, 2,375,000 workers are registered for regular State insurance checks.

In my opinion, it is not time for us to terminate the Federal unemployment insurance program. The situation throughout the United States is grave and while we see expanding business, we see the ominous situation of increasing unemployment. It behooves us to be careful and to see the signs. We should not terminate this Federal program until we are sure that workers will be employed.

The following article by A. H. Raskin, feature writer for the New York Times casts light upon the situation and will prove interesting and alarming reading. I recommend it to all who wish to be informed:

[From the New York Times, Mar. 16, 1959]

PEOPLE BEHIND STATISTICS: A STUDY OF UNEMPLOYED—VICTIMS IN FIVE STATES PUZZLED BY PLIGHT—FAMILY DEBTS INCREASE AMID GAINS IN OUTPUT AT MECHANIZED PLANTS

(By A. H. Raskin)

Unemployment is a figure in a Government report, as dreary and lifeless as the Federal debt or the death rate.

Unemployment is people—the individual hardship and heartache of 4,749,000 Americans, willing and able to work but unable to find suitable jobs.

Unemployment is the husky, fresh-faced college graduate, with 3 years of Air Force duty behind him, being told he is too old for a job with a future—at age 26.

Unemployment is the breezy, blustery executive, accustomed to an income of $50,000 a year, trying to pay his bills on a State job insurance check of $40 a week—an amount he once spent on taxis and cigars.

Unemployment is the head shipping clerk, stranded when his textile plant moved from New York to North Carolina, subsisting on odd jobs of heavy cleaning and reading an inspirational pamphlet. Its title, "Get Rich in Spite of Yourself."

Unemployment is the rhinestone setter, with all her State and Federal benefits drawn, watching a giveaway show on television and murmuring, "It makes me feel bad to see people getting all these nice things."

Unemployment is the electrical worker, fearful that automation has permanently wiped out his chances for reemployment, wondering whether he can volunteer for a space flight to the moon.

To put faces on figures, correspondents of the New York Times have spent the last week talking to idle workers and their families in States where unemployment has remained high despite the general pickup in business.

Their story makes a gray backdrop for reports of higher production, higher sales, higher profits, higher wages and other indices of returning prosperity. It is a story told without bitterness—almost apologetically—even by those who have gone through the last anguishing turn of the wringer and been forced to turn to public relief.

Puzzlement is more apparent than anger in the attitude of men and women who have tramped the streets, month after weary month, with nothing to show for their efforts but holes in their shoes and a growing pile of debts.

In Detroit, capital of the automobile industry, one worker in seven is jobless and cutbacks in the output of some 1959 models threaten to add thousands to the idle lists in the next few weeks. Pittsburgh, crossroads of steel and coal production, is worried that large-scale unemployment will become a chronic drag on its economic well-being.

In the mine regions of West Virginia the specter of permanent pools of idle workers is even more tragically present. Mechanization has cut the need for manpower so drastically that 68,000 men now dig more coal than 125,000 did 10 years ago. The displaced, returning from futile job-seeking expeditions to Cleveland, Columbus, or Detroit, are less disposed to be philosophical about their plight than most of the country's uncomplaining unemployed.

Surplus food—"mollygrub" is what they call it in the Kanawha Valley coalfields—has become a mainstay in the diets of tens of thousands of families, not only in West Virginia but also is every other State. In December, 5,230,000 persons benefited from the Federal dole of butter, flour, cornmeal, and other surplus commodities. The food lines were almost twice as long as they had been a year earlier.

Yet, by the standards of mass misery that prevailed in the great depression of the thirties, privation is a minor problem. What bears most raspingly on today's jobless is the sense of uselessness that comes with being unwanted and unneeded in the world's richest and most productive Nation.

The corrosive effect has been acute among youngsters—high school and college graduates, ex-GI's, and others in the 20 to 35 age group—locked in their first real bout with hard times and deprived of the community of suffering that helped preserve the fabric of self-respect in the depression years when everyone was in trouble.

YOUNG MAN'S RECESSION

In many ways this was a young man's recession, especially in factory industries operating under rigid seniority systems. The most recently hired were the first to feel the layoff ax. Now science, moving with the same breathtaking speed in the improvement of industrial technology as it is in the conquest of the atom and of outer space, is making the day of recall to work more remote.

The harnessing of electronic brains to mechanical muscles has made it possible to produce more goods with fewer workers. Men with 10, 12, and even 15 years of seniority remain on the surplus list while their companies climb past the production peaks they set in preautomation days.

To make the outlook gloomier, other employers hesitate to hire them for fear that their desire to safeguard their pension equities and priority status in their old jobs will cause them to quit when and if the recall whistle sounds.

For men and women of more advanced age among the unemployed, the calendar is an enemy. The piling up in New York and other States of statutory prohibitions against discrimination based on age has brought no abatement in the conviction of those past 35—and even a good many under that age—that their biggest handicap is the years in which they acquired their maturity and skill.

There is little tendency to clutch for the comforts of the welfare state. Confronted with the necessity for going on relief, most workers will grab a job at half or less than the standard they used to enjoy. And there are plenty of employers ready to capitalize on this preference for staying independent of a Government handout.

RELIEF LOAD OF 3 PERCENT

In small machine shops, dry goods warehouses, and other small businesses, the calls are for work at only a few cents above the legal minimum of $1 an hour. Only in the large standardized industries and those under stringent union policing is there no move to pull down pay scales or trim fringe benefits. There the movement is still up—in both prices and wages.

In this city, where 50,000 workers have drawn all the Federal and State unemployment insurance they could get in the last 14 months, fewer than 100 a month have turned to the department of welfare for relief after their insurance ran out. The total public assistance caseload here has gone up less than 3 percent in the last year, and not all of this slight rise is attributable to unemployment.

In contrast to the economic trough of the thirties, when one-fifth of the city's population was on home or work relief, the ratio now is 1 in 23. And many of the family heads now on the rolls are unemployable even by the relaxed tests that would apply in the rosiest flush of full employment.

In Detroit and other centers of "productivity-unemployment," the relief rolls have risen more rapidly. But everywhere the idle, without insurance or other sources of support, echo the remark of the Detroit mother of five, who told a reporter:

"Accepting money from welfare, I feel we're down to the last notch. I don't want the children to grow up with the idea of welfare aid. My parents back in Arkansas raised me never to lean on welfare."

Here are some reports on what unemployment has meant to workers and their families:

NEW YORK-NEW JERSEY

The New York-New Jersey metropolitan area, with its incredible diversity of finance, commerce, entertainment, publishing and manufacturing, is enjoying the seasonal upswing that always accompanies the pre-Easter rush in its largest single field of employment the needle trades.

But the face of joblessness in the metropolis has so many visages that improvement even in a multi-billion-dollar area leaves hundreds of thousands untouched. The last official estimate in mid-January showed 375,000 workers or 1 in 12 looking for jobs in the 5 boroughs.

A reporter who toured unemployment insurance offices, welfare agencies, union hiring halls and armories where the idle queued up for Federal food came away with impressions as diverse as the people he talked to. Visits to the jobless in their own homes merely reinforced his feeling that no shortcut cure by Government or industry, would eradicate the economic sores behind the gleaming new skyscrapers, the flourishing theaters, and restaurants and the other badges of New York's opulence.

WAITING IN THE 'T' LINE

Walk into the job insurance office at 259 West 54th Street and chat with some of the men and women on the "T" line. This is the State labor department's shorthand for temporary unemployed compensation, the emergency program the Federal Government finances for the long-term jobless.

Here is James Matthews, a tall, handsome man of 36, with a shy smile, who won a Rhodes scholarship and studied at Oxford and the Sorbonne after graduating from Columbia. He had 4 years of wartime duty on Navy combat ships and was receiving officer's training when V–J Day came.

He entered the State Department's career Foreign Service and held posts in Europe and the Far East until he resigned in 1953 to become an international marketing specialist for a Standard Oil affiliate overseas. An expert in six languages, he was on his way to a European assignment for International Goodrich last summer when a dip in rubber sales wiped out his $200-a-week job.

His pavement-pounding has convinced him that employers want men in their mid-twenties, not mid-thirties. What depresses him even more is that so many of those he sees going abroad are men whose interest in their foreign trade missions seems to him largely confined to the prospect of hanging around the American bar.

In the meantime Mr. Matthews has a somewhat less global concern. He has just made the transfer from the State insurance lists, where he drew his full quota of 26 $45-checks, to the Federal list. This week red tape connected with the shift will limit his benefit to $11. That means he will have to send a distress signal to his parents in Texas for a fresh loan.

"If Congress doesn't extend the Federal program beyond its present March 31 closing date, I will really be in the soup," he says. His savings are all gone, but his job insurance and help from his family have enabled him to keep quarters at the Columbia Club, 4 West 43d Street.

A few places down the line is Mrs. Sydonia Goodstein, of 340 West 57th Street, an imperious woman in black caracul. She has the air of a grand dame, as befits a couturiere whose shop used to make costly dresses for Saks Fifth Avenue, Bergdorf Goodman, Neiman-Marcus, and other fine stores.

The business she started in 1921 never recovered from a fire that gutted the building 2 years ago. Now, her lease gone and her job insurance expiring this week, she is looking for work. This is her report on her first telephone call in response to a help wanted advertisement:

"The employer said I sounded young and asked how old I was. I am a rabbi's daughter and do not lie, so I said 65. He told me, 'Lady, why don't you go sit in the park?' It reminded me of a book I once read about an uncivilized island where they burned everybody at 50. I thought it was savage, but it doesn't seem so savage now."

The next man asks that his name be kept secret, but it could be Willy Loman, the hapless hero of Arthur Miller's "Death of a Salesman," whose goal in life is to be well liked. He is a jolly, talkative man of 55, whose sales talent made him head of a ladies' belt business with 80 employees, an annual volume of more than $1 million, and profits in the $50,000 to $60,000 range.

A bankrupt company he bought for tax-loss purposes and then tried to run, plus the advent of the beltless chemise, proved his downfall. The home he owned in Harrison is gone and the lease on his $230-a-month apartment in Riverdale runs out in June. He has been borrowing on the $100,000 in personal insurance he used to carry, but the end of that is in sight.

FUTURE LOOKS BLEAK

"I keep telling my wife it's fortunate that I was born with a strong heart and a weak mind," he says with a melancholy attempt at a salesman's laugh. "But I'm really at the end of my rope. I've been selling all my life; I have a wonderful reputation in the field. It doesn't seem possible I can't get connected. But after 14 months of tramping around, the future looks very, very bleak."

Drop in on Michael Azzata, a well-set-up youth of 26, with glossy black hair and dark, earnest eyes, in his parents' neat apartment in a neat row of identical tan-brick houses at 30–27 41st Street, Long Island City, Queens.

He enlisted in the Air Force after he got out of high school at the height of the Korean war. When he went to Columbia under the GI bill of rights, he took seriously the advice of industrialists and educators that it was wise for young men to get a well-rounded general training in liberal arts, instead of concentrating on specialized technical courses.

Now, with a B.A. degree, he finds himself being told by job interviewers that he lacks the specific instruction or experience they require and that he is too old to get into an executive training program.

It does not help, psychologically, that his own inability to get a job with a future, even at $50 a week, forces his 74-year-old father to keep working at Pennsylvania Station as a bootblack. He will probably settle for a night job as a restaurant supervisor and go back to Columbia to take a master's degree in business administration.

## Tax Exemptions on Public Housing Bonds

EXTENSION OF REMARKS

OF

### HON. GEORGE A. KASEM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. KASEM. Mr. Speaker, it has been related to me that some municipal

authorities have been concerned over the fact that H.R. 5096, recently introduced by my colleague from California [Mr. GORDON MCDONOUGH], would be a step toward eliminating tax exemptions on other bonds. The bill would remove long standing tax exemptions on public housing bonds.

Ever since I can remember, the Federal Government has made interest on local bond issues nontaxable so that local governments and school districts can issue bonds at lower interest rates.

I heartily endorse this principle as it gives the local taxpayer a break on interest payment and the municipalities and school districts much needed advantages in the money market.

Public housing, as the term implies, is a public undertaking for a purpose equally as desirable as other governmental activities—the providing of a minimum standard of housing for American families.

IMPEDE PUBLIC HOUSING

It is obvious that the bill's purpose is to impede public housing rather than to correct any alleged tax inequity. To allow this device to succeed would open the gate to using the removal of tax exemption, which has become an integral part of all local bond issues, to defeat municipal or local projects that a legislator might oppose when he either can not defeat or will not attack the project directly.

This would be a very bad precedent to establish.

## Wild Dentifrice Claims

EXTENSION OF REMARKS

OF

### HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. GATHINGS. Mr. Speaker, Dr. William A. Alstadt of Little Rock, Ark., one of the foremost dentists in America today, orthodontist and immediate past president of the American Dental Association, has done much to place in their proper context claims regarding miracle dentifrices and fluoridation.

Dr. Alstadt, who is a native of eastern Arkansas, the First Congressional District, has sought during his presidency of the American Dental Association, to contribute to a better understanding rather than a continuation of misinformation. Dr. Alstadt points out the good and the bad—as a good dentist should, and the account of Dr. Alstadt's approach to this matter, as carried in the Arkansas Democrat of January 25, 1959, will be of interest to every citizen of this Nation.

It is a pleasure to call attention to the conclusions on these important subjects of this excellent citizen and outstanding orthodontist:

WILD DENTIFRICE CLAIMS CALLED ONE CAUSE OF U.S. DENTAL WOES

Advertising agencies for the toothpaste industry will probably avoid calling on a particular Little Rock dentist for recommendation of any of their miracle dentifrices.

Dr. William A. Alstadt, orthodontist and immediate past president of the American Dental Association, yesterday said flatly most of the claims made by advertising agencies of toothpaste manufacturers are either wildly extravagant or pure hokum.

He continued, "this is one cause for the generally poor condition of Arkansas' and America's teeth. The public, lulled into a false sense of security by these claims, accumulates the very diseases it seeks to avoid.

"Dental research has already demonstrated there is no such thing as a miracle toothpaste—whether it be red, blue, green, striped, or other color."

Dr. Alstadt said the American Dental Association is currently conferring with the Federal Trade Commission and dentifrice manufacturers in an effort to tone down these extravagant claims.

For proper care of the teeth he recommends a thorough brushing immediately after eating. If it is impossible to brush, then rinsing out the mouth is the next best thing.

Not brushing or improper brushing can allow food particles to work down between the teeth, Dr. Alstadt said, eventually causing pyorrhea, or periodontal disease.

"These claims that one can safely get by with only one brushing a day are absolutely false," he asserted. "The dental profession has no quarrel with ethical dentifrice manufacturers, because many have made contributions to dental health through educational procedures, but we most emphatically disagree with those who permit wild claims to be made by their advertising agencies."

With the exception of the common cold, dental disease is most widespread, affecting 98 percent of people, Dr. Alstadt said.

Fluoridated water supplies have done a great deal toward prevention of tooth decay, according to Dr. Alstadt, and the dental health picture in Arkansas is a little better than nationally. He attributed this to the fact that there are 34 cities in the State with fluoridated water supplies.

"Of course, fluoridation isn't the only answer to the dental health problem," Dr. Alstadt said. "But use of this treated water, plus a good diet and good oral hygiene, can reduce dental decay by 65 percent."

Dr. Aldstadt said "one of our problems in Arkansas is proportionate distribution of dentists. Everyone in the State does not have the dental care we'd like to see."

Arkansas' ratio of dentists to population is 1 to 3,100, considerably less than the national average of 1 to 1,900.

"But we're working hard to get qualified students into dental schools," Dr. Alstadt said, "and we've added about 300 dentists in the State since World War II.

"We now have 132 students in the 47 dental schools of the Nation," Dr. Alstadt added.

Arkansas has about 550 practicing dentists.

"We are fortunate in Arkansas in having a large group of dentists who are keeping abreast of the latest advances. Almost all of them belong to the Arkansas State Dental Association, and they attend meetings, returning home with new techniques, equipment, and ideas for the better treatment of their patients," Dr. Alstadt said.

"The dental profession has an obligation to the American public to continue getting somewhere," he said. "We still have many unsolved problems but we are trying to elevate the dental health of our people. In so doing we are definitely contributing to the general health advancement of the public.

"Dentistry is a changing profession, and as a major health profession has the obligation of contributing to the general as well as dental health advancement.

"It is amazing to some of us in health fields than an intelligent man will have his automobile checked routinely, will have his refrigerator, floor furnace, and other mechanical gadgets serviced to avoid breakdown, but health, and particularly dental health, is quite often neglected.

"Last year only 46 percent of the American people visited their family dentist," Dr. Alstadt said. "And I would say that percentage is about accurate for Arkansas.

"Fear of pain has been the major reason people neglected their teeth, but with the advent of newer drugs, techniques, and equipment pain has been reduced to an absolute minimum," Dr. Alstadt added. "It no longer should be deterrent to good dental health."

## The Country Elevator Operator

EXTENSION OF REMARKS

OF

### HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. JOHANSEN. Mr. Speaker, I am honored to have as a constituent in the Third District of Michigan Mr. Charles S. Force, who is vice president of the Grain & Feed Dealers' National Association. Mr. Force is a partner in the firm of Little Bros., grain elevator operators in Kalamazoo, Mich.

At a dinner given for Members of Congress Tuesday evening, March 10, by the Grain & Feed Dealers' National Association here in Washington, Mr. Force was the principal speaker discussing the role and the problems of the local elevator operator in modern agricultural operations.

Under permission to extend my remarks, I include Mr. Force's speech:

It is my belief that the grain and feed business, or the local elevator, is the most important business in any agricultural community. The country elevator offers to each farm community a very necessary service—a service that most farmers need. Our country elevators vary in size from the small operator with limited facilities in a restricted market doing a limited business to large warehouses with capacities of several million bushels. The larger country elevator organizations may have line elevators doing business over a wide area. They may also operate feed plants at one or more of their locations. The country elevator and feed business may vary from State to State, but basically many of our problems are similar.

These elevators purchase from their customers wheat, corn, grain, sorghums, oats, barley, soybeans, and flax. All of these grains have to be weighed, cleaned, graded and loaded in cars or trucks, and then paid for at the highest possible prices. Usually these same grains are sold on a basis of official weights and grades which may bring discounts and shortages. The country elevators often manufacture feed and retail fertilizers, feed, seed, and other farm supplies. They also extend credit to many customers, and with our new practice of integration, feed customers are financed by one of the following: manufacturers, bankers and country elevators. This plan necessitates a large amount of capital and credit along with a sound helpful service program to make their customers' farm operations more profitable.

Large feeders today are asking for a new service which feed and grain men refer to as the customer grain bank. Under this plan a feeder brings to the elevator feed grains and asks the elevator to store and let the feeder take delivery as needed for his feeding operations throughout the year. This plan enables the farmer to haul grain to the elevator during the slack season. Grain is hauled in large quantities and there is no risk on the part of the farmer of having grain deteriorate in farm storage. The elevator stores grain, grinds and mixes grain with supplements and delivers it to the customer as needed. In many instances the finished feed moves back to the farm in bulk trucks. In addition, they have all the problems and challenges that confront small business. Gentlemen, small business has some serious problems today.

In the Midwest, farmers expect their local grain elevator to also have modern grinding and mixing facilities. They expect to have the homegrown grains ground and mixed and scientifically blended with protein concentrates. The customer expects result feeds and feeding programs to produce milk, meat, and eggs at the lowest possible cost.

The country elevator must have trained people to meet the demands of their customers. Their organization must know and understand farm problems and be anxious to serve in this capacity. A good elevator man must have an agricultural education or experience equal to an agricultural county agent. Good country elevators have tremendous effect on the agricultural programs of a community. Such programs are largely responsible for the increase of agriculture income. Studies have shown that farm customers come to and depend on their country elevator for advice on when to sell their grain, feeding programs, rate of seeding, fertilizer applications, and grain storage problems on the farm. In many instances this information has come from the State agricultural college, but the farmer depends on the country elevator for his information. Because of this, there is a close relationship between State agricultural colleges and grain and feed dealers. Each realizes the importance of the other, realizing that in the end their close cooperation benefits the agriculture college, the country elevator, and the farmer. At our Michigan State University we have an elevator and farm supply course to train young men in this field. This school is now 12 years old and approximately 250 boys have graduated. Practically all of these boys are connected with the grain and feed business in Michigan and adjoining States. For an elevator to have the operation that I have described—it follows that our industry operates on a very narrow margin of profit. A net profit from 2 to 3 percent is average. This narrow margin is caused by very competitive conditions and high overhead.

Along with our usual problems of purchasing, selling, and maintaining equipment, the country elevator now has the problem of operating under changing agricultural conditions that have built up large surpluses of grain. Much of these surpluses have come under CCC ownership because of loan defaults on price-supported grain. The supply for corn, wheat, barley, soybeans, grain sorghums and other feed grains for the 1958–59 marketing year is about 11.6 billion bushels. This is about 1.5 billion bushels larger than for the preceding year and 3.5 billion bushels more than were available during the 1953–54 marketing year. Of these crops CCC owned outright in its inventory 74.3 percent of the carryover stocks. The 1958 carryover was about 3.2 billion bushels. The carryover for grain and oilseed carryover into 1959 marketing year will be approximately 4.4 billion bushels or 1.2 billion bushels more than in 1958. Because of these surpluses there is a continual need each year for more storage for price-supported grain. Farmers have depended upon their country elevator to store their grain or to find storage for them. Warehousemen met the tremendous demands for storage in 1958 by building 600 million bushels of new warehouse space. A release from the USDA on December 16 stated that the 1958 harvest was disrupted less by storage problems than in other recent years. This additional storage was constructed even though warehousemen know that:

1. Elevator storage is over expanded in many area for normal crop production and carryover.

2. Uniform grain storage rates have not increased since 1954 even though our costs have gone up.

3. Responsibility is greater under the stricter requirements of the Food and Drug Administration.

4. Guaranteed occupancy and the rapid writeoff 60 months tax amortization of grain storage facilities are no longer available. I might say that at a recent meeting of the directors of the Grain & Feed Dealers National Association and the State Grain Association officers there was no interest in legislation to renew the rapid writeoff provisions.

In September 1958 the commercial storage was approximately 6 billion bushels. An April 1958 Government estimate of farm storage (based on eight Midwestern States) was approximately 2.5 billion bushels. In addition CCC owns approximately 1 billion bushels of space. Will all of this storage space be needed? Will the increased commercial storage that has been built or is now being built cause storage to be left empty with unpaid mortgages? Already many people foreign to our industry are being attracted by the publicized need for storage.

Our free marketing system that so many men of my age have become accustomed to is being badly disrupted. I believe that I speak for most grain men when I say that this is a condition that is hard to become accustomed to. I do not feel that there is an elevator man in the country that hasn't resented the building of Government-bin sites in his market. The grain placed in these bins was the grain that the elevator formerly purchased from grain producers and was merchandized to realize the most profit to the farmer and the elevator. We are pleased that it was unnecessary for CCC to purchase additional Government-owned storage units during the last 2 years. We also believe that the policy of this administration and the previous administration to fill privately-owned storage before filling CCC storage is sound and in line with the wishes of the Congress. Every country warehouseman shudders when he things of the future with federally-owned binsites in his backyard, and when he healizes that CCC owns a total of nearly 1 billion bushels of grain-storage space. County and State officials also realize that they have no tax revenue future from CCC-owned binsites.

Our farmers, elevator men and terminal operators feel the need for free marketing in the handling of grain. Our accumulation of surpluses by our Government through price support provision of the agricultural program has stagnated grain markets. I feel that the actual accumulation and ownership of grains by the Government has made the Government a competitor of the grain merchandisers and the grain growers.

We do believe, however, that the Department of Agriculture personnel and Members of Congress are to be congratulated for the development and operation of the subsidy in kind export programs for wheat and coarse grains. Under these programs the export demand for all grains is reflected in the market-place. These programs have thus been of distinct pricewise benefit to grain producers. Under these programs the Government has effected sizable savings of Government funds. These programs have afforded all segments of the grain industry an opportunity to revitalize themselves. At country points and interior markets, grain merchandisers have, for the first time since 1946, had a chance to acquire grain for resale for export without fear of Government competition.

Under these programs—for the first time since World War II, coarse grain acquired at country points from private merchants have been sold at the interior markets for export shipment out of those markets. At markets tributary to the Gulf Waterway the competition for grains for resale to private exporters has brought about an increase in the market price received by producers.

Most all elevator men have experienced some difficulty with the regulations of the Food and Drug Administration. We all endorse programs to protect the health of consumers. Programs of grain sanitation should begin at the farm. The elevator operator should not have to be responsible for maintaining and enforcing the entire grain sanitation program. It has worked a severe hardship on country shippers because they do not have the time, the equipment or experience to carefully check every truckload of grain from a farmer. The elevator man is at the mercy of Food and Drug Administration under circumstances where he cannot protect himself.

Gentlemen, I have tried to give you some information and appreciation of how the country elevator serves agriculture. I have tried to tell you of their importance and what they do which makes them of this importance. Also the additional problems which have been imposed on the country elevator through governmental regulations.

## One Hundredth Anniversary of Brooklyn School

EXTENSION OF REMARKS
OF
## HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. ANFUSO. Mr. Speaker, not many private schools in the country can boast of an uninterrupted existence extending over a whole century. The Heffley & Browne Secretarial School in Brooklyn is now celebrating the 100th anniversary of its existence. The citizens of Brooklyn are very proud of this institution. On the occasion of this celebration, I have today forwarded the following letter of congratulations to Mr. George A. Klaum, the principal of the school:

MARCH 16, 1959.

Mr. GEORGE A. KLAUM,
*Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.*

DEAR MR. KLAUM: I note with a great deal of delight in your letter of March 9 that the Heffley & Browne Secretarial School is now celebrating the 100th anniversary of its existence and that it is the oldest school of its kind in the East.

You most certainly have much cause to be proud of this record of uninterrupted service to the community. Most noteworthy is also the fact that the school has graduated more than 100,000 students, many of whom are serving in important positions in the business world, in government, and in other fields of activity. This, in itself, is

an accomplishment which deserves to be recorded on the occasion of your anniversary.

May I take this opportunity to extend to you, your faculty, staff, students, and graduates my congratulations and sincerest wishes for success and continued accomplishments. We in Brooklyn are very proud of this institution, its past achievements, and its influence to the good in the future. May you continue to help raise and to inspire many more generations of young Brooklynites for the task ahead and for the responsibilities required of them by our community. As you enter the second century of existence, may you find the going easier and the rewards greater.

Sincerely yours,

VICTOR L. ANFUSO,
*Member of Congress.*

## High School Students Give Their Thoughts on Foreign Aid

EXTENSION OF REMARKS
OF
## HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. DENT. Mr. Speaker, in the very near future, the highly controversial subject of foreign aid will be before this House.

Of recent date, the President submitted his estimate of needs and his argument for the passage without reduction of the amount requested. I am bringing to the Congress today, an unrehearsed and unsolicited report by the students of Bell-Avon High School, Salina, Pa. I believe the reading of these statements made by high school students should be a required subject to all of the Members of this Congress. I feel it would be like a breath of fresh air coming into this Chamber because of the fresh and different approaches to the overall subject contained in the frank statements by these high school students. I for one am indebted to their teacher, Craig F. Culp, for sending this message to the Congress, and for his continued interest in the problems of democracy:

I do not approve of this foreign aid program. There are millions of people out of work and the money used for foreign aid could be used for all these Americans. The foreign aid money is increasing year after year and is becoming more uncontrollable each year. This is why I disapprove of foreign aid.

CHARLOTTE CONTO.

Our present $82 billion expense for foreign aid is far beyond my idea of what can safely be thrown away each year. It has been proven in many instances that this program is of little or no value for many countries willingly accept our money but still distrust us. Some of the countries use and need our aid and are also a boon to democracy. I have just read of your fight against the Government taking the bid of an English firm for the hydroelectric equipment. Even if that country did underbid our American firm we should support our American way of life.

NICK ALCORN.

In my opinion, I think that the United States is spending entirely too much money on the foreign aid program. I don't think that the foreign aid program should be stopped entirely but it should be cut down considerably. As long as there are unemployed people in the United States, I think we should help them instead of other countries.

CAROLE NOVOSEL.

I am not sold on this foreign aid policy. It appears to me that the nations receiving this aid don't want or appreciate it. As long as we help these nations, they won't have any ambition to help themselves and work for self-preservation. They rely on America for help. They feel that our country is only helping them because we want something in return. They don't understand that we just want to be friends with them. We in America are educated enough to realize that one cannot buy friendship. It must be earned. I think it's pretty obvious that our foreign aid program is doing more harm than good for all parties involved. Besides having a perverting effect on the countries receiving, it is disadvantageous for us. The foreign imports are crowding our American-made goods from our markets. Instead of buying foreign imports, we should build up our own industries, thus providing work for the unemployed. Education is more essential now than ever before. Nevertheless, many schools are crowded and in some areas, due to existing conditions, the students go to school in shifts. Many teachers are underpaid. Why doesn't our Government start a home aid program and help those who need and would appreciate help.

DAISY MAE COPNEY.

I heartily agree that the huge amount of revenue being spent should be reduced. Many of the foreign countries which receive our aid don't want it. They feel that we want something in return. Instead of pushing our money on them I think we should utilize it where it will do the most good.

EVELYN TRINCLISTI.

I think rather than spend billions of dollars on foreign aid, it would be better to work out some program for the unemployed Americans. I feel that there should be a fund for countries that really need help but there should be some understanding that this is to be paid back after they are on their feet again. In this way they would have more respect for the United States. In my opinion no one has very much respect for someone who is always giving them things for nothing. They will come back for more and walk all over the person who is giving it to them. It is the same way with nations.

BERTHA JEAN KRALIK.

I believe that our foreign aid program has gotten out of hand. The funds that we have sent and are sending in most cases are not even appreciated. What about the poor people of our country that need help? Should we forget about them?

KENNETH DEMYAN.

In my opinion I think we ought to put a stop to this business of foreign countries sending their products over to our country to be sold because right here in our own country we have many people who are out of work. In my opinion I think they ought to try to work out a system to get all men and women back to work and try cutting down on this business of spending money for aid for the foreign countries.

MIKE ORVOSH.

The foreign aid program has many advantages and disadvantages. It has made our countries more closely related in some ways, but countries depend too much on us as if we were their mother country. During the fiscal year which ended on June 30, 1954, the United States furnished Western Europe with approximately $2 billion worth of military equipment. In the future will this be used for us or against us?

FRANK MARCHITELLI.

In regard to the foreign aid program, I believe that it should be carried on to a certain extent. I mean to better our foreign relations with other countries, but we should not spend billions and billions of dollars on them. Today many girls and boys getting out of school cannot get jobs, not because they are lazy but because there are no jobs to find. So, I think that the United States should think about its own people first and other countries second. I also think that if the United States helps a country too much, this country will not try to help itself to get back on its feet. We should help other countries, but not with billions and billions of American dollars.

EDWARD G. SEBEN.

I think the foreign aid program is a very good idea. It permits us to help other nations when they need aid and lend money to them when their government does not have sufficient funds on hand to aid their people.

The foreign aid program is a very good step toward having a better relationship with other countries and promoting peace and contentment among nations of the world.

ELEANOR MEAKO.

Instead of using all the money for the people of other countries, I think the Government should use it for the people of the United States.

There are over 4 million people in this country who are unemployed. Some of these funds could be used to make it easier for the unemployed person to keep his family and pay his bills. This money could also be used for more recreation centers, more summer camps for the young people of this country, and for medical research.

CATHY PRUGH.

I don't think that we should aid the foreign countries. There are people in the United States who are unemployed and need help just as badly as the people do in Europe.

The United States should help foreign countries to a certain extent, but I think the United States worries too much about foreign countries and too little about her own people in this country.

WATSON MALOY.

I know that one reason for foreign aid is that we need to keep the other countries as friends but surely we can remain friendly without having to give them money and other aid all the time. Is it not possible that some of this money could be kept here in our country to help reduce the amount of our own national debt, or to help the many jobless people and improve some of the miserable conditions which we have in many parts of the country?

It is hard to believe that our Government cannot see that it is hurting itself more than helping by giving away such large amounts of money which are so desperately needed here in our own country. I do sincerely hope that it will soon begin to realize how much better off we would be if a lot more of this money were kept here at home. However, I do think it is a good idea to continue being friends with other countries if in some way a war should break

out we could depend on these countries to help us.

ALTA MATTHEWS.

I think the foreign aid program is a good idea, but don't you think in some cases we are going to extremes? I think we are sending them too much money. If we keep sending them as much money as we have been we may find ourselves in need of help. On the other hand though they may help us. That is a chance we have to take.

We are even bringing foreigners into this country and giving them jobs. I think that our men should be found jobs first because after all most of them are citizens of the United States.

DONNA CHRISTY.

The United States should help foreign countries to a certain extent. But sometimes they overdo it. They should think about our own country which is in a recession now.

MARY ANN ZAGOZAN.

In regard to our foreign aid policy, I feel that it is a little out of hand. At least part of the large amount of money sent overseas could be used for better schools in this country. I really do believe in helping out other people and other countries, but I am just wondering if they aren't depending on us just a little too much.

LOUISE PERFETTA.

Foreign aid is used to strengthen mutual security and individual and collective defenses to the free world. In my opinion, foreign aid is a very good thing to help the needy people in other countries. It will give the countries a more friendly feeling toward the United States. If we receive a friendly response from the countries receiving our aid, the United States will know that they are doing a good job.

I think that the United States is doing a very big and wonderful job with foreign aid and I think is should be continued.

THERESA MARKUZIC.

In a time when communism is trying to overrun free people, we need all the allies we can get. If sending foreign aid to these countries will keep them our allies, I am all for the program. Cutting our foreign aid spending may deprive many people in foreign countries of the bare necessities of life. I believe we must do something about the millions of Americans out of work, but not at the expense of our foreign aid program.

I feel that if we helped these countries now when they need it, we would be sure of help from them when and if we needed it. Also, I feel our help to them will avoid wars.

BEVERLY DIBLER.

I think that the foreign aid program should be cut down or discontinued for the present time. One reason of course is the amount of unemployment in our own country. I think that it is right to help a counry get back on its feet, but I do not see why the United States has to support it for the rest of its life.

There are many disasters in the United States such as floods, tornadoes, and other disasters. I think some of the money should be used for our own aid, instead of foreign aid.

RICHARD BOTTEGAL.

Foreign aid is all right just as long as it is used correctly and with understanding. Hand across the sea is all right, but my opinion is that if it keeps increasing it is going to cost America more than just money.

JOHN LAYNE.

I think that instead of sending millions of dollars to foreign countries, that it could be used in America for bigger and better school systems. America is a strong country, so let's keep it that way.

RAY MYERS.

From a humane standpoint, I think it is the duty of a wealthy country to help poor ones. Foreign aid makes possible military installations in strategic areas. It is difficult for communism to gain a foothold in countries where our aid provides food and clothing. However, I think too much money is being doled. It would be more effective and sincere to aid them through know-how and guidance. There are only 150 men and women selected for the U.S. Foreign Service. Since there is evidence that these people are doing an excellent job, why not train hundreds more?

Even needy people are suspicious of large gifts of money, but people trust someone who listens to their problems and then works with them to find solutions.

Therefore, I think we should send many more experts in agriculture, industry, and finance to foreign countries.

DOROTHY GLASS.

The foreign aid program got out of control because it went hog wild on lending. Just help the countries that really need it. Foreign aid should come after our own citizens are taken care of. America should come first with Americans.

JAMES CASSA.

The more aid we give to foreign countries, the more taxes will increase here in America. The supply of money aiding foreign countries could be used to make our mines safer, to prevent floods, and schools could be improved.

Regarding the foreign imports of glass, steel, oil, and aluminum products—and the many products that are crowding our American-made goods from our market places, I feel certain that we should cut down on purchasing a lot of products which put many of our people out of work.

SHIRLEY SCHALL.

I am not much in favor of giving money to foreign countries, much of which is obligation free, when we have so many unemployed here in our own country. But I am in favor of sending technicians and teachers into different countries to teach their people how to save for themselves. If the country needed money to get a start I would lend it to them on the condition that they pay it back when they are able to stand on their own two feet.

Recently I heard a report on where our foreign aid money was going and I discovered that only a small part of it was being sent to our South American brothers. In my opinion I think we should first give the top priority on foreign aid to them. Again I would give this aid in the form of trained technicians, teachers, and loans if needed, to help the country establish itself. The Communists are probably trying very hard to get a toehold on the American Continent, and since South America would be their best bet I think we, as a brother nation, should give all possible aid and assistance to these south-of-the-border countries so as to establish good relations with them.

STEPHEN KAPUSTA.

I would like to know if the foreign aid bill could be revised? Billions of dollars are spent each year for this aid.

If communistic countries can sway them just by talking, why can't we? There is not any doubt that these countries do need the aid but so do some of the people in the United States. Thousands of seniors will be graduated this June with no future and no employment. Surely the Government could devise some plan that would reduce our payment so that we could spend the money to build more plants to produce more employment.

CAROL ZARANEK.

The foreign aid program has not worked out at all according to plan. The reason used for giving so much money to foreign countries is that we want to remain on a friendly relations basis. Instead of putting friendly ideas into their heads, we put doubt. It is already known that after money is given to these countries, they want to know what we want for it. The prosperity of our own country should be taken into consideration first. Friendly relations should be obtained in another way and by other means.

CAROL PATTERSON.

Foreign aid in itself, strengthens the standing of the United States with other countries, but why give aid to those who don't want or appreciate it? Later on they may use the strength we are giving them against us. I think aid should be given to those who need it. We just wouldn't be Americans if we left others suffer. However, aid at home definitely comes before foreign aid.

BERNARD WALTERS.

I do not approve of the foreign-aid program that is now in practice. I think that money should be sent to other countries if we have already taken care of the people in our own country. At present there are many slum districts and many undesirable places in the United States that could be fixed up if some of the money that is being used to further other countries was being used to further places here in our own country. While the Government is giving away billions of dollars to other countries, the people in our own country are suffering for it.

I think this country should try and secure friendly relations with other countries, but not try to buy their friendship, because in trying to secure friendly relations through money we very possibly may be making enemies instead of friends.

RALPH K. CULP.

I am not in favor of the foreign-aid plan. I think there should be more money given to the needy in our own country. If more of the money is used for commercial use in this country the people wouldn't be telling stories of how the Government is spending the money carelessly. If more money were given to our industries there would be more work for the people in the United States.

I think the foreign aid program should be slowed down a lot and there should be more peace making by talk and not by money.

RONALD FRASSENEI.

I think the United States is spending entirely too much money on foreign aid. Some of the money should be used right here in our own country to help the many millions of people who are unemployed. Many people in the United States are in distress and need food and clothing just as bad as the people in other countries that the United States is helping.

CATHY DORMA.

Foreign aid has done some good in the past. The foreign aid program is a big problem for if the United States doesn't give aid, the other countries don't think much of us, and if we do give aid some countries don't appreciate it. Therefore, I think that the larger portion of the foreign aid should be given to those nations that appreciate it.

NORMAN BORTZ.

I believe that we should keep up the foreign aid because if we drop it, and the

other countries want any materials, they will go to Russia or some other nation for it. Then if we should happen to get into war we wouldn't have any allies.

As for our unemployment situation I think we should quit bringing in so many foreign people and leave the ones that are already in the United States have the jobs.

MARVYL HEIMBERGER.

## Attack on the FBI—VIII

EXTENSION OF REMARKS
OF
## HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the eighth and final article in the series by Pulitzer prize winning reporter, Edward J. Mowery. This series deals with the campaign to discredit the Federal Bureau of Investigation. The final installment appeared in the Newark Star-Ledger of February 9, 1959:

FBI FOES YELL LOUDEST WHEN REDS ARE PUT ON THE SPOT

(By Edward J. Mowery)

WASHINGTON.—In 1950, a gang of hoodlums wearing garish rubber masks executed the notorious Brink's robbery in Boston, carting away $2,775,000 in loot.

On January 12, 1956 (nearly 6 years later), the Federal Bureau of Investigation nabbed six of the thugs who were convicted.

On a bitter November day in 1955, an airliner exploded over Longmont, Colo., and 44 persons lost their lives. Using its vast scientific and investigative machinery, the FBI unerringly traced the criminal act to John Gilbert Graham, whose mother was among the victims.

In 1956, the Nation was appalled at the brutal abduction of 1-month-old Peter Weinberger from his New York home. After sifting nearly 2 million handwriting specimens, the FBI identified the writer of 2 ransom notes.

And in 1957, the Federal agency crushed the sinister Russian espionage apparatus of "Master Spy" Rudolph Abel, seizing vast amounts of elaborate electronic equipment including coded microdot messages that had been funneled to Moscow.

No cries of "secret police" tactics, "Gestapo" or "incipient fascism" were heard from Communists and their stooges when the FBI solved these cases to protect Americans.

But when the FBI corners subversives or spotlights the activities of (600-plus) Communist fronts, the "liberals" wail and launch a crusade to get both the Bureau and J. Edgar Hoover. This, they say, is "thought control."

What is the function of the FBI? How successful is it?

The agency's jurisdiction covers more than 150 Federal investigative matters ranging from kidnaping to crimes on Indian reservations. One of its primary responsibilities is protecting internal security.

With a total special agent personnel of 6,068, it staffs 53 field offices from Hawaii to Alaska and in the past 3 (fiscal) years has logged 33,632 convictions.

In 1958 alone, the FBI received 84,768 "matters" relating to the internal security of the United States for investigations. They involved individuals, organizations, Red infiltration and plots to overthrow the Government.

Of this total investigations involved 348 specific espionage cases.

The cardinal precepts of the FBI's operation include these A B C's:

The highest standards of personal and professional conduct. Prompt and complete handling of assignments with absolute impartiality; no deviation from full protection of individual rights and privileges, and equal diligence in establishing innocence as in the identification and apprehension of violators.

The effectiveness of the FBI's ethical and procedural standards, its supporters say, is demonstrated in its overall achievement record: 93 percent of those convicted pleaded guilty.

Among the hoodlums bagged by the FBI in the postwar era were Elmer "Trigger" Burke ("killing is my business"), Gabriel Vigorita (the car-thief baron), Joe Levy and Dave Goldreyer (master con men), Clyde Johnson and Gerhard Puff (bank robbers), Nick Montos (escape artist), etc.

In the field of domestic intelligence, an FBI official explained that arrests and convictions alone offer no barometer as to the Bureau's effectiveness.

"Security operations are primarily preventive in nature," he said, "and intelligence (or counterintelligence) information often precipitates diplomatic protests, visa cancellations, denials of access to classified data and other types of nonprosecutive action.

"Soviet espionage operations in the United States have suffered tremendous setbacks in the recent past. For example, since the conviction of the Rosenbergs in 1951, FBI investigations have resulted in: The 1953 arrest of Otto Verber and Kurt Ponger, naturalized American citizens who doubled as U.S.S.R. spies in Austria; the smashing (in 1957) of the apparatus directed by Jack Soble, Myra Soble, and Jacob Albam, and the capture of Col. Rudolph Abel, also in 1957.

"In addition, a number of persons have been indicted and convicted, and others have left the country to avoid prosecution as a result of Soviet intelligence thrusts against the United States. It's all interesting to note that information gathered by the FBI has resulted in numerous Soviet and satellite diplomats being declared persona non grata."

One area in the FBI's war on subversives has been marked by frustration.

Of 109 Communist Party leaders arrested and convicted under the Smith Act upon documented evidence gathered by the FBI, 76 have won reversals because of Supreme Court rulings. (Conviction under the act involved conspiracy to teach and advocate the violent overthrow of the U.S. Government.)

In other security-type cases, FBI charges have stuck. In (fiscal) 1958 false filing of non-Communist affidavits led to 12 convictions and other convictions resulted for failure to admit membership in subversive organizations (on Government security questionnaires) and for perjury.

In the field of kidnaping—one of the Bureau's most active areas—of 570 kidnapings handled by the FBI since passage of the so-called Lindbergh law in 1932, only two major cases remain unsolved.

The two exceptions—they're still "open"—were the 1936 abduction of Charles Mattson, and the 1938 kidnaping of Peter Levine. Both youngsters were subsequently found dead. Thousands of suspects have been eliminated to date.

In the area of cooperative services to municipal, county and State law enforcement agencies, the FBI had tabulated millions of assists.

The FBI made full facilities of its laboratory and identification unit available to local law enforcement agencies in connection with the recent wave of bombings of religious and educational institutions. The Bureau also made arrangements to handle out-of-State leads on the outrages and 176 FBI-sponsored special conferences were held in November and December throughout the United States, Hawaii and Puerto Rico.

The conferences were attended by 8,112 law enforcement officers representing 3,687 agencies.

Vast amounts of information concerning local law violations are channeled by the FBI to local authorities. If joint jurisdiction is involved and prosecution looms in a State court, FBI evidence is turned over to local (or State) officials.

In (fiscal) 1958, information from FBI confidential informants relating to other jurisdictions resulted in 1,695 arrests and recovery of $911,508 in stolen and contraband valuables by other agencies.

In FBI cases, informants' disclosures led to 1,478 arrests and $890,000 in recoveries.

Here are some of the other free cooperative services supplied by the FBI in (fiscal) 1958 to local and State enforcement agencies:

FBI Laboratory: Received 34,018 requests for examinations involving 137,142 specimens and requiring 165,462 examinations. (FBI technicians are available to give expert testimony in local courts.)

Fingerprints: An average of 20,000 prints were received daily for processing. The files contain 150,900,000 sets (33,400,000 in the criminal section.)

Fugitives: "Stop notices" placed against the fingerprint records of those sought by other authorities and FBI information on their whereabouts is immediately sent to the interested authorities. An average of 1,300 fugitives monthly is identified by FBI technicians.

FBI National Academy: Since its founding by J. Edgar Hoover in 1935, 3,636 career enforcement officers (local, Federal, and State) have been trained free, 184 completing the course in 1958. Representatives of Scotland Yard and the Royal Canadian Mounted have also taken the course. Special agents qualified as police instructors participated in 2,724 regional and local police training programs in 1958.

As to the FBI's responsibilities and its dedication in protecting Americans, the Bureau spokesman declared:

"If the FBI could single out one objective it would go like this: 'Find the truth, and with strong practicality * * * get the job done.'

It is the FBI's sworn duty to protect with all its facilities and strength the internal security of this Nation. And the fight against subversion and betrayal from within is a relentless struggle.

"Last year (1957) the Bureau received more than 1,180,000 requests for security-type information concerning individuals and organizations from agencies in the executive branch.

"The Bureau's responsibility in enforcing the laws is a sacred trust. No pressure campaigns, no crusades, no amount of invective will have the slightest effect on the FBI's determination to do its job."

## The Face of Poverty

EXTENSION OF REMARKS
OF
## HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 2, 1959*

Mrs. GREEN of Oregon. Mr. Speaker, Miss Eve Edstrom, one of the distinguished reporters on the staff of the Washington Post, has written a series

of articles about the hungry children of the District of Columbia. These articles are now appearing in the Post. They are not pleasant reading. In a dramatic way, they highlight the unbelievable spectacle of utter poverty in the midst of plenty, in a city which ought to be an example of what free governments can accomplish. Mr. Speaker, I ask that these articles be printed in the Appendix of the RECORD together with just one further question of mine. Mr. Speaker, in a time of massive agricultural surpluses, in a time of social awareness, in the capitol city of freemen, how can these things happen?

[From the Washington Post, Mar. 15, 1959]

FACE OF POVERTY BEHIND WASHINGTON FACADE

(By Eve Edstrom)

The District's face of poverty—once hidden behind the doors of the poorhouse—now is submerged in the open city because no one will look at it.

It is a stranger even to those who see it daily.

A teacher complains about the constant tardiness of a child. But no one mentions that the child's home has no clock.

A social worker counsels a mother on how to market wisely. But no one mentions that the mother's home has no icebox.

A child care worker deplores the toilet habits of a youngster. But no one mentions that the child's home has no workable lavatory.

UNKNOWN NICETIES

A clock, a refrigerator, and a lavatory are all elementary necessities in this affluent society of ours. Yet they still are unknown luxuries to scores of this city's impoverished families.

In this day of two cars in every garage in suburbia, the meaning of a chicken in every pot is not yet known to many a child of the slums.

City welfare workers, for example, tell the following story to illustrate one of the reasons why the saying of grace was begun at Junior Village, the District's home for homeless children.

"It was to give the children time to pause—before grabbing for bread for fear there would not be enough to go around. These are children who never have known the meaning of having had enough."

ONE IN SIX FAMILIES

To most Washington area residents, the poor are just a statistic—and one which can be ignored, at that.

When 22 percent of the families in the metropolitan area make incomes of $10,000 or more, it is easy to overlook the 7 percent who have $3,000 or less to spend.

It is particularly easy to forget them because five out of every six impoverished families in the area live within the confines of the District.

Almost singlehandedly, the District must assume the burden of poverty for the entire metropolitan area. Therefore the 7 percent becomes 15 percent if viewed against the District's population alone.

Washington's impoverished families, a Board of Trade study shows, total 31,500, or almost 1 out of every 6 families living in the Nation's Capital.

DISGRACEFUL SURVIVAL

As is pointed out by John Kenneth Galbraith in his book "The Affluent Society," the existence of poverty is not remarkable in India but it is remarkable that it has survived in the United States.

"We ignore it because we share with all societies at all times the capacity for not seeing what we do not wish to see," he writes. "* * * But while our failure to notice can be explained, it cannot be excused. 'Poverty,' Pitt exclaimed, 'is no disgrace, but it is damned annoying.' In the contemporary United States, it is not annoying but it is a disgrace."

Living in poverty amid plenty is much more than a statistic.

It is not just the 1,522 families who were evicted here in 1958. It is the 8-year-old boy who went home during the noon school recess to find his bed, his meager clothes, and his few playthings set out on the street—and no parent at home to tell him where he would live next. Our children don't live from day to day, says a school principal; they live from minute to minute.

It is not just the 6,000 families who have waited—waited as long as 10 years in some cases—to move from their overcrowded hovels into public housing. It is the 13-year-old girl who, in desperation, asked police to please find her a home because she was tired of living with 17 persons—her mother, 8 brothers, and sisters, grandmother, mother's friend, 3 aunts, 1 of their children and 2 roomers—in a house unfit for any human.

It is not just the 10,000 to 12,000 families whose gas gets cut off annually. It is the infant crying for milk and the mother with no place to warm it.

It is not just the city's 50,000 drunks. It is the two teenage boys who went home from their afterschool jobs to find that their father had pawned all the family's scant belongings so he could join the winos on the corner.

It is not just the 5,000 who receive food and clothes handouts from the Salvation Army each year. It is the two children who arrived to be outfitted with shoes, coats, shirts, and trousers so they could attend their father's funeral.

It is not just the 44,434 who receive surplus food here. It is the stooped lady who ripped the nondescript covering from her food package, placed the contents in two store-marked shopping bags and said: "I like to have people think I've been shopping."

It is not just the 22,900 unemployed here. It is the father of nine pleading for a $1.10-an-hour porter's job, who doesn't ask whether there is sick leave or vacation benefits but merely: "Can I count on it, will it be steady?"

FILING CABINET FODDER

"We find it nauseating that these families exist," said Elizabeth H. Ross, former deputy chief of the Federal Children's Bureau. "This is because we truly believe that anyone who wants to can get ahead in our society."

But for a variety of reasons, Washington's impoverished families cannot get along. They are handicapped by mental and physical deficiencies, excessive procreation, alcohol, insufficient education, lack of any skills.

Such families usually are referred to as multiproblem families. But as Mrs. Ross points out, they also could be referred to as multiagency families. Every agency has a piece of them, but they are just so many papers in so many case records in so many filing cabinets all over town.

One hospital record, for example, shows that a mother is getting help with her health problem from a visiting nurse. But visiting nurse records show that they bowed out of the case last July.

One record shows that a child is progressing satisfactorily in the fifth grade. Another shows that the same child is in an atypical class doing second grade work.

One worker records that children should be removed from a mother's care. Another worker in a related agency seeks to help the mother keep her children.

These things happen because agency workers throughout the city are responsible for almost double the number of families that they reasonably can be expected to serve. At best, they can give emergency service to meet the crisis of the moment.

"We are so busy putting plasters on cuts that we never have time to see who has been cut," said one welfare worker. "We treat these cases as emergency cases for decades and then it is emergency treatment with no diagnosis."

LONGTIME RESIDENTS

Contrary to a widespread belief, these families have not migrated here in the last few years. Many of them came here from the South a decade or two ago and have remained long enough to produce the hungry children of today's Washington school system.

This is indicated by a new study of those on relief here. Although relief families make up only about one-third of those living in poverty here, the study makes it possible to answer partially the question of where the city's poor came from and when they got here.

Washington, it appears, can thank South Carolina, North Carolina, Virginia, and Maryland for being fountainheads of the District's citizens on relief.

These four States turn up most frequently as the birthplaces of those on relief who are not native born. This is true whether one looks at the relief rolls of the aged, the disabled, the blind, or mothers with dependent children.

Mothers and their dependent children make up the largest relief category here. And the study shows that of 2,911 mothers receiving the District's public aid, 34 percent were born in Washington and 66 percent were born elsewhere.

The State which is the source of the largest number of mothers—531—is South Caroline. North Carolina, with 467 of her natives on District rolls, is right behind. And Washington's neighbors, Virginia with 405 and Maryland with 193, rank next.

WARTIME AVALANCHE

The migration began in the depression years, with 21.5 percent of the total coming here in the 1930's, and was accelerated in World War II. About 40 percent arrived in 1940–50 with 25 percent coming between 1940 and 1945.

Since 1950, 27.6 percent have arrived. The record high was 5.1 percent in 1952 while the low of 0.7 was recorded in 1957.

With rural background and limited educational attainments, the bulk of these people are ill prepared for urban living. They remain here because, in the words of a Salvation Army worker, they have "nothing to go back to."

Now they have produced a phenomenal number of children for the District. But Washington has yet to take its first realistic step toward preventing their children from becoming as dependent as they are.

Probably more is know statistically about the families on relief than about any other group of Washington's impoverished families. Yet the man who administers the District's relief program, Bernard W. Scholz, is the first to admit that the District doesn't know as much as it should about these families because his workers are so preoccupied with the minutiae of checking eligibility requirements.

"We know we aid a mother and seven children but we don't know if she has seven dishes, seven plates, or seven sheets," he said. "We don't even know if she has the mental ability to know the difference between a quarter and a nickel.

"We have got to stop talking long enough to look at those we are trying to help. What is the good of talking about family responsibility if it concerns those who still do not have the concept of the family? What is the good of talking about meal planning if it concerns those who still have

no concept of mealtime, who still grab a handful from the communal stewpot, as it were?

"Until we know our impoverished families, we will make no progress against poverty."

Monday: District taxpayers, meet Ginny, one of your burdens, and find out why her children will be just like she is.

---

A CASE HISTORY OF WANT AND FAILURE: STOPGAP AID FOR A DESPERATE FAMILY

[From the Washington Post, Mar. 16, 1959]

(By Eve Edstrom)

District taxpayers don't know Ginny but they have spent thousands of dollars on her.

Yet in more than a decade of service to her not one cent has been spent to prevent her children from becoming just like Ginny.

Ginny and her family represent the most corroded of the District's 31,000 impoverished families.

Like so many of them she comes from a rural Southern community. She is mentally limited. She also has been a diabetic all her life.

She constantly goes into diabetic comas and the children call an ambulance to take her to the hospital.

Sometimes Ginny goes out on a stretcher in the morning and is back by afternoon. Other times she spends several days at the hospital. Since mid-December she has been hospitalized three times.

Most of Ginny's diabetic comas are caused by her failure to eat properly.

Quite incongruously, hospital officials have counseled her on how to eat properly while she was dependent on Women's Bureau handouts and neighbors' scraps. She had no icebox to store food in her rat-infested quarters.

Each time Ginny goes to the hospital her four children, led by the oldest girl, now 13, arrive at the Women's Bureau and ask to be transported to Junior Village, the iDstrict's home for homeless children. The oldest girl has been doing this since she was old enough to cross the street.

If Ginny returns home before the children are transported the 13-year-old cries because she wants to go to the Village.

"She has outgrown her mother," the child's case record states. "She likes the experience of all the utilities at Junior Village."

HOME IN A HOVEL

Until recently this family lived in a dark, filthy room infested with roaches and rats. The lavatory in the building didn't work. washing facilities were limited and wood was used for cooking. The family didn't even have bed linen, let alone such "modern conveniences" as a clock or a radio.

Although the children lived next door to a school they seldom got up in time to get there—unless teachers and sometimes the principal arrived to dress them and bring them to school.

"In cold weather you would find them all huddled in the same bed trying to keep warm," the principal said. "It is difficult to tell whether their retardation is caused by limited ability or by their many absences from school."

Neighbors tried to make life more pleasant for the 13-year-old by inviting her to listen to the radio or watch television. But Ginny refused to permit her to do so because she wanted the child to "do the housework and care for the children."

BARRED FROM RELIEF

Although sporadic efforts were made to help the family move, Ginny wanted to remain in her hovel "because of the food neighbors gave her."

She repeatedly applied for relief and hospital officials constantly asked if welfare officials were aware of her health needs.

"While we understand she is ill and the children not properly cared for we do have to be clear about her situation and relationship with Mr. D," a relief worker wrote.

In the District relief is not granted if an able-bodied man is in the home. And Mr. D, native of Spotsylvania County, Va., is the father of Ginny's children.

Mr. D's notion of parental responosibility can be summed up by this story:

When a caseworker discussed with Mr. D his plans for marrying Ginny, he said he had not because there was more involved in marriage than "just marriage," that he would draw a year in jail for not supporting his children if he were married but probably would get only a couple of months if not married. After the children were grown he might marry Ginny, he said.

A MEAL AT A TIME

Ginny's association with Mr. D finally was severed and she was granted relief. But she couldn't seem to manage her grant.

It wasn't until last year that a welfare worker recognized the necessity for Ginny to have a refrigerator so she could plan her food purchases. One was obtained and Ginny found it helpful because she could now purchase enough food for more than one meal.

Long before the refrigerator arrived, however, Ginny's oldest daughter rebelled against her squalid home conditions.

Her aim, she often said, was to become 12 so she could run away from home—and she has, several times. On one occasion she arrived at a city hospital and asked to be placed in a home.

Finally this child and her 10-year-old sister refused to leave Junior Village and return home to their mother following her last hospitalization. The two children, in effect, forced welfare officials to decide whether they should be committed as dependents.

For the first time, some permanent placement plan has been considered for these youngsters whose family situation has been handled on an emergency basis for more than a decade.

This is how Washington progresses against poverty.

THE FACES OF THE POOR

The poorhouse now has left the land;
That symbol of defeat
No longer mocks and shames the few
Who haven't much to eat.
The poor farm visits its reproach
No more on human pride,
Nor lifts to folly monuments
Across the countryside.

Rejoice that such ignoble sights
No more offend the mind;
But not so much that you forget
The poor still left behind.
To tear the poorhouse down is fine,
But mankind still is heir
To faults and ills and sundry woes
That once were tenants there.

The "Ghettoes" where such miseries
Unhappy wretches battered
Have not in utter vanquished fled,
But mostly have been scattered.
The poor are better hidden now;
We've not achieved a cure
For circumstances fell that grind
The faces of the poor.

—J. R. W.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

---

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

---

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

---

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

---

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

## George Washington Parke Custis, Orator of Young Ireland

EXTENSION OF REMARKS
OF
## HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. FOGARTY. Mr. Speaker, there has been established in recent years an annual custom of paying tribute to the step-grandson of George Washington at the Custis-Lee Mansion in Arlington Cemetery each year on the Sunday preceding the feast of St. Patrick. George Washington Parke Custis was for more than 40 years a militant voice crying out against the wrongs inflicted upon the Irish people and urged the Irish to follow the example of the American Revolution, if need be, to right those wrongs. On Sunday, March 15, 1959, the third annual pilgrimage was made to the grave of Mr. Custis, and in keeping with an oft-repeated request made by him, shamrocks were planted on his grave. Mr. Custis prophesied that the day would come, when Ireland would be free, and he asked that in that day some Irish heart would come and, dropping a shamrock on his grave, cry "God bless him."

Ireland is not yet fully free, but at least a portion of the country can attest to the truth of the prophecy. So yesterday from northern Virginia came the George Washington Chapter of the Friendly Sons of St. Patrick, who with Mr. Paul C. Swartz of the National Capital Parks Service annually make the arrangements, to place their shamrocks. The Ancient Order of Hibernians, the District of Columbia chapter of the Friendly Sons, the Irish War Veterans, and others participated.

The president of the Emerald Isle Division of the Ancient Order of Hibernians, and a former Member of the House, gave the principal address on this occasion. With your permission, Mr. Speaker, and under the unanimous consent of my colleagues, I include the remarks of Hon. John M. Costello, of California, in the Appendix of the RECORD:

GEORGE WASHINGTON PARKE CUSTIS, ORATOR OF YOUNG IRELAND

(Address by John M. Costello, president Emerald Isle Division, Ancient Order of Hibernians, Custis-Lee Mansion, Arlington Cemetery, March 15, 1959)

I would that we might hear the voice of George Washington Parke Custis as he stood here on the threshold of this stately residence and gave sound to the noble sentiments, with which his mind and heart were filled.

That voice is silent now, for more than a hundred years, and we have no wire recordings or mechanical devices to revive or reproduce his dulcet notes and vigorous tones, which made his oratory so outstanding. We can only turn to the published records which are available to us in an effort to regain something of the depth of his patriotism, the breadth of his loyalty, and the overflowing fullness of his burning hatred of intolerance and persecution. His speeches, poems, and writings all contain a wealth of information concerning the events of his time and particularly concerning the Irish, both individually and collectively, and the parts they played in the formative years of our country.

Who is this man whom we come to honor this day?

Who was this man, who commands our attention and causes us to lay aside other cares and other tasks, that we may pause and pay him homage each succeeding year as we prepare to celebrate the Irish national holiday, St. Patrick's Day?

In 1757, the husband of Martha Dandridge Custis passed away leaving his young widow with two small children. The following year George Washington, upon his marriage to Mrs. Custis, adopted the children, John and Martha Custis, as his own and thus he reared them. It was this John Custis (who purchased this estate from two of the Alexander brothers, who had inherited the land from their father, Gerard Alexander. The latter's grandfather had purchased the property, initially a tract of 6,000 acres, from Capt. Robert Howsing, to whom it had been granted by Governor Berkeley, of Virginia, in 1669.

Upon attaining his manhood, John Custis was married to Eleanor Calvert, granddaughter of the Sixth Lord of Baltimore. John Custis desired this magnificent estate, as it would provide a home close to that of his mother at Mount Vernon, as well as being within easy distance of Mount Airy, where his wife's family resided. Unfortunately John Custis died prematurely, leaving a daughter, Eleanor Parke Custis, who was born on this estate in 1779, and an infant son, George Washington Parke Custis, born on April 30, 1781, the year in which his father died.

Once more George and Martha Washington took two young children to raise at Mount Vernon, and it was there that George Washington Parke Custis grew into manhood. It was at Mount Vernon that he had occasion to meet the national figures of that day and to witness the passing events of history. Through this experience he acquired a fund of knowledge which fills his speeches with countless anecdotes and intimate details of the great events of his day. It was in this atmosphere that he undoubtedly developed his intense patriotic fervor, his devotion to the principles of freedom and justice, as well as his profound detestation of any violation of the individual rights and liberties of man, and more particularly his strong opposition to the subjection of the Irish people to the vicious cruelties and outrageous persecutions being inflicted upon them by the English overlords during this wretched phase of Irish history.

This is the man whom we come to honor here this day.

George Washington Parke Custis was the principal speaker on no less than 27 occasions for St. Patrick's Day celebrations. He constantly deplored the evils of absentee landlords in Ireland, the religious persecutions being inflicted upon the Irish, the horrors of famine in the land, when food from Ireland's soil was being shipped out of the country. He urged the Irish to seek the one means whereby their problem might be solved and their ultimate freedom secured.

"Let Ireland take warning from the history of America's days of trial. Let Ireland cease to bend at the footstool of power, with her honor, her dignity, and her manhood trailing in the dust."

Yes, Mr. Custis urged the Irish to rise in arms, for only in arms could they command the English to yield them back their freedoms and their rights. He knew well that he would not be privileged to see a free and independent Ireland, but he never ceased to urge the example of the American Revolution as a pattern for the Irish. So it has proven in the century that has passed. Only as a result of the constant rising up of valiant Irish revolutionaries, has Ireland won first one right and then another. Not until the Easter rebellion of 1916 was a republic proclaimed in Ireland, proclaimed to the music of firing guns and rifle shots. Mr. Custis had learned well from the lips of Washington himself, that the only redress, which America could obtain from England, was by the use of arms, and it was this sage counsel he urged and insisted the Irish should employ.

Mr. Custis would have delighted to have seen this day, when at least a part of Ireland has gained its freedom. Yet I am sure that he would not be satisfied, realizing that a part of that great isle is still subjected to the oppression and outside rule of the English. Rather would he repeat the words he spoke on March 14, 1829:

"We would, and our humble efforts are directed to that end, that (northeastern) Ireland become regenerate and free in the enjoyments of civil and religious liberty, by means at which millions may rejoice, and humanity have nothing to deplore. We would that the desolating sword of war remain sheathed, and both parties assist to prune the benignant olive of peace. We would that this great and beneficent revolution should be accomplished, rather by the force of opinion, than by the force of arms; and we would that the just and righteous cause of Irish emancipation should shed its clear, yet strong light of truth and conviction, upon the hitherto dark and implacable minds of Ireland's rulers, rather than that the victories of her freedom should shed one drop of blood."

Should the force of opinion fail to achieve the desired end, George Washington Parke Custis would then urge the force of arms to enforce the enlightenment upon the dark and implacable minds of Ireland's rulers. And, if you should wonder why he should champion the cause of Ireland, and ask him why, he would respond:

"Sirs, I make no apology for the sentiments I avow in the capital of my native country. The wrongs of Ireland have called up a voice from the old halls of Mount Vernon, and it shall be heard in our land, though all others were hushed in silence, and Erin will know that she hath at least one friend in that America which owes her many. The apologists for intolerance and corruption ask, why these Irish attachments? why should Protestant Americans be concerned for Catholic emancipation? For myself, I answer, that, 40 years ago, when in life's young and happy day, I played around those

venerated halls, which formed my paternal home, that I beheld the great Chief receive an honored guest, who came charged to declare the unanimous voice of a free people, electing George Washington first President of the United States. This honored, this important trust, was delegated to the good and venerable Charles Thomson, Secretary to the august Congress of the Revolution, and a native Irishman."

Then Custis would relate the story of John Byrne, who fell a captive at the surrender of Charleston:

"His tongue gave him an immediate passport to the prison ship, that floating hell, for which England may claim the sole merit for the discovery."

Then he would tell how he escaped, swam ashore and found his way to the camp of the illustrious Greene, where at the battle of Eutaw Springs, in the words of Byrne: "* * * when our gallant colonel cried to the old line, cease firing my lads, and rush on them with the bayonet, believe me when I say, John Byrne was not idle."

Further would Custis cite the last signer of the Declaration of Independence:

"When this illustrious Catholic grasped the pen to sign the immortal charter of our empire, he gave to the winds all thoughts of the consequences, and pledged, at once, his valued life, his princely fortune, and sacred honor, for the liberties of his country. Revered then be the altar at which a Carroll kneels. In our respect for his religion, we endeavor to honor him, who so much honors us. * * * Yes, Americans, Catholics mingled their blood, and that in no stinted stream, with the Protestant brethren, for those inestimable rights of civil and religious liberty, which we all, as members of one political family, now so happily enjoy."

This was the man, who commands our attention today.

This was the man, who, being challenged as to what England would say to his espousal of the Irish cause, made answer:

"What will England say, forsooth? The time, I trust, has gone by, never to return, when there can be heard from American lips, the monstrous jargon, of 'England the world's last hope, the bulwark of our religion, the fast anchored isle.' As to what the rulers of England, may say to us, or our proceedings, it is a matter of perfect nonchalance; but as to the people, the liberal and noble minded, and England has many such, they will say, brave Americans, you are right. You set a generous example to the civilized world. Blessed above all nations in the enjoyment of civil and religious liberty, it is feeling, it is magnanimous, that you should wish to see these blessings the lot of all mankind. Again, it was Ireland who cheered you in the dark hour of your trial. Irish hearts and Irish sinews were with you, in your arduous struggle for independence, and now that poor Erin hath her days of trial, your manly and generous efforts to aid her will do you honor in the estimation of the good and liberal minded of all countries, and solve the long-disputed problem, that republics can be grateful."

In the early days of the city of Washington, the month of March each year, would not pass without the voice of George Washington Parke Custis being raised in behalf of Ireland in her struggle for freedom and independence. How he would have been delighted with this historic March of 1959, were he to speak here today and herald the news of the action of the Congress, which has just finished the process of voting the creation of the 50th State in the Union, thereby giving Hawaiians their rightful voice in the Government of their affairs and the Nation's.

Turning away from the Pacific, his gaze would rest on the Isle of Cyprus, which is this month being given the status of a free and independent country. Under the domination of the English, the only solution which their diplomats could recommend was that the island be partitioned—yes, in the pattern of Ireland—the Turkish minority in control of the one end of the island, and the Greek majority controlling the rest; all the while both Greece and Turkey would continue to agitate for full control. Their only thought was more partition, the curse inflicted on Ireland, and imposed on Korea, Vietnam, and Germany—Germany, where a divided Berlin is today the focus of tension, and may well be the trigger for a truly devastating conflict.

Fortunately our own State Department played an important role in bringing about a sound, sensible, and practicable solution of this dispute over Cyprus. As a result the island remains a united country, under the joint protection of Turkey and Greece, and is ready to assume her rightful place among free and independent peoples. The Cyprus solution might well have been applied to Ireland with the same happy results, in place of the shortsighted arrangement now existing, which can only spell disunity, engender friction, and occasion continued bloodshed and strife. Well might our own State Department once more to use their good influence to bring about a sound, sensible, and practicable solution for Ireland, a solution that real statesmanship recommends. That is the outcome, which Mr. Custis would bespeak on an occasion such as this.

Yes; this March is memorable—for at noon on Tuesday, March 17, there will arrive at the airport, the President of Ireland, paying a visit of state to the President of the United States. This is an event for which another 'Custis' of the West, clamored—and how he would have loved to have lived to see this day. Joseph Scott of Los Angeles, like Custis an orator and great lover of Ireland, until his death the president of the American League for an Undivided Ireland, besieged the White House and the State Department, urging an invitation for the President of Ireland. He likewise besought His Excellency Sean T. O'Kelly, the President of Ireland, to request such an invitation. It is for us to thrill at this great event, which will demonstrate the fraternity, the unity and Christian charity, that exist between our two great Nations.

Coming close upon the heels of this event, the English Prime Minister is visiting here—to seek a solution of the current crisis of Berlin. He comes urging that conferences and concessions can combat communism and maintain peace. Unfortunately umbrella wielding diplomacy leaves no imprint on the Russian mind—only the show of power and the readiness to use it. To Mr. Macmillan, Mr. Custis would say, as he did in March of 1844:

"The best treaties with tyrants were secured with sword in hand. When the people of Ireland shall have resolved upon this alternative, and be prepared to meet it, and not till then, may they hope to sever the manacles of their bondage, and to rise in the beauty and strength of the sons of liberty."

We too must meet the Russian threats with sword in hand and be prepared to use it.

So it is in this most historic March, we have assembled here to learn who was this man, friend of young Ireland, orator for 40 years and more in her behalf, who often prayed that should he not see the day of liberty and happiness in Ireland, which he predicts, then when it does come, he prayed:

"Perhaps a son of Erin may make a pilgrimage to the prophet's grave. No Irishman, he hoped, would 'cast a nettle' on it, but rather plant a shamrock there, exclaiming as he went his way. 'Peaceful be his rest, he was the friend and orator of Ireland'."

## Anyhow a Timely Warning

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of favorable response throughout the country to the plan advanced by several Members of this House to create an orderly and systematic plan for paying off the national debt, I am including an editorial which appeared in the Idaho Statesman, of Boise, Idaho, on March 9:

ANYHOW A TIMELY WARNING

Like 'most everybody else who's not entirely bereft of understanding and conscience, Representative JAMES C. WRIGHT, a Texas Democrat, views with alarm the towering national debt that now has reached a reported $283 billion and that seems most likely to keep right on climbing.

But unlike 'most everybody else, Representative WRIGHT, 36-year-old third term Congressman, veteran of World War II combat, two-term mayor of his hometown and partner in a trade expansion and advertising firm, isn't content to merely wring his hands, nor would he stifle his conscience and sweep the whole disagreeable matter under the rug.

He proposes to do something about it and so he has submitted to the Congress a proposal that is so thoroughly steeped in commonsense that in these days it may seem to be almost revolutionary. He's proposing to pay off the national debt, a little at a time but in accordance with a definite program, and to levy a tax specifically for that purpose.

He's proposing payment on the debt at the rate of 1 percent a year. The tax, at first would be a substantial one. If the debt were to go no higher than it now is, the first year's payment would amount to $2.83 billion. But, like the householder paying on an amortization plan for his home, the Government's payments on the debt reduction account would steadily reduce the payments for interest, which now amount to $8.1 billion a year, or substantially more than 10 percent of all the contemplated Federal Government spending for all purposes the coming year.

The Congressman puts it this way: "In 100 years we could completely retire the debt by paying $495 billion in interest and $283 billion in principal, or a total of $778 billion. But if we pay nothing on the debt itself, the interest alone for 100 years will be $980 billion and we will still owe the debt of $283 billion, or a total of $1,263 trillion."

That's a conclusion based, of course, on the assumption that for 100 years the Government would have to balance its budget and not go further into debt, and so, lamentably, it runs counter to current Federal fiscal practices.

The principle, at any rate, of Congressman WRIGHT's proposal, is one that commends itself to farsighted conservatives.

It ought, also, to command the attention of the spenders. They haven't so far manifested any great concern about mounting taxes, nor permitted it to interfere with their ever-mounting spending schemes. Certainly they must be somehow aware that we can't go on indefinitely spending more than we take in. That way inevitably leads to destruction of credit so that ultimately the Government couldn't borrow any more and might either have to quit spending alto-

gether, or to take over everything, and even the chief advocates of ever-increasing Government spending might not like that.

Very definitely Mr. WRIGHT is on the right track.

His proposal may, or may not, receive the consideration it so eminently deserves, but it should serve at any rate as a serious warning of the bad trouble we're headed into unless there's a decisive reversal of current policies of spending in excess of income.

## Veterans' Loans

EXTENSION OF REMARKS
OF
## HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call to the attention of my colleagues the serious situation in my State of West Virginia where mounting unemployment rolls threaten the vested interests ex-servicemen have in their homes purchased through Veterans' Administration loans.

In this connection, I want to call attention to a letter from the Honorable OLIN TEAGUE, chairman of the Veterans' Affairs Committee, who has been kind enough to ask the Veterans' Administration for a special survey of the situation as it affects veterans' loans, in West Virginia and what is being done to forestall foreclosures.

I want most of all to commend Chairman TEAGUE's efforts and the efforts of the Veterans' Administration officials to protect the interests of these veterans who, through no fault of their own, find themselves unable to meet their monthly payments. The information contained in Mr. TEAGUE's letter that no foreclosures on these properties will be permitted is reassuring.

Mr. Speaker, at best this is only a temporary arrangement. Should the chronic unemployment situation that exists in my State continue, or possibly worsen, there will come a time when action will be necessary and these unfortunate men will stand to lose the major portion of their investment in their homes.

I am offering Mr. TEAGUE's letter for inclusion in the RECORD beacuse what is happening in West Virginia is also happening in other States, and it behooves the Congress to take immediate action to provide, through public works and other governmental activities, jobs that will enable these veterans to meet their obligations.

Mr. TEAGUE's letter follows:

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
*Washington, D.C., March 5, 1959.*

Hon. CLEVELAND M. BAILEY,
*House of Representatives,*
*Washington, D.C.*

DEAR COLLEAGUE: The committee's investigation of the unemployment condition in the State of West Virginia and its effect on veterans' loans shows that even under adverse conditions the veterans in your State have prevented foreclosures on their homes. The number of current defaults are less than 1 percent of the total loans outstanding in both the direct and guaranteed programs. Although one city in West Virginia—Charleston—has been listed, along with 11 other cities in the United States, as having a high unemployment situation, some of this unemployment being chronic, the overall picture of the veterans' loan program in West Virginia seems stable.

I am attaching a detailed breakdown of the status of the veterans' loan program in the State of West Virginia. You will note that the number of foreclosures, both on direct and guaranteed loans, has steadily decreased over the past 3 years. This breakdown also shows that on the foreclosures which have been made the amount of deficiency claims against the veterans has fluctuated. This is explained that the amount of the claims vary in direct relation to the condition of the property when it is taken over by the Veterans' Administration.

The committee discussed this matter with officials of the Veterans' Administration and found that the central office officials here in Washington are very sensitive to the unemployment conditions that exist today in the State of West Virginia. They have issued instructions to the Veterans' Administration regional office in Huntington that no foreclosure proceedings will be taken on direct loans without prior submission to central office. The regional office has been further instructed to use all types of servicing on the guaranteed loans in an effort to prevent foreclosures. As a servicing technique, the Veterans' Administration is trying to persuade lenders to accept smaller monthly payments or waive payments on the principle, accepting interest payments only, until the veterans can once again resume their regular payments. I have also been informed that no attempts will be made to require the veterans to catch up on their waived payments, because this would add a burden on the veterans when they again become employed.

The officials in the Huntington regional office advise that the unemployment situation is very serious and that indications point to the fact that it may get worse before it gets better. They also feel that with proper servicing they can keep the foreclosures on veterans' homes at a minimum. The officials also state that so far they have had very close cooperation with the lenders who hold veterans' loans. They are firmly of the opinion that under the present conditions in the State it is to the best interest of both the Government and the veterans to postpone foreclosures of any kind.

The following breakdown will give you a detailed picture of the recent guaranteed and direct loan activity in the State of West Virginia:

| County | Guaranteed loans, July 1 to Dec. 1, 1958 | Direct loans, Apr. 1 to Dec. 1, 1958 | Veteran population |
|---|---|---|---|
| 3d Congressional District: | | | |
| Braxton | 0 | 4 | 1,530 |
| Calhoun | 0 | 2 | 1,070 |
| Clay | 0 | 0 | 1,380 |
| Doddridge | 0 | 2 | 900 |
| Fayette | 1 | 5 | 10,110 |
| Gilmer | 0 | 1 | 910 |
| Harrison | 0 | 12 | 9,950 |
| Lewis | 0 | 2 | 1,980 |
| Nicholas | 0 | 4 | 3,100 |
| Ritchie | 0 | 0 | 1,380 |
| Upshur | 0 | 3 | 1,950 |
| Wirt | 0 | 1 | 450 |
| | 1 | 36 | 34,710 |
| Other counties: | | | |
| Barbour | 0 | 0 | 2,060 |
| Berkeley | 0 | 6 | 2,950 |
| Boone | 1 | 16 | 4,560 |
| Cabell | 18 | 56 | 14,370 |
| Grant | 0 | 3 | 710 |
| Greenbrier | 0 | 7 | 5,160 |
| Hampshire | 0 | 2 | 1,210 |
| Hardy | 0 | 0 | 910 |
| Jackson | 0 | 2 | 2,100 |
| Jefferson | 0 | 4 | 2,000 |
| Kanawha | 5 | 32 | 28,700 |
| Lincoln | 0 | 3 | 2,240 |
| Logan | 1 | 10 | 8,060 |
| Marion | 2 | 7 | 9,670 |
| Mason | 0 | 14 | 2,110 |
| McDowell | 3 | 2 | 11,750 |
| Mercer | 1 | 18 | 8,870 |
| Mineral | 0 | 1 | 2,980 |
| Mingo | 0 | 6 | 6,240 |
| Monongalia | 0 | 8 | 8,010 |
| Monroe | 0 | 0 | 1,030 |
| Morgan | 2 | 0 | 1,070 |
| Pendleton | 0 | 3 | 810 |
| Pleasants | 0 | 0 | 850 |
| Pocahontas | 0 | 0 | 1,630 |
| Preston | 5 | 2 | 3,540 |
| Putnam | 1 | 6 | 2,190 |
| Raleigh | 9 | 30 | 11,410 |
| Randolph | 1 | 3 | 3,610 |
| Roane | 0 | 2 | 1,630 |
| Summers | 0 | 2 | 2,800 |
| Taylor | 0 | 8 | 3,150 |
| Tucker | 0 | 2 | 980 |
| Tyler | 0 | 1 | 1,250 |
| Wayne | 4 | 30 | 4,150 |
| Webster | 0 | 5 | 1,840 |
| Wetzel | 0 | 2 | 2,480 |
| Wood | 1 | 87 | 9,810 |
| Wyoming | 0 | 1 | 4,210 |
| Brooke | 2 | 12 | 4,480 |
| Hancock | 19 | 4 | 4,620 |
| Marshall | 4 | 8 | 5,890 |
| Ohio | 9 | 4 | 9,500 |
| State total | 89 | 445 | 243,000 |
| Veterans on waiting list for direct loans as of Dec. 1, 1958 | | | 1,191 |

From the foregoing you will note that there has been very little activity recently in the guaranteed loan program. If it had not been for the direct loan program, very few veterans would have been able to obtain loans during 1958. Your attention is invited to the fact that in the entire State of West Virginia only 89 loans were made by lenders as compared to 445 loans made by the Veterans' Administration under the direct loan program.

I feel that as a result of the committee's investigation of this situation, the State of West Virginia is fortunate in having its veterans cooperate with the Veterans' Administration, thus preventing foreclosures and loss of veterans' homes. I am confident that this record will set an example for other States that have a high unemployment situation.

In the President's economic report to Congress he stressed the need for some type of legislation to aid distressed areas and advised that he planned on submitting recommendations for such legislation at an early date.

I am sure that the foregoing will be of assistance to you in evaluating any legislation that is submitted to assist distressed areas. If I can be of further assistance, please do not hesitate to let me know.

Sincerely yours,

OLIN E. TEAGUE,
*Chairman.*

## When Do We Face Up to This?

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of favorable response throughout the country to the plan advanced by several Members of this House to create an orderly and systematic plan for paying

off the national debt, I am including an editorial which appeared in the Kansas City Daily Drovers Telegram of Kansas City, Mo., on February 25:

[From the Kansas City Daily Drovers Telegram, Feb. 25, 1959]

WHEN DO WE FACE UP TO THIS?

We'd like to offer a rousing cheer for Congressman JIM WRIGHT, of Texas. He stood up in the House the other day and offered a concurrent resolution calling for beginning a systematic program of reducing the national debt. His suggestion is that we set aside a sum equivalent to 1 percent or more of the national debt each year to retire the principal. That would mean starting with $2.8 billion, since the debt amounts to $283 billion. At that rate it would take something less than 100 years to pay it off. But in the process we taxpayers (and our children and their children) would be saved around $485 billion.

The Congressman should have a pat on the back for daring to propose such a thing. His plan, or something like it, ought to be implemented without delay, while the Nation is in a period of prosperity and can logically contemplate doing something about ridding itself of this monstrous debt which hangs over the heads of us as well as future generations yet unborn.

Some will ask why we should begin to retire this debt. There are many people who sincerely believe there is no point in worrying about it, since Uncle Sam is not broke and can get along as long as his assets and revenues are on such a tremendous scale. They argue that the need for spending is far greater as a stimulant and stabilizer than is the need for debt reduction.

Yes; probably the Nation can continue to live with the national debt. But common sense cries out for a saner course. There may come a day when we can no longer live with it. Why shouldn't we begin at once to prepare for the possibility of such a day, which history tells us is almost certain to come? Why, we may also ask, should this debt with staggering principal and interest be carried along as a permanent burden, when none of us, in his personal or business life, considers such economics sound. As individuals we work, scrimp and save feverishly to reduce the principal of any debt we contract, in order to get out from under at the earliest possible moment.

There are other reasons why it is logical to begin the reduction of this debt. One of them is cost. The interest charges on a debt of $283 billion cannot be minimized—they are immense. During the next fiscal year the interest on the debt will be $8.1 billion. And if the average rate increases to 3.5 percent as seems likely, it will climb to $9.9 billion. Assuming we make no move to reduce the debt, in less than 30 years we will pay as much in interest as the debt is today but we will still owe all of it.

Another reason for concern over the debt is the eroding effect it has on the credit of the Federal Government. There appears to be a growing lack of enthusiasm for Government securities among investors. This is true of both those who buy Government notes and bonds in the Treasury's refinancing activities, and among the general public itself, which buys Government savings bonds.

Representative THOMAS PELLY, of Washington, urging the House to act favorably on the resolution, pointed out that "a policy of balanced budgets, together with regular yearly payments on the debt, could restore confidence in Government securities and the interest rates on Treasury borrowing would decline almost enough to offset the amount of yearly debt reduction."

Isn't it about time we got our collective selves by the scruff of the neck and demand a definite answer as to what we are going to do about this debt?

## Commies Seek To Discredit FBI

EXTENSION OF REMARKS
OF
## HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks, I wish to insert the following newspaper article published in the Baltimore News-Post on February 28, 1959.

This article forewarns Americans to be on guard against unjustified attacks on the FBI and its dedicated and able Director:

[From the Baltimore News-Post, Feb. 28, 1959]

COMMIES SEEK TO DISCREDIT FBI

(By Jack Lotto)

The Kremlin has kicked off a global smear campaign against the Federal Bureau of Investigation and its Director, J. Edgar Hoover.

Outright lies, distortions, and half-truths are being used by the international Communist movement propagandists in their campaign—in 19 languages—to paint America, instead of Russia, as a police state.

The drive masterminded behind the Iron Curtain coincided with supposedly unrelated attacks in this country designed to weaken, and undermine public confidence in the FBI and Hoover.

A publication most Americans never heard of, but which is the "bible" for all Communist parties, called World Marxist Review: Problems of Peace and Socialism, laid down the line to be echoed:

"J. Edgar Hoover * * * trampling on the Declaration of Indepedence, harasses the people of America with an army of special agents and professional informers.

"THE BITTER FRUIT

"Fear, hysteria, bookburning, telephone tapping, wholesale victimization, and character assassination—such are the bitter fruits of the inglorious reign of Hoover, the master of deceit."

The voice of the brutal Red freedom repressors concentrated much of its fire on a vital weapon of the FBI against subversive conspirators—the use of informants.

Said the Marxist Review in its current issue:

"The professional informer is the most despised and detested creature in all lands at all times * * * but, lavishly spending the American taxpayers' money, the police chief found creatures for his dirty work * * *."

Reason for the Red attempt to pin an odious label on ex-Communists who helped the Federal agency:

In every successful court case against Communists, the key witnesses were defectors from the Soviet-bossed conspiracy, or undercover agents planted inside Communist ranks.

UNITED STATES WOULD BE HAMPERED

The Reds know the United States would be hampered seriously in its attempts to protect itself against Communist espionage and subversive activities if ex-Communist informants could not be used or trusted as witnesses.

Watch for the Reds, their sympathizers and dupes to start screaming about witchhunts and persecution and against the FBI use of alleged professional liars, falsifiers, and stool-pigeons.

Why? To discredit in advance the testimony of Government witnesses in pending trials, cast public suspicion on any future defectors who may testify against them, and open the door for later frame-up claims for those convicted.

The World Marxist Review is the chief vehicle for published propaganda directives of the world Red movement. It is published in Prague in Russian, French, Chinese, Albanian, Bulgarian, Czech, Dutch, German, Hungarian, Italian, Japanese, Korean, Mongolian, Polish, Spanish, Rumanian, Swedish, and Vietnamese.

An English edition is printed in Canada for U.S. distribution.

## Ireland's Law Has Glorious Past

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting article by Rev. Robert F. Drinan, S.J., dean of Boston College Law School, which appeared in the Pilot, Boston, Mass., on March 14, 1959:

IRELAND'S LAW HAS GLORIOUS PAST

(By Rev. Robert F. Drinan, S.J.)

(March 17 is not only the feast day of the great Irish missionary, it is also the patronal feast of the archdiocese of Boston. In view of this dual significance of St. Patrick's Day, we present here a condensation of an address, "The History of Irish Law," given to the Eire Society of Boston on October 5, 1958.)

The Irish are a race with a deep sense of injustice. No other nation has felt so deeply the injustice of internal division and the sting of an alien government. Long centuries of occupation by a foreign power have deepened and intensified the Irish passion for law and justice.

It is perhaps significant to note in this connection that descendants of Ireland in this country are represented to their full strength or even more so in the legal profession.

The history of Irish law can conveniently be divided into three eras:

The age of the Brehons.

The fusion of the common law of England with early Irish law.

And the full flowering of Irish-English law in the Irish Constitution of 1937.

In pre-Christian Ireland the judges or Brehons were obliged to take a well-defined course and training. There was no legislature as we know it today so that the Brehons not merely interpreted the law but also formed new laws. Two collections of the decisions of the Brehons have been issued: the "Senchus Mor," or the book of civil law, and the "Book of Aicill," which records the criminal law. No nation of Europe can boast of such an ancient and detailed account of its earliest political institutions.

No adequate text, however, of the Brehon laws has been available until recently. During the period of 1865–1901, there was issued the six-volume set of "Ancient Laws of Ireland." Despite this scholarship, basic problems remain in the texts and interpretation of the Brehon law which governed Ireland for over 1,100 years.

Upon the arrival in Ireland of St. Patrick (probably in the year 433) the fusion of pre-Christian Irish or Brehon law and the Catholic outlook was initiated. During the 33 years of Patrick's apostolate in Ireland he did much to achieve a lasting synthesis of the Brehon law with the best traditions of the Roman law which the church on the Continent was baptising.

It should not be inferred, however, that the nine-man law-revision commission that St. Patrick appointed had any radical task to perform upon the Brehon law; pre-Christian Irish law had many fine characteristics including humanitarian provision for hospital care, an advanced outlook on equal rights for married women and sensible regulations concerning criminals.

Here again, however, one must be careful in evaluating the Brehon laws since as the distinguished Irish Justice Gavan Duffy stated in the case of Foyle v. Attorney General (1949—"The (Brehon) law still has to be deduced from elliptical, incomplete and often corrupt texts * * * the study of Irish law, seriously undertaken only in recent times, is still in its infancy."

The fusion of the Brehon law with Christian principles produced a law which governed Ireland for almost a thousand years. Around the year 1200, however, the laws of England began to be accepted in Ireland. From the year 1171 up until the final virtual suppression of Irish law under Cromwell there was a dual system of law in Ireland.

Officially, however, the Statutes of Kilkenny, passed by the Irish Parliament in 1366, reaffirmed the exclusive binding force of Irish law. Despite this decree, however, English law and even English judges were accepted in many regions of Ireland.

With the conquest of Ireland by a foreign power Irish law was destroyed and—the word is not too strong—desecrated. English legal institutions were imposed upon a subject people. The bitterness and the resentment caused in the Irish heart by this destruction of one of Ireland's great cultural achivements—its law—was summed up in 1925 by Mr. Cosgrove, president of the executive council, in these words:

"The body of laws and the system of judging imposed upon this Nation were English (not even British) in their seed, English in their growth, English in their vitality.

"In the long struggle for the right to rule in our own country there has been no sphere of the administration lately ended which impressed itself on the minds of our people as a standing monument of alien government more than the * * * administration of law and justice which supplanted * * * the laws and institutions (which were) a part of the living national organism."

With the liberation of southern Ireland from four centuries of oppression the legal genius of the Irish people once again became evident in the Irish constitutions of 1922 and 1937—documents which will remain as testaments of the passion for justice which St. Patrick discovered already well developed in the Irish conscience.

The Irish Constitution, born in the full flush of modern Celtic nationalism, is a document which synthesizes the best feature of modern democratic institutions with an overall Christian outlook.

Recognizing the Catholic Church as the "guardian of the faith professed by the great majority of the citizens," the Irish Constitution nonetheless affirms that the "state shall not impose any disabilities or make any discrimination on the ground of religious profession, belief, or status."

The Irish Constitution has already had a great impact on the world; its provisions have been copied or used as guides in the new laws of India, Pakistan, and Ceylon. Future decisions of the Supreme Court of Ireland may well have a continuing influence on the jurisprudence of all the nations of the British Commonwealth which follow the common or Anglo-American law.

Although the Irish Constitution and the decisional law construing it have been quite satisfactory, this is not to deny that there are as yet great unknowns in Irish law. For example, the exact status of a marriage contracted by an Irish citizen abroad to a divorced person is not clear in Ireland where divorce and remarriage are disallowed.

In view of the Christian orientation of ancient and modern Irish law, perhaps it is not fanciful to hope that the Irish bench will be able to hand down significant decisions on some of the basic legal-moral problems which trouble mankind today. Perhaps, in fact, one could speculate that this is the new spiritual destiny of the Irish people, to send forth juridical ideas to the world rather than missionaries.

All the work of the great reformers, therefore, is by no means concluded by reason of the independence of southern Ireland. The work of Emmet and Parnell and O'Connell and the Sinn Fein goes on, in the legal institutions which have resulted from their labors.

Consequently, in the words of the Irish Constitution, "gratefully remembering their heroic and unremitting struggle to regain the rightful independence of our nation," we stand in admiration at the work of the architects of modern Ireland. Their achievements will abide forever. Their crusade has resulted in the creation of moral agency which will endure not merely wherever Irish eyes are smiling and Irish laughter rings, but forever throughout the entire civilized world.

## The Red Parade

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of March 13, 1959:

THE RED PARADE

By this time, most of the people of the Pittsburgh district are well aware of the nature of the Communist international conspiracy. They know, from sworn testimony before the House of Representatives' Un-American Activities Committee and other official tribunals, of the plot against the United States and the names of those accused of taking part in it.

Those who remain uninformed may well review the testimony given before a subcommittee of the House committee here in Pittsburgh this week. The hearings started off with the testimony of two brave citizens, Hamp Golden and his wife Mary, of Crafton, who endured the detestation of associates and neighbors to pose as Communists for years while informing the FBI of the machinations of the Reds.

The Goldens gave sworn testimony, naming names, of the workings of the Red conspiracy, right up to last Saturday's caucus meeting held to advise the comrades what attitude to take toward the committee when the hearings began.

Then followed the familiar parade of the Reds, cloaking themselves in the fifth amendment, refusing to answer even routine questions, defying the committee, virtually disavowing any responsibility for the welfare of the Nation of which they are citizens.

The objective of the committee is to obtain evidence on which to base legislation to combat the Red conspiracy. But the hearings have additional value as enlightenment for the public.

We would hope that such enlightenment would fall, full strength, on such misled personalities as those who lend their well-known names to the Red efforts to undermine the work of the committee and induce Congress to abolish it. The Commies parade those names before the public at every opportunity in an attempt to create the impression that the American public opposes the committee.

The Un-American Activities Committee is doing a necessary and important job in exposing the Red conspiracy. It works under many handicaps, one of which is the constant smearing of the committee and its members by the Commie propaganda machine.

The committee deserves the support and confidence of every true citizen, for its revelations are helping to preserve and protect our way of life.

## Court Upholds "Under God" in Pledge to Flag

EXTENSION OF REMARKS
OF
### HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. RABAUT. Mr. Speaker, as the author of the amendment placing the words "under God" in the Pledge of Allegiance to the Flag, I am most pleased to insert an article from the Daily News of New York wherein Supreme Court Justice Isadore Bookstein dismisses the suit of the representatives of the Freethinkers of America who contended that reference to God and the pledge violates Federal and State constitutional guarantees of freedom of conscience. So right was the learned judge when he said: "The first amendment does not grant disbelievers preference over those who do believe in God, and who, in pledging their allegiance, choose to express that belief."

The article follows:

ALBANY, February 24.—A State supreme court ruling made public today refused to order the phrase "under God" stricken from the pledge of allegiance to the flag as it is recited in the State's public schools.

The ruling came in a suit by Joseph Lewis, of Croton Falls, president of the Freethinkers of America, and Alfred L. Klein, of Staten Island, who contended that reference to God in the pledge violates Federal and State constitutional guarantees of freedom of conscience.

MUST PAY COSTS

Supreme Court Justice Isadore Bookstein, dismissing the suit with costs assessed against the petitioners, declared that inclusion of the phrase "under God" in no way impinges on the guarantees against a church state.

He noted, furthermore, that strict exclusion of references to God from our public papers would invalidate the President's oath of office, the Declaration of Independence, and the oath of the court, all of which carry references to the Almighty.

CITES AMENDMENT

"If I properly apprehend the intent, design, and purposes of the first amendment," Bookstein wrote, "it was conceived to prevent and prohibit the establishment of a state religion: it was not intended to prevent or prohibit the growth and development of a religious state."

The petitioners' argument that children of Freethinkers would be humiliated if they odmitted "under God" from the pledge, Bookstein said, was not relevant.

The first amendment, he said, does not grant disbelievers "preference over those who do believe in God, and who, in pledging their allegiance, choose to express that belief."

## Presentation of Plaque Honoring Late Congressman William B. Oliver, of Alabama

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. BOYKIN. Mr. Speaker, at the seventh annual meeting of the Warrior-Tombigbee Development Association in Tuscaloosa, Ala., on March 6, 1959, tribute was paid to a distinguished Alabamian and former Member of the House of Representatives, the late William Bacon Oliver. Mr. Oliver represented the Sixth Alabama District which has as its able Congressman today my good friend, ARMISTEAD SELDEN.

In 1957 Congressman SELDEN introduced legislation providing that the lock and dam on the Warrior-Tombigbee Waterway near Tuscaloosa be officially named the William Bacon Oliver lock and dam in honor of the former Congressman. This legislation was enacted into law, and a plaque inscribed with the law was presented by Mr. SELDEN at the river association meeting to Mrs. William B. Oliver, widow of the great Alabamian. She in turn presented it to Col. R. W. Love, Mobile district engineer of the U.S. Corps of Engineers, who indicated that the plaque will be appropriately placed at the site of the William Bacon Oliver lock and dam

Because there are Members of the present House of Representatives and Senate who knew and loved William Bacon Oliver and will be interested in this event, I am including below Mr. SELDEN's remarks, as well as an account of the presentation ceremony:

Mr. SELDEN. This evening we pause to pay tribute to a distinguished Alabamian whose name is ascribed to the first modern navigational structure built on the Warrior-Tombigbee Waterway. I refer, of course, to the late William Bacon Oliver, who for almost a quarter of a century represented our State's Sixth Congressional District in the Congress of the United States.

During his dedicated service in the House of Representatives, Congressman Oliver made many lasting contributions to his district, State, and Nation. He was always alert to the needs of national defense, to the potentialities of our youth, and to the problems of workingmen and women. He was a man of keen intelligence, an eminently qualified attorney, and a forceful and highly regarded legislator.

William B. Oliver, or Buck Oliver as he was affectionately known to his friends and constituents, was born in 1867 near the banks of the Warrior River at Eutaw, Ala. He received his education at schools in his hometown, at the Verner College Preparatory School in Tuscaloosa and at the University of Alabama.

He received his law degree at the University of Alabama in 1889 and in that same year, after taking a special law course at the University of Virginia, he was admitted to the Alabama bar. He began active participation in his chosen profession at the age of only 22 here in Tuscaloosa.

In 1898 he was appointed solicitor for the Sixth Judicial Circuit of Alabama and served with distinction in that position for nearly 10 years. He resigned as solicitor to become dean of the law school of the University of Alabama.

In 1914 Buck Oliver was elected to Congress where he served 11 consecutive terms, retiring voluntarily in 1937. When he first entered the House of Representatives, he was assigned to the Naval Affairs Committee, a post he held for 6 years. During much of this period, the world was at war and the work of the Naval Affairs Committee was highly important to the United States and to our allies.

When the 68th Congress convened in 1921, Mr. Oliver was appointed to membership on the powerful House Appropriations Committee. He was an outstanding member of this committee for his remaining 16 years in Congress and, among other accomplishments, played an important part in instituting a Federal budgetary system.

Although he had planned to retire when he chose not to seek reelection in 1937, he was called to serve his government once again 2 years later—this time as special assistant to the Attorney General of the United States. He held this post until 1944 when, at the age of 77, he retired permanently from public affairs. Four years later, on May 27, 1948, Mr. Oliver died while on a visit to New Orleans. He was buried in the cemetery in Eutaw, the town where he was born and where he grew up.

The ideals of democracy and the principles of the Democratic Party were of the utmost importance to Mr. Oliver throughout his life. In the words of his friend and colleague, the late Congressman Sam Hobbs, of Alabama, Mr. Oliver "was a Democrat without apology, but too much of a gentleman ever to give offense to political foes even in the fiercest fights. His was a perfect voice, and his skill in using it made his forensic ability both feared and admired."

And indeed Buck Oliver was recognized for his great ability as a speaker who never wasted words. He was not noted for giving frequent or lengthy talks; but when he did speak, his remarks were direct and to the point, relevant to the subject matter, and so penetrating that it was obvious they were backed up by clear understanding and forethought.

Mr. Oliver was blessed with the attributes of high character, integrity, honesty, and faith in God, as well as in his fellow man. He was a devout member of the Presbyterian Church which he served as an elder and as the moderator of the synod of Alabama.

The high qualities Mr. Oliver possessed were clearly recalled by Representative CLARENCE CANNON, of Missouri, the present chairman of the House Appropriations Committee, when he said: "He was a man of lofty ideals and strength of character, tactful, considerate, and courteous, and generous in his friendships. He measured up in every respect to the high standards of his native State which has sent more than its share of able and distinguished statesmen to the two Houses of Congress. His State is honored and the annals and traditions of the House of Representatives enriched by his service here."

Among Mr. Oliver's many contributions to our district was his successful effort to obtain the initial appropriation to construct a new lock and dam on the Warrior-Tombigbee Waterway at Tuscaloosa. This structure was the first link in the modernization of the great water artery that connects north central Alabama with the port of Mobile.

As a tribute to Mr. Oliver, his many friends throughout this area held a ceremony upon the completion of the lock and dam in 1940 and designated the new structure as the Oliver lock and dam. Mr. Oliver had no knowledge of the plans to name the new facility for him until he and Mrs. Oliver, who were in Washington at the time, received an invitation to attend the dedication ceremony.

In early 1957, it was called to my attention that no action had ever been taken to officially name the structure in his honor and that legally its name was still the Tuscaloosa lock and dam. Accordingly, I introduced a bill which was subsequently enacted into law officially designating the fine navigation structure here at Tuscaloosa as the William Bacon Oliver lock and dam.

And now I would like for Mrs. William Bacon Oliver to come forward so that I may present to her a plaque on which is inscribed the public law honoring her late husband.

(Mrs. Oliver comes forward to receive plaque.)

Mrs. Oliver, the designation of a great navigation structure as the William Bacon Oliver lock and dam is an effort by those who knew and respected your late husband to express our appreciation for his many years of distinguished public service.

Mrs. WILLIAM B. OLIVER (accepting plaque). To those who loved him and have wished to honor him, may I say, thank you. Please carry on.

(Mrs. Oliver then presents plaque to Colonel Love.)

COL. ROBERT W. LOVE. I am pleased to receive this beautiful plaque inscribed with the public law naming the navigation lock and dam here at Tuscaloosa the William Bacon Oliver lock and dam for public display at the structure. We have already prepared a glass-covered case for it, so that it can be readily seen but will be protected from the weather. The case is mounted on a low post on the lock mound at the top of the steps leading down to the esplanade. In this position it will be seen by everyone visiting the lock.

I will see that the plaque is placed in the case immediately and that it and the case are maintained in first-class condition. The plaque will be a constant reminder to all who pass of the great services rendered the State of Alabama by her distinguished citizen and public servant, William Bacon Oliver.

## Dramatic Presentation

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of favorable response throughout the country to the plan advanced by several Members of this House to create an orderly and systematic plan for paying off the national debt, I am including an editorial which appeared in the South Bend Tribune, of South Bend, Ind., on March 9:

[From the South Bend Tribune, Mar. 9, 1959]

DRAMATIC PRESENTATION

The monumental size of the Federal debt and the desirability of whittling it down in-

stead of always increasing it are dramatized by Representative JAMES C. WRIGHT, JR., a Texas Democrat.

How effective his dramatization may be, however, in inspiring Congress to face up to the need for debt-paring action remains to be seen. The experience during the great depression, the great war, and the great boom that came in that order doesn't indicate that Congress is about to do anything sensational where hacking away at the debt mountain is concerned.

Nevertheless, Representative WRIGHT deserves thanks for the concise manner in which he has called attention to the debt and what it means to taxpayers even if nothing is done to trim it on a methodical basis.

It may be assumed, too, from his presentation of the facts that Representative WRIGHT henceforth will continue as a champion of the philosophy that the Federal Government should live within its means and put aside money to shrink the debt and, in the long run, save money for the taxpayers.

He advocates a 100-year plan. His idea is to pay off one-hundredth of the debt annually, come what may.

In this way, he calculates, paying off the debt, even if it becomes no larger, and meeting interest payments will take $778 billion. The alternative—and this is frightening—is to shell out $980 billion in interest alone in the next century if the debt is not reduced, even if it does not grow.

Faced with these startling fiscal facts, it would seem Federal debt reduction needs high priority in congressional business.

## The Law Is the Law Is Nuts

EXTENSION OF REMARKS
OF
### HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an editorial from the Birmingham Post-Herald of March 7, 1959, entitled "The Law Is the Law Is Nuts." This editorial points up graphically one serious inequity of the current farm program. I commend it to the attention of every Member of this House:

THE LAW IS THE LAW IS NUTS

Evetts Haley, Jr., owes the Government $506.11 because he harvested 473 bushels of wheat without the Government's permission. And he'll have to pay, or else, because the Supreme Court has just brushed off his argument that he had a right to grow grain to feed his own cattle.

Out in Michigan another farmer has paid the Government $2,643 in fines for raising his own chickenfeed. (The Government already has grabbed his $1,701 bank account.) So this farmer, Stanley Yankus, is selling his farm and taking off for Australia, where he hopes he can run a farm his own way.

This punishment for small farmers is being levied under the same law which permits the Government to pay out nearly $1.5 million to a single corporation farm to prop up the price of the rice it produced. It is the same law which got a California corporation farm $854,450 in 1957 for growing cotton—and the same corporation another $125,942 for not growing cotton.

It is the same law which in 1957 gave sums ranging from $10,000 to $322,000 each to 2,422 large-size farmers who took land out of production. It is the same law which has piled up such a hoard of surplus crops that it costs the taxpayers $1 billion a year just to store them.

The farm bloc diehards who insist on keeping this anticonsumer, antitaxpayer, antifarmer law on the books loudly proclaim it is for the benefit of the little farmer.

It sure is.

A small farmer in Indiana had his tractor seized because he planted 16 more acres of wheat than the Government said he could. A small farmer in Pennsylvania was fined $404 for raising 24 acres of wheat to feed his cattle, and threatened with sale of his farm if he didn't pay. Mr. Haley is being socked for raising 43 acres of wheat and Mr. Yankus is leaving the country because the Government wouldn't let him run his egg farm the best way he knew how.

It's the law, all right. But it's crazy.

## Address by the National Commander of the American Legion

EXTENSION OF REMARKS
OF
### HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. STEED. Mr. Speaker, in these critical times there is greater need than ever before for the American people to inform themselves and to debate the problems confronting our country. In a recent address before a Boston, Mass., audience, Hon. Preston Moore, national commander of the American Legion, made an outstanding contribution in this field. I am sure all Americans will find his remarks of particular interest, and am, therefore, including the full text of this timely and important address in the RECORD. It follows:

ADDRESS BY PRESTON J. MOORE, NATIONAL COMMANDER, THE AMERICAN LEGION, STATLER-HILTON HOTEL, BOSTON, MASS., SATURDAY, FEBRUARY 28, 1959

Theodore Roosevelt, looking into the future a half century ago, made this statement:

"The things that will destroy America are prosperity at any price, peace at any price, safety first instead of duty first, and the love of soft living."

Nikita Khrushchev, addressing the nations of the West in a more recent day, declared: "We will bury you."

Roosevelt spoke out of love for America, Khrushchev out of hate. I suggest we consider this evening whether by disregarding the warning of the one we are lending substance to the threat of the other.

As national commander of the American Legion, I speak for men and women who care greatly for their country. We do not have all of the facts and intelligence that are available to those high in Government. We do not profess to have nearly all of the answers. But we do have eyes and ears and a right to insist that national policies reflect the people's will and command the people's understanding.

Many of us seriously doubt that current national policy in the field of security and international affairs meets either of these standards. On the contrary, there appears to be a desire to blunt the people's will and to spare us full knowledge of the danger we face.

Our Government worries, and with reason, about the impression it makes upon peoples abroad. Let us hope that it has equal concern about the impression it makes upon its own people. For the image that is beginning to take shape now is one of indecision and drift.

Our leadership appears to be telling us in all earnestness that if we keep calm, guide right, and maintain 120 steps a minute, we'll march into a brighter tomorrow.

I submit that something more is required.

The Soviet Union is committed by word and deed to world domination. The United States, for all practical purposes, stands alone in her path. If communism is to be stopped, the superior forces—moral and physical—must come from us.

The advantage at the start of the cold war 12 years ago was clearly ours. While the Soviet Union looted and enslaved conquered lands, our policy was to rehabilitate and liberate. Russia's economy lay partially devastated; ours was unscarred and primed for pent-up peacetime demands. We had the bomb; Russia did not.

Today, by any objective measure, the advantage has swung the other way. The Kremlin has added to her domain, without bloodying a single Russian division, vast territories and hundreds of millions of subjects. Her prestige and influence in still neutral countries have increased; ours have waned. In the newly decisive field of space exploration, she has produced results exceeding our best efforts. The bomb of 1947 now takes the form of the intercontinental ballistic missile—the ultimate weapon. Russia has it; we don't.

The how and why of this incredible shift in the balance of power can be argued, perhaps to good purpose, in another day. There is no time for it now. Clearly, the important—the imperative—need is for an all-out national effort to make up lost ground.

The American people, I am convinced, are aware of this need and braced to meet it. Most of us expected that the summons would come with the convening of Congress and the announcement of the administration's new program.

Yet when it came, with the shock of the Soviet moon shot still reverberating and with responsible sources attesting to the depth of our peril, what did it tell us? It told us that the most important thing we have to do is balance the budget. It told us that we can solve our defense problem for the next year by spending exactly what we can afford to spend within the limits of normal income.

Now this could result from nothing more that a remarkable coincidence. There is mounting evidence, however, that it actually resulted from a willingness to subordinate defense to dollars.

The Rockefeller studies group, a nonpartisan advisory unit, recommended in 1958 an immediate increase of $3 billion for defense and similar increases each year for the following 6 years. The defense budget now before the Congress proposes not an increase but a reduction of one-fourth billion dollars from the current year's total.

Lt. Gen. Arthur G. Trudeau is Chief of Research and Development for the U.S. Army. In a public address on January 14 of this year, he stated: "We can't compete in quantity with the manpower of the Soviet bloc, so it is necessary to be superior in weapons and material * * * we don't have the funds to develop one-third of the projects that are presented to us."

The Soviet military threat, now and for the indefinite future, lies in intercontinental aircraft and missiles. It stands to reason that an effective deterrent force must be built around the same type of weapons.

Last spring the Congress appropriated a supplemental fund of $90 million earmarked for ICBM development. Not 1 cent of that fund was spent.

In recent months the men responsible for our missile program have admitted that the Russians are ahead of us in this crucial race. While estimates of the Soviet lead vary, there is agreement that we are behind and that it will take from 1 to 3 years of intensive effort to catch up.

And yet, the President's current budget request for missile procurement is $600 million less than last year's.

How are we to understand and support such a program? If balancing the budget is our No. 1 objective, then it's dead on target. But if our prime goal is to regain the balance of striking power as insurance against Soviet attack, then it spells deadly peril for America.

Prosperity at the price of national sovereignty is a bad buy.

Of course, the package is not being presented in just that way. It comes wrapped in assurances of our overall capabilities and coated with references to our great industrial and scientific potential. The magazine, Aviation Week, in its issue of February 2, observed: "* * * There is a somewhat pathetic attempt to substitute bold ringing phrases in the budget message for the vital dollars and priorities in the budget itself."

Gen. Curtis Lemay, Vice Chief of Staff of the Air Force, recently told a congressional committee that he believes any general war will be won or lost within 2 or 3 days by forces in uniform when it breaks out. I question very seriously whether in deciding to launch such a war the Soviet leaders would be deterred one bit by the retaliatory power of balanced budgets and unbuilt missiles.

Another aspect of this limited defense planning that challenges public understanding is the role of the Chairman and members of the Joint Chiefs of Staff. Each of these distinguished military leaders has dutifully testified that the requested program is generally adequate. According to the Secretary of Defense, they even endorsed in writing the spending totals approved by the Pentagon and Budget Bureau, with some reservations.

How deep those reservations are, we do not know. We do know, from their own testimony, that each requested a larger total as a minimum need for his respective service and that their requests were whittled down first in the Pentagon and then again by the noted military strategists in the Bureau of the Budget.

The one authoritative spokesman who broke ranks in public, to my knowledge, was Mr. Roy Johnson, Chief of the Advanced Research Projects Agency within the Defense Department. Under questioning before the Senate Preparedness Committee, Mr. Johnson stated that his original budget request was cut 30 percent before it reached Congress. He said it was his personal conviction that an additional $150 million should be provided for the total space effort.

Information of this kind, in my opinion, is due the Congress and the people. Sure, it rocks the boat. But if rocking is needed to make the boat go, then we can stand lots more of it.

What is at stake now is not bureaucratic harmony—not political advantage—not the peace of mind of fiscal experts—but the peace of the world and America's survival.

This is not my conclusion. It is the hard, inescapable fact of the times in which we live.

A bipartisan committee of the House of Representatives, after studying the space exploration field all of last year, reported as follows:

"Outer space is fast becoming the heart and soul of advanced military science. It constitutes at once the greatest threat and defense of man's existence on earth. Only a bold and dynamic program employing the total talents and the greatest strength of the United States and its friends is competent to meet a challenge so overwhelming."

And the committee raised this clear warning: "The strategic balance of power can shift to the nation first achieving operational usability of new scientific developments. Neglect of new developments may create a time of weakness for a nation long enough for a strong rival to overwhelm and destroy it."

Whether through neglect or a wrong guess or what-have-you, our time of weakness is here. A policy of business almost as usual can only prolong and increase our vulnerability.

The Communists have tried for years to make the world believe that Americans worship only the dollar. Now, after giving away billions of dollars to our friends and some of our enemies with practically no strings attached, it would be a tragic thing to prove the Communists right at the expense of our national defense.

Fighting the cold war is expensive. The American people know that. Fighting it to win will be more and more expensive. We're ready for that, too.

But what of the peace talk? Lately, we've been hearing it from all sides: "The Russians aren't so bad—we've got to get along with them sooner or later * * * all Mikoyan wants is free trade * * * why spend all this money on an arms race, anyway?"

Mr. Khrushchev said he will bury us, and I believe he means to try. Mr. Mikoyan's visit was intended to serve, and did serve, that purpose.

Mikoyan used our airwaves and front pages to preach the Red gospel and blame tensions on our leaders. He told us there was no reason why his country and ours couldn't be friends, if only our leaders would play fair. When questioned about the fate of 11 American airmen unreported since their transport plane went down in Soviet Armenia, he complained that we didn't trust him. Mikoyan knew the answer to that question. While pretending to speak for mutual understanding and good faith, he knew our Government had absolute proof that Soviet fighter pilots used that unarmed plane for target practice and sent it crashing in flames.

Mikoyan no doubt succeeded in influencing world opinion against America. Perhaps there are some in our own land who now hope for good results from negotiations and treaties with the Communists. For my part, I pray that whoever represents the United States at such meetings will remember well the radio conversation of Soviet pilots closing in for the kill:

"The target is burning, 582 * * * look at him, he will not get away, he is already falling * * * I will finish him off, boys, I will finish him off on the run."

Do we advance the interests of America when we attempt to do business with these people? Or do we solicit peace at any price?

Russia wages the cold war all the time on all fronts. The worldwide pressures we must meet come not only in the military and space lines but also in the psychological, economic, and social fields. They all require expert, aggressive handling and they all require substantial expenditures.

The return on our investment in some cases seems pitifully small. In others—the military assistance program, for example—we have received far more than we have given.

Our military assistance program has made possible the organization, training, and arming of the present NATO forces. If we had to provide the same degree of security that our NATO European allies are providing for the United States, we would have to spend an additional $2½ billion a year just for the pay of personnel in combat forces. If we had to supply the manpower now furnished NATO by European allies, we would have to more than double the active-duty strength of our Military Establishment.

More important, we maintain through NATO a series of missile and aircraft bases that we would not otherwise have. Today, these advanced bases represent a very large part of our Sunday punch.

Those who will soon be flashing their economy knives at this program also ignore or forget the fact that our military help is predicated upon self-help. The 12 European countries which have received military assistance have spent more than eight times the dollar value of equipment we have supplied them.

By our standards, Spain is a poverty-stricken nation. Yet, the Spanish people support five divisions of troops. We would be foolish indeed not to join them in a mutual security effort.

I have tried to summarize in simple terms the enormous challenge we face at this moment. No matter how you size it up, there is no soft, easy, economical way to keep America the home of the free and brave.

We can afford to do what we have to do.

If higher taxes are needed for a realistic defense effort, the people will pay them. If it takes a compulsory program of belt-tightening, let's have it. We can do too much, and live with the consequences. If we do too little, Mr. Khrushchev will execute our will.

Six years ago, the then national commander pledged to President Eisenhower the prayers and understanding of American Legionnaires as he assumed the Presidential responsibilities. I renew that pledge today. The men and women who served with him in World War I and under him in World War II and Korea would not add to his burden. We ask, instead, that he add to ours.

We are a mature, competitive people. Our faith is firm and our spirit strong. A generous God has blessed us with bountiful resources. Let us assert our power now—boldly and vigorously—in the place where danger lies.

## Big Savings Shown in Switch From Oil Heat to Anthracite Coal Heating

EXTENSION OF REMARKS

OF

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Hazleton (Pa.) Plain Speaker of Monday, March 9, 1959:

PLANT CHIEF SWITCHES TO COAL—AMAZED AT SAVINGS IN HEAT COST

The president of a Taylor, Pa., textile plant decided that his plant was spending too much for oil heat. He called on a local coal producer, the Moffat Coal Co., and inquired about hard coal heat.

As a result of data furnished by the Moffat Co., the textile plant decided to try automatic anthracite. A fire jet was soon installed, and the textile man waited to observe the results.

After noting the savings that coal brought about for the first 3-month period, Mr. J. W. Smith, president of the Lackawanna Textile Co., dictated a letter to the president of the Moffat Coal Co.

"We are amazed," he wrote, "at the savings in the cost of heating our factory by the use of rice anthracite and feel that you would be interested in the following com-

parative costs: During the 3-month periods of November 1 through January 31 in the years of 1956, 1957, 1958, we paid $1,543, $1,755, and $1,836 for No. 2 fuel oil to heat our factory.

"After we switched to anthracite, for the same period November 1, 1958 to January 31, 1959, we paid only $1,105.65 for heat." This figure is all the more remarkable because the number of degree days for the coal heat period was 13 percent higher than similar period in the previous heating season.

If the degree day increase were applied to the last oil-heat year, the cost for oil would have been $2,075.29, instead of $1,836, which means that coal heat for the 3-month period would have cost less than half as much.

## Has Blight Fallen on "Wearing of the Green"?

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of interest to Irish readers, by the Very Reverend Monsignor Francis J. Lally, which appeared in the Pilot, published in Boston, Mass., on March 14, 1959:

HAS BLIGHT FALLEN ON "WEARING OF THE GREEN"?

(By Very Rev. Msgr. Francis J. Lally)

I have never been in Ireland on St. Patrick's Day, but I am informed that it is a Holyday of Obligation and a legal holiday as well.

An inquiry from your paper suggests that Irish readers may have some interest in the way the day is observed elsewhere, and especially the popular attitude toward it in America. For my part, I can only speak of the part of our country that I know best which is Massachusetts with its neighboring States, and the predominantly Irish flavor of so much of this area makes the day and its celebration somewhat significant.

There has been some observance of St. Patrick's Day in our part of the world since the Irish first came here in large numbers over one hundred years ago. In a sense we may say that it was observed from the earliest days of the Republic when General Washington, out of consideration for the Irishmen serving in his army, used the name of the Saint as the password in Boston on March 17, 1776.

In later years the celebration had a decidedly religious flavor with solemn Masses and appropriate sermons in the morning with a parish party of some kind in the evening. Along with this there were many galas of one kind or another, also with a good deal of speechmaking, under the auspices of the local Irish societies. It was traditionally a festive day, and it had its full share of sentiment and nostalgic references to the "old country."

For the most part, in those times, it was men and women born in Ireland, or their children, who arranged the celebrations and they doubtless partook of much of the quality of similar activities at home.

The passing years have not been kind to the old familiar gatherings; they have changed their ways as indeed those taking part in them have also changed. St. Patrick's Day is now something halfway between Mardi Gras and Hallowe'en and, like the two of these, only a small percentage of those involved in its celebration understand any of its religious significance.

Radio and television, merchants and advertisers, all allow anyone who can get himself into something green and speak with what passes for an Irish accent to have his say on St. Patrick's Day.

In the meantime, of course, there has developed the so-called civic celebration. One may wonder why the civil authorities feel an interest in a religious holiday but, in Boston at least, they use it as civic excuse for a St. Patrick's observance. It was on March 17 that the British were driven from Boston by American forces and, since this was a step forward in the achievement of American freedom, we have a proper title for rejoicing.

Not many people these days, however, think much about the retreating British on March 17, and in the course of the oratory a reference to "perfidious Albion" takes care of that part of the observance. For the rest, there is generous praise of Irish virtues and Irish valor, and this is also likely to have a more historic than contemporary emphasis.

We should mention also the parades. Several cities have St. Patrick's Day parades, and the one in New York is famous. In Boston the parade makes its way through the less elegant thoroughfares of the city keeping carefully to that section which once boasted an almost total Irish population, but which now, with changing economic and social conditions, contains a rather mixed middle income population.

From an impartial judgment, one would have to admit that the principal excellence of this parade is the presence of several topnotch Catholic Youth Organization bands; without these it would be tedious indeed. By tradition it does bring out many prominent political figures, some of whom, it appears, know very little more about St. Patrick than his name. The New York parade, by contrast, marches up Fifth Avenue, but even here observers have been critical in latter years of what is traditionally a high quality parade.

This brings us to the point where we must acknowledge that the last years have seen the expression from many quarters of a general dissatisfaction with much of the observance which surrounds St. Patrick's Day. There are, of course, many very well conducted ceremonies, especially those sponsored by organizations of Irish background and interest. Also we must mention the efforts of church authorities to restore the religious observance to its central place, which is bound to have a good effect. In spite of all of this, the public ritual which emanates from press, and radio and television, from advertising and professional comedians, from civic celebrations at various levels, and should know better, is very nearly appalling.

Five years ago this time the Catholic Free Press of Worcester published in its pages a letter from St. Patrick himself in which he mentioned certain dissatisfactions with our local celebration. Among other things he spoke of the "waves of oratory flooding St. Patrick's Day." St. Anthony, who appeared to be discussing the topic with the saint of Erin, suggested an old Italian proverb which says "Passata le festa, garbato il santo." Speaking then of St. Anthony, "I know he remembers election day on St. Patrick's Day, but on election day does he remember St. Patrick—and that flaming integrity, passionate faith, stubborn fidelity and purity which are Patrick's heritage to the Irish and to the world." The implication is precisely what you are thinking.

A couple of years ago Father Manton, the eloquent redemptorist of Boston's famed Mission Church, touched upon this topic in his characteristic and picturesque way by referring to the "bogus bogtrotters," "the sham shamrocks," "the psycho Patricks," and "the synthetic Sinn Feiners." Just a year ago the Pilot, of Boston, with all of its Irish history, called for a new look in the observance of the annual feast of St. Patrick. This was the tenor of its language:

"The stage Irishman at his worst was no more stupid and offensive than the TV Irishman who has now unhappily succeeded him. Some of this must seem to be amusing to some people in America—for those who can claim any Irish ancestry it is most unfunny. The Irish should be mature enough to enjoy a laugh or two at their own expense—this we would allow—but to be mocked in terms of bucolic idiocy is too much.

"Somehow the word has spread about that it is profitable for merchants and practical for politicians to drape themselves in green and to talk and act in general as if those of Irish origin by some kind of fantastic miracle became simple-minded children just for the day, preoccupied with nothing more serious than extravagant emotions about Ireland. If this ever made any sense, and that is to be doubted, it makes sense no longer and the Irish should have the wits to know when they are being ridiculed and insulted in terms of what should be and properly is a dignified and glorious tradition.

"In simple terms, let us see some dignity and respect enter upon a celebration, now very near a mockery, which marks the feast of one of Christianity's greatest missionaries and which is intended to honor a historic people who deserve better."

Now there are many people who have an explanation of our problem in simple social terms: the Irish in America are merely coming of age. It is, however, not so easy to dispose of as that. No one pretends that the Irish in America have not been prompt to take advantage of the social mobility characteristic of our country, and there is no question about tastes changing with a change of status. We do not speak of this. The celebrations on March 17 in times past suited the people they were intended for; they were very often simple but they were not vulgar; they may have been sentimental, but they were not ridiculous; they doubtless were not professional, but they were not contrived for the convenience of politicians.

Without suggesting that we become stuffy about the whole business, it is possible for us to restore dignity and sincerity to what has become mere sham and sentiment. The real Ireland, so familiar to her friends, is better served by this refocusing of values now too long delayed.

When we can manage to persuade Americans that Ireland is not a semimagical island, populated by light-hearted and by light-headed people, it will be easier for them to take seriously the impressive role she is now assuming as a leader among the smaller nations of the world.

## Sensible Proposals on the National Debt

EXTENSION OF REMARKS
OF
### HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of favorable response throughout the country to the plan advanced by several Members of this House to create an orderly and systematic plan for paying off the national debt, I am including an editorial which appeared in the Courier-Times-Telegraph, of Tyler, Tex., on March 8:

[From the Tyler (Tex.) Courier-Times-Telegraph, Mar. 8, 1959]

SENSIBLE PROPOSALS ON THE NATIONAL DEBT

Two youthful Texas Congressmen have introduced a bill in Congress that offers a slow but sure solution of the financial dilemma that faces our Federal Government on the issue of the national debt.

At the end of February, our national public debt stood at the staggering figure of $285,495,075,863—and that, ladies and gentlemen, is just about $285.5 billion, if the long string of numerals throws you.

Representatives JAMES C. WRIGHT, of Fort Worth, and FRANK N. IKARD, of Wichita Falls, are authors of the new bill. It is a simple one.

It would require the Secretary of the Treasury, by law, to budget a 1 percent payment on the national debt every year.

It would not preclude, of course, a larger payment when such larger payment was made possible by surpluses—which are rarities in these days of big Government.

Approval of this bill, plus adoption of a pay-as-you-go plan for the Federal Government similar to that used by the State of Texas and several other States and long urged by this newspaper, would be big steps forward in putting our Nation back on a sound fiscal footing.

With only the 1 percent payment made every year, we would be out of the red ink in 100 years. That's 1 percent per year on the present debt, of course. Payment of 1 percent per year on the balance would leave more than $100 billion still due at the end of a century, and mathematically the debt could never be retired in this manner.

By making a payment of $2.85 billion a year for a whole century, we can correct the mess we've gotten our Government into in the relatively short span of less than 30 years.

Representatives IKARD and WRIGHT have come up with some rather astounding figures in applying the rule of common sense to our national debt—an approach, let us hasten to add, that is all too rare in governmental circles.

As you must surely know, it takes a whopping amount of money every year from our national budget just to service the debt we've already accumulated—that means pay the interest on it. Payment of this interest now makes up the second largest item in the national budget—second only to the national defense.

You may not believe this, but the cold figures as cited by Messrs. WRIGHT and IKARD prove it:

"If we pay 1 percent of the present debt each year for 100 years, plus interest on the balance, it will cost us a total of $778 billion to retire the debt completely.

"If we pay nothing but the interest on the debt each year for 100 years—and our Government has to do that—we will pay out a total amount of $980 billion in 100 years, and still have that same $285.5 billion debt hanging over the heads of our great-grandchildren."

This mandatory debt retirement policy, plus a mandatory requirement of a balanced budget in each subsequent fiscal year after this one, would constitute one of the cheapest and soundest investments this country ever could make in our national defense against communism.

Why?

It is well known that the Kremlin is depending upon the ultimate economic collapse of the Western democracies for final Communist victory. That is elemental Marx—let the capitalists spend their way into bankruptcy.

That is the "why" of the economic cold war.

Nothing can help an economy collapse more rapidly than a staggering load of debt. Ask any man in business—or ask anyone who has to struggle with a household budget.

Now our public debt could be retired more rapidly than can be accomplished through the Wright-Ikard proposal. And it should be, with adequate attention to the fact that overly drastice measures could likewise wreck our economy.

But the 1 percent per year retirement plan would be only an annual drop in the budget bucket. To make such a gentle approach to fiscal soundness mandatory is certainly good sense—with every effort also being put forth to increase the debt retirement payment when it can be logically done, as so often is the case.

The Wright-Ikard proposal should go hand in hand with a law—or constitutional amendment, if that be required—that would put the National Government on a pay-as-you-go basis.

The two would go far toward curing our hot national case of Federal fever. They would bulwark our Nation in what figures to be a long economic struggle with the Communist dictatorships. They make sound fiscal sense.

If you think these measures have merit, it might help if you clip this editorial and mail it to your Congressman and Senators with a note that you approve of them. If Congress gets a clear idea that this is the way American people feel about our mounting debt burden, chances are better that they will take action along the lines outlined here.

## China Mainland People Despise Communism

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Dr. Dison Hsueh-feng Poe, of the Chinese delegation to the 10th session of the General Conference of UNESCO:

In the name of my government and of our delegation to the General Conference, I wish to express our heartfelt gratitude to the French Government and the French people for their warm reception and kind hospitality. We take pride in the fact that UNESCO is holding the 10th session of the General Conference in its new headquarters here in this illustrious city of Paris.

As you are aware, I am sure, Mr. President, we of the Chinese delegation have come a long way from a region where Communist guns for the past 2 months and more have been pounding some of our offshore islands. Just a few days ago, as the newspapers reported, 36,000 rounds of shells were hurled at our Quemoy (Kinmen) Islands within 6 hours. Does it not sound ironical that from this very rostrum we heard it described that the Communists on the mainland of China are peace loving?

Permit me to tell you, fellow delegates, that the Communist regime has been detested and hated by the 500 million people on our mainland. The Communist regime represents nobody but its alien master; it is un-Chinese in origin, and un-Chinese in nature and purpose.

Do we have proofs? Yes, fellow delegates, plenty of proofs. When the Chinese prisoners-of-war in the camps of the United Nations command in Korea were asked whether they wished to return to the so-called happy Communist China, 14,000 of them, that is, 75 percent of the total number of Chinese prisoners-of-war, chose to go to Taiwan (Formosa), free China. Such a fact is clear proof of whom the Chinese people really prefer and of who represents China.

There is another indication. All these years there has been a steady, continuing flow of refugees fleeing from the China mainland to nearby Hong Kong and other parts of the free world. What does this mean? It means this: Refugees are people who vote with their feet. That is to say, the oppressed Chinese on our mainland, being unable to change their regime by ballot, have no alternative to a geographical change.

One more unmistakable illustration may be given. The number of overseas Chinese students going to Taiwan from southeast Asia for the purpose of pursuing higher education is steadily increasing year by year. At present there is a total number of 10,000 overseas Chinese students in Taiwan. On the other hand, the number of overseas Chinese students going to the Communist mainland is greatly decreasing each year.

Suffice it to say, the 500 million Chinese on our mainland, deep in their hearts, want my government to represent them.

One word more. My government is the legitimate government of China, freely chosen by the 500 million people on the mainland. True, the Kuomingtang is the dominant party, the party in power. But our legislative assembly consists of members of different parties. Certain delegates seem to imagine that by mere repetitious distortion they can turn white to black. No. One hundred lies cannot add up to a single truth.

Mr. President, it is duty to my government and loyalty to UNESCO that compels me to deplore the obnoxious attempts made, and the provocative and slanderous things said, by delegates of the Soviet clique.

I shall now turn to a brief presentation of the progress in the Republic of China of educational, cultural, and scientific work. According to the constitution of our Republic, not less than 15 percent of the national budget, not less than 25 percent of the provincial budget, and not less than 35 percent of the local budget are to be spent on education. Despite financial difficulties at trying times like these, my government has each year fulfilled these constitutional requirements. This fact demonstrates how much importance my government attaches to educational, cultural, and scientific work.

As a result of our continuous exertion, our educational development at different levels may stand comparison with that of any country. Quantitatively, here are some statistical figures. Ninety-five percent of our children of school age are attending primary schools. Relative to the whole population, 152 out of every 1,000 are primary pupils; 30 out of every 1,000 are middle-school students; and 3 out of every 1,000 are college and university students.

Qualitatively, we have also taken strides forward, in the training of better teachers, in the improved methods of teaching, in the bringing up to date of teaching materials, in the revision of the curriculum for institutions of high learning, etc. The most noteworthy point is that Chinese education, stemming from Chinese culture, teaches the respect for human dignity and human worth, stresses individual morality and social ethics, and champions justice and peace. Such an educational program is completely in line with what UNESCO proclaims to be its purposes and objectives.

Need I add here parenthetically that the Communist regime on mainland China is doing just the opposite? The Communists there are doing everything possible to destroy human dignity, to deny human worth, to uproot morality and ethics and, in a word, to undo Chinese culture.

As to the preservation of the visible, tangible forms of our glorious ancient heritage, such as rare books, ancient manuscripts, and

precious works of art, I am glad to inform you that over 90 percent of these priceless treasures have been removed to, and preserved in Taiwan. Taiwan has verily become the living symbol and the true center of Chinese culture. And here again shall I not remind you that the mainland Communists are doing the very opposite, such as burning ancient books and even mutilating our written language? Ladies and gentlemen, is it not queer to hear the question raised as to who is, or what is, representative of the Chinese?

In the carrying out of UNESCO programs and activities such as the exchange of publications and the exchange of students and scholars, my government has also done its part to the best of its ability. The UNESCO scholarships granted to Chinese students, though scanty in number, are made the best use of. We have also sent representatives and contributed our ideas to the different UNESCO regional conferences. UNESCO's cooperation with China in the promotion of our science education, in the holding of public exhibitions, and in the translation into Chinese of UNESCO publications is very much appreciated by us. Our hope is that in years to come UNESCO's cooperation with us will become increasingly closer in ways many and varied.

Speaking of UNESCO programs and activities from now on, may I venture to suggest that the Organization should concentrate its endeavor to the main purpose and function for which UNESCO has been brought into being. Let me quote from the preamble of the constitution: "Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed. * * * The great and terrible war which has now ended was a war made possible by the denial of the democratic principles of the dignity, equality, and mutual respect of men * * * (and UNESCO is created) for the purpose of advancing, through the educational and scientific and cultural relations of the peoples of the world, the objectives of international peace and of the common welfare of mankind for which the United Nations Organization was established and which its charter proclaims."

UNESCO, Mr. President, was founded on recognition of the vast diversity of traditions and cultures. One of its preliminary functions is to find a common ground for understanding between diverse philosophies and systems. This is manifested in particular by UNESCO's major project on mutual appreciation of eastern and western cultural values.

Before we can have mutual appreciation of eastern and western cultural values we should seek first of all to ascertain what eastern or western cultural values are. Now eastern cultures are many and diverse. There is no gainsaying, however, that Chinese culture is a dominant type of eastern culture. The essence of Chinese culture is embodied in the teachings of Confucius. There is the Doctrine of the Golden Mean. There is the cardinal principle of benevolence and righteousness. There is the established convention of five relationships in human society, namely, the relationships between the governor and the governed, between father and son, between husband and wife, between brothers, and between friends. There is the universal ideal to cultivate moral virtue oneself, to keep the family relationship healthy and sound, to govern the nation wisely, and to bring peace to the whole world.

Where are these Chinese cultural values to be found today? They are to be found in free China, where my Government and our people are cherishing these values and are endeavoring to translate ideal into action. On the China mainland under the Communist regime, these traditional Chinese cultural values are being liquidated by an alien force. Indeed, the Communist regime denies everything Chinese. It is un-Chinese. Nay, it is anti-Chinese. For instance, there is no intellectual freedom whatever on China mainland. If anyone entertains doubt about my statement, please find out for his own satisfaction what has happened to the hundred flowers in Mao Tse-tung's garden.

Chinese culture, Mr. President, is basically moderate, self-respecting, and peaceloving. It is opposed to regimentation and aggression. It aims at unity, not uniformity. Unity is cohesive and leads to human solidarity and peace. Uniformity, on the other hand, is coercive and leads to social conflicts and war.

The traditional Chinese way of life is to attain harmony and peace. Its inner norm is the natural law, so splendidly described by Mencius. The Communist way of life is exactly the opposite. The Chinese are at peace within themselves, with the social order, with the universe and with God. Indeed, something like this may be said: if one is honest and a Communist, he is not Chinese. If one is Chinese and a Communist, he is not honest. If one is Chinese and honest, he cannot be a Communist. The Communist regime on China mainland is certainly only a passing phase.

The Chinese delegation realizes that great progress has been made with regard to the major project of mutual appreciation of East and West. However, one cannot deny that China assumes a major role in the cultural system of the East. No cultural program will be adequate and effective without the active participation of China, especially in the planning and formation of the project. It is with real regret we say that the Republic of China is not represented on the advisory body. Some kind of remedy should be, and I hope, will be made.

In conclusion, I wish to make one more observation. The promotion of international morality should receive the joint attention and deserve the common endeavor of Unesco. As a term, international morality is perhaps out-moded. In substance, international morality serves as the only solid foundation of international law and international peace. Mere scientific development, and mere material progress do not suffice to bring salvation to mankind. As a matter of fact, there is the same central core in Eastern, as well as in Western, cultures. For instance, there is very much in common in Confucianism and Christianity. It is only with the untiring, unceasing promotion of international morality that hypocrisy and aggression and war may be averted.

## That Glorious Apostle

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to include an article honoring St. Patrick which appeared in the Lawrence, Mass., Sunday Sun on March 15, 1959.

The late Attorney John P. S. Mahoney, the writer of this excellent editorial entitled "That Glorious Apostle," which originally appeared in the Telegram-Sun of Lawrence, Mass., on March 17, 1929, 30 years ago, was not only editor and publisher of the Telegram-Sun but he was also one of the most able, capable, and outstanding trial lawyers in the Commonwealth of Massachusetts during his lifetime. He was an energetic, forceful, and dynamic leader in the civic and municipal affairs of his home city, Lawrence, Mass., loved, respected, and admired by all of us in that community.

The article follows:

THAT GLORIOUS APOSTLE

(An extract from an editorial by the late John P. S. Mahoney, editor and publisher of the Telegram-Sun, St. Patrick's Day, March 17, 1929)

Irishmen the world over do well to celebrate the birth of St. Patrick, whose noble work has done more to mould the Irish character than any other influence. For what would the Irishmen be without that undying religious fervor which still lives in the hearts of all true Celts. That reverence for all that is holy and sacred which is one of the marked characteristics of our race springs from the soil which St. Patrick blessed.

It is that deep respect for the teaching of that holy apostle of the Emerald Isle which has enabled the Irish race to hold fast to those fundamental principles of morality which are accorded to it by all who have studied their national characteristics. Then let us say, "All hail to that glorious apostle."

The celebration of St. Patrick's Day is peculiar, in that it is not only a religious celebration, but a patriotic one. It is interesting to know that the earliest celebration of St. Patrick's Day in America, of which a record has been found, took place in 1737. On March 17 of that year, the Charitable Irish Society was organized in Boston by a number of leading Irish Protestants, the same society, which is still in existence, but without any religious qualifications, the society now being almost wholly composed of Catholic members. From this time on until the Revolutionary War St. Patrick was honored by Irishmen in America. It is again interesting to know that the British evacuated Boston on St. Patrick's Day, 1776, and the Americans took possession under command of Sullivan who had been put in charge that day. Washington in the camp at Cambridge authorized as parole for the day "Boston" with countersign "St. Patrick."

St. Patrick anniversary meetings ought to be inspiring, encouraging, filled with hope for the future. Although the Irishman is the product of Ireland, his field of operation, unlike the native of most other countries has been the wide world. What the Irishman has been prevented from accomplishing in his own country, he has accomplished in others. Most men achieve greatness in their native land. The laws of most countries of the world are made for the benefit of their citizens, protecting their rights, fostering their industries, and developing the genius of their sons. Ireland's story is the only exception to that rule. The Irishman alone has had to transplant his genius from his native soil to cultivate it in new and unknown lands.

## Ghana

EXTENSION OF REMARKS
OF
### HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. CURTIS of Missouri. Mr. Speaker, I have been much interested in the newly

independent nation of Ghana and I contacted the International Cooperation Administration to obtain information thereon. Because I felt that each Member of Congress should be apprised of the response, I have requested permission to have included in the CONGRESSIONAL RECORD Mr. Guilford Jameson's letter of February 27, 1959. It follows:

INTERNATIONAL COOPERATION ADMINISTRATION,
*Washington, D.C., February 27, 1959.*

Hon. THOMAS B. CURTIS,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSSMAN CURTIS: This is in further reply to your letter of January 27, 1959, inclosing a page from the CONGRESSIONAL RECORD containing certain observations by Mr. GROSS. You had previously called Mr. Smith's attention to Mr. GROSS' statement during a January breakfast meeting at the SOS Club.

Mr. GROSS states that Prime Minister Nkrumah calls himself a Marxist Socialist and that he has recently purchased a $750,000 yacht from the British which will be used to entertain distinguished foreign visitors. He further states that Prime Minister Nkrumah received the red carpet treatment when he came to Washington on a money raising junket.

It should be pointed out that Mr. Nkrumah as Prime Minister of the newly independent nation of Ghana, came to the United States as an invited guest of this Government and was extended the usual courtesies extended to heads of foreign governments while here as official guests. Prior to his visit to the United States, he had been the official guest of the United Kingdom. Subsequently, he paid an official call on Prime Minister Nehru in New Delhi.

While questions of economic aid were discussed with the Prime Minister during his stay here last July, his trip was essentially a good will mission and not for the purpose of money raising. As is the case with a number of other less developed countries in Africa, the United States is providing Ghana with limited assistance through the technical cooperation program. This assistance is primarily aimed at overcoming Ghana's shortage of technical and administrative manpower needed to improve the functions of government and to increase the ability of Ghana to raise the living standards of its people.

It is true that Prime Minister Nkrumah calls himself a Marxist Socialist. We believe, however, that the actions taken by his Government are more significant than what he calls himself. Since achieving independence, Ghana has demonstrated its eagerness to attract both foreign and domestic capital into private investment and has taken legal and administrative steps to foster this end.

The yacht *Radiant* was purchased in December 1958 for use as a training vessel for Ghana's new nautical college and will be manned by members of its faculty. Whether or not it will also be used for entertaining visitors we do not know. The ship is berthed in Ghana's only present port capable of handling a vessel of its size, Takoradi, 142 miles from the capital. No U.S. assistance was given in the purchase of the vessel and no naval training is offered under the technical cooperation program. There is no U.S. military assistance program for Ghana.

Ghana is a country friendly to the United States. It is exerting a strong influence on the future course of political development in a continent now in ferment, whose people and resources may play a vital role in the history of the next several decades. Prime Minister Nkrumah was educated in the United States and remembers this country with fondness and respect.

Independence, though highly prized, presents recently freed peoples with many new problems of governmental policy and program. All of the actions of the Government of Ghana are not, nor could they be expected to be, actions which the U.S. Government would take. In its 2 years of independence, Ghana has, however, carefully husbanded its economic development resources. The United States through its technical cooperation program is helping to reinforce Ghana's own plans and ambitions toward raising the living standards of its people.

Sincerely,

GUILFORD JAMESON,
*Deputy Director for Congressional Relations.*

## United Mine Workers of America Highly Displeased Over West Germany's Tax on Coal Imports

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Hazelton (Pa.) Plain Speaker of Monday, March 9, 1959:

KENNEDY SAYS UMWA FAR FROM PLEASED SINCE WEST GERMANY TAXED COAL IMPORTS

The United Mine Workers of America, like American coal producers and exporters, is far from placated since West Germany slapped a $4.76-ton tax on coal imports from this country, UMWA Vice President Thomas Kennedy said yesterday.

Kennedy made the statement in the wake of published reports abroad that affected American interests have been "reasonably placated" since the import duty was imposed by the West German Government last month.

"The words 'reasonably placated,'" asserted Kennedy, "also are definitely contrary to the truth insofar as the United Mine Workers are concerned." He added that "the UMWA and the coal industry are on the contrary even more resentful than ever before at what can only be considered an arrogant breach of contract."

The UMWA official cited a recent statement by UMWA President John L. Lewis in which he vigorously protested against the import duty, pointing out that "motivation on the part of the German Government is political in nature and not, in itself, economic," adding: "Germany is planning to increase its trade with Russia, East Germany, and Poland on a barter basis and now has pending requests from Russia for additional barter deals."

Kennedy stressed that the coal industry was in dire need of its export business; the railroads needed the revenue derived from shipping the coal to the east coast and the "impoverished and unemployed coal miners and railroad workers are in dire need of thee employment dependent upon this export business."

Reiterating that the UMWA was not placated, Kennedy said that "in fact, we are, if possible, more determined than ever before that the Government of the United States should use every means at its disposal to urge the removal of this prohibitive tax on an American product which can be sold in Germany cheaper than the Germans can produce it themselves."

## East-West Trade Fight Lurks in Berlin Crisis

EXTENSION OF REMARKS
OF
### HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article entitled "East-West Trade Fight Lurks in Berlin Crisis," which appeared in the March 15 Los Angeles Times.

I believe this article, written by Robert Hartmann, Times Washington bureau chief, assesses very well the meaning and goal of the Soviet trade offensive and its overall significance in the Communist struggle for world dominance, and will be of interest to the Congress.

EAST-WEST TRADE FIGHT LURKS IN BERLIN CRISIS—COMMERCE MAY BE SECRET WEAPON OF KHRUSHCHEV AT SUMMIT CONFERENCE

(By Robert T. Hartmann)

WASHINGTON, March 14.—Just below the surface of the Berlin controversy, all but drowned out by its melodramatic overtones of countdown and showdown, is a question even more complex and divisive: East-West trade.

Commerce, rather than an unknown number of intercontinental missiles, may well turn out to be Khrushchev's secret weapon at the summit conference he—and it now appears Macmillan as well—is anxiously seeking with President Eisenhower.

The President will tell the Nation Monday that he does not expect war, large or small, over the Kremlin-created situation in East Germany. The other two leaders have been saying the same. Everybody wants to settle things by negotiation—the argument is who and where and when and what about.

SOMETHING MUST GIVE

In an international impasse, to use an old phrase, something's gotta give. Actually, unless one side gives under pressure of force, settlement by negotiation becomes a matter of two-way give and take.

President Eisenhower has flatly stated that the United States will not give one inch on its rights in West Berlin. The whole western alliance, while less adamant about the untenable old German capital itself, cannot yield West Germany to the Communists and survive. If we are not to fight, where do we give?

LEAVES NO DOUBTS

There is no doubt at all where Khrushchev wants the West to give. He has spelled it out as clearly as Hitler did.

"We will bury you," he warned, "not with bombs but with economic competition." Ruling half the world, he just might.

When Prime Minister Macmillan arrived in Moscow for his exploratory talks with Khrushchev, this is what the rigidly controlled Soviet press told the Soviet people: "Many Britons connect hope for the establishment of normal Anglo-Soviet commercial relations with Macmillan's journey. They understand that this would help Britain to put right its rather shaky economy. The British people, like all peace-loving peoples of the world, demand that the leaders of Britain and other western powers should strike a course of businesslike cooperation and peaceful coexistence with the U.S.S.R. and other Socialist countries."

HEARD TIME AGAIN

This might be taken for pure Pravda drivel if this report had not heard it substantially

paraphrased time and again by Englishmen thoroughly familiar with British Government objectives. It must always be remembered that Britain is a nation of traders to whom foreign commerce is not merely a bonus but an absolute necessity.

Trade is good in itself to an Englishman, while Americans can afford to consider both commodities and customers, and this accounts for the basic difference in the two nation's China policies from the opium wars to Quemoy.

In the closest parallel to Macmillan's reconnaissance in Russia since Khrushchev cooked up the Berlin crisis, Deputy Soviet Premier Mikoyan came to the United States (at Moscow's request) and hastened to assure Americans that May 27 was not intended as an ultimatum at all. Mikoyan is the Kremlin's top expert on trade or, more precisely, economic war.

VISITS BUSINESSMEN

Mikoyan put in most of his time here, not with the proletariat, but with U.S. businessmen who are interested in foreign markets. He failed to find the enthusiasm for free East-West trade that prevails in Britain (more among Macmillan's conservatives than the somewhat sterling bloc isolationist Laborites) and even Canada, but he betrayed his main mission on his last day in Washington.

TURNED DOWN COLD

Having endured Hungarian demonstrators and other democratic annoyances with something like a smile, Mikoyan really blew his stack when the big pitch he had been saving for the finale met with flat refusals from the two top U.S. officials in the foreign trade field.

First, C. Douglas Dillon, Undersecretary of State for economic affairs, turned Mikoyan down cold on his bid for U.S. financial credits, lowering of strategic restrictions and more trade with the Soviet Union. Word leaked from this closed-door meeting that Milkoyan was so mad he subjected Dillon to a storm of abuse quite out of character for an affable goodwill salesman, and his anger still showed in his National Press Club speech immediately afterward.

So well briefed was this top Communist official on American affairs that he tried again after lunch at the Department of Commerce, where a running jurisdictional feud has been going on between its foreign trade experts and Dillon's shop in the State Department. But Mikoyan got an even more frigid reception from the new Secretary of Commerce, Lewis L. Strauss, who quoted George Washington—a revolutionary more to his liking—and admonished the seminary-schooled atheist on religion.

LITTLE RELATION TO NEED

The intense desire of Khrushchev and Mikoyan to trade with the United States and do away with strategic controls imposed in 1947 and 1948 by Congress bears little direct relation to the Soviet Union's economic needs. If commerce were completely free it probably would not be in great volume, for the simple reason that Russia produces very little Americans want to buy.

The real reason is psychological—U.S. trade bans are a symbol the Soviets want to destroy. Then they can say to all free world countries who are wary of their offers: "Look, the Americans do business with us, why shouldn't you? Besides, we can beat their best price."

PRICE NO OBJECT

Undoubtedly they can, too, because price is really no object in the Soviet Union. The state produces everything and arbitrarily sets a price on it. Internally, this must bear some relation to cost with most commodities, but in foreign trade it is fixed to serve the purpose of each transaction. Official U.S quarters put it this way:

"The U.S.S.R. has always used trade as a political instrument to further its internal economic plans and foreign policy strategy. The state has a foreign trade monopoly and can bargain with individual buyers abroad. The basic Soviet objective has always been autarchy—self-sufficiency in order to improve its power position."

AIMS AT INDEPENDENCE

An official Soviet publication, Foreign Trade, has this to say:

"The main goal of Soviet import trade policy is to utilize foreign products and, above all, foreign machinery for the technological and economic independence of the U.S.S.R. The import policy of the U.S.S.R. is so organized that it aids the speediest freedom from imports."

As an example of this, before recognition the Soviet Union bought considerable quantities of tractors and trucks from American firms. With the help of American engineers, they built factories to duplicate these and other farm machines, and now they import none at all.

NO PROFIT MOTIVE

Using trade as a weapon of foreign policy, Khrushchev is unhampered by the British motive (profit) or the American need for secure sources of supply. The Soviets use trade to reward (Egypt, India, and now, perhaps, Britain), to punish (Yugoslavia, Finland), to infiltrate and disrupt (South America and Africa). The United States is almost the only major trading country which has not signed a trade agreement with Moscow.

In 1958, taking the Sino-Soviet bloc as a whole, 70 percent of its total trade was internal and 30 percent with the free world. But this was a significant gain from an 80 to 20 ratio when Stalin died.

TRADE NEVER LARGE

Direct United States-Soviet trade, except during the wartime lend-lease period for which the Russians never settled up, has never been large. U.S. imports (furs, chemicals) amounted in 1957 to $16,775,000 and U.S. exports (tallow, industrial machinery) to less than a third of this, $4,481,000. The Soviets made up the balance from their $4 billion gold reserves or through triangular trade.

The Soviet share of total world trade in 1957 was 3.6 percent, about the same as Czarist Russia had before World War I.

MAKE NO SECRET

British circles make no secret of their hope that a relaxation of East-West trade barriers will be a major result of any summit conference. On the American side, where the summit idea is less popular, here is what Secretary of Commerce Strauss has to say:

"The fact that a trade war is less dramatic than a shooting war does not mean its outcome would be less disastrous. Until very recently, world trade generally was in historic profit patterns. The sinister novelty introduced by the Kremlin is the use of trade solely as a political weapon. It is not in business for business but for economic warfare."

## St. Patrick's Day, 1959

EXTENSION OF REMARKS

OF

### HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. KOWALSKI. Mr. Speaker, St. Patrick is loved and admired the world over, but most of all, I think, by three nations: Ireland, whose apostle and patron saint he is; America, where his fame and glory have been growing since Revolutionary times; and Poland, where his stalwart faith and courage, his lifelong warfare on behalf of the enslaved and oppressed, seem to cry out for love and admiration and emulation. Some seem to think we do not know much about St. Patrick, just because we do not know the precise time and place of his birth, and are a little less than sure of the date of his death. But time and place, chronology and geography, are not the prime essentials of a man. What we need to know of St. Patrick is precisely what we do know, with the ringing clarity of a trumpet call. For we have from St. Patrick what is sadly lacking in the vast majority of the saints, his own words of exhortation and remonstrance, words in which his character appears plainly and even the tone of his voice seems to come through, and even an account of his life in his own words. Back in the fourth and fifth centuries, when St. Patrick lived and wrote, time seems to have meant less to people than it does today, and the only date we can be anything like sure of is the date of his death, March 17, 493—and some historians give dates as much as 30 years off from that. But we do know the facts of his life, as narrated in his autobiography, and his humility and piety, courage and vigor, as they appear in the manner of his narration.

The world knows well, and will never forget, that Patrick, seized by pirates and sold into slavery at the age of 16, served a heathen Irish master as herdsman for 6 years, escaped to the Continent, and, after long wanderings, returned to his home. May the world never forget, too, how the divine call came to Patrick, at home and in safety, to plunge himself again into the discomforts and dangers of pagan Ireland, and to save those very people who had been his masters. Whether at Auxerre or under St. Martin at Tours, he studied for the priesthood, was ordained, and sent as a missionary to Ireland, in accordance with his call and desire. With his burning love for God, and his self-sacrificing devotion to the people of Ireland, he threw himself heart and soul into the task of bringing his beloved people to the foot of the cross of Christ. In this task, he succeeded so completely that today, in the eyes of the world, the patriotism of Ireland, and the catholicity of Ireland, are alike personified and typified in the well-beloved figure of St. Patrick.

## Poison in Your Water—No. 49

EXTENSION OF REMARKS

OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRES-

SIONAL RECORD an article appearing in the Lodi (Calif.) News-Sentinel on January 12, 1959, entitled "Fish Dying From River Pollutants":

FISH DYING FROM RIVER POLLUTANTS

Tens of thousands of young salmon are dying because of pollution of the waters of the Mokelumne River, according to Howard Babcock, president of Lodi Sportsmens Club.

Babcock, who was in the Camanche area of the river yesterday afternoon, said the stream "is in a bad state of pollution."

"Today," he said, "We lost tens of thousands of our little salmon fingerlings that had just hatched out—about an inch long, just out of the sac stage—due to this pollution.

"I looked at the river with a member of the fish and game department, and we found other fish dead besides salmon. Steelhead, sunfish, and every type of fish that was in the river.

LOOKED MILKY

"The river looked like somebody had poured milk in it, it was that white.

"I was told that some of the pollution was coming from the Penn Mines, and the other source was the Pacific Clay Products Co.

"If a sportsman is out fishing and they catch him with one fish over the limit, he's fined probably $25. Yet industry can pollute the stream and kill literally tens of thousands of fish.

"The fish and game department have the power to cite them for polluting a stream, but the most they ever fine them is $50—something like that.

URGES ORGANIZATION

Babcock urged that sportsmen "organize and pass the proper legislation to give the pollution control board laws with teeth in them to stop this."

"To do this is going to take a lot of work on the part of organized sportsmen throughout the entire State. But I believe it can be done."

Babcock said many streams throughout California are faced with severe pollution problems.

In addition to the tens of thousands of dead fish he saw yesterday, Babcock said that they are still dying right along.

"Many little fish were coming up to the surface for air.

"You see, what pollution does, besides putting poisonous chemicals in the water, it takes oxygen out of the water. They were coming up to the surface for oxygen."

The local sportsman, noting that Pardee Dam's outlow yesterday was only 50 cubic feet per second, said a greater outflow would dilute the harmful wastes, and thus give the fish a better chance to survive.

## The Columbia River Regional Library Demonstration

EXTENSION OF REMARKS
OF
### HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. HORAN. Mr. Speaker, under the privilege granted me to extend my own remarks in the Appendix of the RECORD, I am pleased to include an editorial by Mr. Wilfred R. Woods, editor and publisher of the Wenatchee Daily World, Wenatchee, Wash. In Mr. Woods' column "Talking it Over," he has some interesting and very readable comments on their regional library demonstration. The editorial follows:

TALKING IT OVER

(By Wilfred R. Woods)

There's a quite revolution going on in north central Washington.

It's a revolution without smoke and gunfire, where the weapons are paper and ink.

We refer to the change in reading habits that is taking place thanks to the experiment in library service being undertaken.

This experiment is the Columbia River regional library demonstration. It is the product of State and Federal funds, to demonstrate what can be done to provide first-rate library service to a widely scattered population.

And this is exactly what is happening: first-rate service is being provided.

The figures of growth tell the story. There was a 68-percent increase in book use during April to November of last year over the same period of the previous year. A total of 444,596 books were circulated during these months of 1958 as against 263,892 in 1957.

Omar Bacon, head of the demonstration, tells us the goal of the library demonstration is to have 80,000 books on hand. At the present time he has less than 60,000. These are not kept in the regional center in south Wenatchee, but are virtually all in the various libraries throughout north central Washington.

The demonstration library bought three bookmobiles, stationed at Wenatchee, Omak, and Moses Lake. These serve the scattered communities and centers which do not have established libraries. There are 20 people on the staff, the majority at the center in Wenatchee.

The various communities with libraries which have joined in the demonstration include Bridgeport, Ephrata, Grand Coulee, Moses Lake, Omak, Oroville, Pateros, Quincy, Republic, Soap Lake, Tonasket, Twisp, Waterville, Winthrop, and Chelan County's library setup.

This demonstration is bringing to mind that a community without books is a poor community indeed. And the availability of books is an asset that cannot be reckoned in dollars and cents.

## The Military Pay Act Does Injustice to Retired Servicemen

EXTENSION OF REMARKS
OF
### HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post dated March 21, 1959:

THE MILITARY PAY ACT DOES INJUSTICE TO RETIRED SERVICEMEN

The recommendation by a committee, headed by Ralph J. Cordiner, which was assigned by the Defense Department to investigate service pay, was that pay for naval, military and air men who have earned their retirement should be geared to the current pay which is received in active service. In other words, if the pay for an admiral or an Army sergeant on active duty is increased 10 percent, his pay after he retires will be increased by 10 percent. Up to this point, this is how service retirement has been handled for many years, and that is how it is treated in the Military Pay Act of 1958, as to those retired after its effective date, June 1, 1958.

However, in the bill passed at the last session of Congress, this relationship between active-duty pay and retired pay is, with certain exceptions, not applied to men already retired. They were given a flat 6 percent increase across the board. This results in all sorts of anomalies, including one mentioned by the Washington Star in which a major general who retired a few months before the bill became law received approximately $1,900 a year less than an officer of equal rank who retired after the effective date.

A difference between military retired pay and civilian retired pay, which stays put no matter what happens to the pay of active workers, is that the retired military man is not really retired at all. He is still subject to the Uniform Code of Military Justice; he is subject to recall in emergency or at the pleasure of the Defense Department. Thus it is logical that his pay on the retired list should be geared to his pay when on active duty. But the central reason is that pay in the armed services is generally less than for the same grade of ability in civilian life, and some added compensation at retirement is fair and just.

It seems to us that restoration by the new Congress of the traditional relationship between the pay of active-service officers and men and the pay of retired military personnel would pay dividends in several respects. In the first place, of course, it would correct an injustice to the officers and enlisted men already retired, who are certainly hit as hard by inflationary prices as will be the men to be retired later. But the change could also have an important effect on the ability of the services to persuade men to make military service a permanent career.

## More Aid for the Aged

EXTENSION OF REMARKS
OF
### HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the March 1, 1959, Los Angeles Times concerning a plan for improved health insurance for the aged, which is expected to be made available by the physicians of California in several months.

I believe the efforts by the California physicians group in this regard is to be commended and hope the plan is successful in bringing about improved health care for the aged.

The editorial follows:

MORE AID FOR THE AGED

California physicians are about to add to their service for the aged with a prepaid insurance plan. The move serves to justify the contention of medical men that they can provide adequate service to obviate the necessity for socialized medicine.

FOR THOSE PAST 65

Working through their California Physicians' Service, the State's medical fraternity expects to make available in a few months a plan for which basic principles already have been established for benefits covering professional services for persons over 65 years of age.

The move itself fulfills the basic principle of offering service on a private basis. This should satisfy those critics who oppose Government plans as bureaucratic or an invasion of private rights.

The CPS president, Dr. A. A. Morrison of Ventura, in announcing progress to the annual convention of the House of Delegates of the California Medical Association in San Francisco, indicated that the plan will be introduced as an experiment. He made it clear that continuation and progress would be governed by results. If the plan works well in its initial form, no doubt wider service for additional care will be offered.

Thus the Blue Shield movement in this State continues its efforts to meet the critics who have contended that the private system of health insurance is too slow and covers too little of necessary medical expenses for too few benefits.

PROGRESS REPORTED

The California move is part of the progress to be reported to Congress soon by the Secretary of Health, Education, and Welfare. The report, to go to the House Ways and Means Committee early in March, specifies that little progress has been made in the last 5 years in providing health insurance at costs poor families can afford. But it notes progress in enlarging types and duration of benefits and most recently in providing for health needs of the aged.

One area of progress is in wider availability of noncancellable insurance offered by reputable companies. Previously, companies exercised freely their right to cancel or refuse renewal of policies when the insured showed declining health or reached a higher age bracket.

The most striking experiment in insuring the elderly is the 65-plus plan, launched in 1957 in Iowa. Being extended by the sponsoring company to other States, the new service offers a policy without restriction as to age and without medical examination. The only out reserved by the company is to cancel or modify all policies in a State if heavy losses materialize.

This policy provides benefits of up to $10 a day for hospital care for a maximum of 31 days for each confinement, up to $100 for miscellaneous hospital expense, and up to $200 for surgeon fees. The premium is $6.50 per month per person.

REINSURING PROPOSED

This program also has been tailored to the electronic age: policies offered by newspaper coupon ads only, applications processed by machine and commissions limited to 1 percent, all of which should help check the upward trend of premiums.

The Welfare Secretary's report recalls that President Eisenhower recommended to Congress 5 years ago that Government reinsure any special risks assumed by insurance groups willing to experiment with greater protection against high medical bills. The President had averred that such a plan would put the Government neither in the insurance nor the medical business.

However, the American Medical Association, which had helped defeat President Truman's plan for compulsory medical insurance, helped defeat the Eisenhower plan as an entering wedge for socialized medicine. The House voted against it in July 1954, almost 2 to 1.

As part of the AMA the CMA is fulfilling part of the obligation to provide an adequate alternative to socialized medicine. To stimulate private action, some credit can be given those who sincerely felt that Government-in-medicine was the only way to provide medical care quickly enough. Certainly the CPS-Blue Shield plan is superior in theory to socialized medicine. It only remains to be proved in practice.

## H.R. 10

EXTENSION OF REMARKS
OF
## HON. JESSICA McC. WEIS
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mrs. WEIS. Mr. Speaker, on a number of occasions prior to yesterday's vote on H.R. 10, I expressed my support for legislation of this kind which would provide a tax incentive to encourage and promote long-range private planning for old age.

This principle has for some time been accepted by the Government in the case of employer contributions to pension programs. Under our present tax laws, an employee covered by an approved pension plan pays no current income tax on his company's contribution to his retirement fund, and neither does the company, which deducts its pension costs as business expenses.

H.R. 10 simply seeks to extend this principle to the self-employed who wish to make financial provision for retirement, by providing them with tax treatment no less favorable than that already enjoyed by individuals employed by others.

I supported H.R. 10 because of a conviction that it is highly desirable to encourage thrift, saving, and long-term private planning for the later, less productive years of life. Such planning over a long period reduces dependence upon the Federal Government in old age and furthermore—and just as important—it stimulates a sense of pride of accomplishment on the part of those who do not have to depend on others in their golden years.

But though I supported this measure, Mr. Speaker, I must object strenuously to the method by which it was presented to us for action. I have not served long in the Congress, but in the short span of time that I have been here I have been impressed by the need for orderly rules of procedure, and I was more than a little distressed yesterday to find the majority leadership resorting to the rather spurious and questionable parliamentary technique of calling for a suspension of the rules in order to rush this legislation through the House without proper consideration.

I have just recently received a copy of Jefferson's "Manual of Parliamentary Practice." The very first section of that master work contains an admonition on the "Importance of Adhering to Rules." Because of the seriousness of this matter, I would like to quote a few paragraphs from section I of Jefferson's manual.

So far the maxim is certainly true and is founded in good sense, that as it is always in the power of the majority, by their numbers, to stop any improper measures proposed on the part of their opponents, the only weapons by which the minority can defend themselves against similar attempts from those in power are the forms and rules of proceeding which have been adopted as they were found necessary, from time to time, and are become the law of the House, by a strict adherence to which the weaker party can only be protected from those irregularities and abuses which these forms were intended to check, and which the wantonness of power is but too often apt to suggest to large and successful majorities.

And whether these forms be in all cases the most rational or not is really not of so great importance. It is much more material that there should be a rule to go by than what that rule is; that there may be a uniformity of proceeding in business not subject to the caprice of the Speaker or the captiousness of the Members. It is very material that order, decency, and regularity be preserved in a dignified public body.

I am definitely opposed to riding roughshod over the established rules of the House, regardless of the merits of the particular legislation being considered, and I trust that yesterday's action will not start a trend in that direction. I know of no legislation so important that we cannot continue to conform to the rules which have guided the actions of the Congress for so long, and I certainly hope that in the future we will see fit to restrain our enthusiasm sufficiently to give deference to these normal procedures.

## Slumbering Must Cease

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a thought-provoking editorial which appeared in the Daily Evening Item, of Lynn, Mass., on March 12, 1959:

SLUMBERING MUST CEASE

Let's turn off the TV set, put the car in the garage, sit down and face the harsh, painful, urgent facts.

The big one:

The showdown with Russia over Berlin and Germany is the worst crisis we've had since the firing stopped in World War II. And it won't be solved by throwing out the first baseball in mid-April.

The intense pressure Soviet Premier Khrushchev is applying carries great peril of a ruinous nuclear war, by accident or miscalculation if not by design.

Yet we Americans neither feel nor show any real sense of urgency. Perhaps we are calloused by so many manufactured Russian alarms. Last year the Middle East, this year Berlin. Same old boring show. We give it a bad rating and switch to our trusty westerns.

In one breath the Eisenhower administration says any conflict over Germany almost surely would be nuclear, but the President talks of balancing the budget, cutting the Armed Forces, seeing no need to step up our lagging missile pace.

Mr. Eisenhower tells us not to get too stirred over this crisis. The words might sound better if we were awake at all. In the circumstances they amount to patting a

sleeping head, putting a cautionary finger to the lips, and tiptoeing out of the room.

We're not alone in our slumber. The vaunted NATO never has risen to more than a fifth of its planned strength. British leaders keep a constant weather eye on the next elections. Other allies are reducing their armed forces or slashing the draft term at the very moment when the West's great verbal posture is firmness.

In all the complex maneuvering between East and West, we appear to pay slim heed to the often critical uses of psychological warfare.

Endlessly we stress negatives, the things we can't or won't do. We find no advantage in trying to push the Reds off balance as they so frequently do us. We blandly assume we can only lose propaganda combat at a summit or other conference, and fear we will be "taken" no matter what is done or said.

Are we so unintelligent, so naive, so lacking in faith that we must conclude this?

And are we so wrapped up in personal and national concerns that we refuse to see danger until it stands on our doorstep? Will we talk of balanced budgets until the day the Russians balance them for us?

We've got to cut through Khrushchev's soft purring of "peace, peace" and find the tough, unsoftened core of his demands.

We've got to look hard, too, at what exactly we have on hand or in prospect to deal with this threat, if the worst should come.

And we've got to grasp once and for all why Berlin and Germany mean so much to us. Why would we ask the destruction of New York, Washington, Chicago, Los Angeles and many other cities to keep Berlin free?

The truth is not new, but it's still devastatingly important. West Berlin, just part of a divided city, is a great political and economic entity.

An island in the East German Communist sea, it is a showcase of liberty. More, it is a bastion, a forward outpost. Yield so huge a prize and you cast into the black the morale and spirit of resistance not only of Germans but Frenchmen, Britons, Hollanders, Belgians, Greeks and others. You may lose the game in Europe.

When that happens the orbit of freedom will be crucially narrowed, and our own safety infinitely more imperiled than ever in our history.

## A Round-the-Clock Scholar

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article regarding an outstanding scholar, whom I have the privilege of calling my friend, Dr. Samuel Belkin, president of Yeshiva University.

The article appeared in the New York News of Sunday February 15, 1959:

A ROUND-THE-CLOCK SCHOLAR

(By Don Nelsen)

The term "gentleman and scholar," has been kicked around so frequently that it has ceased to have much meaning. Nowadays, it is usually applied to a person who has just loaned you five bucks. There are a few men, however, who qualify for the accolade in its traditional sense and one of them is gray-bearded Dr. Samuel Belkin, president of Yeshiva University.

At 48, Samuel Belkin is one of the youngest of college chief executives, but this fact is hardly unusual. What is unusual is the age at which he received the office. He was not yet 32 when he was handed the reins in 1943, just 7 years after he had come to Yeshiva as an instructor in Greek.

Dr. Belkin, however, has made a career of doing things at tender years. He was a rabbi at 17, a Ph. D. at 24 and a full professor at 29.

"It would be something of an impossibility for a boy to become a rabbi at that age today," the doctor observed in his office recently. "In Europe, in my time, studies were much more concentrated than they are here today. Now a boy has the advantage of a more extensive preparation for the rabbinate."

Dr. Belkin's "time in Europe" consisted of the first 18 years of his life. He was born in Svislocz, which was then in Poland but is now part of the Soviet Union. Even then, however, the opportunities for Jews were severely limited. Where could a brilliant lad, who obviously had much to offer, go? The answer was as plain as the nose on Horace Greeley's face. He went west—to America.

Belkin's landing occurred in New York in 1929, to which he had come under the sponsorship of relatives in Philadelphia. At the time, young Samuel could speak Polish, Yiddish and Hebrew, but these were as useful to him in his adopted country as a harp in a Dixieland band. His corrective was to whip into some English language courses, the better to find his way through this new land. Within 2 years he had found his way to Brown University, where he began his Ph. D. work.

"I came to Brown with $5 in my pocket," Dr. Belkin recalls. "I really didn't know how I was going to get through. But then I met a family—I think it was during the Jewish holidays—and they took me in and paid my way for the first semester. They did out of the generosity of their hearts. They were wonderful people."

Later, a scholarship and monthly checks from an aunt in New York kept him going till he received his degree in 1935.

"My field was Greek and Hellenic literature. It was close to my heart because it embraced a good deal of old Hebrew scholarship. I enjoyed my years at Brown immensely," he said nostalgically. "The people there were exceptionally considerate toward me."

Dr. Belkin remains a scholar to this day, though pressed with a mass of administrative detail. A Phi Beta Kappa, he has published a host of books and articles on rabbinic and Hellenic literature and has served as an associate editor of rabbinics for the Universal Jewish Encyclopedia. His views on education are widely sought and his reputation as a man of principle and action has called him to membership on many civil and educational bodies.

Last year the State Department selected him, along with Presidents Hesburgh of Notre Dame, Pusey of Harvard and three other outstanding educators, to explain the purposes of higher education in the United States to the Russian people. The medium for this was America, the Russian langauge magazine issued by the U.S. Information Service in the U.S.S.R.

Dr. Belkin presides over his academic dominion of 17 schools and 4 community centers from a Spartanly furnished office on the first floor of Yeshiva's main building at Amsterdam Avenue and 186th Street. Unlike many college presidents, he does not live on the school grounds. He and wife, Selma, whom he met as a young visitor to Philadelphia, have an apartment in the East 90's. His daughter Linda, on the other hand, lives close by Yeshiva with her husband, who is a student at the university, and their baby son, Alan. Dr. Belkin's son, however, is still further away in Stamford, Conn., where he attends a private elementary school.

Each morning the president repairs to his seat of government in a car supplied by the university. This could be termed riding in style, but in reality it's more or less of a necessity. The component schools of Yeshiva are located in six widely separated areas of the city. To get around to each of them and to the other appointments that fall inevitably on the shoulders of a college president, he needs either a car or a durable pair of roller skates, and there's no question as to which is the less taxing.

Actually, this back-and-forth traveling is the result of the good doctor's own doings. Under his dynamic hand, Yeshiva has expanded tremendously. Among other advances, it has gained university status, founded the first medical school and the first college for women under Jewish auspices, and established two graduate schools for education and mathematics. The only trick Dr. Belkin couldn't manage was a central location for all.

Together with Belkin the builder, Belkin the scholar, and Belkin the educator, there is Belkin the man. He speaks quietly and firmly, his sentences occasionally punctuated by flickering smiles or slight frowns as he pauses to consider his train of thought. He is gracious and charming, too. A photographer was shooting pictures of him when a recalcitrant flash gun refused to function.

"———," swore the piqued photog and then, looking sheepishly at Rabbi Belkin, apologized for using such a term in so religious an atmosphere.

"Perfectly all right," smiled the doctor, amused at the photog's plight. "Great men have always said what they thought."

It would appear that pulling a man gently off a hook and salving the wound at the same time is another of Samuel Belkin's myriad talents.

## Ireland and Poland on St. Patrick's Day, 1959

EXTENSION OF REMARKS
OF
### HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. PUCINSKI. Mr. Speaker, the world today pays tribute and homage to the patron saint of Ireland, St. Patrick. While St. Patrick was a son of Ireland, people of good will of all ethnic backgrounds join in paying tribute to the great son of God. Even though my own heritage finds its roots in my grandparents who migrated from Poland, I join in paying tribute today to St. Patrick, and I wish to call the attention of the House to the striking parallel between the struggle for freedom by the Irish and the similar struggle for freedom by my own ancestors, the Poles.

This day honors St. Patrick, the patron saint of Ireland, on the anniversary of his death, March 17, 493. St. Patrick's Day has long been celebrated by Christian and freedom-loving people, not only in Ireland but throughout the world.

Since the early history of the United States, Americans have commemorated the ascension of this great servant of God from his calling here on earth.

The life and accomplishments of St. Patrick exemplify the great human struggle to surmount oppression which stands in the way of advancing the work of God. As a youth St. Patrick was captured, sold as a slave, and held in bondage for 6 years. After escaping he entered a monastery and began to prepare himself for his divinely inspired mission. During his life of preaching, teaching, building churches, organizing parishes, and performing miracles, he was taken prisoner 12 times and was once loaded with chains and condemned to die.

In our time when much of the Christian world is enslaved by Communist totalitarianism, the Christians of the free world help to keep alive the hopes of their oppressed brethren within the Soviet bloc for the restoration of religious liberty and national independence. On hallowed days such as this, when free nations are especially thankful for their liberties and subjugated people are denied their rights to human dignity, we are profoundly impressed by the parallel struggle of the now independent Irish nation and downtrodden nations like Poland for religious freedom and national independence.

Both the Irish and the Poles are rightfully proud of their ancestry. Neither would be worthy of their heritage if they were not. Every people should preserve those memories which are peculiar to them and commemorate those events which have molded their heritage. It is as right for us to emulate our historic virtues as it is for us to criticize and overcome the mistakes of the past.

Both Poland and Ireland are among the greatest daughters of the Catholic Church. Under British domination, the Irish people suffered the supression of their rights to freedom of worship. In Poland the persecution of the church has been carried out by the Communists since 1945, with the intent of eventually uprooting all religious faiths and institutions.

Both Ireland and Poland have long and invincible traditions of greatness, which cannot be extirpated by foreign conquest. The union of the Polish and Irish minds with Christianity has yielded marvelous fruits. Poland by the end of the Middle Ages, was a large kingdom, forming an integral part of Western Christendom and contributing to the common cultural and religious life of Europe. Ireland, already a rich culture at St. Patrick's birth, became an island of Christian saints and scholars. Christianity inspired both the Irish and the Poles with a collective dynamism, a great national purpose, and an inspired sense of destiny.

Ireland endured exploitation for centuries before her fight for national independence triumphed in 1922. Poland has several times undergone and is now suffering the hardships of being ruled by alien despotism.

When Henry VIII withdrew from the Church of Rome, a program was inaugurated to confiscate the estates of the Irish noblemen. As this campaign was pursued more vigorously, Englishmen who loaned money to the Crown to defray the expenses of subjugating the Irish were repaid with grants of landholdings in Ireland. In 1649 Oliver Cromwell invaded Ireland with a large army that was followed by a horde of fortune seekers. The oppressive domination of Ireland by the English landlords, known as the plantation system, became solidly entrenched. Thereafter her people were ruthlessly exploited, starved, and decimated.

Virtually all of Ireland was Catholic at this time. Catholics were not permitted to own land or to hold seats in Parliament. The Irish Parliament could not consider any legislation without the approval of the British Privy Council. There emerged an organization whose membership was comprised primarily of the descendants of those who followed Cromwell, and this group was fostered and protected by the British rulers.

Throughout the period of British rule, the Irish people clung to their forbidden language, stoutly resisted political domination and economic oppression, and remained loyal to their Catholic faith, against whatever repression their masters might devise. The deeply symbolical Easter Rebellion of 1916, the brutal methods used to crush it, and the execution of its leaders aroused in Ireland a national spirit of revolt which had been dormant but never dead since the time of the great O'Neill. Ultimately, the cause of freedom and independence was victorious in Ireland.

Poland was divided among Russia, Prussia, and Austria between 1772 and 1795. From 1795 until 1918, the Polish state disappeared from the map of Europe, but the Polish Nation, like the sons of Eire, remained alive and vigorous. The Poles never accepted the dismemberment of their country and took every opportunity to fight for the restoration of their national independence. Inside Poland there were insurrections in 1831 and 1863, both of which were suppressed with savage reprisals. Many Poles took refuge in exile during the time when Poland was yoked by foreign rule. After 123 years of enormous effort and sacrifice, Poland was restored as an independent country in 1918.

In 1939 Poland was again partitioned, this time by its totalitarian neighbors, Nazi Germany and Soviet Russia. After the German offensive was launched against the Soviet Union, all of Poland was occupied by the Nazis, who methodically proceeded to liquidate a large part of the population by massacres, starvation, and extermination in concentration camps. Five million Poles, including three million Jews perished. At the end of the war, there were 1½ million orphans in Poland.

Like Ireland, Poland was forced to fight for its independence. To combat the Nazi reign of terror during the World War II occupation, the Poles organized a powerful underground state with secret courts, a secret administrative apparatus, a secret press, secret schools, and a brave partisan army which grew to considerable strength and conducted guerilla warfare against the Nazi oppressors. Then, toward the end of the Second World War, the Soviet Union drove the German armies from Poland and then aborted the restoration of freedom and national independence for Poland by installing in power a stooge government of Polish Communists loyal to Moscow.

Now Poland is shackled by the Red chains of Communist tyranny. But neither the brave and fearless people of Poland nor the conscience of the free world will rest until the bonds of slavery are broken. The Polish people have risen before. They will rise to freedom again.

Today we honor the saint who escaped from slavery and, armed only with the love of God, returned to his former masters and conquered them. We honor, too, all people who have maintained their national faith under alien control. May all oppressed nations now enslaved by foreign dictatorships soon breathe the free air that blows over the Republic of Ireland.

---

## Connecticut "King" Helped Form Probable 50th State

EXTENSION OF REMARKS
OF
## HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. DADDARIO. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by William A. Garrett, of the Hartford Times news bureau. Bill Garrett has done a wonderful job of research in compiling a story of the way the Binghams of Connecticut, one of them a former Member of Congress, have played a part in the early history of our 50th State:

CONNECTICUT "KING" HELPED FORM PROBABLE 50TH STATE

(By William A. Garrett)

WASHINGTON.—Hawaii, now probably closer to statehood than ever before, once had a "King Hiram"—from far-off Connecticut, where his grandson Hiram was to become Governor and then U.S. Senator.

This writer first learned about King Hiram from Delegate JOHN A. BURNS, Democrat, Hawaii's only Member of Congress. The island Territory was greatly influenced in its formative years, Mr. BURNS says, by this Connecticut leader of a mission band which set out for the South Seas 139 years ago.

The "king" was the Reverend Hiram Bingham, whose son Hiram, father of Governor and Senator Hiram Bingham, also was to spread Christianity among the Hawaiians.

Great and great-great-grandchildren of the Binghams now populate Connecticut, and beyond.

Mr. BURNS, a Montanan, has offices next to those of Representative FRANK KOWALSKI, Democrat, Meriden, and down the hall from those of Representative EMILIO Q. DADDARIO, Democrat, of Hartford. Both Connecticut Congressmen, incidentally, are prostatehood.

Mr. DADDARIO's Hartford County District has roughly the population of Hawaii, which has about as much land area as Connecticut and Rhode Island combined.

The delegate points out that Connecticut also has made a recent contribution to Hawaii—in the person of Frank Fasi, formerly of Hartford, in the Territorial senate. Fasi is a former Marine officer and Weaver High athlete who married a Hawaiian girl and adopted her homeland after World War II.

Thrice, if unsuccessfully, Senator Fasi sought the mayoralty of Honolulu, Hawaii's top city, where the second and third Hiram Binghams were born. Senator Bingham, noted explorer, author, teacher, and aviator, was born there 84 years ago. He died here in 1957.

King Hiram, who died in New Haven in 1869 at age 80, was the seventh of 13 children and a native of Bennington, Vt. He and his fellow missionaries sailed from Boston on October 23, 1819. They were sent out, with their families, by the American Board of Commissioners for Foreign Missions.

J. C. Furnas' book on the South Seas, "Anatomy of Paradise," says that Honolulu then was a hard-looking, flat, dry, ugly and jerry-built settlement. The island archipelago had been isolated from the world until 42 years before. The Binghams lived in a native hut a year until a frame house was shipped from the States.

The missionaries, the book tells, made Hawaiians "one of the world's most literate peoples, although in an obscure dialect." They also "trained the natives to wear clothes, to sing, and to go through the motions of congregationalism."

French Catholic and other missionaries came later. Some mission churches still stand in this pineapple paradise. The missionaries won their war with heathenism but the principal mark they left was economic.

Today Hawaii does an annual business of $1.8 billion a year. It is at the sea and air crossroads of the Pacific. Its few early churches, established by the Reverend Mr. Bingham and the missionaries of all faiths who followed him, have grown to more than 500.

The Binghamites had liaison with the natives through Hawaiian youths sent to Connecticut to be educated at a special school in Cornwall. There, in an old, hilly graveyard, lies one of these youths, Henry Obookiah—who, Furnas writes, "probably still wonders at the snow that clogs the dark conifers in this strange country."

The Obookiah boy is felt to have died of civilization. Once one of his fellow Cornwall pupils was found, bitterly weeping, on the Yale steps in New Haven. The lad cried, legend has it, "because his people were ignorant and nobody was doing anything about it."

King Hiram got only grudging permission at first to bring the Gospel to Hawaii, then under King Kamehameha 3d. But the missionaries brought their women and children, and among the child-loving natives kids were a mollifying influence. And the white man's medicine did wonders too.

Besides, Mrs. Bingham—the former Minerva Clarissa Brewster—toiled night and day to sew for the natives. She and other mission wives had reason to wish themselves back in Connecticut, but seldom complained.

The Binghamites founded Oahu College, which Senator Bingham was to attend. They could have made easy livings with high prestige, Furnas notes, as Connecticut pastors. But they stayed, King Hiram until 1840. His departure was due to his wife's illness.

On the Honolulu waterfront the missionary became known as King Hiram. Some colleagues entered the native government and "thenceforth bullying man-of-war captains, intriguing foreign consul or corner-cutting trader found himself dealing not with confused Polynesians (natives) but with persistent and self-righteous Yankees."

The missionaries crusaded against vice in familiar Yankee style. They decried tobacco so loudly that the natives thought "Thou shalt not smoke" was 1 of the 10 Commandments.

## "Boys Will Be Big Shots"

EXTENSION OF REMARKS
OF
### HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to Hon. James A. Farley by Mrs. A. N. Goodwin of Topeka, Kans., with reference to his article "Boys Will Be Big Shots":

TOPEKA, KANS., *December 29, 1958.*
Mr. JAMES A. FARLEY,
*New York City.*

DEAR MR. FARLEY: I am writing to you because I believe you may be interested in a discussion of your article "Boys Will Be Big Shots" published in "Faith Made Them Champions."

The Kansas State Boys Industrial School, an institution of correction for convicted juvenile delinquents is located in Topeka. About 6 years ago the Protestant chaplain instituted a Sunday school there, attendance on a voluntary basis. Student priests from St. Marys College minister to the Catholic boys. Mr. Goodwin and I volunteered to teach a class in the Sunday school and one or both of us have continued ever since except for a very short time.

In our current class we have 16 to 18 boys about 12 and 14 years old, all convicted in their home counties for some misdemeanor. The fourth Sunday of each month we let the boys take over for a study of living Christians and the effect religion has had upon their lives. They choose their own personality and present it in their own way. Yesterday, December 28, they presented your article—and did a very thorough and fine job of it, too. Because of the nature of your story we, and the chaplain, were rather surprised but interested in their thinking in their choice and also their presentation of it and the discussion that followed. We thought you would be, too.

After the two boys who had volunteered to lead the lesson had read the article to the class, we discussed it and made a listing of their findings. I will list their statements, in the order of statements.

"You can't get along without God."

"You can't get along without working; you can't get anything for nothing."

"Can't get along without love."

His (your) life was different—he had to go to work when his father died—and didn't get much money.

Made a promise not to smoke or drink—and kept that promise.

"Boys have the wrong leader."

"Boys want to be accepted."

"Delinquency is caused by lack of love, broken homes, and adult indifference." (They repeated this many times.)

"Boys want attention."

The boys were very pensive and thoughtful during the reading of the article and during the discussion. They, of course, knew more about a lot of the reasons than you and I.

Too many times, I think, people are prone to pass along only the critical thinking of an article when it should be easier and more pleasant to pass along the positive side of a reaction. For that reason we felt we would like to let you know of this lesson. We felt the boys had certainly heard every word that was read and absorbed it. We can but hope that some of it will linger with some of them when they are released and again are confronted with the complex problems of society.

Yours very truly,

Mrs. A. N. GOODWIN.

## Civil Rights Junket Wasted Time and Money

EXTENSION OF REMARKS
OF
### HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. LOSER. Mr. Speaker, unanimous consent having been first obtained, I wish to call to the attention of the House, a rather interesting editorial appearing in the Nashville (Tenn.) Banner relative to the appearance in Nashville of the Civil Rights Commission.

This editorial suggests that the visit of the Commission to the Athens of the South was a junket, and the money spent on the visit was wasted time and money.

The editorial follows:

[From the Nashville Banner, Mar. 10, 1959]

CIVIL RIGHTS JUNKET WASTED TIME AND MONEY

If, as some members seem to feel, the Civil Rights Commission is not accomplishing very much, the group could have saved the taxpayers quite a bit of money by calling off the Nashville junket, as this newspaper suggested.

The point is that the Commission members did not learn anything new, if they have been reading the Southern School News, to which all subscribe. This monthly newspaper is produced by the Southern Education Reporting Service, an impartial and fact-finding organization with headquarters in Nashville.

A subscription to the Southern School News costs $2 a year. But because the Civil Rights Commission takes five, they get it for $1.50 each. The paper keeps the desegregation picture up to date with interviews, objective reports and documents gathered by professional newspapermen in all the States affected.

The Commission also has Facts on Film, produced by SERS. This mile of microfilm contains all that has been reported by American newspapers and magazines about desegregation since the Supreme Court ruling in 1954.

The Commission has plenty of money at its disposal, of course. President Eisenhower gave it $200,000 out of his emergency fund in January 1958. Then Congress came along in June of the same year and appropriated $750,000 for the work that the membership now seems to have little heart.

However, the members get $50 each per day when they sit, plus travel and living expense. They have a staff of 50, about 10 of whom usually go along for the ride when a hearing is held.

The home of this organization, which decided to find out why school integration isn't going any better, is a five-story building of rather plush offices near the White House.

Nevertheless, the trip to Nashville was deemed a must. And it must have taken quite a hunk out of the taxpayers' $750,000 for the membership and staff safari to the Athens of the South. In addition, of course, the same taxpayers paid the expense of those 18 or 20 who came to testify from the border States to the West and North.

It would have been less expensive to bring school representatives from the Deep South States, but these officials chose not to take part in the junket.

If the Commission members had stayed in their fine offices in Washington and read Southern School News or consulted Facts on Film, they could have saved a lot of money for the Federal budget.

In addition, they could have found out from the above media what the Deep South is thinking and doing about desegregation. That's where the greatest problem lies, of course.

## National Cowboy Hall of Fame

EXTENSION OF REMARKS
OF
### HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. McGOVERN. Mr. Speaker, South Dakota was honored recently by the inclusion of Ben C. Ash in the National Cowboy Hall of Fame. Ash, a frontiersman, trailblazer in the Black Hills, wagon boss for Gen. George Custer, outstanding law-enforcement officer, and a man who lived as a child in one of the first four frame houses in Yankton in Territorial days, will join two other great South Dakotans in the hall of fame. They are G. E. "Ed" Lemmon and James "Scotty" Philip. The following brief biographical sketch appeared in the Yankton Daily Press and Dakotan of March 14, 1959:

Ben C. Ash, 1851–1946; frontiersman, fearless law-enforcement officer; cattleman; trailblazer in the Black Hills; leading figure of Dakota Territory and South Dakota.

Born in Indiana, Ash was taken in 1859 by his parents to Yankton, D.T., as the town was founded, and they lived in one of the four cabins that made the town. As a youth he was a horsebreaker and trader. At 17 he became an assistant to the U.S. marshal and on reaching legal age was a deputy marshal for 12 years. Later he was sheriff of Hughes County.

In 1872 Ash supervised laying 50 miles of track on the Northern Pacific east of the present Bismarck. In 1873 he joined Custer's command as wagon boss of forty-four 6-mule hitches on the expedition that was to explore the Yellowstone country in Montana. This was featured by discovery of gold on French Creek in the Black Hills in 1874. In 1875–76, Ash explored the Black Hills and marked a trail from Bismarck.

He filed on a claim near Pierre, and was in the livery and grocery business. In 1885 he bought a ranch near Fort Pierre, sold it when elected sheriff; later he was agent for the Lower Brule Reservation under Cleveland's administration.

In the late 1890's Ash had a horse ranch with up to 3,500 head, selling out in 1903. He then stocked the ranch with cattle under the C–Cross brand, ranging from upper Rabbit Creek to Faith, and had up to 10,000 head. Homesteaders shrunk the range so he pulled back to his 5,000 deeded acres, the last big spread outside the reservation to cut back to fee land.

As towns grew along the railroad he engaged in banking and other types of business. He sold the ranch in 1917; helped found the stockyards in Sioux City; returned later to South Dakota; had some reverses; spent his last years at Federal soldiers' home; has been honored with a monument for work in Black Hills; and is regarded as one of the State's early leaders and developers.

## Elton Howard Brown—Tribute

EXTENSION OF REMARKS
OF
### HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. SHIPLEY. Mr. Speaker, in the March 1959 issue of the Lion magazine, circulated internationally, appeared an article about a distinguished fellow member of the Lions Club. This is Elton Howard Brown, known as Brownie to many hundreds of thousands of persons who visit the searchroom at the U.S. Patent Office here. This article was written by the noted writer, Larston D. Farar, who is well and favorably known to my colleagues on both sides of the aisle. It is the story of a Government servant who is performing his duties ably in a position of great responsibility and trust. If we had more Government servants like Brownie, who always smiles when he greets the public, and has served Uncle Sam perhaps longer than any other man on the Federal payroll, I feel sure there would be less cause for complaints by our taxpayers.

The article follows:

The next time you go to Washington, D.C., you may want to meet Elton Howard Brown * * * at 66 a big, friendly lion with a thick mane of wavy white hair and twinkling bluish-grey eyes, who heads the Patent Reference Branch, or search room, at the U.S. Patent Office.

This room, with 336 places for searchers and the records of almost three million inventions, is usually busy with patent lawyers with fat briefcases and inventors in sometimes shabby clothes who come each day hoping not to find an invention like the one they are searching. The room is, in effect, a proving ground for the Nation's basement wizards whose bright ideas often end in the discouraging discovery that somebody else thought 'em up first. At desks that resemble church pews, attorneys and inventors flip endless patent cards, muttering to themselves and shaking their heads.

Yet, as one of them said: "If it weren't for the inventions listed in this room, we would be running around naked, chasing each other with clubs."

In mammoth stacks flanking the room are records of the legacy of the few celebrated and the multitude of unrecognized inventors who have contributed to our industrial advancement and comfort since the Patent Office began in 1790.

Here are the major inventions of Elias Howe's sewing machine, Cyrus McCormick's reaper, Eli Whitney's cotton gin, Samuel F. B. Morse's telegraph, Alexander Graham Bell's telephone, Otto Mergenthaler's linotype and the thousand creations of Thomas Alva Edison. The inventions run the gamut of life from the cradle to the grave—an infant's crib, a schoolboy's bike, an old man's cane and a coffin with bell attached so that the "corpse" can ring it in case of premature burial.

In a typical year, inventors and their lawyers bring about 350,000 ideas to the room in the Department of Commerce Building for study. They quickly abandon about three-fourths of them as having been already registered. About half of the 85,000 remaining are rejected as useless, unworkable or old. Patents are granted in 346 classes and 53,000 sub-classes of inventions, but less than 20 percent bring the inventor enough money to trouble him when he pays his income tax. To date, 2,830,000 individual inventions have been patented.

In all likelihood, if you have ever been in the search room, you have seen Elton Brown, or "Brownie," as he is known to the thousands who use the room, to his fellow Lions and the countless other citizens whom he has helped in his various civic duties.

"He is the inventor's best friend—but get one of them to admit it," a patent lawyer remarked, smiling wryly. "He shows them that what they think is new was invented 40 years ago."

A patent agent put it this way: "Brownie knows more about our Nation's inventions than any other living man, including any inventor, but he has never invented anything himself—except a unique way of serving the public."

Brownie himself doesn't know how many persons he has directed to the proper place to search for patents. But simple arithmetic applied to the number of searchers who come to the Patent Office indicates that it easily must run into the millions. Not content merely with searching for patents and viewing models, he frequently spends his vacation time in industrial centers viewing at first hand the inventions at work. "They look better in action than they do on cards," he says.

When the talk turns to inventors, Brownie is filled with memories of the great—of today and yesteryear. He has seen 'em all, from Charles Kettering to Henry Ford and many another who has contributed mightily to the upbuilding of our civilization.

He remembers young Glenn Martin coming to check on his first tentative ideas on the airplane, and tall, nervous Charles E. Duryea, inventor of the first American automobile, who came in when an old man and died poor. He knew O. U. Zerk, who invented a lubrication fitting. When Zerk first appeared in the search room, he merely gave his initials. When he returned years later and worth a fortune, he identified himself as Oscar Ulysses Zerk.

During his three-and-a-half decades as chief of the search room, Mr. Brown has learned more tricks of his trade than any other living man. He knows that ballpoint pens are classified under "Brush-Scrubbing and General Cleaning Instruments," and that a hangman's gallows is filed under "Surgery," or "Neck Stretching Devices."

He has heard and seen so many fantastic ideas it would be difficult for anyone to startle him. One time, an erratic inventor came to him with plans to make Washington an aerial city, supported 3,000 feet above the Potomac by inflated balloons.

Finding out whether or not an invention already has been invented is almost as easy for him as finding Times Square is for a Manhattanite. He possesses a remarkable memory. When you sit down with him and say, "Stop me if you've heard this one," he usually could stop you quickly. However, he will hear you out and then go to the files and come up with the evidence that purposely or not, you are a copycat.

Brownie knows virtually every patent lawyer who is licensed to practice before the

Patent Office, plus the patent agents and their associates and assistants. The lawyers and agents love him, but the inventors usually suspect him.

"An inventor almost always thinks I'm trying to steal his invention, although I must learn something about his invention in order to help him," Brownie points out. "Sometimes, to get his confidence, I must even get him angry with me or use some other means to get him to shake his idea loose. After getting the idea, I don't say, 'Oh, that is old,' or 'I've seen this somewhere before.' That alone would make me a marked man."

But with incredible speed, out of the millions of inventions, he can understand a gadget, turn to his classification manual and find what field of search the inventor should cover. Sometimes he pinpoints in a few minutes the very idea the inventor thought was novel. He lets the printed page prove the point, volunteering no other information since he doesn't want to make it seem that he wished the potential inventor hard luck.

Once an inventor sat down at Brownie's desk and declared that, due to a sad experience, he had developed a new invention. The inventor said he had been driving in a heavy rainstorm on a dirt road and had a flat tire. In order to change the tire, he had to wallow in the gummy red muck. In a flash, he had an idea for a pushbutton, automatic jack that would be standard equipment on every car.

Sympathetically, Brownie referred him to "Pushing and Pulling Instruments," where the inventor found 115 similar devices already patented. But to his astonishment none of them was in use. All had proved to be too expensive.

Brownie has been in the Patent Office for more than 53 years, longer than any other employee in the Department of Commerce and possibly longer than any of Uncle Sam's other 2,300,000 Federal workers. He started in October 1905, as a copyboy, was promoted to typist, and later moved to the patent delivery room. In 1923, Brownie was named assistant to the head of the search room, and 4 days later when the chief died, he was appointed to the job he still holds.

His career as a Lion is somewhat shorter, though nonetheless distinguished. It wasn't until Brownie was over 50 that his son, Elton, Jr., a former president of the north Washington club, got him interested in the work of the association. But when he did, Elton Brown père went to work with the same enthusiasm that has marked his work in the Patent Office for so many years. Brownie is a charter member and past president of the Mount Rainier-Brentwood, Md. club and has a 10-year perfect attendance record .

He has 3 years more to go before reaching the Government's mandatory retirement age, and when he does, Brownie has a few ideas for inventions of his own, he admits with a smile. "But I hope they don't duplicate any of the whacky ones I've seen."

## Luigi Luzzatti in 1925

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, a most interesting excerpt from the dairy of Luigi Luzzatti appeared in the Carolina Israelite, January-February 1959 issue. I commend its reading to the attention of our colleagues, as follows:

LUIGI LUZZATTI IN 1925

On May 30, 1925, the great Italian scholar Luigi Luzzatti visited Palestine and wrote in his diary—

"Oh, if agrarian reawakenings instead of exciting envy of the Arabs, may avail to transform those Semites too into brave farmers; the Jews of Palestine, saving themselves from the perils of their race—excessive humility in misery, pride in the days of good fortune—would bring about a revival of western Asia. If the Arabs would greet the new, and at the same time ancient children of that land as brothers who are helping them to develop the hidden wealth of the soil; if Christians, Jews, Mohammedans would persuade themselves that their creed invokes and requires reciprocal justice, and that God, the father of races, wishes to be worshipped in good will and not in persecutions; what light would be released once more from Judea, the redeemer of four continents."

## Winning Essay on Hiring the Handicapped, by Betty Ann Thompson, Centennial Senior High School, Compton, Calif.

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of the recent winning essay in the essay contest in the southeast district, Los Angeles County, Calif., significantly and appropriately entitled "Hiring the Handicapped in Our Town," of which essay contest a very distinguished but handicapped veteran, Lillian M. Karnes of Compton, Calif., was chairman. The $40 fund, divided into three awards, was contributed by the following groups, to wit: The Compton, Calif., Disabled American Veterans; Veterans of Foreign Wars; the American Legion; and individual members of Veterans Employment and the Committee to Employ the Physically Handicapped. The winner was Miss Betty Ann Thompson, 1202 East 123d Street, Los Angeles, Calif., and she received the award of a $25 U.S. savings bond and her essay is hereinafter set forth. The second-place winner was Mary Helen Hines of 1854 East 121st Street, Los Angeles, Calif., who received $10. The third-place winner was Carolyn Jackson of 1408 East 122d Street, Los Angeles, Calif., who received a $5 award.

Because Miss Thompson was first-place winner, her essay has been forwarded to the State Committee for the Employment of Physically Handicapped appointed by the Honorable Pat Brown, Governor of the State of California, and, Mr. Speaker, the winning essay of all those forwarded to the Governor's committee will be forwarded to Washington, D.C., to there compete at the national level with like essays from throughout our beloved Nation with the final winner to receive at the personal hands of the President of the United States, Dwight D. Eisenhower, a $1,000 U.S. bond.

The Disabled American Veterans National Foundation is supplying the $1,000 bond for the best essay nationwide and for the cost of the trip to our Nation's Capital from whatever State produces the national winner.

Mr. Speaker, I am sure you and all the other Members of this distinguished legislative body join with me in complimenting the sponsors of this particular essay contest, as well as congratulating the winners thereof as hereinbefore set forth.

I am pleased to say that Betty Ann Thompson, first-place winner attends the Centennial Senior High School in Compton, Calif., as well as residing in the important city of Los Angeles, Calif., and that her teacher of English composition and literature is Miss Catherine C. Devine.

Her winning essay follows:

HIRING THE HANDICAPPED IN OUR TOWN

I have a job, and you have a job to do, but there are so many who have nothing. What accounts for this? Is it that most people aren't interested in their own welfare? Is it because they aren't interested in their family's welfare? No, it is because most of these people are in some way physically handicapped. How can this word do so much to disturb the minds of more than 15 percent of the people in the United States who are handicapped? It's simple—the handicapped are in need of jobs. This group of people know too well the meaning of insecurity, for the problems they face are numerous.

The problem of hiring the physically handicapped is of national importance. America's progress depends on each and every individual. This includes also those who are handicapped physically.

When it comes to hiring people for jobs, in some cities the physically handicapped are turned away. It is this problem that we as American citizens face. However, special employment agencies have been set up to aid those who are in some way physically handicapped. Primarily, the work of these agencies is to educate those who are handicapped, so that they will be able to compete on a more equal basis with physically normal people of our community in securing a job.

In Los Angeles County, the ratio of the handicapped is 6 to 2. In the areas surrounding our community 3 to 6 is the ratio of the physically handicapped employed. Comparing Los Angeles County with statewide statistics, approximately 3,300 physically handicapped persons are unemployed. Nationally we stand at 8 percent unemployed handicapped persons.

Ducommon, Harvey Aluminum, and Robert Shaw Fulton are to be commended for paying particular attention to this group of people. These companies employ handicapped persons and find them to be very fine employees. It is companies such as these which give these persons the opportunity for a better life.

In every case of a handicapped person, one will find that they tend to do a better job than those who are not handicapped. The handicapped appreciate the opportunity to work, so they tend to be better employees. You will not find in any instance a person handicapped physically staying home from a job because of a minor sickness. Their skill is like that of the architect who laid plans to build the Golden Gate Bridge, always stable.

It is our duty as Americans to see that each citizen has some means of support whether he is handicapped or not. Americans are not to judge whether a person is fit for something; rather, we are to assist in rehabilitation so that they are fit and able to accomplish something in life. When this is done, America will be more prosperous in everything that she does, and America will truly be the greatest Nation in the world.

## Achievement in Realism at St. Olaf College

EXTENSION OF REMARKS
OF
**HON. FRANK M. COFFIN**
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. COFFIN. Mr. Speaker, the distinguished gentleman from Michigan [Mr. FORD] and I have recently returned from St. Olaf College in Northfield, Minn., where we had the honor of participating in its political emphasis week.

Because we feel that what we saw and experienced would be of great interest to the Members of this House, we shall try to convey something of the atmosphere of their mock house of representatives. So closely did the students emulate the form, spirit, and substance of this House, that we had the uncanny feeling that Congress had moved westward and grown younger. Mr. Speaker, we think it is of some significance that over 200 students at this fine liberal arts college should enlist in and carry through an intensive 4 months preparation for the 4 sessions of the mock house of representatives which were held on February 27, March 12, 13, and 14. The students were not drawn solely from the political science department, but included a balanced cross section of majors in science, literature, and other disciplines. Their preparatory work included exhaustive study of such fields as agriculture, labor reform, foreign aid, and civil rights. Each participant represented a particular State and tried faithfully to reflect the probable points of view of a Representative from his area. The house parliamentarian and speaker had to become intimately acquainted with Cannon's Rules and Procedure to an extent not usually approximated by anybody but a House veteran. All of this work was done without credit and after regular study hours.

Somehow the enthusiasm was maintained until the climax of the entire exercises which was political emphasis week. The St. Olaf gymnasium was transformed into a smaller but realistic house of representatives, complete even to the mace at the speaker's side. The three work sessions of the mock house then began to grind out the grist of the several committees. The legislative agenda from any point of view was an overpowering one including civil rights, farm policy, Federal aid to education, foreign aid, labor reform, Supreme Court limitations, and abolishment of right-to-work laws.

The debate proceeded hot and heavy with tempers occasionally running high and with floor leaders and whips constantly directing their parties as groups from particular areas held frantic caucuses to determine their position as the issues changed. The speeches for and against each measure showed a depth of knowledge and understanding about those issues which demand the utmost of us in this Chamber. Even the students who were not speaking sat at their seats in rapt attention for 3 to 4 hours—the average length of each session. The ability of these students to sustain both their attention and their enthusiasm for such an extended period of time impressed us and gave us no little inspiration. If American college students enjoy stimulating leadership of this kind in exercises in citizenship, we need have no final doubts about our future.

We understand that the gentle but persistent guidance of Dr. James R. Klonoski of the political science faculty of St. Olaf has been in large degree responsible for perhaps the most remarkable shadow congress which has been held. The student chairman, David Brye, and his excellent steering committee followed through with the arrangements in a manner to be envied.

Mr. Speaker, what began as an effort in education proved to be an achievement in realism.

## Recent FCC Ruling Will Force Broadcasters to Distort the News

EXTENSION OF REMARKS
OF
**HON. GLENN CUNNINGHAM**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I include an editorial from today's Washington Post and Times Herald on the recent Federal Communications Commission ruling on section 315 of the Federal Communications Act.

DISTORTING THE NEWS

The absurdity of requiring equal time on the air for all candidates for a political office when any one of those candidates is heard or seen in a newscast is brought into sharp focus by the Lar Daly case. Mr. Daly is a perennial officeseeker who obtained free time on Chicago television stations because they had broadcast news films showing the incumbent mayor, a Democrat, and his Republican opponent. The Federal Communications Commission ruled that Lar Daly was entitled to equal time on a regular news broadcast.

Officials of the National Association of Broadcasters rightly see in this decision a grave threat to radio and television coverage of political events. Frank Stanton, president of the Columbia Broadcasting System, pointed out that during the 1956 presidential campaign the CBS Television Network devoted about 20 percent of its television newscast time to the presidential and vice presidential candidates of the two major parties. If it had been required to give equal time to all the 24 presidential and vice presidential candidates of the 12 parties which participated in that election, there would have been a complete blackout of other news and even then the requirement would not have been satisfied.

The source of this straight jacket imposed on radio and television news is, of course, section 315 of the Federal Communications Act. It requires that any station which permits any legally qualified candidate for any public office to use its facilities must afford equal opportunities to all other such candidates for that office. This attempt to put candidates of the Prohibition Party, America First, and other insignificant political groups on a par with the major Democratic and Republican Parties is in itself ridiculous. We have previously pointed to the urgent need for modification of this provision so that television and radio can do their essential job of presenting the major candidates to the people without having to clutter their programs with meaningless harangues that no one wants to hear.

Whether the statute requires the FCC to extend this principle of equal treatment for the unequal to newscasts is a highly controversial issue. The language of section 315 is indeed sweeping; yet it speaks of permitting a candidate to use a broadcasting station. When a candidate who happens also to be the President of the Uniteed States or the mayor of a city is shown in a newscast, he is not using the station in any literal sense of the word. Rather, the station is using him to present the news to the people.

In any event, the ruling stands as a gross encroachment upon freedom of information in a democratic country. The broadcasting industry has an obligation to fight it in the FCC, in the courts, and in Congress. Representative GLENN CUNNINGHAM has offered a bill to draw the proper distinction between political broadcasts as such and the appearance of candidates in legitimate newscasts. Certainly that step will have to be taken if the Daly ruling is not changed by the FCC or the courts. But Congress should not stop there. It should also recast section 315 so as to require fair play among the major candidates without trying to thrust minor factions and local crackpots into the major political leagues.

## Our Constitution—Worth Having, Worth Defending

EXTENSION OF REMARKS
OF
**HON. CARL ALBERT**
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. ALBERT. Mr. Speaker, under unanimous consent, I include an original oration by Charles E. Puckett, a student in Wilson, Okla., High School, in the Appendix of the RECORD. Entitled "Our Constitution—Worth Having, Worth Defending," the oration won first place in both county and district contests.

The oration follows:

We Americans have, on numerous occasions and by many persons, been accused of being a people who know the price of everything and the value of nothing. In an attempt to reevaluate some of the things that underlie our American way of life, I have chosen as the subject of my original oration, Our Constitution—Worth Having, Worth Defending.

Underlying every law made, every act of government—yes, even the Constitution itself—is the will of the people of the United

States. The Constitution came into being as a result of the people's will. Today it exists as the symbol of their basic beliefs.

Human freedoms and the rights of the individual are set forth in the Constitution of the United States. These rights were important when the Constitution was new, they are important today, they shall be important tomorrow. Our Constitution is dedicated to the proposition of promoting the welfare of the individual, as one of the many individuals who make up this great Nation.

Our Constitution's worth lies in the fact that it recognizes men's rights—God-given rights—and realizes that only a free individual operating in a free society can make a real contribution to that society. Nowhere else in this world is the freedom of the individual stressed as it is in America.

The American Constitution is the ablest of the written guides to government of the people that the world has ever known. Its greatness lies in its basic ideals: all men are created equal, all men have certain basic freedoms, all men are individuals and deserve to be treated as such.

Government logically exists for only one purpose, to protect these ideals. People do not exist for laws, laws exist for people, laws exist to guarantee freedom for people.

A democracy is the best form of government that a freedom-loving people can have. No other form of government can provide so fully for the freedom, success, and happiness of its citizens as can a democracy.

The Constitution plays a vital role in our American democracy. Every bit of work performed by the Government of the United States, from the President in the White House to the constable in an isolated village, is subject to a written instrument, the Constitution. This instrument guarantees that men shall be ruled by law and not by the whims of men.

Without this guarantee of freedom and individual rights, democracy in the United States would wither away and die. And yet some of the very people benefiting from the Constitution often question it and the authority of the Supreme Court to interpret it. They refuse to believe in its ideals or uphold its guarantees. Today, all across the South—in Little Rock, in Virginia, in Alabama—there is racial strife and prejudice because people have forgotten the basic ideals of the Constitution, because people have forgotten that all men are created equal. They have forgotten that this document came out of centuries of bitter struggle, a search by men to find a way of combining order, liberty, authority, and freedom. They have forgotten the proud heritage of freedom under the law for which this document stands. They would tear it down, but in trying they will only tear themselves down, for the Constitution stands for our American way of life. It is the way of individual liberty, of the free market, of private property, of personal initiative. It is the freedom of the press, the freedom of speech, the freedom of worship. It is the great heritage that has advanced from our Founding Fathers to the atomic scientists of today. The Constitution is America.

Defense of the American ideals began before the first shot was fired at Concord. In two World Wars and various revolutions, America has defended her beliefs in freedom—usually, before the attack has come from the outside. Today, the forces of destruction strike partly from within.

The Constitution has upheld our best interests for nearly 175 years. Are we going to allow these attacks to continue unchallenged? Are we going to raise neither arms nor voice in defense of the one thing that has guaranteed our liberty? Will we fail our duty now? The Constitution is still the basis for the American way of life. We must not—we cannot—we will not—allow erosion to eat away at its ideals. Our enemies are lies, misconceptions, and prejudice. Our best defense is truth. Anything worth having is worth defending—defending with action, both physical and intellectual. Not all of us are called upon to defend our country with physical action. But, our citizenship places upon us the duty of defending our beliefs with intellectual action. Every individual must realize that he has not mastered the subject of liberty until he practices those things which guarantee freedom to others.

Today our Constitution can be defended with ballots or with bullets. Few times in its history, however, has it become necessary to defend it with bullets. But we are regularly called upon to defend it with our ballots. In every election, one party or the other is more nearly concerned with the general welfare of the people. To adequately defend our Constitution, we must first understand its ideals and then recognize the issues involved. For it has been proven that he fights best who knows why he fights.

All men are created equal. All men have certain fundamental liberties. All men have importance as individuals.

These things the Constitution guarantees, and these things we must defend. Upon their establishment and their maintenance rests the American way of life.

These guarantees mean more than all the material possessions of America, for these guarantees have made it possible for Americans to obtain and enjoy their material possessions.

Too often we tend to place value only on the things which we see. Too often we tend to forget the intangibles. But, in light of the struggle by the peoples of the world to obtain those things which the Constitution guarantees, we realize that the Constitution is worth having, it is worth fighting for. Our forefathers died to secure its blessings. Their descendants died to protect it. People in other parts of the world are willing to give their lives to obtain the same benefits that it guarantees the people of America. As the beneficiaries of all who have struggled for human freedom, can we do less than these? Is it too much to ask that we give our time, our interest—our very life blood if necessary—to defend this precious heritage? In time of calm, our apparent unconcern may seem to answer, "Yes." But in times of stress, we know our answer will be different.

For, as James Mussatti has said, "Our most formidable fortress of defense in time of stress will remain the Constitution of the United States. But it is only as good as our understanding and defense of the purpose for which it was drafted. Eternal vigilance and personal responsibility are still the price of human liberty."

"Yes," I say. Our Constitution is worth having. It is worth defending.

## Low Farm Price Supports and Their Effect on Surpluses

EXTENSION OF REMARKS

OF

### HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 16, 1959*

Mr. POAGE. Mr. Speaker, at another point in the RECORD, my friend, Hon. PAUL JONES, has inserted a clipping from the Washington Post, which contained a letter by Mr. Joseph Alsop. I, too, had asked that this article be inserted, but Mr. JONES' request preceded mine. In that letter Mr. Alsop points out his dissatisfaction with policies of the present Secretary of Agriculture and cites his reasons.

While I have, from the very day when Mr. Benson turned his back on Candidate Eisenhower's Kason and Brookings promises, expressed my disagreement with his low support philosophy, it has only been recently that the public has come to realize that this Benson policy has failed completely. Farmers have long realized that it has reduced the average income of farm people to one-half that of nonfarm people even while the Secretary was talking self-righteously about the great increase of per capita farm income in 1958. This was largely due to the great movement of farm families to the cities.

Most people have, however, completely overlooked the fact that Mr. Benson's policies have resulted in cost far and away beyond anything ever experienced under the much higher rigid supports of previous administrations. The public is just now beginning to recognize that flexible supports, which were advanced to save money for the taxpayer and to reduce our surpluses have failed to do either. The cost of operating the Department of Agriculture is today just about four times what it was under Mr. Benson's predecessor, and the surpluses on hand have grown so that the President tells us that it will soon cost a billion dollars a year just to store them.

Mr. Alsop brings out this with his usual clarity. He says:

I myself was a strong supporter of Secretary Benson when he took office. Like many others, I supposed that he had the determination and the courage to remove the anomalies of the earlier, Democratic farm program. I am only ashamed that it took me so long to notice that Benson's long suit was pious talk rather than positive performance. His efforts to remove past anomalies and extravagances have in fact produced even greater present anomalies and extravagances.

Again he states:

He has permitted the total cost of the farm program to double and then triple, while prating about economy.

Mr. Speaker, I believe a word of explanation is in order. Mr. Benson's policies seem quite consistent to most people who are not acquainted with farming in one-crop areas—the areas in which most of our surpluses are produced. Mr. Benson says that if you drop the support price on any commodity that farmers will next year quit growing that commodity. That sounds reasonable, but it simply does not work out that way.

Doubtless, Mr. Benson believes his assumption to be true, but I ask you to place yourself in the position of a cotton farmer who has been growing 10 bales of cotton—above the average—and getting $160 per bale—about what he got last year. This meant your gross income from cotton was $1,600. And in most of the Cotton Belt that is no comparable cash crop to which you can turn. Suppose now that Mr. Benson can prove that you as a cotton farmer will, next year, get only $80 per bale. What would

you do? I think it is clear that in the absence of controls, you would try to grow 20 bales. This is the only way you have of maintaining income. It is the only way most farmers who grow our basic crops have of supporting their families. Therefore, when confronted with lower supports, farmers grow more, not less.

This is exactly what farmers always try to do. Our largest cotton crop was grown when support prices were only 52 percent of parity. According to the Secretary, we should have imported cotton that year. When cotton supports and prices went up, the pressure was off and farmers grew less, even when there were no controls.

For low prices to reduce production they must be so low and continue so long that they force farmers off the farm.

Mr. Benson seems perfectly willing to use this drastic starvation method of moving farming operations into larger and larger units. Fundamentally, this is the real farm problem. Do we want more farmers forced into town to compete on an already overfilled labor market? Do we want to aggravate industrial unemployment, and place a still further burden on our already overtaxed relief rolls? Do we want our farms to become rural factories owned by absentee corporate operators? Will such a situation help any substantial group of our citizenship? Will it give us cheaper food? Will it give greater purchasing power with which to buy the products of our factories? Will it help us to maintain that unyielding opposition to communism which all over the world has had its roots on the farm?

May it not well turn out to be as poor a long-time investment as Mr. Benson's administration of the Department of Agriculture has turned out to be on a short-time basis? These, Mr. Speaker, are some of the very real questions involved in the farm problem.

Finally, Mr. Speaker, that all may see the record and evaluate it for themselves, I include some tables prepared by the staff of our Committee on Agriculture just about 1 week ago. I believe that it is fair to state that these figures show that never has so little been accomplished with so much:

FARM FACTS AND FIGURES

Total realized net income of farmers after deducting agricultural production expenses from the total cash income from farm marketings:

| | |
|---|---|
| Last 6 years: | |
| 1953 | $13,809,000,000 |
| 1954 | 12,201,000,000 |
| 1955 | 11,470,000,000 |
| 1956 | 12,111,000,000 |
| 1957 | 10,840,000,000 |
| 1958 | 13,060,000,000 |
| Total | 73,581,000,000 |
| Six previous years: | |
| 1947 | 17,304,000,000 |
| 1948 | 16,057,000,000 |
| 1949 | 13,789,000,000 |
| 1950 | 13,185,000,000 |
| 1951 | 15,158,000,000 |
| 1952 | 14,416,000,000 |
| Total | 89,909,000,000 |

During the last 6 years farmers marketed 15 percent more food and nonfood products than in the 6 preceding years, 1947–52 inclusive. Had farmers been paid for the larger volume of food and nonfood products marketed in the last 6 years at the same rate as in the 6 immediately preceding years their net income in the last 6 years would have been $96,700 million, which is $23,109 million above what they actually received. If farm prices, instead of declining, had increased in proportion to all other prices during the last 6 years, then the income of farmers would have been much greater than $96,700 million.

*Appropriations for the Department of Agriculture*

| | |
|---|---|
| Last 6 years: | |
| 1954 | $1,782,300,000 |
| 1955 | 2,026,500,000 |
| 1956 | 1,601,900,000 |
| 1957 | 3,583,100,000 |
| 1958 | 6,870,900,000 |
| 1959 | [1] 5,888,600,000 |
| Total | 21,753,300,000 |
| Six previous years: | |
| 1948 | 1,224,500,000 |
| 1949 | 1,183,500,000 |
| 1950 | 1,503,800,000 |
| 1951 | 1,375,900,000 |
| 1952 | 1,817,800,000 |
| 1953 | 1,510,400,000 |
| Total | 8,615,900,000 |

[1] Estimate. Actual expenditures in fiscal 1959 now estimated at $7,341,000,000.

NOTE.—Appropriations are for fiscal years. Appropriation bill of 1952 covered period of July 1, 1952 through June 30, 1953.

*Farm price-support losses—(Commodity Credit Corporation)*

| | |
|---|---|
| As of Jan. 1, 1953 | $1,064,617,225 |
| As of Jan. 1, 1959 | 5,853,292,744 |

NOTE.—The losses in 6 years, from January 1953 through 1958, were more than 4 times the total of losses during the previous 20-year history of Commodity Credit Corporation price-support operations.

| | |
|---|---|
| 20-year loss (1933–52) | $1,064,617,225 |
| 6-year loss (1953–58) | 4,788,675,519 |

*CCC price-support operations for basic crops only—(wheat, corn, cotton, tobacco, rice, peanuts)*

| | |
|---|---|
| To Jan. 1, 1953 (at end of 20 years) (profit) | $13,011,290 |
| To Jan. 1, 1959 (6 years later) (loss) | 2,528,607,297 |

NOTE.—The CCC price-support program for cotton, over 20 years, showed a profit of $268 million. But this profit has been wiped out, by cotton program losses of approximately $850 million during the last 3 years.

*Losses on dairy products*

| | |
|---|---|
| Up to Jan. 1, 1953 | $132,523,383 |
| Since Jan. 1, 1953 to Jan. 1, 1958 | 1,511,038,079 |
| Dairy program total losses | 1,643,561,462 |

*CCC investments*

| | |
|---|---|
| Total CCC investments (inventory and loans) as of Jan. 1, 1953 | $2,452,000,000 |
| Total CCC investments (inventory and loans) as of Jan. 1, 1959 | 8,716,071,000 |

*CCC investments in major crops*

[Inventory and loans]

| Crop | Unit | Amount | Value |
|---|---|---|---|
| Cotton: | | | |
| Jan. 1, 1953 | Bales | 1,097,000 | $166,779,000 |

## Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare, has brought to Congress a proposal which he says will help meet the current shortage of more than 140,000 classrooms. However, to build the 75,000 classrooms which Dr. Flemming says will be built under his formula, State constitutional and statutory debt limitations will have to be changed, basic tax concepts will have to be revised, and the States will have to match the Federal funds with money they do not have.

On this St. Patrick's Day, Dr. Flemming's famous formula can be modified slightly. Those fabled little rascals, the leprechauns, can be put to work. The Secretary could change the necessity for matching funds by the States to matching by the leprechauns. All each State would have to do would be to convince a leprechaun to come forward with his pot of gold. The Federal Government would match every pot with an equivalent one from the Federal Treasury. Those who disbelieve in the existence of the leprechauns may not have too much faith in the ability of this proposal to build classrooms but as many scoili—schools—could be built for the cailini—girls—and buachallai—boys—under this method as would be under Dr. Flemming's original formula.

## Statement on the Berlin Crisis by Wisconsin Conference of Methodist Churches

EXTENSION OF REMARKS
OF
### HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the Berlin crisis as adopted by the world peace commission of the Wisconsin Conference of Methodist Churches, and sent to me by Mr. Lawrence Giese, of Milwaukee, the commission chairman. This thoughtful statement can, I believe, be read with profit by Members of Congress and others throughout our Government:

STATEMENT ON BERLIN CRISIS

The Berlin crisis calls for fresh and creative thinking. Neither the cause of peace nor the welfare of the German people will be served by a rigid adherence to fixed positions.

To be acceptable and workable, any new plan offered must meet the minimum legitimate needs of the West, central Europe, and Russia. Russia, who lost 20 million people in the last war, must feel her future will not contain a nuclear-armed Germany leading a united Europe in attack against her.

Czechoslovakia, Poland, and East Germany need an end to Russian-armed domination. West Germany wants West Berlin protected against seizure by East German Communists. The West must feel that any new proposal would not encourage Russian armed aggression.

The answer to these requirements, we believe, may exist in large part in current proposals of British Labor Party, German Social Democrats, and the Polish Government for disengagement of military forces in Germany, Poland, and Czechoslovakia with neutralization and substantial demilitarization of that area under international inspection and control. These proposals were given additional meaning when Khrushchev told the 21st Soviet Congress he would be willing to withdraw Russian troops from that area in a central European area disengagement.

We believe that those proposals would be strengthened if they clearly stated that the goal in that three-nation area would be the reduction of all arms to the level necessary only for domestic order, carried out and maintained under adequate U.N. inspection.

To prevent a "power vacuum" into which either side might return, we believe a United Nations armed force should be stationed in those three countries, backed by a declaration from the West and the U.S.S.R. that each side would consider any military operation against that U.N. force by the other as an attack upon itself.

Substantial benefits would come to all concerned from such a plan, namely:

1. Both Russia and the West would be freed from a possible resurgence of militarism in a nuclear-armed Germany.

2. Russia would get a dependable neutral buffer zone in place of satellites that are dangerously unreliable.

3. Sixty million Poles, Czechs, Germans freed from U.S.S.R. armed control.

4. The future of West Berlin and of German reunification would be much brighter in an atmosphere removed from the arena of the cold war.

5. The armed forces facing each other in central Germany would be separated, reducing the possibility of incidents that could provoke war.

Perhaps most important, this proposal would institute in the vital central European area the principle of effective disarmament under United Nations inspection and control, which must eventually extend to the whole world if lasting peace is to be secured.

## American Legion's 40th Anniversary

EXTENSION OF REMARKS
OF
### HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an address to my fellow Legionnaires on the occasion of the American Legion's 40th anniversary:

Fellow Legionnaires, this occasion marks an important date in the history of our organization. Forty years ago today the American Legion came into being at caucuses of the first American Expeditionary Force held in Paris on March 15–17, 1919. We do not meet here to boast or cast bouquets at ourselves—we leave that to others—but it is only proper that we should remind ourselves, more than a generation and two world wars intervening between the founding of our organization and the present that (I quote from the "Brief History of the Legion" prepared by the national headquarters in Indianapolis) today, 40 years after its inception, the American Legion is "the only major American veterans' association which was formed overseas by fighting men and women. It includes more combat veterans, more disabled veterans, more winners of the Congressional Medal of Honor and other decorations than all other veterans' organizations combined."

There has never been anything like it in American veterans' history save only the Grand Army of the Republic: In its scope and influence the American Legion is to the 20th century what the Grand Army was to the preceding one, but we flatter ourselves that our own legislative history is a bit more savory than that of the older organization which flourished in the heyday of what might be termed the lush era of log-rolling and back-scratching. It reached an all-time high in the first administration of Grover Cleveland when it ran headlong into that formidable and entirely immovable character. Here are two or three examples of the pension bills of Civil War veterans with which Mr. Cleveland had to deal by the hundreds, if not the thousands, back in 1886. One claimant had fallen over a fence with absolutely no injury to his person; but he was a veteran and therefore, on the strength of this shocking calamity, must have a pension. Another demanded a life pension because he had hurt his ankle while intending to enlist. Still another had broken his leg while gathering dandelions long after the war. And so forth and so on. For such claims the Grand Army of the Republic fought with a zeal and valor worthy of a better cause. In contrast to such pre-

posterous goings on, the record of the American Legion in respect to needy veterans offers a bright and lustrous page of solid, enduring achievement. For our legislative record, State and national, we need apologize to none. Our contributions to hospitalization, education and all manner of public welfare where we can with propriety act, stands, and speaks for itself. But all this is as well known to you as to myself.

It is, however, a great pleasure and satisfaction merely to rise and remind you of that splendid record which first began to be written 40 years ago. May we, one and all, everywhere in this beloved land of ours, continue the good work so proudly begun many years ago and so faithfully and stanchly maintained ever since. May we ever live up to and be worthy of the title of our organization—the American Legion.

## An Exile's Rambles Through Erin

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include in the RECORD a very interesting recital of a trip made to the Old Sod by one of my constituents, Mr. Jeremiah J. Riordan, a resident of Peabody, Mass., and a very popular Irishman who has been most active down through the years as a sincere and conscientious member of the Ancient Order of Hibernians, division 11, in Essex County, Commonwealth of Massachusetts.

This outstanding Irishman has established an enviable record as a writer and author of Irish subjects, and is held in high repute in his community:

AN EXILE'S RAMBLES THROUGH ERIN

(By Diarmuid O'Riordan)

'Twas on June 7, 1956, that my wife and I boarded a plane (TWA) at Boston, Mass., U.S.A., for Shannon Airport in Ireland, to satisfy a desire we had hankering in our hearts for a number of years, to once again see the hills and valleys of Ireland and visit the scenes of our childhood days and, if possible, visit some friends of our youth. It was 49 years since I had looked back from the deck of a White Star liner at the last glimpse of Erin as it sank below the horizon when the good ship *Cymric* headed her way across the broad Atlantic for the shores of the United States, now the land of our adoption.

My wife, Annie (Moran) Riordan, although a few years my junior, was absent from County Mayo, Ireland, for 50 years. I had kept in touch with my relatives through correspondence down through the years until at last they had all gone to the great beyond. So I did not expect any great reception on my arrival, although I knew I would meet some schoolboy chums to remind me of the dim past. On the other hand, my wife had lost all touch with her relatives in Ireland. She had left behind her in 1906, an aunt and her three sons. At this stage it would be well to state that she was born in England. Her parents died while she was still an infant, so her aunt in Ireland was given the responsibility of bringing her up. She had a brother in England with whom she had kept in touch, and the desire to meet him and his family was part of the hankering in her heart, besides her not forgotten relatives in County Mayo.

That was the picture facing us as we walked up the gangway to the huge bird of the air that was to take us back to Ireland in as many hours as it took days to bring us away from there 50 years ago. Neither of us had ever attempted to fly before and though I was not afraid for myself, as I knew I could acclimate myself to anything. I was anxious about my companion as she is of a nervous disposition. We walked in and sat down as if it was an everyday occurrence. There were about 50 passengers aboard but at one glance I knew they were not all going to get off at Shannon. It was a Trans-World Airways plane and would keep on going to other airports in the worldly course. It was now 10 p.m., the time scheduled for departure, and as the great motors began to hum loudly, I kept watching my wife and she did not seem to mind it. In glancing out the window of the plane I knew we were moving rapidly as I observed objects flying backwards and very soon there was nothing visible but complete darkness, so I concluded we were up near or over the clouds. We laid back in our seats and tried to get some sleep but, try as I might, slumber would not come to me, but lo and behold, Annie started to snore loudly and she kept it up until we reached Gander Airport at Novia Scotia, where we stopped to refuel. After 30 minutes we heard the motors again starting up and again we were in the air, this time facing the broad Atlantic. It was then 1 o'clock a.m. American time and very soon it was bright daylight as we were going to meet the sun in its course around the planet earth. Annie again was soon fast asleep but beyond a few odd winks there was no slumber for me so as that when about 9 a.m. American time, 2 p.m. Irish time, we were told to get ready to land at Shannon. I had to shake her gently to awaken her. I then told her we were in Ireland, she just smiled and said, "Don't be silly, we can't be in Ireland yet; we just left Boston."

II

We came to a stop and those of us who were to visit Ireland got off and after going through the usual formalities, we were free to go to any part of the Emerald Isle which we liked best. I, myself, had a hankering for County Cork, where I spent the first 24 years of my life, but I thought if I went there first I could not stay long enough to satisfy my years of longing, as I would have to yet visit Mayo and England. So if we visited those places first and curtail our stay as much as possible, I would have more time at my disposal to spend among my haunts in Inchigeela, County Cork, than if I went there first. We were scheduled to go back to the land of the free and the home of the brave on August 13. The visit to County Mayo and to England was a must, so it was better to get it over with at once and then return to God's own country (County Cork) as soon as possible. After changing my American dollars to £5 notes at Shannon, I said, "Now show me the way to Ballyhaunis, County Mayo." The employees at the airport were more than obliging to guide us right, and a young girl wearing a uniform immediately pointed out a bus that would take us to Ennis, County Clare, where we could contact a train that would take us to Ballyhaunis, County Mayo. In fact, together with pointing it out to us, she contacted the conductor of the bus and requested him to wait until we could get our baggage aboard, which he very obligingly did.

We started out on our first tour through Ireland on the 8th of June 1956. The ride from Shannon to Ennis gave me my first impression of my native land. I had not seen much of it in my youth, first, because there was no means of transportation in those days; secondly, money was scarce, and thirdly, my occupation was too steady to allow time off. (I was a letter-carrier since I left school until I came to America in 1907.) So in that bus ride from Shannon to Ennis I covered more ground and saw more of Ireland than I had during the first 24 years of my life. That part of Clare, covered by the route of that bus, was not very encouraging to any exile in his rambles through Erin. The land was not of the best, though the residences were almost modern-looking in appearance, there didn't seem to be any people working in the fields. I did see a number of men digging a trench along a road. It looked like a sewer or a watermain. That was the only activity I observed in County Clare until we reached Ennis railroad station. Well, here we are at Ennis depot, waiting for a train to Ballyhaunis, which will arrive in 30 minutes.

I have read in some book or other periodical that Ennis is a very ancient city. Well, that is the impression it gave me that day as I sat in a seat on the platform waiting for the train. Not only did the city look ancient, but the people looked ancient, the few of them that were there in and out of the ancient-looking waiting room. I don't mean that they looked old in years. Some were young men and women; still somehow they looked ancient. However, the train arrived on schedule and I was surprised to step into a nice comfortable compartment. We soon started on our rambles through Erin. There was a passenger across from me whom I recognized as one who got off the plane at Shannon. However he got to Ennis, I don't know. I tried to get him into conversation, but I could only learn that he did not get on at Boston but came from the Middle West and he was going to Westport, County Mayo, which was as far as this train goes. So I gave up trying to talk to him and got to converse with an Irish lady, who was going home after doing some shopping in Ennis. She was very interesting and gave me my first inkling of the Irish Republic, for when I left Ireland the country was under British rule. The natives were subjects of English-made laws and they were afraid of their rulers. They were crushed by English landlords. They were timid of making improvements on their land or their homes for fear of their rent being raised. They were bowing and lifting their hats to the landlord and his agent. But in this woman, who kept up a conversation with me, I could see she was different from the people I once knew. She spoke with a spirit of independence like the American people, and I knew she was not going to bow to any man or woman. In one word she was independent. She was a specimen of Irish womanhood. A specimen of an independant Irish Republic, who felt and knew she was as good as anybody. From then on I felt too that I was no longer visiting a subject people but an independent and proud people, who were willing to receive an exile with a "Cead Mile Failte." My interesting passenger got off at a small station in County Galway. She wished us good luck and safe journey. We thanked her and then I turned my attention to the passing scenery. It was not very encouraging. The land seemed poor and very stony ground. The fences, dividing the fields, were a single stone structure of a temporary nature, which looked as if a bull or a cow could tumble them over with their horns. But the cows or cattle were very scarce along that stretch of country. Sheep seem to be the prevailing stock of the farmers in Galway and Mayo, the next county in our rambles. Soon the train stopped at Claremorris, where we were told we are to change for Ballyhaunis. Ourt wait at Claremorris was 30 minutes and the place seemed deserted as we walked up and down the platform. Soon we heard the puffing coming and we got our baggage ready to board. We got in the same compartment with a young priest.

Here I must explain that some of the cars of the trains in Ireland are all one compartment of passengers, like the one we got on at Ennis, while other cars are divided into several compartments to hold six or eight passengers, a door from the platform to enter each compartment. This train we got at Claremorris was of the divided variety. So we got on to accompany Father Reilly. He told me his name after looking at the tag on one of my bags and his remarking, "Riordan, that is a good Irish name." I said, "Yes, Father, and what would your name be?" He said, "Reilly, just as good as Riordan anyday." I thought to myself more of that independent spirit and I liked him for it. It turned out that he belonged to the Columban Mission, and was a visitor at Boston 2 years ago. I told him I knew Father McGrath of Milton, and that we, often in Peabody, ran parties for him and his Columbia Mission. So we were the best of friends before we reached Ballyhaunis. Ballyhaunis, the home of my wife's ancestors, is a nice town, composed of very friendly people. After procuring a taxi to take us to a hotel and supper, it was then about 8 p.m. An acquaintance of mine in Peabody asked me to call to an address in Knox Street, Ballyhaunis, if I had time to just step in and say "Hello" for him. So, after having supper I walked out front and there was somebody standing at the door of the hotel; so I said, "What street is this?" "This is Main Street." "Where is Knox Street?" "Right around the corner." So around the corner I went to Knox Street.

I soon found the address I wanted. It happened to be a grocery and bar combined. So in I went and asked for the proprietor. I said, "Martin Waldron from Peabody, Mass., asked me to drop in here and say hello." After a certain amount of humming and hawing and further identification they know who Martin was, so I was a friend of everybody there. There were a number of men drinking beer standing at the bar and they all had a welcome for the Yankees (Annie was with me). Then I explained my mission to Ballyhaunis, looking for relatives of my wife, and I asked them if they knew where a place called Cappagh was and if there were any Morans there. A taximan happened to be in the crowd. He said he thought he knew them. He know where Cappagh was, anyway. It was about 3 or 4 miles out in the country toward County Sligo. "Well," I said, "will you come to my hotel in the morning at 9 o'clock and we will take a ride out there." He said, "9 o'clock." I said, "Yes." He said, "why can't you wait until they get out of bed? I laughed and said, "will 10 o'clock do?" He said, "that would be better, you won't get anybody around here up at 9 o'clock in the morning." So, to make a long story short, he came in the morning to take us to Cappagh and we rode out with him about 3½ miles out a nice road through a farming district and he stopped at a house about 20 yards in from the road. A little gate opened at a convenient distance from the road, then a path to the front door of the house. On each side of the path a bed of flowers was very conspicuous. We entered the house and introduced ourselves to a young woman, who could not have been born before my wife had left Ireland. There were five or six young children in the kitchen. They all looked to be less than 8 or 9 years old and an older woman sitting near the fire. The younger woman, who afterward proved to be the mother of the children, told us her name was Moran before she was married; she was now Mrs. Kelly. Her father's name was Tom Moran. I explained about my wife's cousins as being Tom and Willie Moran. So she pointed out Willie's house farther back from the main road, to be reached by a lane about 200 yards long.

So we proceeded up to Willie's house accompanied by one of her boys. The lady in charge there did not seem to know anything about us, but she dispatched a little boy down to the fields, where her husband, Willie, and his brother, Tom, were working. She told him to tell them there were some Yankees here to see them. We went out to the taxi, which was parked in the lane, to await their return. In the meantime, our actions had aroused the feminine curiosity of another neighbor in a nearby farmhouse. She came out to the rick of turf, which was situated near our parked car, with a basket as an excuse, to satisfy her curiosity. She apparently was minding her own business by coming for some means to replenish the fire in her kitchen. I quickly filled in the gap left vacant in her bewildered mind by going over and telling her of my problem. I said my wife, who was born in England was brought up in this locality and left here about 50 years ago, was back now trying to locate her relatives. She paused and looked me over and said, "Your wife would not be Ann Moran, would she?" I said, "Come over here and talk to her." So they talked and renewed acquaintance and found they were girlhood friends 50 years ago. Ann Morley, that was her girlhood name, was delighted to meet one she thought dead and gone. She promised to call at our hotel in Ballyhaunis on next Tuesday, market day, and as she said it, "We will have a drop together."

Then we suggested to drive back down to the main road to meet Willie and Tom on their way back to meet the Yanks. Very soon we saw two old men and a young man coming along the road. The two were Willie and Tom, my wife's cousins and the young man was Willie's son. We went in then to Tom's house and talked about old times. We had tea, and as my taxi was still waiting on the road, we started back to Ballyhaunis. While we were riding back to our hotel, I remembered that the now well-known apparition at Knock and County Mayo were always associated in my mind. On asking the driver how far we were from that famous place, he said it was only 7 miles away. On talking it over with my wife, I engaged the services of the taxi for Sunday afternoon, to avail ourselves of this opportunity to visit the shrine at Knock, where the church had it recognized as an established fact that the Blessed Virgin appeared there in 1879. It was early in the afternoon when we arrived at our hotel. So after refreshing ourselves we went to a travel agency and booked passage from Dublin to Manchester, England, for Monday afternoon and sent a telegram to my wife's niece, Lizzie Price at Bacup, Lancashire, informing her of the time we expected to arrive at Manchester Airport. We then had a few hours to kill in Ballyhaunis, so we started out to see the town. Our first stop was to the Catholic Church, where we said a prayer and made a wish for the assistance of God and the Blessed Virgin for our safe journey through Ireland and England, and our safe return to the United States, the land of our adoption, and the home of our 5 children and 10 grandchildren. In our travels through the town, we were greeted by several people, as the good friendly Irish had a "Cead Mile Failte" for all strangers, especially Yanks that are returning Irish exiles, as whom we were at once recognized. I expect it is from the cut of our clothes, because it could not be from our accent, as I had never lost my Munster brogue. We soon saw another Catholic church, where we made another visit and the same request as before. I once was told by someone that in the first visit to a church, any request asked for in good faith, would be sure to be granted, and on more than one occasion I had reason to believe the truth of that statement. We returned to our hotel about 8 o'clock, but it was bright daylight and likely to be for a few more hours; however, we were both tired and we retired early as we had to be up for Mass on Sunday morning before our journey to Knock.

We woke up in time for 8 o'clock Mass, and went to the parish church on Main Street. A beautiful edifice built in 1921, but as we approached the church door we noticed a blackboard with a notice written in chalk, "collection for the Pope today." I said, "Ho, ho, they must know we were coming." (we had already contributed to the Pope's collection in Peabody.) The Mass was celebrated by the oldest priest I have ever seen active in the service of God. I judged he must be at least 90 years old and he appeared to be very feeble too. After Mass, we had breakfast at our hotel and went out for another walk among the friendly people of Ballyhaunis, as we had a few hours to kill before our appointment with our taxi driver who was to take us to Knock. He came to the hotel at the appointed time of 1 o'clock. We intended having dinner at Knock, as we had a late breakfast and did not feel like putting down another meal just then. We arrived at the village of Knock after a ride of 7 miles of good smooth level roads, well paved with crushed rock. We approached a restaurant and were lucky in getting a table for two immediately, as the place was crowded. Our waitress was a pretty Irish coleen, not yet 18 years, and she was very much interested in us. I don't know whether she used all her customers like she greeted us or not, but I thought she believed us to be her long lost relatives from the United States. I asked her if she would like to go to America. She told me she had a chance to go there once, but she didn't and if she would get the same chance again, she would be off. I gave her a substantial tip and after she had thanked me profusely, I began to think that she was working toward that all the time, for they can tell a Yank a mile off over there. The scene around the village of Knock was something which will remain in my memory for a long time. The large crowd of people assembled there, numerous buses from all parts of Ireland. All the stores were temporarily set up for the sale of religious articles. The devotion and sincerity of the people, pilgrims they are commonly called. There were the stations of the cross outdoors. Mass was celebrated out in the field adjoining the church at 4:30 p.m., followed by Benediction of the Blessed Sacrement and a sermon. Some pilgrims were carried on stretchers, others were in wheelchairs, while more had to use crutches to help them to walk.

The remarkable incident and the more noticeable to us was the true devotion and the apparent faith of the people as they prayed aloud, going through the stations of the cross and answering the rosary, which was said after the sermon. The day was very warm and I'm afraid I did not gain any indulgence that day as I did not expect any heat like that in Ireland. I was wearing heavy underwear, a heavy suit of tweed and a top coat. I was afraid of catching cold and I, being subject to bronchial asthma, I was prepared for colder weather and I could not keep my mind on the devotions of the day, on account of the intense heat. We arrived back in Ballyhaunis at 6 o'clock or 6:30. While driving along the road toward the town I satisfied my curiosity of something that was troubling me for 2 days. On Saturday when we started out with the taxi driver, I noticed every once in a while he made the sign of the cross going back and forth to Cappagh, and today back and forth to Knock, he was doing the same thing until I began to think he might be a little bit touched. At first I was afraid, but then I

saw the poor fellow was harmless, so before we reached Ballyhaunis I got courage and asked him why he was doing it. He said, "you Yankees are all the same. You have no religious principles. We, in Ireland make the sign of the cross whenever we pass a Catholic church or a cemetery." I then paid him off and asked him to come up in the morning to take us and our luggage to the railway depot, as we were taking a train to Dublin so as to get a plane for Manchester, England. That night we had a visit from Willie Moran's son from Cappagh. He told us his folks thought that our visit was too short and they would like to have us call on them again before our return to the U.S.A. I promised him we would after we had visited England and my own County Cork. So he bade us goodbye and said he'd hope to see us again.

In the morning of June 11, I said adieu to Ballyhaunis. I did not expect to see it again and I entered a train bound for Dublin, the capital city of Ireland.

The journey by rail from the west of Ireland to Westland Row Station is full of interest. The railroad passes through some historic places. The scenery, as we proceed along gets more beautiful as we get away from the rocky and barren land of Galway and Mayo, Roscommon, Westmeath, the Curragh of Kildare, Longford, and the plains of Meath are wonderful to behold. Our first stop was Mullingar and from then on we could see the richness of the land. The nice, well-kept houses, the landscaped grounds, the beautiful flower gardens in front of each habitation, the nice cultivated fields and the fat cattle browsing in the green pastures make it look a contented land and a prosperous community of independent people, though it is only 35 years since they started to enjoy that freedom which they had won from a mighty empire by sacrificing the lives of some great Irish patriots, such as Padrig Pearse, Tom Clarke, Terrance McSweeney, Thomas MacCurtin, Harry Boland, Cathal Brugh, Michael Collins, Peter O'Neill, Crowley, and several others, too numerous to mention. As we reached Athlone, our next stop, I could not but think, as I looked on the bridge of the great battle that was fought there in the 17th century between De-Ginkel, general of the English army, and the Irish, led by General Costume. An Irish bard, telling of that battle in a thrilling ballad often recited and sung at many a gathering of Irishmen and women, says:

"Twas well Horatious guarded
The Roman bridge of old,
And well was he rewarded
In riches, land, and gold.
And freedom points forever
To thy pass Thermopilee,
Which teach mankind that tyrants
Cannot subjugate the free.
But there were men as dauntless,
And hearts as true and brave,
By Shannon's gushing waters,
As e'er by Tiber's wave;
For never yet has freedom
More brave defenders known,
Than those brave hearts who guarded,
The old Bridge of Athlone."

Portarlington was our next stop after we had crossed the River Shannon and from then to Dublin. The prosperity of the country was manifest and when we pulled into Westland-Roe Station we felt that our rambles through Erin would be full of thrills and in contrast to the land we left behind 50 years ago, our visit will be a complete, pleasant surprise, our meeting with a free and independent people, instead of a subjected population will be a great comeback. We got a taxi at the Westland-Roe Station for the airport and as we rode along through many principal streets, I had my first view of that wonderful city. Arriving there, we were in time to board an Air Lingus plane for Manchester, England, and as the title of this tale is "An Exile's Ramble Through Erin," our visit to England must be told in another chapter.

III

The Air Lingus line planes are somewhat like the TWA's. We were soon flying across the Irish Sea. It was 5:50 p.m. when we got aboard and we were due in Manchester at 8:50. In a very short time we could see Holyhead on the shores of England. Then we flew over the farming district of Cheshire and Lancashire and shortly the city of Liverpool and Manchester hove into view and we were told to prepare to make a landing and in less time than it takes to tell it, we were descending the ladder at the airport. After a short customs examination we were conducted to a bus, our luggage was put aboard and we were told we were being conducted to the air terminal at Manchester, which is about 20 miles from the airport. My wife and I were sitting in the front of the bus and as we pulled in near the terminal I saw two girls standing on the sidewalk and one of them started jumping while her face was wreathed in smiles. She was Lizzie Price, my wife's niece and she recognized us as she had a picture of us which we sent her some time ago. So we got our luggage out of the bus and as the girls had a car we put it aboard and started for Bacup.

We arrived about 9:30 p.m. Lizzie's companion was her sister Agnes, Mrs. Geoghan. They were two lovable girls and we at once felt as though we had known them all our lives. Waiting for us at 5 Bowker Street, Bacup, was Lizzie's husband, Joe Price, her sister Katie (Mrs. Russell) and Mr. Russell, my wife's brother, Patrick Moran, 79 years old, and his wife, Mrs. Moran. We stayed up late that night, the time slipped away and before we knew where we were 'twas 1 a.m. So we retired and I spent my first night in England.

The reader must excuse me for deviating from my rambles through Erin while telling of my English visit but I assure you my association with people in England will be all Irish or of Irish descent, and also I found that the average Englishman is a lover of freedom and believes that Ireland was worthy of the freedom she had won at such great sacrifice. The next day, Agnes, Lizzie, my wife and I procured a car and went visiting other relatives. John Moran and Willie Roe, two nephews of my wife, who live in a town called Bury. After visiting with them we came back to Bacup and called it a day. The following day I booked passage from Manchester to London for the following Thursday, as I had two nephews there that I had never met. So I was sorry to say goodby to our friends in Bacup and I promised to see them again someday and again went on the air for London, where I visited my two nephews and said a prayer at my sister's grave. I went to the top of Westminster Cathedral, visited the American Embassy, saw Scotland Yard and the royal residence. In all we spent a few hours touring London in company with my nephews and prepared to fly back to Manchester on Monday, 18th of June and from there to Dublin where we landed on Tuesday, June 19, 1 week and 1 day since we left Ballyhaunis.

IV

Back in Dublin and again ready for an exiles' rambles through Erin. We took a taxi to King's Bridge, where we were to board a train for Cork. Our taxi driver was a talkative fellow and he said if we were going to Cork he would recommend the Windsor Hotel. We arrived at King's Bridge and boarded a train for Cork at 4:30 p.m. Every car in the train was pretty well filled. Opposite us sat two young girls and when we chanced to exchange greetings, I guessed they were unknown to each other as they did not board the train at the same time. One, who was more friendly, told me she was a married woman and lived in the city of Cork and on my asking if she was born in Cork, she told me she was born in Seattle, Wash. I noticed she blushed as she said it, so I didn't further question her. She then said she had a cousin in Boston and wondered if I ever met him. I said the chances are that I did not as Boston was a big city and I lived 25 miles from there. "Well," she says, "did you ever hear of a Paddy Moynihan?" That name rang a bell in my memory, as I knew of a Mr. Moynihan, who had been in the State of Massachusetts Accounting Department. So I said, "was your cousin a schoolteacher in Ireland before he went to America?" She said he was. "Well," I said, "he did not come from Cork." "No," she says, "he came from Kerry." I said, "I met your cousin and I shook hands with him." The scenery along on both sides of that railroad on the east coast of Ireland is beautiful. The valley near the Galtee Mountains as viewed from the train that evening, as the sun was moving toward the western horizon is a picture that no artist can paint. The weather was beautiful. Our company was delightful and the train was nearing my native County Cork, where I had not been for 49 years and my excitement grew momentarily.

After we had left Limerick Junction and I saw Mallow Station I knew the hour I had longed for had arrived and soon we were going through the tunnel and into the Glanmire Station at dear old rebel Cork. Hustle and bustle followed our arrival at Cork and soon I was in a taxi bound for the Windsor Hotel. On entering that famous inn, I was told if I had not booked ahead I could not be accomodated. It was the same at Corrigans Hotel next door. So I came back to my driver and said we will have to try somewhere else. He said, "Would you like to go to a guesthouse? I know a very nice woman who goes to Mass every morning," and he spoke with a nice blarney accent. I said, "Take me there." So he drove us to Mrs. Ryan's, 4 Mt. Verdon Terrace, Wellington Road.

V

I had intended to stay in the city only until the following day as I wanted to visit my native Inchigeela. There I was in Ireland. Nearly 2 weeks had gone by since I alighted at Shannon, and yet I had not seen the cottage in which I was born. Nor the church where I was baptized and received my first communion. I had not visited the scenes of my childhood, nor met any of the friends of my youth. But in talking to Mrs. Ryan, she persuaded us to rest up for a few days, as she said you people have done a lot of traveling and you need a rest. So I consented, as I felt as if I needed a rest and as I wanted to call on a Mrs. Healy in Boreenamana Road. This will give me an opportunity to do so. It happened that Mrs. Ryan knew Mrs. Healy well, as they were old friends. She told us the best way to get there. Mrs. Healy was in the States but came back to Ireland 20 years ago and settled down in Cork City. Her maiden name was O'Neill, a sister of one of my neighbors in Peabody, Mass., and when we called on her, and recognized each other I asked her if I would get a taxi tomorrow would she go out to Mourn Abby with us. (A village bordering on the town of Mallow and her native place.) As I said I heard so much about that place from exiles in Peabody that I wanted to see it. She said she would be delighted. So I got in touch with my taxi driver with the blarney accent, a Mr. Coogan by the way, and we again called on Mrs. Healy the following morning. Our first stop that day was a visit to the bells of Shandon, made famous by the lines of Father O'Mahony (Father Prout) "The Bells of Shandon that sound

so grand on the pleasant waters of the River Lee."

Then Blarney Castle was the next place of interest about which so much has been written that I don't feel competent to do full justice to that beautiful place, but I will say I did not kiss the blarney stone, for to accomplish that it was necessary to climb to the top of the castle, and being troubled with bronchial asthma, I thought it wiser not to do so. We set out for Mallow and Mourne Abbey. We visited the O'Neill homestead at Ballyhilloge and the Walsh's cottage and a Mr. and Mrs. Coleman at Grenard. When we got to Coleman's they were getting ready to go to a funeral, a Mr. Buckley, who was an I.R.A. man. He had fought for the freedom, which the people now enjoy and was to go to his last resting place, with military honors. So we too proceded to Ballinamona Cemetery and I witnessed my first I.R.A. funeral. No need to describe that here, as the Irish appreciate what those boys have done during those 5 glorious years, and as they are now dropping from us one by one. They are all given a military farewall worthy of the sacrifices they have made. We came back to Cork that day through Fermoy, though a little longer route, it was worth the extra time as we passed such places as Rathcormac, Watergrass Hill and Glanmire. During the Marian year, several grottos were set up in Ireland, out in the rural districts by voluntary labor. In Glanmire, I think, there is the finest in all Ireland. It is cut out of solid rock and no words of mine can describe it here, but I will just say it is magnificent. We arrived back at Mrs. Ryans and I made arrangements to go to my native Inchigeela on Fridy. I notified the Lake Hotel, in the village, to that effect.

VI

On Thursday, July 21, we rested all day and on Friday the 22d we boarded a bus at 6:30 p.m. that would take us to my native village of Inchigeela about 30 miles away. Well, here I was at last steering westward to fulfill a desire existing in my heart for a long time. A hope, yes a cherished hope, I often thought in vain, now at last to come true. A dream I sometimes felt would be only a dream. No pen can portray my feelings on that occasion, rather I would say with the poet Locke, "This one short hour pays lavishly back, full many a year of mourning. I'd almost venture another flight, there is so much joy in returning. Watching out for that hallowed place, all other attractions scorning. Oh, Inchigeela, don't you hear me shout, I bid you the top of the morning."

When we got to within about 5 miles of the village, I started to look for familiar places and scenes. Yes; here was Toonsbridge. I wonder who has the "Public Hours," here now Dan Dineen's farmhouse on the left. The hill of Millen, Herlihy's lived here on the right. Oh, oh, Dan the Logg's house is torn down. Rossmore Hill don't seem so steep, and on reaching the top, I can see the village. "Oh, Thaneem An Die," but there it is. Yes; there it is "my native Inchigeela, near the town of sweet Macroom." From now on the ghosts of my ancestors, I expect, will be greeting me. As I am passing Joss Kellehers I can hear him singing in his fine rich voice, "Ma vesteen Leigh" although I know he is gone to the great beyond these many years. Here we are at the hotel. I am greeted first by Timmy Sullivan, proprietor of the hotel, a schoolmate of mine, his wife Mrs. Sullivan too welcomes me, and Neilus Kelleher, ex-postman comes sauntering in to bid me a "Cead Mile Falte," a member of the guard NA Seactna, and Paddy Casey drops in later and we sit and talk late into the night. We are shown our room and we prepare to retire, but as I had a great desire to satisfy an impulse I had when a boy I always thought I would like to stand inside this hotel and look out instead of standing outside and looking in. I now was in a position to satisfy that desire, so I strolled over to the window, raised the shade and looked out. I did not believe my eyes. I rubbed my optics, as I thought indeed I was observing an optical illusion or maybe twas all a dream. Yes; it must be a dream. This could not be true. Perhaps this whole of my rambles through Erin is just a dream and I'll soon wake up at home in Peabody. I pinched myself. No; it is no dream, here was my wife in the room with me. There is Deleas Hotel across the street (now Creedons Hotel). There is Quinlan's house, and Thade Ahern's and Joney Barry's and the post office where I worked. No; it can't be a dream. But if anybody told me they saw the streets of Inchigeela lit up with electric lights, I would not believe them. Yes; there is my native village all lit up. I wonder is it because I'm returned, they are lighting the place up. I ran downstairs and inquired what is the cause of the illumination. They told me the place has been lit up for the past 6 months.

The following morning after breakfast, our first visit was the chapel where I received my first Communion and got Confirmation. In this chapel there is a statue of the Blessed Virgin. I had always thought of that as being the largest I had ever seen. I carried a picture of that in my mind during my years of exile and I could see no other as large as it until I began to think it is because I saw it with my childhood eyes, where it looked very big then. I was anxious now to see it again. I expected it would not look so big, so on my first visit I went before the altar of the Virgin Mary. Yes, the same statue was there and, yes, it still is the largest I have seen in all the years of my travels. I roamed along through the village and went along until I came to the cottage I was born in. I went in and explained my visit to a young mother. She was very courteous and asked me to sit down. I had great difficulty in suppressing my emotion as I thought of my dear father, my good stepmother, and a fond brother whom I left here 50 years ago.

I proceeded on further up the road to view some more familiar scenes and, yes, to see someone I once knew. Someone who was once very dear to me. Moor said, "There is nothing half so sweet in life as love's young dream." Yes, I wanted to see the girl I left behind. We got back to our hotel at 1:30 and had dinner. That was Saturday, and I spent the remainder of the day catching up on my correspondence. On Sunday morning we went to 8 o'clock Mass. There was a time when I knew every man, woman, and child that went to this chapel. As I wended my way among the people to Mass this morning, I knew no one. No one greeted me with a "Hello" or a "Quinas tha, an Thu." But, again, they must know we were coming for there is the blackboard that I saw in Ballyhaunis, "collection for the Pope today." This is the third contribution I have made to the Pope this year. The following Saturday, my wife and I went to confession and on Sunday morning we received Communion in my native place, at the same altar rail where I knelt as an innocent gossoon when receiving my first Communion. We stayed at the Lake Hotel 3 weeks. I made some new friends, they who were too young to be acquainted with before I emigrated, Paddy Casey, Paddy Joe Reilly, Dermot Kelleher, Timothy Galvin, John Mick Galvin, Eugene Corcoran, Shawn Rou Sullivan. I went back to see Carrig An Aferin and the scene of the Kilmachel ambush, where the South Cork Brigade, under Tom Barry, annihilated two lorrys full of auxiliary police one Sunday afternoon.

We also paid a visit to Dunmanway to visit some people and we spent a whole day in Macroom renewing acquaintances. I had always a desire to spend a night in lone Gougane Barra to see what it looked like in the darkness of the night, so after I spent 3 weeks in Inchigeela. I booked at Cronin's Hotel for July 13 and 14. The bus goes by Inchigeela on Saturday evening and I can get picked up at Gougane for the city of Cork on Monday morning, July 15. When leaving Inchigeela that evening, my thoughts went back to that memorable evening, now nearly 50 years ago, when "O'er Muskery's heights and Sheha's slopes the waning moon shone pale as I clasped her to my heart that night near Keimeen's emerald vale, and when inside the cottage door her nimble form did pass, the last I saw of my colleen Bragh, my Inchigeela lass."

We arrived in Gougane Barra that evening at about 8:30 p.m., brought up our luggage to the hotel, and, as it was still bright daylight, we went to visit the little chapel on the island. That was not the first time I visited there as I was present at the opening Mass of that little edifice at the beginning of this century. It was built under the direction of Father Hurley, then parish pastor of the parish of Iveleary (Inchigeela), whose body now lies buried there alongside the poet Callan, who wrote about Gougane Barra and made it more famous by his verses, "There is a green island in lone Gougane Barra. In Deep Valley Desmond a thousand wild fountains come down to that lake from their home in the mountains." I said a prayer at Father Hurley's grave and we walked back to Deep Valley Desmond, which is now taken up by the Irish Forestry Department, and will in a few years more be a dense forest. I think that walk was almost too much for me, as I almost got an attack of an asthmatic nature. So I retired early and I had yet to see Gougane Barra by moonlight.

The following day, Sunday, it poured rain something terrible and we just ventured out to attend Mass at the little chapel where there were about 50 present and we had a full house. We sat in the lobby of the hotel all day looking out at the rain and the summit of the mountains were invisible owing to the fog. We listened to the radio broadcast of the all Ireland final football between Cork and Kerry and in the last few seconds of the game twas announced, "well, there are only seconds left in the game, Cork is the winner by three points. Oh, Oh, Kerry scored a goal, 1 second before the final whistle. It is a draw." What a game. It was still raining in Gougane Barra, so we went to our room and soon retired. Monday morning on July 15, the bus drove up to Cronin's Hotel at Gougane bound for Cork City. I checked out at the office and a porter put my luggage aboard and soon we were on our way to the city of the rebel county. The historic village of Ballingeary was our first encounter on our return journey. Here you can hear the Gaelic language spoken fluently and the natives prefer to converse in Irish than the "bearla." The names over the doors of the few stores there are in the village are in the Gaelic tongue. "Slan Leath Anoiss." A passerby shouts at an occupant of the bus, "Go Maneigh Ola." "Ouit" was his reply.

VII

As we were leaving Ballingeary behind and going on towards Inchigeela, here I must say something about the Inchigeela lakes, as the road between the two villages skirt along those lovely expanses of water for a distance of about 5 miles and the scenery was never so nice than what it appeared to be on that morning. The sun was shining brightly and after yesterday's downpour, the fields and valleys on the far side of the expanse of water was a scene that artists rave about. The verdant countryside, the nice smug looking farmhouses in the valleys and in the glens. The cottiers cottage surrounded by marigolds and rose bushes and

the new growth of fir trees sloping down to the water's edge, gave me something to ponder over as I rode along that Monday morning, and realizing that my holidays would soon be over (4 more weeks). I prayed that never again would Irishmen and women have to fight and shed their blood to preserve that peace which they now enjoy after 700 years of persecution, bloodshed, and sorrow. We arrived at Inchigeela at 9 a.m. I had to stop at the Lake Hotel to pick up a piece of my luggage and I found a little crowd gathered there to bid us goodby. But it was nothing like the American funeral of bygone days. As then, when any young man or woman was going to America, it was the custom for them to leave the village about 7 o'clock in the morning in order to catch the 10 o'clock train at Macroom, so as to get to Queenstown (now Cobh) in time to book passage on the liner leaving the following morning. When leaving the village, all the villagers would turn out in a body and march as far as the graveyard, about a half a mile east of the village toward Macroom, where they bid the youthful travelers goodby, and many a tear was shed there in days gone by as the boy or girl was getting into the cart to take them away to the train. We called it the "American funeral," and many is the one I attended until at last it came to be my own turn to face the villagers at the church gate and tearfully bid all the good folks goodby; that was in 1907. Today 1956, there will be no "American funeral," and transportation is different now, this bus runs right to the city as no more trains are running from Macroom. So I must just watch the village fade away after saying a fond goodby to those folks here. I will be alone with my thoughts as the bus flies quickly onwards toward Macroom, where we stop for a short while and then we will be in Cork at Wellington Road, with the lady that "goes to Mass every morning." I learned while at Inchigeela that the bus company sponsored tours from the city every day which I now can take advantage of as I am living in the city. I have 4 more weeks to see Ireland. I have visited all my old friends that I knew in the olden days except one, who I found out at Macroom lives in Dublin. So I can kill two birds with one shot, as I promised them in Ballyhaunis that I would call back. I now can go to Dublin and see my friend there and again run across Ireland to Ballyhaunis.

So leaving the most of my luggage at Mrs. Ryan's at Cork, we got a train for Dublin on the 18th of July, arriving at the capital city early in the afternoon. I taxied to the address of Mrs. Cronin, my friend from Macroom. She received us very hospitably and gave us the use of her car and chauffeur, and herself accompanied us in a tour of the beautiful city of Dublin. We had 3 hours at our disposal and we visited all the interesting places. I was impressed at the cleanliness, beauty and newness of the capital of Ireland. At 10 o'clock we put up at a hotel and were at Westlandrow station in the morning at 9 o'clock waiting for a train to take us back to Ballyhaunis. We had only 20 minutes to wait and I noticed several young men and women also waiting, some young couples with 2 or 3 children. They all had luggage and seemed to be going to or coming from somewhere. We boarded the train bound for the west of Ireland, and nearly all the young people referred to got on. In our compartment there were a young man and his young wife and two children. I should say between 4 and 7 years old. I soon learned they were traveling all the previous night from England. They had arrived at Dunleara this morning. They were going back to their old home in County Mayo for a month's vacation from their place of employment in England. They had no sleep all night and very soon the children closed their eyes and were dead to the world, and afterwards the young father and mother did likewise.

I had another chance to see the beauty spots going through the middle of Ireland, and as each town or village hove into view, I was again impressed by the scenery. I have a habit of sitting on the right side of a train and as we go along I keep looking out over my right shoulder so as that now when I am riding toward the west of Ireland I am looking at scenes I had not observed when going the other way some few weeks ago. I could not but notice again the garden of flowers at almost every homestead. Mullingar, Athlone, Rosscommon, Ballinlough, and Ballyhaunis, here is where we get off. We said goodby and safe journey to our young friends, who were now awake and were going on to Westport. I had only a handbag for luggage, so on alighting I ignored the offers of all taximen as I now knew my way around and proceeded out of the depot and along down the street that would take me to the hotel. One taximan who was more ambitious than the rest drove after us and stopped as he was passing and he says, "If you are going to the hotel you may as well ride with me. It won't cost you anything as I am going that way anyway." So we got in and I engaged him to take us to Cappagh in the afternoon. The proprietoress of the hotel was glad to see us as she knew us from our previous visit and we had no trouble in getting accommodations. We rode out to Cappagh that afternoon and this time we had tea at Willie Moran's house. They seemed glad to see us. We dismissed the taxi and asked him to come back at 6 o'clock to drive us back to our hotel. The following morning found us at the depot again and I requested two tickets for Cork, as I did not want to go to Dublin again. There were two more ladies and a little girl who also requested tickets for Cork. We received our tickets but were told to change at Portarlington. So we got on all together and settled back waiting for Portarlington. This was a fast train and did not stop at any small places.

Our first stop was Athlone. The conductor came around and punched our tickets and he said Portarlington was the next stop, so on we went waiting for Portarlington. But we were in for a big disappointment, for yes, you guessed it, the next stop was Dublin. Here we had an argument with railroad officials. We would have to have taxi service to Kingsbridge station where we would get a train for Cork. We also needed tickets for Portarlington for five people, but we could get no satisfaction and the transportation to Kingsbridge was 9 shillings plus the price of tickets for Portarlington, all through no fault of ours. The other two ladies and the little girl were bound for Cobh, where they were to board a liner for Chicago. We thought we were all over our troubles but we had another fight with the conductor of this train as he said we could not travel on the tickets in our possession and the ladies appealed to me to present their argument for them. So I took the floor and called on all my persuasive ability to my assistance and I soon had that conductor throwing up his hands making a hasty retreat out of our compartment. The ladies smiled and the litle girl wittingly said, "So much for Portarlington."

We arrived at the rebel city and at Mrs. Ryan's in time for tea and tomorrow we were to start patronizing the bus tours from Cork for various places in Munster.

VIII

Here it is July 20 and we are going back home to the United States of America on the 13th of August. I must take a ride down to Cobb to see what changes are there since 1907, as it was there I saw from the tender taking us out to the big ship, a group of men and women on the quay waving handkerchiefs to their loved ones, who were bound for the broad Atlantic. So we took the train for Cobb that afternoon. In our journey I got to converse with a very interesting lady. She seemed a regular Mother Machree, and she talked about her family a lot and mentioned some historical facts that made me remark, "I did not get a chance to learn anything of that nature, as I am a product of the so-called National schools under British rule." Her answer was, "I too am a victim but I had a patriotic father." I said, "Was he a fenian"? She nodded her head and tears were glistening in her eyes, so I did not pursue the matter further, but just then the train was passing a ruined tower. She placed her hand on my shoulder and she said, "Did you ever hear the song about the tower that 'Captain Mackey robbed down Erins lovely Lee.'" I said "I did." "Well," she says, "there it is now." She left the train at Cobb without my learning her name.

We turned our attention now to real sightseeing. All our obligations were completed. We had satisfied all our desires. We had 3 weeks left to see Ireland without visiting anybody. So on July 22, we went on an all day tour to Tralee and Killarney, leaving Cork at 9:30 a.m. by touring bus, speeding out through Carrigrohane on a fine glorious morning with not a care in the world. A bus load of people seeking enjoyment, everybody happy and gay and willing to fraternize, were good omens for an enjoyable trip. The bus was equipped with a loud speaker and the conductor, through a microphone, described the places of interest as we went along to Leemount Cross, Healys Bridge, Barrahaurin, Banteer, Ballymaquirke, Boherbue, Kiskeam Castleisland, and Tralee.

The town of Castleisland's main street is as wide as O'Connell Street in Dublin. Every now and then while needing topic for his description of interesting places, the conductor would sing a song or request a passenger to sing and then sometimes everybody was singing, so after leaving Castleisland and while approaching Tralee everybody sang:

"The pale moon was shining above the green mountain. The sun was declining beneath the blue sea. When I strayed with my love through the clear crystal fountain that lies in the beautiful vale of Tralee. She was lovely and fair as the rose is in summer. Yet it was not her beauty alone that won me. Oh, No! Twas the truth in her eye ever beaming which made me love, Mary the Rose of Tralee."

We had a 2 hour stop at Tralee. We had lunch at a hotel and had time to see the town. My wife and I as usual paid a visit to the beautiful Catholic Church and visited some of the big stores, as it was near time for us to be picking up souvenirs to bring back to the States for all our grandchildren. The Irish merchants are really wide awake for that line of business. As almost in every store, you can find article marked, "souvenirs from Cork, from Ireland, from Killarney," so as that there is no excuse for those going back to the States but that they can find plenty of presents appropriately described as gifts from the Emerald Isle. On our return journey we came through Castlemain, and as we were going through the main street of that town, a passenger took the mike and sang in a fine rich voice: "There was a wild colonial boy, Dan Dillon was his name, he was born in Ireland's sunny clime not far from Castlemain."

The people in the street stopped and looked and waved their hats at us as we rode by in our merry mood. Killorglin was our next town and we stopped there for a short time at the scene of Puck Fair (they were making preparations then for that event, as it was to take place on the week of August 6). Our next stop was the famed Killarney where we had tea at the great Southern Hotel. We visited the cathedral and had a ride in

a jaunting car through the Kenmare estate. When we left Killarney we had a long ride through the Darranasogarth Mountains, which divide Cork and Kerry and we soon dropped down on Ballyvourney in County Cork. Another Irish-speaking district like Ballingeary. At an Oireachtas in Dublin in 1905 there were five first prizes went to that village for Irish storytelling, Irish stepdancing, Irish conversation, Irish recitation, and an exhibition dance of the eight-hand reel. Soon we were rolling through Macroom and famed Inniscarra, arriving in Cork at 10 p.m. Our next trip was a half-day tour to Mount Melleray and Youghal leaving Cork at 2:30 p.m. We rode out through Glanmire to Fermoy and Lismore making a short stop at Cappoquin, t'was a warm day and being thirsty, I went for a drink. I asked my waitress, "What is there about this town that keeps running in my mind?" She said, "maybe you are thinking of that song, In Sweet Cappoquin." I embraced her and called for a Cruiskeen lawn. I said "that is it," and I went out and got on the bus for Mount Melleray. We had an hour's stop there. There was a book where you could register if you wished. So I wrote my name and address as Peabody, Mass. Very soon a man walked up to me with an extended hand and said "pleased to meet you, I am Hayes from South Boston." We talked for a while and I found out he knew some of my friends in South Boston.

We came back through Cappaquin, Lismore, and then Youghal, where we stopped for 2 hours. We arirved back at Cork at 10:30 p.m., and on the way back everybody was singing. There were several solos and as there were several nations represented some sang "Down by the Tanyard Side." Some sang "Bonnie Doon," some sang the "Star-Spangled Banner," that good old yankee tune, some sang the "Marseillaise," and some "God Save the King." Then t'was up to me to sing a song and I knew not what to sing. Then I thought of all those songs that my daddy oft had sung when he placed me on his knee when love and life were young and I sang that old "Come All Ye" that he often sang so grand, "Sure I met with Naper Tandy and he took me by the hand." We had reservations made for the next day for an all-day tour to the Glen of Aherlow and Shannon Airport. This bus left at 9:30 in the morning of July 24, via Fermoy, Mithelstown, Galbally. As we were passing through Galbally, I had to think of my father as I often heard him singing, "I Wish I Never Saw Galbally Town or the Sky Over Darby O'Leary." There are many songs sung concerning the Glen of Aherlow, but I am not going to quote them here, for as I gazed on that beautiful spot from the side of the Galtee Mountains, where the bus was parked, I was spellbound by its magnificence and I said out loud, I did not care who was listening, "There is a land worth fighting for." There was a man standing near me who evidently knew the district better than I did. He took a hold of my arm and whispered in my ear, "Yes, it is worth fighting for sir, for 'tis many is the good drop of potten was made down there." The town of Tipperary was our next stop and then the historic city of Limerick and the treaty stone. On our return to Cork we went by many places of interest in County Limerick including Buree, where DeValera was brought up and the school he attended. The house where Archbishop Mannix, of Australia, was born, Bathluric Buttevan and Mallow. On July 25 we slept late so we took a half-day tour to Glandore. On that day, leaving Cork at 2:30 p.m., we went along seeking the valley of the Bandon River by Bellgooly, Innishannon, Crossbarry, Kinsale, Bandon, Owenachincha, Rosscarbary, and Glandore. As we were going by Crossbarry, the conductor, through the mike, told of the great fight made by Tom Barry and the South Cork Brigade here during the black and tan war and how "Flur" Begley played his bagpipe all during the battle.

"The tune he played that day of
Fate shall never wholy flee,
For the piper of Crossbarry boys
He piped old Ireland free."

Glandore has been sadly neglected by historians and writers. The praises of Killarney are given us in song and story. Glengarrif has been written about as one of the beauty spots of Ireland. The meeting of the waters has been made famous by Tom Moor. The grandeur of the Glen of Aherlow has been praised in prose and poetry. Whilst the lovely Glandore has been jealously guarded, as if its inhabitants were fearful that some one would come and do something to mar its beauty. Yes, it is hidden away in a southwestern corner of County Cork. On arriving there that evening, I was spellbound by its grandeur and after taking in its beauty by long and loving observations, I walked over to a man whom I took to be a native, sitting on a wall whittling a stick. "I said you have a nice place here, sir." He looked at me and said after a pause, "if you had this place overs in the States, the common people could not go near it." And he spoke with an air of superiority, so I questioned him further. I said, "Maybe you are right but that is no reason why you should hide it over here and keep it all to yourself." He answered, "Now you make me feel guilty, I was 34 years in the States. I served 20 years in the New York police force and when I got my pension, my wife and I came back here to this. We never had any children, so we are living here in the midst of all this. It may seem selfish to you, but to us it is perfectly legal."

IX

On July 26 we took the combined cruise and motor coach tour through the Golden vale and Lough Derg via Fermoy, Mitchelstown, Ballylanders, Knocklong, Limerick and Killaloe. The bus arrived at Killaloe at 1:15 p.m. By the way there were three bus-loads of tourists in this tour and we boarded the launch immediately after arriving as we were told we could procure lunch on board. It was a beautiful day and we settled down in the top deck of the boat for a 3 hours cruise of Lough Derg, which is situated between the counties of Tipperary and Galway. As the boat proceeded along from Killaloe the Golden vale of Tipperary was on our right and I began to think of Charles Kickam's "Knocknagow" or "The Homes of Tipperary" written about 100 years ago, and I thought if Kickham could only see the homes of Tipperary today, he would write in a more inspiring manner. There would not be so many tears shed while reading his version or "The Homes of Tipperary." In those unhappy days, while landlordism ruled the country, eviction after eviction took place, whilst the down-trodden tenant farmer struggled to pay an exorbitant rent. The humbled homesteader would not dare have a flower garden in front of his door. If so, his rent would be nearly doubled as the landlords agent would consider him too "well off." Today as we ride along through Lough Derg, Tipperary presents a different scene, a peaceful prosperous-looking stretch of farmland, well cultivated fields, and happy looking homesteads, with a variation of flower gardens, scattered here and there, made it a scene opposite to that which painted by Kickam in his masterpiece, "Knocknagow." If I could only hear "The Knocknagow Fife and Drum band" so well depicted by Kickam. But I hope there is another band there to take its place, not only in the village of Knocknagow, but in every town and village in Tipperary, to keep alive the glorious Irish airs, the Irish National spirit, and that love of freedom for which the boys of 1916 and the men of the five glorious following years fought and died. "Benacht De Le Nanim."

After about 1 hour and a half sailing north along the shores of Tipperary, our boat turned back and then we were closer to County Galway. It was the haying season and farmers were busy in the numerous fields, as seen from the lake, "saving the hay," and I said to my wife, "here is a wish fulfilled" she says, "what wish," "that wish expressed in the song Galway Bay."

"And someday I may go back to Ireland, if 'twas only at the closing of my day, once again to see the ripple of the trout stream, And the workers in the meadow saving hay. To sit beside a turf fire in a cottage and to watch the barefoot gosoons at their play. To see again the moonlight over Cladagh and to watch the sun go down on Galway Bay."

That started the singing in the boat and a fellow tourist sang the next verse in fine style.

"And if there is going to be a life hereafter and sometimes I think there is going to be, I'll ask my God to let me make my heaven in that little Isle across the Irish Sea."

We arrived back at Killaloe about 4:30 p.m. We boarded our buses and started back through Birdhill and Limerick. We stopped at Limerick for an hour and as Mrs. Ryan and her husband were along with us on this trip, Mr. Ryan being a native of Limerick, he showed us around to many interesting places including a special visit to the treaty stone of Limerick upon which was written the now notorious broken treaty. On leaving the city of Limerick, we came by Rathluric (Charliville) Buttevant, Mallow, and came into Cork City by Blarney and Blackpool arriving in Cork at 10 p.m. That was the last of our tours through Cork and Munster. There was another, the first one we took, about which I have not written. We took that one while we were staying in Inchigeela. We met the touring bus at Macroom on its way to Killarney and as we had reservations, our seats were vacant. That day we went through Ballyvourney over the hills of Kerry into Killarney. On the return trip we were to come through Glengariff and Gougane Barra. We were rolling along nearing the border of County Cork when I noticed a tunnel in the rocks ahead and our conductor, who was a very able entertainer that day announced, "we are still in the kingdom of Kerry but as soon as we get through this tunnel you see ahead we will be in County Cork. So away we went and through the tunnel and just as we emerged on the other side on the first flash of light, I yelled, "Up Cork," and 50 voices chorased, "Up Cork." Then somebody sang that song, "The boys who licked the black and tans were the boys of the County Cork." We went through Glengarriff, the Pass of Keimeneigh and Gougane Barra without incident. We left the bus that time at Inchigeela as we were then staying at the Lake Hotel, conducted by a schoolmate of mine, Timothy Sullivan.

X

The city of Cork is a beautiful city and on the few occasions that I visited there before I emigrated, the red uniform of the English soldier was very conspicuous. A regiment was kept there by the English Government to preserve the peace, along with a large contingent of the R.I.C., roaming the streets of the city with heavy clubs or batons hanging from their belts.

Today with the exception of some traffic officers, there is no police visible and Cork in a crimeless city. The Cork County gaol is closed for good. "No business" as a member of the local guards put it when I asked him why. While we stayed in Cork, there was a by election for a member of Dail Erin and one night in Patrick Street, I attended a political rally in which De Valaria was the principal speaker. 'Twas very largely attended, all traffic being stopped during the proceedings. De Valaria's party candidate was elected the following day. We had only a short time left until we would be going back to the United States of America. Day by day our vacation was drawing to a close. I had guaranteed my reservations with TWA. I had all my shopping done to take back mementos of the Emerald Isle to those at home in the United States, but there was a friend of mine in Carrigaline, whom I had not yet met. This was a man to whom I said farewell in Inchigeela 49 years ago and when I was back there he was among the missing but I got his address as Shannon Park, Carrigaline.

So I took the Carrigaline bus one day and told the conductor I was a stranger and requested to be left off near Shannon Park. Before reaching the village of Carrigaline, the bus stopped, the conductor informed me, "This is Shannon Park now and do you know where you are going?" I said, "I don't but I'll have to inquire when I get off." He said, "Well, do you see those two men sitting on the stone wall down there?" I said, "I do." "Then go and ask them for any information you desire, they are oldtimers here and they will be able to direct you." I thanked him, got off and walked over toward my two friends and I said, "Good morning, men." They answered "Good morning." "Is this Shannon Park?" "Yes, it is." "Well do any of you men know a man around here named Tim Leary." "I am your man" said one of them and he looked me straight in the eyes. I said, "Are you Tim Leary formerly of Inchigeela?" He said, "Yes, I am." "Don't tell me 'tis as easy as this to find you; I thought I would have a hard time." So after telling him who I was we both felt like shedding tears when we went back 50 years to discuss ancient history on the banks of "my own lovely Lee."

Before going home I paid a visit to Kimsale to see Canon Duggan, who was in Peabody a few years ago to seek assistance for the Cork church building fund. The Canon was gone on his vacation, so I did not meet him. Mrs. Healy and Mrs. Ryan expressed a desire to go to Shannon to wave us goodby, as we would be getting on the plane for home on August 13. So again I contacted Mr. Coogan, my taxi man with the blarney accent, and we left the rebel city at 6 o'clock on August 13. Arrived Limerick at 9, boarded the TWA plane at 10, and set out for the United States, where we arrived at 8:30 a.m. American time, August 14.

As we were proceeding toward Logan Airport I recognized Revere Beach Boulevard and soon we were picking up our bundles getting ready to land. (I had 10 bottles of Irish whiskey.) As we were coming down the gangway from the bird of the air I could hear my daughter Catherine yelling a hearty welcome, as she was waiting for us with our two grandchildren, Net and Jackie. She had a car and in less time than it takes to tell it, we were in Peabody. Yes, we were driving in Ethel Avenue. She was blowing the horn, as much as to tell the neighbors we are here. All our good neighbors were outdoors in a minute—Jewish, French, Finnish, Irish, English, and Scotch, all Americans. As we all salute the starry flag and said "Hail, Columbia," may the day never come when you cannot strike a blow for liberty.

## Levittown Plans School-Cost Curb

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. METCALF. Mr. Speaker, in the arguments which have been raised against H.R. 22, there have been many people who contend that there is no need for Federal aid, that the States and districts can handle the problem by themselves.

I would like to have printed in the RECORD an article which appeared in the New York Times last Sunday. This article shows the plight which faces one district in a relatively well-to-do area. Such situations could be duplicated all over the country, and comprise one of the major arguments for real Federal support of public education.

[From the New York Times, Mar. 15, 1959]

LEVITTOWN PLANS SCHOOL COST CURB—CURTAILED PROGRAM OFFERED AS METHOD OF PREVENTING A METEORIC TAX RISE

LEVITTOWN, L.I., March 14.—Officials of Long Island's largest school district are considering the curtailment of school programs to prevent a meteoric rise in school taxes.

Arthur T. Thibadeau, president of the Levittown School Board, said the proposed cuts would offset inadequate State aid upward-climbing enrollment and increased expenses. He indicated, however, that some tax rise was inevitable.

"We are straightforwardly facing the fact that the 1959–60 budget cannot include everything educationally desirable for this community and at the same time stay within tax limits which are realistic for the average homeowner," Mr. Thibadeau said.

The current tax rate is $5.54 for each $100 of assessed valuation, based on a total school budget of $10,162,442. Taxpayers recently have twice voted down proposed school expansion plans.

Among the programs to be eliminated in the forthcoming budget are a $16,500 driving course and foreign language classes for elementary school children. Special classes for advanced pupils will be curtailed.

The board plans to cut its $30,000 recreation budget in half by pruning all special events, discontinuing special programs for handicapped children and limiting summer activities to pupils in the elementary grades.

Although additional speech teachers, psychologists, nurses and art and music teachers would be required to maintain the present pupil ratio in the face of expanding enrollments, such personnel will not be hired in the forthcoming fiscal year, Mr. Thibadeau said.

Additional teachers will be hired he said, but an average of 4 years of professional experience will be required instead of 5 years as at present.

No additional custodians or maintenance men will be employed, he continued, and $130,000 is expected to be cut from the capital outlay budget for items such as furniture, machinery and playground equipment.

"We are extremely reluctant to propose such measures," Mr. Thibadeau said, "but we apparently have no alternative. Our real estate taxes have already reached a prohibitive level."

A tentative estimate of the new school budget is expected to be made on Thursday. The school board has scheduled three public meetings to discuss the budget with taxpayers prior to a referendum in May.

More than half the proposed budget will be for teachers' salaries, Mr. Thibadeau estimated. The board has approved $100 rises for teachers in the first salary grades, effective next year.

## Maintaining Security

EXTENSION OF REMARKS
OF
## HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of March 16, 1959:

MAINTAINING SECURITY

Congress, impelled by alarm over Berlin, appears ready to increase the defense budget of more than $40 billion. It would be a strange thing if at the same time it reduced the mutual security budget of less than $4 billion. Yet the threat of this is so great that President Eisenhower has sent up a special message emphasizing that mutual security is an equally vital part of defense.

Mutual security funds are often called "foreign aid," although 70 percent of them are spent on American goods and services. Moreover, it can be reasonably argued that they aid the United States more than they aid any recipient nation. For in armed manpower they buy many times the force the same funds could obtain if spent on the United States' own armed services.

The President's message makes a strong case. He points to the practical help mutual security has supplied in three crises in the last year. As he says, in the Lebanon crisis Jordan would probably have collapsed without the aid program. And only support furnished by the United States enabled the Chinese Nationalist regime to stand up to Red China over Quemoy. Likewise in the Berlin situation, aid previously furnished NATO allies has helped knit a stronger shield against the Soviet.

The mutual security program should and can be improved. Too often funds have helped officials rather than the whole people. Better planning is needed to make aid for economic progress fully effective.

We should like to see more emphasis on economic aid. We believe too much money is going to Spain, Korea, and Formosa in military aid. The program may be too thinly spread; it might be better not to dribble funds into 40 nations but instead put enough into a few key spots to insure the success of democratic regimes. And trade can be better than aid.

But most of those seeking to cut funds for mutual security are not trying to make it stronger; they are trying to make it weaker. And they seem to miss entirely the fact that the security of the free world today is a web of mutual helpfulness. The fact that the United States has 250 overseas bases is one measure of the help it gets from allies. And its aid to them adds up to only one-sixth of their expenditures on the web.

Let those who now seek to cut the mutual security program face up to the President's statement:

"Dollar for dollar, our expenditures for the mutual security program, after we have once achieved a reasonable military posture for ourselves, will buy more security than far greater additional expenditures on our own forces."

Unless they can disprove that, their efforts to cut the mutual security program must be regarded as efforts to weaken American defense.

That is the immediate danger. The long-range danger comes in turning the back on the fate of a billion people in the underdeveloped areas of the world. Whether they take the path toward despotism and darkness or the path toward freedom and enlightenment could be decisively influenced by what the United States does. And their choice can decisively affect America's own future.

## Address by the Honorable William M. Tuck, of Virginia

EXTENSION OF REMARKS
OF

## HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. ABBITT. Mr. Speaker, on yesterday, Monday, March 16, memorial ceremonies were held for the late Edward Wren Hudgins, chief justice of the Supreme Court of Appeals of the State of Virginia.

A portrait of Chief Justice Hudgins, painted by Hugo Stevens, was presented by George D. Gibson, Richmond attorney, on behalf of the Virginia State Bar Association. It was accepted by Mr. Justice C. Vernon Spratley, who spoke for the court in accepting the portrait. The portrait was unveiled by Edward Wren Hudgins II, grandson of the late chief justice.

James W. Blanks, president of the Mecklenburg County Bar Association, presented a resolution from the Mecklenburg County Bar Association lauding Judge Hudgins' services.

The Honorable J. Lindsay Almond, Jr., Governor of the Commonwealth of Virginia, spoke in praise of the chief justice.

Unfortunately for me and much to my disappointment, I was unable to attend the ceremonies due to important legislative business requiring my presence in Washington. I had the pleasure and the privilege of knowing Judge Hudgins for a long number of years. He was one of my dearest friends. I learned to love him. He was a great justice and an even greater chief justice. He was learned in the law and had the respect and admiration of all of the attorneys of the Commonwealth of Virginia. To know Judge Hudgins was to admire him. He was a man of great ability. He knew his duty and discharged it fearlessly. He loved Virginia and her traditions and took the lead in upholding the laws of the Commonwealth and dispensing justice with dignity and according to the statutes and the Constitution without interjecting his own personal theories and philosophy.

Judge Hudgins was a devoted husband, a kind and loving father, a real Christian gentleman, an outstanding Virginian, and a great American. He was a lawyer and a scholar.

The Honorable WILLIAM M. TUCK, former Governor of Virginia and now a Member of the House of Representatives from the Fifth Congressional District of Virginia, spoke on behalf of the 34th Judicial Circuit over which Judge Hudgins presided so ably for 14 years.

Under leave to extend my remarks, I desire to include this able address of Representative TUCK which expresses in such a fine way the sentiments of so many of us who loved, honored, and respected Judge Hudgins:

ADDRESS OF HON. WILLIAM M. TUCK, OF VIRGINIA, IN THE COURTROOM OF THE SUPREME COURT OF APPEALS OF VIRGINIA, IN THE CITY OF RICHMOND, ON MONDAY, MARCH 16, 1959, ON THE OCCASION OF THE PRESENTATION OF A PORTRAIT OF THE LATE MR. CHIEF JUSTICE EDWARD WREN HUDGINS

Mr. Chief Justice, Mr. Justices of the Supreme Court of Appeals of Virginia, it is a distinct privilege and a high honor for me at the invitation of the distinguished presiding officer of this body, to come on this occasion as a practicing attorney of the 34th judicial circuit, and as a friend of the last Mr. Chief Justice Hudgins, to participate in these memorial exercises. I come with a heart filled with love and emotion and with unbounded admiration for the qualities of character of the late chief justice. I lack the powers of speech to give expression to the thoughts which crowd the mind, and the sentiments which evolve around the heart on this occasion, or to properly portray the true manly worth and the nobility of character of the late Chief Justice Edward Wren Hudgins, in whose memory we meet today.

My acquaintanceship with him began nearly 40 years ago shortly after I was admitted to the practice of law at the bar of the county of Halifax. He was then a young but able, successful, and learned attorney of our judicial circuit, and was thoroughly established in the confidence and esteem of both bench and bar. The acquaintanceship then formed, shortly ripened into a long and enduring friendship increasing with the passing years.

As a member of the Committee on the Judiciary of the United States House of Representatives, I was in a distant State on official business when the news came advising me of the passing of Virginia's chief justice. The news was saddening and shocking and brought a poignant sense of personal loss. I was conscious also that in the passing of this distinguished jurist, Virginia, too, had suffered, possibly in the hour of her direst need. I returned to Virginia by airplane at the earliest practicable moment in order to join with his family and his many friends at the final rites and thus pay respect to the memory of one of Virginia's noblest sons.

As we gathered on that occasion in the First Baptist Church of Chase City, Va., of which Chief Justice Hudgins was for so many years a faithful member and worker, one was constrained to reflect upon the rich, useful, and lasting contributions he had made to the progress and welfare of his community. The hearts of his friends swelled with pride in the knowledge that he had done so much to enhance and expand, not only the usefulness of his church, but the betterment of his community, his State, and his Nation as well.

Edward Wren Hudgins was born in Buckingham County, Va., on the 17th day of January, 1882, and breathed his last at his home in Chase City, Va., on July 29, 1958. He came from a sturdy southside Virginia family. He was born and reared not far distant from Appomattox Court House, where the gallant army of the matchless Lee was surrendered less than 20 years before. The period into which he had come was one which challenged and tried men's souls. It was a time of great poverty and hardship in southside Virginia. There was little or no industry. Our resources were exhausted. Our manpower was depleted. Our fields were impoverished. Our travail was indescribable. And about all that our people had left in that great area of Virginia at that time was the marrow in their bones. It was under such conditions and in these surroundings that Chief Justice Hudgins was born and grew into manhood and usefulness. The hardihood so characteristic of the citizenry of that day was such as to dispel the clouds of disaster and ruin and to resolve the problems confronting them in keeping with the honor and the determination of a proud people.

The county in which the late chief justice was born is in the very heart of what has been known for so many years as Randolph's district. He labored and served and spent his entire life in that region of our Commonwealth noted for its climate, free of the roughness of winter and the mugginess of summer, for the productivity and fertility of its soil, for its beauty and simplicity, for its flowers and for its birds, for its peaceful and tranquil homes, and for the gentility, the culture and the patriotism of its citizenry. The qualities of this region are described in a scholarly manner by Mr. Bruce, himself a native of Staunton Hill, in his erudite and interesting biography of John Randolph, of Roanoke.

Practicing the industry and the perseverance characteristic of his family and of the county of Buckingham from whence he came, the future chief justice achieved his academic and professional training at Richmond College (now the University of Richmond). All of this by working and without the aid of such modern-day educational devices as have been hatched up by the present generation for the acquisition of a modicum of knowledge—much of it superficial. The University of Richmond later conferred upon him the honorary degree of doctor of laws. At college it was said of him in the history of the class to which he belonged that "he worked hard, played hard, and enjoyed every minute of it." These words were so characteristic of the full duration of his somewhat long and exceedingly useful life.

In 1908 he commenced the practice of law in Chase City, Mecklenburg County, Va., in partnership with the late Prof. W. S. McNeil and the late Honorable Thomas W. Ozlin. Almost from the first it became apparent that he possessed those qualities which would bring him to the forefront as one of the most eminent attorneys of Southside, Va., if not indeed of our whole State. From these early beginnings he demonstrated sterling qualities of character and leadership which were manifest throughout his entire life. He was thorough, diligent, and conscientious in the performance of every task, duty, and obligation.

He became interested in and associated himself with all worthy phases of activity of the community in which he lived. The professional, the social, the religious, and the political life of Mecklenberg County was improved because of his interest and activity in it. Every endeavor in which he engaged throughout his entire career was in keeping with the highest traditions of our great Commonwealth.

No doubt the happiest occasion of his life was the 16th day of March 1910, when he became united in marriage to Miss Lucy Henry Morton, of Charlotte County, who like the future chief justice, came from a long line of distinguished Southside, Va., ancestors, who had fought our wars, who had charted our course, and who had been responsible for the development and improve-

ment of our part of Virginia. She was one of the most beautiful and attractive young ladies in that whole area and her great devotion as wife and mother inspired him to noble achievements. This happy marriage was blessed with two fine sons—Edward Morton Hudgins and William Henry Hudgins—both of whom are members of the Virginia bar, and both of whom served with distinction as commissioned officers of high rank in the Armed Forces of our country during the recent turmoil and conflicts in which the Nation has been engaged. The older son, the Honorable Edward Morton Hudgins, has represented Chesterfield County in the House of Delegates of Virginia since 1952. The relationship which existed among the members of this family during the lifetime of Judge Hudgins was beautiful to behold and the love and devotion of the late chief justice for his wife and sons was evidenced by his unsullied domestic purity and fidelity.

In 1915 he was elected to represent the county of Mecklenburg in the House of Delegates of Virginia. He served in that body during the regular sessions of 1916 and 1918 and the special session of 1919. It is interesting to note that there were many members of the general assemply associated with him during that period who were destined to be called to high public station. In addition to the future chief justice, there were among the membership of this body, three future governors of Virginia, and two future U.S. Senators. And among that number who took office with the future chief justice in January 1916, was another Virginian who likewise achieved a position of great prominence and usefulness, the Honorable H. F. BYRD.

Years after he left the service of the house of delegates, there still remained among the membership many able Virginians who spoke admiringly of his knowledge, his parliamentary skill, his devotion to the public service, and his zeal to serve the best interests of Virginia.

The late chief justice was in many respects a most unusual man. He was endowed with talents and qualities of character which would have enabled him to achieve distinction in any line of human endeavor to which he may have directed his energies. He possessed a pleasing personality and attractive appearance. He was of a strong and virile body, of tireless energy, and extraordinary intelligence. He had a resolute and courageous heart. He possessed business sagacity and marshaled his resources and powers with dexterity and skill. Had he chosen to go into business, or into politics, the possibilities of his achievements would have been boundless. Though he devoted little of his time to business matters, his acumen was such that he enjoyed the confidence and the esteem of the business leaders of Southside, Va., and many are they who consulted with him from time to time and who earnestly sought his advice and counsel. In public affairs his limitless storehouse of wisdom was drawn upon heavily and his advice very generally followed by both officeholder and citizen.

In 1926, the General Assembly of Virginia created the 34th judicial circuit comprised of the counties of Halifax, Lunenburg, and Mecklenburg. These counties are bound together by sentiment, by political attitudes and considerations, by family ties, by economy, and by a firm determination to preserve the best and finest traditions in Virginia. These three Southside Virginia counties are blessed with a citizenship unsurpassed by that of any other section of Virginia, a Commonwealth which can rightfully boast of the courage and the patriotism and the intelligence of her people.

Among the contemporaries of the future judge in the 34th judicial circuit at the time it was created, were such men as Hiram Wall, E. C. Goode, Irby Turnbull, and Sterling Hutcheson of Mecklenburg; Thomas W. Ozlin, Needham S. Turnbull and George E. Allen of Lunenburg; and John Martin, Frank L. McKinney, James S. Easley, and Marshall B. Booker of Halifax, as well as many others of rank, distinction and ability. It was from such a company of lawyers and citizens that the young, able, and dependable Ed Hudgins of Mecklenburg was unanimously chosen to preside over our new judicial circuit. It was an appropriate and meritorious recognition of his character, ability, and fitness to administer impartial justice.

The distinguished members of this court, who have formerly presided over rural circuits, need not be reminded of the close and cordial relationships which normally exist between the presiding judge and the officers of his court, particularly the clerk. When Judge Hudgins ascended the bench of the 34th Judicial Circuit, he thus became associated with the Honorable John Leroy Yates, of Lunenburg; the Honorable Ernest Crews Lacy, of Halifax; and the Honorable Herbert Farrar Hutcheson, of Mecklenburg; whose memories are cherished by thousands of our people and whose names are inseparably linked with the life and the culture of those three counties. The longevity of service in public office of the distinguished gentlemen whose names I have just called is evidence of a most convincing nature that in that section we have been blessed with the highest and most fruitful type of leadership, and that our people are of a conservative disposition and nature and stability of character. In Southside, Va., the office of county clerk frequently is passed on from father to son to grandson, and in the more than 200 years of history of these three counties, and with the exception of the Civil War and reconstruction periods, less than 10 people have served as clerk in one of these counties, and practically the same situation obtains in the other two counties.

The new judge was courteous but firm in his dealings with court attachés, with witnesses, jurors, and attorneys, and particularly sympathetic with and considerate of the younger attorneys who were either obtuse or inexperienced in procedure and in pleading and practice. From the very first it was obvious that the 34th Circuit had chosen an outstanding judge of extraordinary ability who would preside with dignity, efficiency, and fairness and in whose strong and determined hands the administration of justice would be safe.

These were among the happiest years of his life, although his accomplishments and attainments as a justice and as a chief justice of this honorable body are such that he could not have achieved such success unless he had been in love with the work he found as a member and chief justice of this honorable court.

The Virginia constitutional changes of 1928 provided for increasing the number of justices on this court from five to seven. The general assembly on January 17, 1930—by coincidence the 48th anniversary of the birth of Judge Hudgins—elected him to one of the newly created associate justiceships, and he joined the court on February 1, 1930, taking his seat at the March session. He served continuously on this court for 28 years and 6 months, becoming its chief justice in October 1947, to succeed the late Chief Justice Henry W. Holt. He enjoyed the longest continuous service on this court of any jurist in the last 105 years. In the entire history of Virginia, only three others have had longer consecutive tenure on the State's highest court. They are William Fleming (1779–1824); Spencer Roane (1789–1822); and William H. Cabell (1811–53). He presided over this body as chief justice for a longer period than any other individual with the single exception of the late Honorable Preston W. Campbell, of Washington County.

He was indeed impressive on the bench. His opinions touched every conceivable field of State appellate law and were replete with simplicity, directness, force, wisdom, and justice. When he spoke or wrote, he was clear and concise and to the point. He was earnest in his convictions. He said what he meant and meant what he said. He expressed himself clearly, concisely, and directly. He was so sincere in his convictions that it never occurred to him to stoop to the employment of the cheap and paltry decorations of discourse, a fault of speech to which so many are addicted.

He participated in more than 8,000 cases. He rendered a total of 534 opinions, the first on June 12, 1930, *Voyentzie* v. *Ryan* (154 Virginia 604), and the last was adopted as the opinion of the court and handed down on September 10, 1958, *Robinson et al* v. *Peterson* (200 Virginia 186).

Many of his decisions were notable and attracted widespread attention and interest, but time permits a brief reference to only a few of them:

In his decision in *Hall* v. *Commonwealth*, he drew an incisive line between the right of an evangelist to practice his religion and a homeowner's right to privacy.

In *Zirkle* v. *Commonwealth*, he demonstrated his innate knowledge of people by reversing the conviction of a defendant whose good reputation had been challenged by the Commonwealth's introduction of evidence of a previous driving conviction. "One swallow maketh not a summer—one drink maketh not a drunkard," so said the chief justice.

Unlike the present Supreme Court of the United States, his decisions were based upon what the law is and not what he thought the law ought to be.

In the Daniel case, decided in December 1957, a suit brought by a party badly injured in a power line accident was denied. The plaintiff had failed to file notice within the time prescribed by law. The late chief justice said that the legislature had the power to make special rules for particular claiments, but such power was legislative, not judicial. "If exceptions are made by statute, they exist, if not, they do not exist," he said.

He possessed judicial wisdom and the courage to act upon it. He refused to surrender to the legal lilliputians north of the Potomac who will unless curbed, obliterate our system of jurisprudence as we have known and loved it since the foundation of the Republic.

Lovers of liberty were pleased with the per curiam holding of this court under his great leadership in the case of *Naim* v. *Naim*.

In that case reported in 350 U.S. 891, 76 S. Ct. 151 (1955), the Court above referred to undertook to vacate a final decision of the Supreme Court of Appeals of Virginia which had held invalid the marriage of a white woman to a man of another race. The U.S. Supreme Court then remanded the case to the Supreme Court of Appeals of Virginia in order that the case might be returned to the circuit court of the city of Portsmouth for additional facts to be incorporated in the record. The Virginia court met the situation without equivocation. When this order was received the Virginia court held that there is no provision in Virginia law by which it could send a case back to the circuit court of the city of Portsmouth to be reopened. And this honorable court stated: "The decree of the trial court and the decree of this court affirming it have become final so far as these courts are concerned" (*Naim* v. *Naim*, 197 Va. 734 (1956); 90 S. E. 2d 849). The effect of the ruling of the Virginia court was to fail or refuse to obey the preverse and obdurate order of the Supreme Court of the United States.

His activities in life were so varied that all of them cannot be adverted to within the

confines of a short address. Aside from his general worth as a judge and as a chief justice, his work in the reorganization of the administration of justice within the courts of this State constitutes possibly his greatest contribution. It is believed that he accomplished more in this field than any other individual in this or any other previous generation. He was also instrumental in organizing the conference of chief justices. I have some firsthand knowledge of his interest in his reorganizational work and of the monumental proportions of his efforts. I am sure that he would regard his accomplishments along these lines as certainly one of the greatest achievements of his useful career.

Whatever he did was well done. He was a man in every sense of the word. He was a sturdy oak and a tower of strength. Those who were interested in promoting the welfare of our State and Nation, naturally gravitated to him. He will be greatly missed as one of the great Virginians of his generation. Let us hope that the example of his life will animate us all to a higher and a renewed consecration, to worthy and unselfish devotion to our country and to our kind, and that we may all become stronger and better and more effective by reason of having known and been associated with him.

"God give us men! A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor—men who will not lie;
Men who can stand before a demagog,
And damn his treacherous flatteries without winking!
Tall men, sun-crowned, who live above the fog
In public duty, and in private thinking:
For while the rabble, with their thumb-worn creeds,
Their large professions and their little deeds—
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land, and waiting Justice sleeps!"

It is difficult for those of us who knew the late chief justice to associate him with those whose duties and earthly labors have ended and who have passed on into other realms.

As we reflect upon the many events in his full and useful life, we become conscious of the rapidity of the movement of the sands in the hourglass of time and of the swift falling of the leaves of life. "The wine of life keeps oozing—drop by drop, the leaves of life keep falling—one by one," and so it is with us.

But despite these somber thoughts, and the interest and admonition with which this hour is freighted, it is not altogether one of sadness. For we do appreciate the privilege of having known and lived and served with the beloved late chief justice in whose cherished memory we are here assembled. We take comfort in the knowledge that he devoutly practiced the faith he embraced, and when on that July day his immortal soul winged its way into a boundless eternity, he carried with him the faith of our fathers. He will continue to live in the hearts and minds of those who knew and loved him and in the great institutions he loved and served with such ability and devotion. May we be taught to so number our days that we may apply our hearts unto wisdom, and, at last, like him, enter into the inheritance reserved for the faithful.

"Green be the turf above thee,
Friend of my better days!
None knew thee but to love thee
Nor named thee but to praise."

## The Miracle of Hawaii

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. MULTER. Mr. Speaker, we are all pleased to see the 50th star added to our flag and we welcome our new citizens of Hawaii.

I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 13, 1959, together with an article by Roscoe Drummond which appeared in the New York Herald Tribune of March 15, 1959:

[From the New York Times, Mar. 13, 1959]

THE MIRACLE OF HAWAII

The miracle of Hawaii is not that, as a result of yesterday's House vote, she is now to become the 50th State of the American Union. It is, rather, that this State has been created under great difficulties in mid-Pacific, 2,000 miles from the American mainland. Here is a community of eight main islands and about a dozen smaller ones about equal in area to the two States of Connecticut and Rhode Island and something more than 1 percent of the area of her newest sister State, Alaska.

When Captain Cook passed that way 181 years ago, Hawaii had about 300,000 people. Now she has about one-half million and of that one-half million perhaps 12,000 are of pure Hawaiian stock. The others are of a dozen or more principal nationalities and a great many subsidiary ones. They come from China, from Japan, from the Portuguese Islands, from the Philippines, from the American South and from almost any accessible country with exportable labor that one can think of.

The miracle is that this astounding mixture is becoming not a new nation but a new version of the American people. For what are the American people but a mingling of most European races and of some oriental races, bound together by a common language and by common traditions rather than by racial origin?

Hawaii was not a deliberate ethnic experiment. The modern Hawaiian people were produced by what the sugar planters and the pineapple farmers took to be economic necessity. Their ancestors were brought in when it was discovered that the original Hawaiians not only were becoming scarcer, but did not see the reason for working as contract laborers on the plantations. There were some evils, some exploitations, but out of it all has come an intelligent, healthy, and even beautiful race of people who are just as capable of governing themselves as are the people of New York, California, or Texas.

The battle is over now, although some formalities must still be complied with. The President will sign the statehood bill, the people of Hawaii will approve it unless they have changed their minds, and the wide blue water that separates San Francisco from Honolulu will shrink in its political dimensions to a river boundary line.

There are those who look with apprehension to some unhappy moments in Hawaii's labor history, as when a dock strike in 1949 tied up the islands for 6 months. Yet there is no reason to believe that the State of Hawaii will have any more difficulty handling such crises than the Territory of Hawaii did. Why should we expect second-class citizens, which is what the people of Hawaii have been, to stand up for their rights as effectively as do first-class citizens, which is what the citizens of Hawaii are about to become?

There was one more argument, besides the argument of justice, for voting Hawaii as an equal into the Union. This was that, like Alaska, she stands on the front line of our defense. Her great industries, sugar, pineapples, and tourists, taken together, do not quite equal what the Government spends in the islands. It was said a long time ago, "Put none but Americans on guard." This we have done in Alaska. This we are now doing in Hawaii. Long live the 50th State.

[From the New York Herald Tribune, Mar. 15, 1959]

MEET HAWAII—FIFTIETH STATE

(By Roscoe Drummond)

WASHINGTON.—There will soon be 50 States in the Union—100 Senators and 1 or 2 more Members of the House of Representatives.

It is more than 100 years since President Franklin Pierce suggested that Hawaii be incorporated into the Union.

Now, after 22 formal hearings since 1935, producing 6,400 printed pages of testimony and exhibits totaling some 3 million words with 900 witnesses being heard in the Territory and in Washington, the State of Hawaii is being welcomed with open arms.

For the first time in history the Senate Interior and Insular Affairs Committee unanimously recommended a State for admission, and Senate bill 50 will make Hawaii the 50th State with the notable high of seven southern Senators joining in approval.

Here are the principal factors and facts behind this action:

Is Hawaii contiguous? Hawaii doesn't touch continental United States but is nearer to the main body of the Nation than many other States, including California, were when they were first admitted. In travel and in communication Hawaii is closer to Washington, D.C., than Boston and New York were when the Republic was founded. Certainly the United States must control the sea and the air from Puget Sound to Pearl Harbor as long as there is a nation.

Can Hawaii pay its way? It has a population of 600,000 people—larger than the population of any State at the time of admission, except Oklahoma. Its population now is larger than that of Vermont, Delaware, Wyoming, Nevada, and Alaska. It has a strong economy and for years has paid into the U.S. Treasury more taxes than nine States of the Union.

Who are the Hawaiian people? At least 90 percent of them are American citizens. The population consists of approximately 37 percent Japanese ancestry, 23 percent Caucasian, 17 percent Hawaiian ancestry, 12 percent Filipino ancestry and 6 percent Chinese ancestry. They have a strong, stable, modern democratic form of government—offering the groping peoples of Asia a look into the parlor of true democracy.

Are they loyal? The late Senator Hugh Butler, then chairman of the Senate Committee on Interior and Insular Affairs, made this report after an on-the-spot study:

"If there is such a thing as a supreme test of loyalty to an ideal, then a willingness to serve in battle in support of that ideal is entitled to such a description."

There were 426 Hawaiian boys killed in Korean action.

Not one case of a Hawaiian soldier's desertion to the enemy was recorded.

Not one case of a successful Red brainwashing of a Hawaiian soldier was recorded.

Of the 22 American servicemen who went over to the Chinese Communists after the Korean armistice, there were turncoats from Texas, Georgia, Minnesota, Louisiana, Illinois, Virginia, Rhode Island, Arkansas, Tennessee, and Mississippi—but not one from Hawaii.

What about communism? In 1950 the House Committee on Un-American Activities estimated that there were 90 known Communists in Hawaii. Later J. Edgar Hoover put it at 36. There are no Communists in the Hawaiian Legislature and when one sympathizer of Harry Bridges ran for mayor of Honolulu in 1956 he was administered the worst defeat in Hawaiian history.

What of Hawaiian politics? The two-party system prevails. It has been traditionally Republican. In 1956 Hawaii elected its first Democratic delegate to Congress since 1934 and reelected him last year. Recently Hawaii has reflected the national voting pattern and since 1954 Democrats have controlled the Hawaiian Legislature for the first time.

Hawaii is ready for admission, and the Nation is ready for Hawaii.

## A Badly Needed Change in the "Equal Time" Section of the Federal Communications Act

EXTENSION OF REMARKS
OF
## HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. CUNNINGHAM. Mr. Speaker, the recent ruling by the Federal Communications Commission in interpreting section 315 of the Federal Communications Act—the "equal time" section—has caused great concern in the broadcasting industry and by many other persons who are concerned about future news reporting of Government and political news.

This past Saturday, the president of the Columbia Broadcasting System, Dr. Frank Stanton, chose to let other pressing problems wait until later while he spoke on this matter to a general conference of representatives from CBS television network affiliated stations.

I found in Dr. Stanton's remarks a clear analysis of the situation that confronts the broadcasters and the public if the FCC ruling is carried through. Everyone concerned with letting the public know the facts and issues in any political campaign will do well to read these remarks and ponder the future.

Under leave to extend my remarks, I include the body of Dr. Stanton's remarks and point out that this situation is of such importance that Dr. Stanton abandoned a previously prepared speech to give this address:

STANTON'S REMARKS

The problem which I want to discuss today has very serious implications not only for broadcasting but for the whole question of the effective working of democracy under the pressures of modern life. This is a matter of such urgency, in my judgment, that we should all give it the fullest attention possible. I refer to the construction put upon section 315 of the Federal Communications Act by the FCC in the Lar "(America First)" Daly case here in Chicago.

Mr. Daly, a perennial but unsuccessful office-seeker, late last year announced himself a candidate for both the Republican and Democratic nominations for mayor of Chicago. Two men prominent in the news, Mayor Richard Daley and ex-Congressman Timothy Sheehan, were the major candidates in the Democratic and Republican parties. During the course of its daily news coverage, WBBM–TV exercised its news judgment by including significant news of the mayoralty campaign. This includes the mayor and Congressman Sheehan, the chief Republican candidate, filing nomination papers, as well as Mayor Daley greeting President Frondizi of Argentina on the latter's arrival at the Chicago airport, and Mayor Daley, with his wife, opening the March of Dimes campaign.

On February 19, 1959 the Federal Communications Commission ruled, in perhaps the most severely crippling decision ever to be handed down with regard to broadcast journalism, that this news coverage must be matched by alloting equal time to Lar Daly on a regular news broadcast—even though the original appearances of the mayor and the Congressman were obviously unavoidable in any adequate television coverage of news of wide general interest to the people of the Nation's second largest city.

We propose to appeal this decision with all the force and vigor at our command. We have asked the Commission to reconsider and to reverse itself. If it does not, we are going to appeal to the courts; we are going to appeal to the Congress; and we are going to appeal to the people.

Let me make it clear that this fight will be directed only to this extraordinary ruling that section 315 is applicable to newscasts. We have said many times in the past that section 315 is, in any case, an abomination—that its ultimate results are to suppress and not to expand political affairs on television and radio. We have held that it is a disservice to the public because it keeps broadcasting from making the contribution which it can uniquely make in presenting leading candidates of major parties in face to face debates. But for the present we are focusing not on the broader faults of section 315 but only on the issue of applying that section to regular newscasts.

Now I would like to talk with you briefly but most earnestly about the significance of this construction of section 315.

If upheld, the decision will have two inevitable results. One will be an immediate practical effect on news broadcasting that can abridge radically both the usefulness of radio and television to our society and their total freedom as media. The second will be to set loose a thoughtless slide rule theory governing the role of journalism in a democracy that can be described only as a wholesale negation of principles that have been safeguards and supports of our democracy from its beginnings.

Let's take a look at this decision and see what it means.

The most important story in this democracy, for very nearly 1 year out of every 4, is the nomination and the election campaigns for the Presidency. This has been true since the founding of the Republic, for our political campaigns are more than the choice of leadership. They constitute a ventilation of policy, an expression through major candidates for high office of the views, the objectives, the values of all of us as a nation.

Now are we to be told that, so far as the uniquely immediate and direct qualities of television news go, this story of dominating importance in our country is forbidden territory? That you cannot in your regular news programs cover State and municipal campaigns for governor and mayor as you see fit? That congressional elections cannot be covered in newscasts with the actual appearances of candidates for Senator and Representative? Or that you can cover such top stories in your own way only if you give equivalent time to every legally qualified candidate who asks for it—even if he is an unheard of aspirant in an obscure party?

Make no mistake about it: the Daly decision, for all practical purposes, makes it a mathematical impossibility for broadcasting to report any political campaign in its own way and take advantage of its own technical capabilities.

Consider for a moment the mathematics of television and the news of a presidential election campaign. The CBS Television Network alone devoted about 20 percent of our television newscast time during the 1956 campaign period to the presidential and vice presidential candidates of the two major parties. Some time on virtually every newscast—from Labor Day to election day—was devoted to the campaign. Under the Daly decision we would have been required to give equivalent time on these regular newscasts to all candidates of all parties who asked for it. There were—as near as can be calculated—24 presidential and vice presidential candidates of 12 parties. To furnish them all with equivalent time would have taken some 38 hours, or approximately 20 percent more than all the time spent by all our television network newscasts on all the news.

The absurdity of this can be multiplied by almost any factor you choose when you apply the Daly ruling to primaries, where you may have a dozen or a score of candidates for a single nomination—and many more than a dozen or a score once the crackpots learn the implication of this decision.

This projection leaves no doubt of where the Daly decision puts us. It simply deprives us of the right to use the distinctive capabalities of television and radio to report directly and vividly the news of political campaigns to the American people.

The Daly ruling would prohibit radio and television from bringing some of the greatest moments in history to the American people: Franklin Roosevelt's declaration for a third term, President Eisenhower's 1956 decision this his health would permit him to run for reelection. Such major news events as an assassination attempt on a candidate for public office could not be shown on a television newscast—unless the attempt succeeded and the victim was therefore no longer a candidate. We would simply not have the freedom to report such events on the ground of their own newsworthiness—which ought to be the sole criterion.

We ought not to underestimate the gravity of this abridgment of our freedom. We are being denied the right to assume and exercise the responsibility for editorial control of our own news program. The Daly decision does not speak of the use of television as a medium for political campaigning. It addresses itself, with deadly effect, to the use of television as journalism. It attempts to substitute a ridiculous mathematical formula for the responsibility of news editors in handling the news of political campaigns.

I am firmly convinced that if we are deprived of this responsibility, we have opened the door to all kinds of invasions, restrictions and harassments of our news function. Responsibility and freedom go hand in hand. If responsibility is taken away from us in this important respect, what other freedom we have left will soon disappear also. The atrophying of so important a part of our news functions as reporting campaigns will inevitably diminish the wholy body. We cannot let this happen. As broadcasters we are often accused by our critics of lacking the guts to handle anything smacking of controversy on the air. These critics ought to be the first to rise up and declare themselves against the Daly ruling, for this would not only discourage the inclusion of highly controversial material in our newscasts but it would actually outlaw it except under conditions impossible to meet.

I think, however, that something greater is involved in this erosive process launched by the Daly ruling than just the strength and

usefulness our our own industry. It seems to me that the ruling spawns a monstrous idea in a democratic society—the idea that quantitative mechanics are more important than the qualitative considerations of the degree to which the people are informed during the critically important period of election campaigns. The idea is promulgated that the freedom and enterprise with which information is garnered and dispensed are less important—and that the access of the people to the direct experience of seeing political candidates and hearing their declarations first-hand in new broadcasts are less important—than rigid, unrealistic mathematical equations. Yet when we talk of these things, we are talking of our health and survival as a democracy. At no time in the democratic experience is a fully informed people more important than in making their electoral decisions. In fact the whole genius of a democratic people rests on this one proposition. We are now witnessing the introduction of the revolutionary idea that informing the people is a secondary matter.

We are also witnessing, in this tortuous construction of section 315, the novel reversal of a principle inherent in the protection extended the free press in the first amendment: That you can trust the people, in Jefferson's words, better than the magistrate in judging the press. Television and radio are constantly exposed to the critical attention of tens of millions of people. Obviously any unfair political use of newscasts would unleash a fury of protests on any station or network that tried it. In fact, 30 years of broadcasting have shown this to be true. In spite of this record, the Daly decision not only distrusts the broadcasters as journalists, it distrusts them as businessmen, implying that they would not have the sense to see the fatal dangers of playing politics with the medium.

We need to remind ourselves, as the Washington Post-Times Herald said editorially after the NAB meeting last year, that there is only one reason for regulating broadcasting at all: the technical need to avoid chaos in the spectrum. That's all. It is not regulated because the regulation of any medium is a social good. On the contrary, as the Post pointed out, it is regulated in spite of the fact that regulation of a medium can be a social evil. It seems to me, then, that there is a danger to all our journalism—printed as well as electronic—if a regulatory power that exists for one reason is applied for purposes other than that requiring the regulation in the first instance.

Look for a moment at the situation of printed journalism. Because of special mailing privileges, vital to the economic health of most periodicals and many newspapers, there is an avenue of approach for attempts to apply mathematical formulas to the editorial contents. A case—utterly outrageous yet no more outrageous than the Daly ruling—could be made for the notion that if a magazine or a newspaper has a partially subsidized circulation through mailing rates and records the words of one political candidate, then the other candidates should be entitled to equal space.

We know that any such idea would be wholly repugnant to traditional values that we, as a democratic society, have put upon freedom of the press. We know that it would so hamper the daily working of a free press that for all practical purposes there would be none during the times it is needed most—political campaigns. Yet once you adopt an idea as having validity, where do you stop in applying it? How do you shut off, how do you halt, a drift that could inundate the most important single aspect of election processes in America—the right to know that has made those processes work in the face of the most staggering crises?

And once more I repeat that the Daly ruling is not about political campaigns. It's about how regular news programs handle political campaigns. It tells the broadcasters the conditions under which they can report campaigns—indeed in a quantitative sense even the contents of the news programs. I say flatly that you cannot have any such halfway, cripplingly conditioned freedom of the press in America. Once the idea is established that the contents of news programs can be tampered with, restricted, harassed, controlled or regulated by an governmental agency in any medium during a political campaign, you open up a Pandora's box that can bring all kinds of harassments and restrictions.

The idea must be rejected now. It must be rejected decisively. It ought to be rejected unanimously.

I have told you that CBS is going to fight the Daly ruling in the courts. It is going to put the issues involved before the people. It hopes for wide support and prompt passage of the remedial and clarifying legislation introduced by Congressman GLENN CUNNINGHAM in H.R. 5389. This bill simply adds a single sentence to section 315(a): "Appearance by a legally qualified candidate on any news program, including news reports and news commentaries, where the format and production of the program are determined by the broadcasting station, or by the network in the case of a network program, and the candidate in no way initiated the recording or the broadcast, shall not be deemed to be use of a broadcasting station within the meaning of this subsection."

We should all take great comfort that these very basic principles and dangers to all of the press have recently been recognized and articulated not by a broadcaster fighting for his own skin but a respected and outstanding member of the print medium—Louis B. Seltzer, editor of the Cleveland Press. Not in connection with section 315, but as to the basic issues involved, he said over the facilities of KYW that "as television increases as the basic medium of communications in some form or another, and it is essential that the newspapers make use of electronic facilities * * * then does it not logically follow that communications will be found to be licensed by the U.S. Government and will that not inhibit, hurt, frustrate and dangerously impair the right of people of America to know freely and fully about events in their country?"

If we do not reject such doctrines as the Daly decision, we are going to wake up some day and find that the unbounded promise of a great medium for the betterment of democratic living has been reduced to impotence. We will discover too late that somewhere an idea got loose and gained such ascendancy over traditional safeguards that as a result, in an age when we needed most desperately a fully informed people making responsible choices, we ended up with a people so immunized by regulation against the stimulation of knowledge and ideas that they became incapable of wise democratic action.

Nobody wants that. Nobody ever wants negation and paralysis. But that is where the doctrine of section 315 as it is now applied will inevitably lead. We have to stop the drift in that direction right now, and stop it for good.

## The Assassination of Mr. Lincoln

EXTENSION OF REMARKS

OF

### HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an interesting editorial from the Economist, published on April 29, 1865, in London, England, entitled "The Assassination of Mr. Lincoln."

I am indebted to one of my constituents, Mr. F.O. Billings, Newport, Wash., for having brought this to my attention.

I think that this is a thoughtful summary of the situation as the English looked at it at the time, and the way they felt about our President.

The editorial follows:

THE ASSASSINATION OF MR. LINCOLN

The murder of Mr. Lincoln is a very great and very lamentable event, perhaps the greatest and most lamentable which has occurred since the coup d'etat, if not since Waterloo. It affects directly and immensely the welfare of the three most powerful countries in the world—America, France, and England—and it affects them all for evil. Time, circumstances, and agent have all conspired as by some cruel perversity to increase the mischief and the horror of an act which at any moment or under any circumstances, would have been most mischievous and horrible. It is not merely that a great man has passed away, but he has disappeared at the very time when his special greatness seemed almost essential to the world, when his death would work the widest conceivable evil, when the chance of replacing him even partially, approached nearest to zero, and he has been removed in the very way which almost alone among causes of death could have doubted the political injury entailed by the decease itself. His death destroys one of the strongest guarantees for continued peace between his country and the external world, while his murder diminishes almost indefinitely the prospects of reconciliation between the two camps into which that country has for 4 years been divided.

At the very instant of all others, when North and South had most reason to see in his character a possibility of reunion, and to dread the accession of his inevitable successor, a southerner murders him to place that successor in his chair, gives occasion for an explosion of sectional hate, and makes a man who has acknowledged that hate master of armies which can give to that hate an almost limitless expression in act. At the very moment when the dread of war between the Union and Western Europe seemed, after inflicting incessant injury for 4 years, about to die away, a murderer deprives us of the man who had most power and most will to maintain peace, and thereby enthrones another whose tendencies are at best an unknown quantity, but who is sure, from inexperience, to sway more toward violence than his predecessor. The injury done alike to the North, to the South, and to the world, is so irremediable, the consequences of the act may be so vast, and are certainly so numerous, that it is with some diffidence we attempt to point out the extent of the American loss, and the result that loss may produce.

The greatness of the American loss seems to us to consist especially in this. To guide and moderate a great revolution, and heal up the wounds created by civil war, it is essential that the Government should be before all things strong. If it is weak, it is sure either to be violent, or to allow some one of the jarring sections of the community to exhibit violence unrestrained, to rely on terror as the French convention, under a false impression of its own dangers, did, or to permit a party to terrorize, as the first ministry of Louis XVIII did. The reign of terror and the terreur blanc were alike owing, one to an imaginary, the other to a real weakness on the part of the governing power. There are so many passions to be restrained, so many armed men to be dealt with, so many fanatic parties to convince, so many private

revenges to check, so many extralegal acts to do, that nothing except an irresistible government can ever hope to secure the end which every government by instinct tries to attain, namely, external order. Now, the difficulty of creating a strong government in America is almost insuperable. The people in the first place dislike government, not this or that administration, but government in the abstract, to such a degree that they have invented a quasi-philosophical theory, proving that government, like war or harlotry, is a necessary evil. Moreover, they have constructed a machinery in the shape of States, specially and deliberately calculated to impede central action, to stop the exercise of power, to reduce government, except so far as it is expressed in arrests by the parish constable, to an impossibility.

They have an absolute parliament, and though they have a strong Executive, it is, when opposed to the people, or even when in advance of the people, paralyzed by a total absence of friends. To make this weakness permanent they have deprived even themselves of absolute power, have first forbidden themselves to change the Constitution, except under circumstances which never occur, and have then, through the machinery of the common schools, given to that Constitution the moral weight of a religious document, therefore, i.e. of a Government able to do great acts very quickly, is really impossible, except in one event. The head of the executive may, by an infinitesimal chance, be a man so exactly representative of the people, that his acts always represent their thoughts, so shrewd that he can steer his way amidst the legal difficulties piled deliberately in his path, and so good that he desires power only for the national ends. The chance of obtaining such a man was, as we say, infinitesimal; but the United States, by a good fortune, of which they will one day be cruelly sensible, had obtained him. Mr. Lincoln, by a rare combination of qualities—patience, sagacity, and honesty—by a still more rare sympathy, not with the best of his Nation but the best average of his Nation, and by a moderation rarest of all, had attained such vast moral authority that he could make all the hundred wheels of the Constitution move in one direction without exerting any physical force. For example, in order to secure the constitutional prohibition of slavery, it is absolutely essential that some 48 separate representative bodies, differing in modes of election, in geographical interests, in education, in prejudices, should harmoniously and strongly cooperate, and so immense was Mr. Lincoln's influence—an influence, it must be remembered, unsupported in this case by power—that had he lived, that cooperation, of which statesmen might well despair, would have been a certainty.

The President had, in fact, attained to the very position—the dictatorship, to use a bad description—required by revolutionary times. At the same time, this vast authority, not having been seized illegally, and being wielded by a man radically good—who for example really reverenced civil liberty and could tolerate venomous opposition—could never be directed to ends wholly disapproved by the ways of those who conferred it. It was, in fact, the authority which nations find it so very hard to secure, which only Italy and America have in our time secured—a good and benevolent, but resistless temporary despotism. That despotism, moreover, was exercised by a man whose brain was a very great one. We do not know in history such an example of the growth of a ruler in wisdom as was exhibited by Mr. Lincoln. Power and responsibility visibly widened his mind and elevated his character. Difficulties, instead of irritating him as they do most men, only increased his reliance on patience; opposition, instead of ulcerating, only made him more tolerant and determined. The very style of his public papers altered, till the very man who had written in an official dispatch about "Uncle Sam's web feet," drew up his final inaugural in a style which extorted from critics so hostile as the Saturday Reviewers, a burst of involuntary admiration. A good but benevolent temporary despotism, wielded by a wise man, was the very instrument the wisest would have desired for the United States; and in losing Mr. Lincoln, the Union has lost it. The great authority attached by law to the President's office reverts to Mr. Johnson, but the far greater moral authority belonging to Mr. Lincoln disappears. There is no longer any person in the Union whom the Union dare or will trust to do exceptional acts, to remove popular generals, to override crotchetty States, to grant concessions to men in arms, to act when needful, as in the Trent case, athwart the popular instinct.

The consequences of this immense loss can as yet scarcely be conjectured, for the one essential datum, the character of the President, is not known. It is probable that that character has been considerably misrepresented. Judging from information necessarily imperfect, we have formed an ad interim opinion that Mr. Johnson is very like an average Scotch tradesman, very shrewd, very pushing, very narrow, and very obstinate, inclined to take the advice of anyone with more knowledge than himself, but unable to act on it when opposed to certain central convictions, not oppressive, but a little indifferent if his plans result in oppression, and subject to fits of enthusiasm as hard to deal with as fits of drunkenness. Should this estimate prove correct, we shall have in the United States a government absolutely resolved upon immediate abolition, whatever its consequences, foolish or wise according to the character of its advisers, very incapable of diplomacy, which demands above all things knowledge, very firm, excessively unpopular with its own agents, and liable to sudden and violent changes of course, so unaccountable as almost to appear freaks. Such a government will find it difficult to overcome the thousand difficulties presented by the organization of the States, by the bitterness of partisans, or by the exasperated feelings of the Army, and will be driven, we fear, to overcome them by violence, or at least to deal with them in a spirit of unsparing rigor.

It is, therefore, we conceive, prima facie probable that the South will be slower to come in, and much less ready to settle down when it has come in, than it would have been under Mr. Lincoln; and this reluctance will be increased by the consciousness that the North has at length obtained a plausible excuse for relentless severity. It will also be much more ready to escape its difficulties by foreign war. Beyond those two somewhat vague propositions, there are as yet too few data whatever for judgment. Least of all are there data to decide whether the North will adhere to the policy of moderation. Upon the whole we think they will, the average American showing in politics that remarkable lenity which arises from perfect freedom, and the consequent absence of fear; but he is also excitable, and it is on the first direction of that excitement that everything will depend. If it takes the direction of vengeance, Mr. Johnson, whose own mind has been embittered against the planters by family injuries, may break loose from his Cabinet; but if, as is much more probable, it takes the direction of overreverence for the policy of the dead, he must coerce his own tendencies until time and the sobering effect of great power have extinguished them. He is certainly a strong man, though of rough type, and the effect of power on the strong is usually to soften.

## Another Summit Conference?

EXTENSION OF REMARKS
OF
## HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. BECKER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

ANOTHER SUMMIT CONFERENCE?—PROPAGANDA SHOW FOR RUSSIANS SEEN IF UNITED STATES GIVES IN TO WIDESPREAD DEMANDS

(By David Lawrence)

Is the world about to witness one of the biggest hoaxes of all times—another summit conference?

Although a Foreign Ministers meeting is to be held in Geneva in May, its failure is anticipated already as the cry is raised for a summit conference.

Dispatches from abroad indicate that Prime Minister Macmillan has been forced into a political corner on the issue and favors a conference of heads of states. Also in the United States certain antiadministration spokesmen who are gullible enough to believe the Soviets will make concessions are speaking out in favor of summit conferences. In fact, it now is being suggested by Chairman FULBRIGHT of the Senate Foreign Relations Committee that such conferences be held twice a year as a regular procedure.

But the average man will ask: "What is there about a summit conference that makes it such an attractive idea to its sponsors?"

So far as the Soviets are concerned, it gives them a propaganda show. The men in the Kremlin can thereby demonstrate to their own people how the rest of the world comes to them begging for crumbs at the table of discussion. As for the allied side, it's a political issue in Great Britain, where the Labor Party pounds away at the Macmillan government by giving the impression that acceptance of a summit conference invitation means peace and that a refusal could lead to war.

Something of the same attitude characterizes the views of some opposition party leaders in the United States. Thus it is asserted Nikita Khrushchev has so much power that it is useless to talk to anyone else, and it is being said in addition that there is no No. 2 man. The inference is that Khrushchev must be humored, and that he alone can make a deal.

Actually, a summit conference is about the last place in the world that any deal can be made between governments. It isn't a quiet, deliberative affair held in a secluded spot where there is an opportunity for reflective discussion by the four top men concerned. On the contrary, at a summit conference each of the heads of state has at his side half a dozen people—aides and advisers—plus clerks and stenographers. There's not much that's private when there are 30 or 40 people in a room. Surrounding the conference outside are at least 1,000 newsmen, photographers, and broadcasters demanding public statements and picture. It isn't a conference, but a carnival of publicity.

If the Soviet Government really wants to draft some kind of agreement to settle the Berlin controversy, it needs only to call in the American or British or French Ambassador at Moscow, and the way could be paved for such an accord. Also, a Foreign Ministers' conference furnishes every opportunity for an agreement to be consummated. Unless the one to be held in Geneva in May is successful, President Eisenhower sees little value in a summit conference later on.

The Soviets fully expect the West to yield to their demands. They look on democracies as weak, unstable, disunited countries which care more for material comforts than they do for principle. Unfortunately, this was the way things looked to the dictators in Europe in the 1930's. But when the chips were down the Allies fought a World War and won it.

History is repeating itself. A dictatorship is again miscalculating the strength and spirits of its adversaries.

Weak-kneed persons on our side are giving aid and comfort to the Soviets by sniping at their own Government from positions of prominence and influence in parliaments abroad and in our Congress at home. This is giving our potential enemies a basis for miscalculation. It could lead to the war everybody on the western side is anxious to avoid.

Whatever agreements might be proclaimed by the summit conference would not be worth the paper they would be wirtten on. The 1954 summit conference agreed solemnly that there should be free elections to reunify Germany. Now, after nearly 5 years, the Soviets have torn up that pledge and are brazenly threatening war if their new demands for keeping Germany dismembered are not accepted.

Firmness by the West alone will save the world from another war. There is a stanch and courageous will to resist at the White House and in the leadership of our Armed Forces. But despite the honeyed words about unity that lately have come from Capitol Hill, the Soviets are convinced that the opposition party in the United States isn't really back of the American Government. It's a mistaken belief, but, judging from the utterances of some of the Democratic leaders and the qualifying phrases they use in giving lipservice to national unity, the Moscow chieftains can readily get the idea that there's a real chance to wring concessions from the West. This could mean surrendering the military position which NATO has hitherto maintained in Western Europe as a safeguard against potential aggression.

Summit conferences should be realistically labeled surrender conferences. For that's why the Soviets keep pressing for them to be convened.

## Hungarian Freedom Day: A Living Symbol

EXTENSION OF REMARKS
OF
### HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. GALLAGHER. Mr. Speaker, Hungarian Freedom Day commemorates a political event which fills many pages in the book of freedom. No one devoted to liberty and the dignity of man can forget the day 111 years ago when the Hungarian people, under the leadership of Louis Kossuth, recaptured from the Hapsburg dynasty many of their inalienable rights.

Had the Hungarian nation's struggle for freedom ended on March 15, 1848, Hungarian Freedom Day would still be a milestone in mankind's march toward liberty. But the Hungarian people did not long enjoy the victory of 1848. Nor was another victory of the Hungarian nation, the independence it achieved after World War I, its final release from the chains of oppression. Twenty-five years later, the boots of the Red army trampled on and suppressed Hungary's independence.

Thus, Hungarian Freedom Day, 1959, does much more than commemorate the history of a glorious nation. It also serves notice on the leaders and quislings of communism that the Hungarian people have never in the past and will never in the future surrender to alien governments and alien creeds.

Hungarian Freedom Day is a living symbol for all Hungarian people, wherever they may be. It is a living symbol for all peoples whose backs are bent under the yoke of communism.

As long as there is a Hungarian Freedom Day, every foe of liberty must fear the date, March 15. The Ides of March brought the death of Caesar. Just as surely does the symbol of another March 15, Hungarian Freedom Day, portend the death of Caesarism.

## Report to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present the report which I rendered as president to the National Rivers and Harbors Congress at the annual convention of the Congress held in the city of Washington, D.C., on May 16, 1958.

PRESIDENT'S REPORT TO NATIONAL RIVERS AND HARBORS CONGRESS

(By Congressman OVERTON BROOKS, of Louisiana)

Members of the National Rivers and Harbors Congress and friends in all of the 57-year history of the National Rivers and Harbors Congress, this past year probably has been the most momentous. We have been confronted with more problems affecting the water development program than ever before. We have had to make quick decisions to protect our program. I trust we have acted wisely for we have had to shoot from the hip, so to speak.

The basic event of the last year which affected our flood control, waterway, harbor, irrigation and water supply program, was the launching of Sputnik I by the Russians on October 4, 1957. Speaking as a member of the House Armed Services Committee, I should like to express the opinion that this was one of the major historic developments of our entire era. If I may draw an analogy, I should say that the launching of an earth satellite into outer space was of far more long-term importance to all of us than the invention of the automobile and Marconi's development of radio.

Of course, we were stunned that the Russians beat us to the draw. It was a disturbing development that sharply jerked us up to the realization that the Russians have scientific and technical skills that are far greater than we had previously dreamed possible. May I call your attention to the exhibit of the National Rivers and Harbors Congress in the State Room. We have titled the exhibit "Russian Pork Barrel." It is an imposing display of what is being done in the way of water development on the other side of the Iron Curtain. We are not presenting this display to advertise or to propagandize for the Russians; but to remind ourselves in sober fashion that if the Russians can launch sputniks and missiles and improve their internal economy all at the same time, we should certainly be able to do the same thing.

National defense goes hand in hand with the orderly development of the water resources of this country. Defense and water resource development cannot be separated arbitrarily by men who do not comprehend how closely interrelated are these twin aspects of our national security and our general well-being. This interrelationship is the theme of our convention.

The National Rivers and Harbors Congress moved into high gear when sputnik was launched. It was immediately obvious to us that we might become so obsessed in pumping funds into the satellite-missile program that we would forget some of the day-to-day problems that remained down here on earth.

Let me recall chronologically the sequence of events that followed Sputnik I and what the National Rivers and Harbors Congress did to meet the threat to the river and harbor program.

1. On October 29, 1957, I addressed the Inland Empire Waterways Association at Longview, Wash. This fine group is directed by Mr. Herbert G. West, who is a member of our board of directors.

In this speech I warned that the launching of sputnik by the Russians would bring about a drastic reappraisal of our budget for waterway development. I also observed that efforts would be made to divert funds which Congress had appropriated for flood control, river and harbor, and irrigation work to the development of satellites and missiles. I observed that we might be threatened with the prospect of getting along with the crumbs that dropped from the table.

2. Through various reports from headquarters of the National Rivers and Harbors Congress, we analyzed the threat to our program. We were first among the organizations in this field to report that there would probably be a 20 percent cut in the budget estimates which would be presented to Congress in January 1958 and that a ban would be placed on the start of new projects in the water development field. There were some who thought we were alarmists in this matter, but events have proved the general accuracy of our fears and predictions.

3. On November 29, 1957, our national headquarters sent out a memorandum to officers, national directors, regional directors, and State vice presidents about the threatened cut in appropriations and in future construction.

This report was circulated to some 150 key Members of Congress who are interested in the overall waterway development program. We had an amazing response from this memorandum—a response that showed that these key Members of Congress were also concerned that the water development program might be scuttled and tossed overboard under the guise of providing funds for the satellite-missile program.

4. In early December, the national headquarters became concerned about the recession. There were several headquarters reports and press releases which carried a survey of news stories appearing in papers all over the country, indicating that we were headed toward hard times. I mention this because we felt that a cutback in construction of public works would further add to the present disturbing business decline.

5. On December 5, 1957, the Bureau of the Budget issued a secret order to the Army Engineers to review the expenditure of the

appropriated funds in the light of new budgetary considerations. This meant simply that the Bureau of the Budget was delaying and deferring and obstructing the flow of appropriated funds into projects which were already under construction. We objected strongly to this action and, as a result, the Bureau of the Budget has released all of these funds that had been held virtually in escrow.

6. As the rumor of cutback, delay and ban on new starts persisted through November, I called a special emergency meeting of the National Rivers and Harbors Congress board of national directors, which was held in Washington on January 4, 1958. Seventeen of the twenty-one members of the board gathered at the Mayflower Hotel and produced a remarkable set of recommendations, opposing these antagonistic acts toward the water development program.

I wish that each of you would take the time to read a copy of these recommendations.

7. On January 13, the Bureau of the Budget sent to Congress its figures for flood control, river, harbor, navigation, and irrigation work. Due to the opposition that we had expressed to the Bureau of the Budget, the cuts in construction funds were not as great as the 20 percent that had originally been considered within the Bureau of the Budget. However, the budget did contain a ban on the start of new projects, as we had predicted.

8. On the same day, January 13, I issued a release to the press in which I labeled the budget provisions as the "liquidation of the water development program." In my statement, I predicted strong congressional opposition to the cuts and the deferment of new starts, especially in view of the growing business recession.

9. On March 7, President Eisenhower issued a statement releasing some of the appropriated funds for the waterway program. The ban on new starts remained, however, on the flood control, navigation, and irrigation-reclamation program. I will say that we strongly resist this effort to throttle the program by slow strangulation.

I hope that our resolutions committee will bring out a firm statement in opposition to this effort to sabotage the water development program of the United States. We cannot stand still and see our money being spent on dubious foreign-aid projects while we are being denied the funds to keep abreast and apace of our growing national water needs.

America cannot stand still. The times will not await indefinite delay in this highly important defense and economic matter. The time to meet our needs is now.

10. On March 11, the House passed the 1958 Omnibus Rivers and Harbors and Flood Control bill by an impressive majority of 321 to 81. The Senate had previously passed the measure. This was merely an authorization bill, but it is necessary before the appropriations can be made to start the projects that are required to keep abreast of our national water needs.

11. On April 15, President Eisenhower vetoed this bill. We hope that Congress will either override the veto or assert its prerogative to plan the future water needs of the Nation without undue obstruction. I also expect our resolutions committee to bring in a strong recommendation on that subject—and the stronger, the better.

While all of these hectic developments were taking place, we were stepping up our activity in the matter of publicity and membership. We have prepared a new pamphlet which I hope you take the time to read: "The National Rivers and Harbors Congress—What It Is—What It Does."

You will have a report later on the matter of membership. I wish to commend the efforts of our directors from all over the country. They have all worked hard and are entitled to our appreciation for a job well done. We are growing soundly and steadily, not only in membership, but in effectiveness in our cause.

I think I would be derelict in my duty were I not at this time to make certain recommendations to this organization. I think our country should adopt three basic principles as fundamental parts of our water utilization program. They are:

1. The Nation needs and should have a stabilized program for the purpose of water development, including reclamation and all types of river and harbor development. This program should be set at a definite dollar amount, always taking in consideration the decreased purchasing power of the dollar and the increased population of the Nation, with concurring increased need for flood control, navigation, reclamation, recreation, and industrial and municipal use of water.

2. We should have a definite and dependable program of new starts, and no agency of government should be allowed to strangle our program for internal development by direct or devious means.

3. Present projects under consideration should be speeded up to the time when they are completed and useful to our people, and a reasonable backlog of new projects should be authorized by the U.S. Congress.

The adoption of such a program nationally would serve to relieve those of us who have worked hard and hazarded greatly of the constant annual uncertainty, and would permit us to look forward with more assurance to the future. America, the richest land on earth, has a right to expect reasonable internal development and reasonable programs of projects which create wealth in themselves and make our land more livable for its people.

During the course of the last year, the National Rivers and Harbors Congress has made tremendous progress. I am delighted to be able to report to you, from your officers and directors, the fact that during the course of this year we have moved the offices of this organization from the third-story-garret on M Street to the modern LaSalle Office Building across Connecticut Avenue from the Mayflower Hotel. Although our space was ample enough at the time of the move, it already has become crowded and too small, and we are looking forward to the time when we will double the size of these offices. I hope that all of you will seek an opportunity to visit your headquarters there during the course of this convention.

During the course of this year, our membership has increased enormously; and this means expanded influence and expanded activity. Keeping up with the increase in membership has been an increase in the total receipts for the organization. This, in turn, has permitted us to increase our budget without going in the red 1 cent. We have added to our staff, as head of the department of public information, Mr. Lacey Reynolds, formerly a newspaperman. His vitality and his alertness have given strength to our program of publicizing the affairs of your organization.

We now have in mind that the National Rivers and Harbors Congress will soon begin to edit a newsletter at regular intervals and will mail this newsletter to our entire membership. This will give us another way to keep in better touch with those throughout the entire Nation who are interested in water utilization and rivers and harbors development.

In the final analysis, we realize that this organization is the oldest national organization for water development in the United States. It was organized in 1901, and is growing in strength today. In the light of the growing demand upon our water resources, I see no reason why this organization should not continue to keep the lead in this program which means everything to the progress and development of our land, and, in fact, to the very survival of our people.

As this year ends, I sense a quickening of activity and energy on the part of the National Rivers and Harbors Congress. I tell you that your organization is accepted throughout the U.S. Congress and the Nation with more respect and with growing admiration for its activity and its accomplishment. With your continued help and support, the National Rivers and Harbors Congress will move on to goals yet unsought and as of this date undreamed of.

---

## The Situation in Bolivia

EXTENSION OF REMARKS
OF
## HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 16, 1959*

Mr. ANFUSO. Mr. Speaker, many of us in this country were terribly shocked to learn last week of mob violence in Bolivia against American officials, which was based on an alleged remark by a U.S. official that Bolivia should be divided up among its South American neighbors. I cannot imagine any American in his right senses making such an uncalled for and downright stupid remark which was intended only to hurt the United States and damage its prestige in Latin America.

Our relations with Bolivia have always been cordial. We have tried to help that country attain a high degree of economic development and a higher standard of living. Bolivia is beset with special problems, the magnitude of which we realize and are willing to do all in our power to help find a logical and satisfactory solution.

Last year and again this year, I introduced in Congress a resolution to establish a Pan American Parliamentary Association for the purpose of seeking better understanding among the nations of the Western Hemisphere, cooperate in the solution of social and economic problems, assist in attaining a higher standard of living, better education, improvement of trade relations, modernization of agriculture, and other problems. I believe that if such an organization would be in existence today where the representatives of the 21 American nations could meet to discuss these problems on a people-to-people basis, we could have avoided such misunderstanding and friction as we have just witnessed in Bolivia.

In connection with the Bolivian situation and possibilities for economic development and investment in that country, I wish to insert into the RECORD a brief article which appeared in the issue of March 6, 1959, of Business International, a weekly publication on business abroad:

BOLIVIAN BALANCE SHEET: WHY THE ODDS ARE FAVORABLE

Mob violence against U.S. Government officials in La Paz, set off by one such official's reputed remark that Bolivia and its

problems should be divided up among its neighbors, shook the confidence of many people in the United States this week. Fears arose that Bolivia in actuality was not making economic progress, that the austerity program essential to it might topple along with the government pushing it, and that the Bolivian people are basically antagonistic to the United States. Qualified observers in La Paz, Washington, and New York, however, dismiss these views as exaggerated.

Item: Two years' frustration of severe austerity have not swung Bolivians against their government leaders, who rule without help of army or, in reality, police power. The very fact that it exploded—harmlessly—against the United States as a scapegoat is reassuring.

Item: The cost-of-living index and the exchange rate of the boliviano are no higher today than in December 1956, when Bolivia's rigorous stabilization program (BI, Feb. 13, 1959, p. 2) went into effect. The country has met its foreign debts, and foreign oil firms have been and are investing a considerable amount of dollars in its oil fields.

PROGRESS MUST BEAR CROSS OF TIN

On the other hand, neither the Bolivian Government nor U.S. aid officials (whose tone has become increasingly petulant in the past year) have faced up to the major drag on economic progress: unproductive, subsidized tin mines (some miners are really only moving rocks). Instead, the effort is to hold the line desperately (and so far unsuccessfully), hoping against hope that the big oil companies will strike it rich. Even if they do, however, it will be years before the results show up on Bolivia's P & L statement.

Further, the Bolivian Government itself is uncoordinated, rushing off in all directions. It has not clamped down on labor agitators (though this may be wise), and some of its leaders showed themselves irresponsible in broadcasting, for political gain, the U.S. official's purported remark—and then trying to put the lid back on. Yet the government has accepted U.S. demands that private enterprise be fostered and austerity imposed.

When all is said and done, however, faith in this potentially rich country rests in its people—whose capacity for work and suffering is demonstrated and whose political maturity, in finally recognizing that constant changes in government solve nothing, has amazed objective observers.

## Cure for Unemployment

EXTENSION OF REMARKS
OF
### HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks I wish to include Sylvia Porter's column from the March 10 issue of the Washington Evening Star.

Miss Porter's column is a startling commentary on one of the more recent tragic developments in our economy—permanent high unemployment even when business is good.

CURE FOR UNEMPLOYMENT

(By Sylvia Porter)

It was a private luncheon and the executive in charge of hiring for one of the Nation's giant corporations was speaking freely:

"Sure, we expect better business and our sales are going up. But while we're producing more than at this time in 1958, we're doing it with—thousands less on the payroll. It's really amazing how much we were able to tighten up on costs in 1957–58 and how handsomely our more efficient plants and machinery are paying off now.

"And I'll tell you this. I'd rather have our employees work a longer week and pay overtime than add one more man than necessary to the payroll. We got such brickbats thrown at us when we had to lay off men last year that I'm going to do everything I can to avoid taking on new ones whom I might have to lay off later and invite the brickbats all over again. It's cheaper to pay the extra expense of overtime than to pay the extra expense of a public relations drive to explain a layoff."

I gulped. "Granted that it makes sense on the balance sheet. But what about the unemployed and the new workers seeking jobs in your area? Don't you feel any responsibility to them? Don't you see yourself benefiting if they have jobs and can buy your products and those of others?"

He didn't gulp. "It is not the responsibility of individual corporations to employ more than we need nor to guarantee full employment at all times. It is my responsibility to my corporation to try for maximum production and for a maximum—although reasonable—profit."

There you have it—a key, straightforward, ungimmicked explanation why unemployment is remaining millions above normal.

And don't kid yourself. The unemployment statistics will continue mighty disheartening at least until well into spring.

Translating the unemployment explanation into simple terms.

(1) Corporations have greatly improved their efficiency of operations and they're aggressively pursuing ways to turn out more goods with fewer workers.

(2) Many feel that while overtime is expensive, it's cheaper in the short run than training workers who might be only temporary and who, if laid off later, would give the corporation a sour reputation the Nation over.

(3) New workers are constantly entering the workforce, threatening to swell the jobless ranks.

Today's jobless problem is not a superficial thing. It is a byproduct of the new age of automation. It is a result of the huge investment corporations have made in plant improvements and expansion. It is a reflection of the sharp, although short, 1957–58 recession.

The superficial cures lie in extension of jobless benefits, aid for depressed areas, major relocation efforts. But the basic cure lies in only one thing:

More growth to absorb the unemployed and new job seekers.

Which means new industries and more production and consumption of such things as autos, houses, appliances, soft goods, public works, services—in short, more of enough things and nonthings to create jobs for all able, willing, and seeking work.

## Weary Waters

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD an article entitled "Weary Waters" by Dr. Ira N. Gabrielson, president of the Wildlife Management Institute. This article appeared in the November 1957 issue of Clubwoman:

WEARY WATERS

(By Dr. Ira N. Gabrielson)

If the otherwise neighborly Mrs. Roe should take it into her head that the easy, quick and practical way to dispose of the Roe family refuse would be to toss it over the fence into the next-door yard of the equally neighborly Mrs. Doe, and should act on the idea, there would be some sort of ruckus. If Mrs. Doe couldn't make her protest stick the authorities would be stepping in, and Mrs. Roe might be having her head examined.

Substitute for the outlandish behavior of the fictional Mrs. Roe that of neighboring communities along a present-day watercourse, and one will have a fairly realistic picture of something going on every day our country over. In spite of our enlightened progress in other directions, more than half of our sewered communities and a comparable proportion of our industries still hold to a free and easy practice of more rough and ready days, just dump the wastes of their homes and factories into a handy stream, and leave it to the stream to take care of them with its biochemical miracle of self-purification.

Days were when no great harm was done that way. No more. Water shortages caused by loading streams with more impurities than they can take care of are appearing in too many localities. Some are becoming critical.

Days were when we felt no urge but to give thanks for our rich farmlands; our growing cities, thriving towns and mushrooming industries; our sparkling lakes, placid rivers and tumbling streams; our fish, birds, and other wildlife; the romance of boyhood's swimming hole, our playgrounds in the great outdoors, our sportsmen's paradises. No more. A shadow of water poverty has been cast across our life as a prospering Nation. Yesterday is yesterday. The urge of today is necessity's urge for action. Thanksgiving is no longer enough. Water pollution is killing our fish, starving our birds, turning swimming holes into cesspools, making disease traps of our beaches, spoiling our inland playgrounds, driving the game from our sportsmen's paradises, threatening our farmlands, our industries, and the health of our communities.

Days were when we could afford to think of water as unlimited and free, like the air we breathe. No more. It was a pretty illusion, but now we have to deal with the hard fact that nature's endowment of water for the area that is the United States, generous as it is, is fixed; that there isn't any more, and we have to make it do. We are face to face with the cold reality that with our rapid increase in population, its shift from country to city, and the even more amazing growth of our industries, our available supply of water for all our needs is being squeezed tighter and tighter between a mounting demand on the one hand and increasing pollution on the other. A spreading awareness of what this means lies back of the broadened and strengthened water pollution control program authorized by Congress last year and now being developed by our Public Health Service.

Every man, woman, and child of the U.S. national family is going to have to have this year, on the average, at least a million gallons of water fit to use. He is going to need more next year, and more and more in the years beyond. Statistics spell out the endless story of how Yankee ingenuity, new inventions, and new conveniences in a rising standard of living mean new uses for

water, and demands for it increasing even faster than the number of our people and their industrial activities.

Looked at one way, the problem of making sure of enough water to go around is a housekeeping problem on a national scale. We as a people are going to have to be more thrifty, and a lot tidier. Figures may be cold, but they can be eloquent too. For instance:

In 1900 our 75 million people were using only 41 billion gallons of water a day. By 1950 a population which had only doubled was using about five times as much. Today our statistical forecasters are predicting that by 1975 our people will need at least 350 billion gallons a day.

In 1900 we had about 4,000 waterworks supplying our cities and larger towns. Today we have four times that many, with some cities having need for twice as much water as they did only 10 years ago.

City shortages are recurring problems from coast to coast. In 1953 the U.S. Geological Survey found a thousand cities resorting to restrictions on water use. As their populations have grown and their water needs mounted even faster, and as nearby sources have become too limited in quantity or too polluted for use, cities have had to reach further and further out for their water supply. New York City, for example, draws its water from the Catskill Mountains, more than 100 miles away, while across the continent Los Angeles has to get its supply from the Colorado River nearly 300 miles away.

Why are water needs so far outstepping growth in population and industry? A look around a modern dwelling, house, or apartment, will indicate part of the answer.

Piped-in water and conveniently placed outlets have taken over from the town pump and spring hole.

The modern washbasin and bathtub do a much quicker, easier, and cleaner job than did the old washstand, pitcher, basin, and slop jar, but they use a lot more water. So do the automatic washers for clothes, linens, and dishes, which have supplanted the cistern, wooden tub, and dishpan.

And the modern counterpart of yesterday's crescent-windowed outdoor retreat—it takes about 5 gallons of water for a single flushing. Multiply by 5 the number of flushings per day in a country of 170 million people, and one has an approximation of only 1 incidental in the skyrocketing per capita consumption of water as the American standard of living goes up and up.

Large-scale air conditioning calling for enormous quantities of water; more and more water for washing the picture windows of homes and the great glass-expanses of modern offices and public buildings; irrigation spreading from West to East; new products making new demands: 300 gallons of water for a pound of synthetic rubber; 100 to 200 gallons for a pound of synthetic dress fabrics; technical advances, new methods, increasing volume in the production of items not new but basic; 65,000 gallons of water to turn out a ton of finished steel; 500 gallons for a yard of woolen cloth; 20 gallons for a pound of finished paper—the list of new or stepped-up uses for water is next to endless.

So it goes and so we grow in prosperity and power. Farms, factories, families; cities, towns, villages; schools, laboratories, playgrounds; businesses, hospitals, governments—all needing, and using, more and more water to produce and enjoy the fruits of American genius and enterprise. And all the while largely preventable pollution is progressively cutting down the natural endowment which has fixed the limits of our water resources. Water shortages haunt America from east to west, not because we have outgrown the supply, but because of the way we have wasted and despoiled it.

OUR WASTE BURDENED STREAMS

Today about 100 million of our 170 million people are living in sewered municipalities—cities, towns, villages, sewer districts, institutions. Into their watercourses their sewage systems are pouring their bath and wash water, kitchen sink garbage, toilet flushings, restaurant and laundry washings, hospital and mortuary refuse—in fact the whole gamut of things mentionable and unmentionable which can be got rid of by dumping them down a drainpipe. The same is true of the acids, chemicals, grease, oils, animal and vegetable matter and all the other objectionable or dangerous substances being discharged into our streams by our industrial plants. Some are poisonous, some corrosive, some merely offensive to see and smell.

Streams are too often contaminated beyond their capacity to purify themselves, especially when they are sluggish, shallow, or small, or when their volume of flow has been reduced by long dry spells. At a point where the load of inpurity has become greater than the stream's capacity for self-purification, the pollution concentration reaches the dangerous and destructive level. From that point on downstream the usefulness of the watercourse to man and beast, farm and factory has been destroyed. Pollution has robbed the Nation of that much of its total available water supply.

In spite of notable advances in recent years in control of pollution with waste treatment plants, the demands for water continue to outrun measures to conserve supply by removing impurities before they reach the stream. Today pollution control is 50 years behind. If we are to bring construction of waste treatment works up to a level where we can merely keep even with pollution, we must be prepared to spend for this alone an estimated $400 to $500 million a year for the next 10 years.

When it comes to its needs for clean water, the national family is faced with a collossal job of housecleaning and home management. That's what its water pollution problem adds up to.

A HOUSECLEANING DRIVE IN THE MAKING

It was congressional recognition of a threatening situation that resulted in the Water Pollution Control Act of 1956. By this act provision was made for a start, under the direction of the Public Health Service, toward a concert of effort by Federal, State, and local governments, public and private agencies, organizations, groups, and individuals, all working together to the single end of protecting the national water supply against further inroads by pollution.

A truly cooperative drive, nationwide, was made possible by authorizations for broadened research; the finding and dissemination of more basic information about the volume and nature of pollution; more technical assistance to States and Federal grants for State programs; encouragement of interstate agreements and uniform State laws; simplification of procedures in Federal abatement actions against interstate pollution; a National Water Pollution Advisory Board made up of specially qualified members not connected with but cooperating with the Federal Government; and for immediate action a half-billion-dollar, 10-year program of Federal grants to assist communities in the construction of sewage treatment works.

The construction grants program is well launched and under full steam. The act limits individual grants to 30 percent of the estimated cost of a project or $250,000, whichever is less. The grantee must provide the rest. During the first fiscal year—more correctly the first 8 months—of the new Federal water pollution control program, a total of $37,942,326 was granted to 446 municipalities to help them build sewage treatment plants.

To this amount, communities added $128,856,364, to bring the total estimated costs of all the program's projects to $166,798,690.

The average Federal grant was about $85,000. Population of the average community served was 22,000.

As of July 1, a total of 1,075 applications for $97,889,447 in grant funds had been received by the Public Health Service and State agencies, with an estimated construction cost for the projects of $677,131,972, if all had been approved.

It is in our history that when our people understand a wrong situation and a need for action, they act. Concerted action on a national scale to safeguard our water supply is overdue; for pollution is adding daily to the burden on already weary waters. It bears directly upon the farmer and his livestock; those who live in urban and rural communities alike; on the conservation of our seafood and wildlife; the beauty and healthfulness of our recreation grounds; upon the health, prosperity and way of life of every last one of us. A way to stop it is ours by law. The rest is up to us.

## Seeds of Friendship

EXTENSION OF REMARKS

OF

### HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. FULTON. Mr. Speaker, I am calling to the attention of Congress and the American people the worthwhile voluntary program of winning new friends, and at the same time doing a really good turn.

Do you feel good about spring coming? Why do we not share it in American friendship gardens all over the world?

[From the Christian Science Monitor, Mar. 16, 1959]

SEEDS FOR OVERSEAS

The annual seeds of friendship collection for overseas, is announced by the All-America Friendship League, with the 1959 goal for spring planting 1 million packets of vegetable and flower seeds. Seeds, in packets or bulk from groups and individuals, are being received now at Friendship Headquarters, 118 West 57th Street, New York 19, N.Y.

Until May 15, the seed committee will send weekly shipments to Britain, France, Western Germany, and Italy; and special shipments will go to Mexico, and Japan. In each country, agricultural and educational committees will supervise the distribution.

Schools and churches, civic and service groups, garden clubs, seed growers, and individuals are all urged to help in this project. Food in the form of seeds can be sent overseas at minimum cost and garden success depends on good seeds. Gifts of money are used to buy seeds at wholesale; packages are marked as gifts from the United States and names of donors forwarded.

The League chairman, Mrs. Edmund H. Cahill, says: "American Friendship Gardens coming to life all over the world are a constant reminder of our friendship, and seeds are living, growing things that will grow on and on in the years to come. These gift seeds from every part of the United States have brought joy to many thousands overseas and are living proof that understanding and

kindness still exist in this world. One garden may not seem important, but millions of persons growing their own flowers and vegetables can transform the morale and health of an entire country."

Early contributors to seeds of friendship were Mrs. D. W. Eisenhower, mother of President Eisenhower, whose seeds came from her own garden in Abilene, Kansas, Mrs. Eleanor Roosevelt, and Mrs. Thomas E. Dewey.

The following are typical comments from participants in the plan:

Sussex: "The seeds of friendship were planted in the school garden by the garden clubs recently formed. Many thanks from all."

Yorkshire: "The young farmers of the school planted the seeds of friendship. Will you please thank the children of America for saving their money to buy seeds for us."

Kent: "Our teacher was so pleased with the seeds that he ordered a special plot prepared to be called the American seed plot. Our thanks to all."

French school: "I hope, as the flowers grow, the friendship will grow between the French and American children. I send thanks to the children and hope the friendship between our two countries will never be broken."

## The Acid Test

EXTENSION OF REMARKS
OF

### HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. QUIGLEY. Mr. Speaker, I would like to invite the attention of my colleagues to the thought-provoking article by Dr. Wernher von Braun, "The Acid Test," which appeared in VFW magazine for March 1959.

To my mind Dr. von Braun is one of the few men who has grasped not only the nature but the full sweep of the challenge of our times. For all business as usual, budget as usual, smugness as usual Americans, I heartily recommend Von Braun's article, which follows:

THE ACID TEST

(By Dr. Wernher von Braun)

The acid test of nations—and men—is the measure of their courage and resourceness in the face of adversity and peril. Those nations which have survived crises have exerted the most profound influences upon mankind's destiny. Those which failed did so largely because they could not manage abundance and power.

The United States has faced agonizing tests more than once during its relatively short history. It has emerged each time from the crucible not without scare but with greater confidence and richer maturity. America survived its crises because it knew what had to be done and did it without regard to consequences and with faith in its own judgment and resources.

Even now, we are experiencing yet another test. Historians may record the present time as one of the most fateful intervals of the 20th century. The early days of October 1957 marked a turning point in our destiny, and in the destinies of other nations, large and small. An unprecedented technological achievement suddenly transformed a troubled but familiar world into one of strange and foreboding aspect. I refer to sputnik, Russia's first satellite. As it has since the dawn of the industrial revolution, science had once again influenced history—and directly shaped the lives of men.

The reaction to sputnik in America was profound. It triggered a period of self-appraisal rarely equaled in modern times. Overnight it became popular to question the bulwarks of our society: our public educational system, our industrial strength, our international policy, our defense strategy and forces, the capabilities of our science and technology. Even the moral fiber of our people came under searching examination. However, since the evident threat was to our security, our initial preoccupation was with modern weapons and our means of defending against them. The Damoclean sword menacing us consisted—and still consists—of the monstrous destructive force inherent in automatic missile-delivery systems, which are capable of transporting thermonuclear warheads over thousands of miles, in any weather, across all geographic and political barriers, at velocities of such magnitude as to imply total destruction without advance warning.

Perhaps it is time now, without muddying the waters further, to determine whether we have correctly assessed the total threat represented by a totalitarian regime whose end objective is world domination.

The Soviet challenge is by no means restricted to military technology. It goes far beyond the realms of politics and armies. No longer is the task of coping with the Red menace the exclusive responsibility of generals and statesmen. The acid test involves every facet of our civilization: religion, economics, politics, science, technology, industry, and education. Freemen everywhere have been caught up in this grim competition. We who enjoy our homes, drive the family car, spend more time in leisure and less in work, who pay less attention to national affairs than to television shows are faced with a decision. Will we do whatever is necessary to win this struggle, or will we continue in our comfortable illusion and thus court the risk of a defeat which would forever eliminate freedom and place our children and their children under the control of an all-powerful state? What we are about to discover is whether a nation which has rated its homerun sluggers and its fullbacks above its scientists and philosophers can meet the total competition of aggression communism and still preserve its way of life.

It will not be enough to perfect weapons systems to equal those of a potential aggressor. It is argued that the deterrent effect of these machines of war may cancel the possibility of total conflict. Consequently, this will turn aggression in another direction: the perimeter or brush type war in which huge rockets of great range and mass destructive capability would not be employed. Against this estimate, the Army has reshaped its striking forces and equipped them with battlefield rockets and guided missiles. This urgent need of a defense capable of dealing with any type of emergency has met a rare degree of unanimity here and abroad.

In sharp contrast, however, wide disagreement has developed over the real significance of the best-publicized exploit of Communist engineering—the earth-circling satellite whose monotonous signal was intentionally audible to listeners everywhere on earth. Skeptics, who refuse to accept the possible until it is demonstrated, are clouding the issue. This is a dangerous state of mind in a day when breakthroughs occur so rapidly that obsolescence of complex weapons systems has become a primary concern.

Perhaps the launching of Explorer helped to redeem our promises, but no amount of explanation or justification can show why we did not do it ahead of the Soviets—and no amount of mutual backslapping that we succeeded with Explorer on the first try can hide the fact that we had lost a round. It was a grave error in judgment to fail to recognize the tremendous psychological impact of an omnipresent artificial moon, visible to anyone with a good pair of eyes and audible to anyone with a simple radio receiver.

More recently we lost another round when our success with the giant Atlas 10–B satellite was immediately and completely overshadowed by the Russians' triumph in placing a manmade object in orbit around the sun. Our incredulous dismay at this feat stems directly from our failure to evaluate realistically the research, development, engineering, and production capabilities of a totalitarian state. This had lulled us into complacency and had led to an underestimate of our adversary, risky business in any competition.

Since I had the dubious privilege of living and working under a totalitarian government for many years, I should be able to evaluate this topic with some degree of competence. Anyone who says that science and technology cannot flourish in a police state does himself and his country a great disservice. It is generally recognized, of course, that personal freedom of movement and thought, and a free exchange of ideas are essential to scientific advance. From this, however, many people erroneously conclude that genuine scientific work is impossible in the climate of dictatorship. Let me clear up this notion once and for all, in the interest of arriving at an honest appraisal of our situation, by citing my personal experience at the Peenemunde rocket center in Hitler's Germany.

Neither I nor any of my associates was ever required to submit a travel itinerary in advance, whether for a short business trip or a vacation lasting several weeks. Throughout the war we had intimate, continuous contact with 36 universities and technical institutions. They performed research in support of our missile programs under contracts so broadly worded that they permitted the institutions an extremely wide latitude in implementation.

Discussions and symposia were held frequently. Many ideas were generated in this truly liberal academic environment. True, these ideas related exclusively to our technical problems and not to politics, but they are successfully applied even today in rocket and missile activities. As far as personal freedom of movement is concerned, as well as free exchange of ideas in the strictly scientific and technological sphere, it would thus simply be misleading to assume that things were much different than in a free country.

The heavy hand of dictatorship is rather felt in another area. In Peenemuende, the security police kept dossiers on all of us, listing all the things we might have said about the regime or individuals of the upper hierarchy. Personal vices and weaknesses were cataloged in the files. But they left us alone as long as our usefulness, in their opinion, was greater than our debit account. Once they felt they could do without you, and you were in their way, they'd call for the dossier and destroy you.

I realize that this sounds quite awful to men who have never experienced it. But the sober fact is that people, whether scientists or candlemakers, learn to live with such a situation. We don't deny ourselves weekend auto trips because of the National Safety Council's warning about multiple deaths. Just so the man living under dictatorship adjusts himself to business as usual, whether he likes it or not, because he must, in order to survive. Something like 700 million people are living today under Communist rule and, in all probability, they have learned to live in the face of such possible "road accidents."

Consequently, we should disabuse ourselves of the dangerous myth that the impotent Russian scientist bends over his

slide rule with a gun at his head. It appears that he enjoys at least as much reward as the American scientist and that, until quite recently, he had even greater latitude in his selection of resources and assistance.

When we consider the Russians' low general technological status during the last war, plus the tremendous physical damage inflicted upon Soviet industry by the war itself, it becomes frighteningly clear that their rate of progress greatly exceeds ours.

The real peril lies in the enormous momentum they have built up, which certainly will yield other dramatic byproducts along the way. They have long since embarked upon a dynamic program to achieve supremacy in science and technology. Their state-controlled educational system is turning out competent engineers and scientists in greater numbers than ours. It is upon this broad foundation that the Russian is waging his effort and not upon the gleanings of the brain-picking of some captive foreign scientists, as many people in this country still seem to believe. Clearly we must accelerate our effort at a rate calculated to overtake and surpass the Russian advantage. And this calls for sacrifice on an unprecedented scale.

It must be understood also that the Soivets have grasped the significance of man's imminent conquest of space and have proceeded well along the road in that direction. A current estimate of the situation would include these possibilities:

First, the Russians probably used a multistage rocket to launch their satellites, a rocket originally designed to carry a thermonuclear warhead over intercontinental range.

Second, the same rocket configuration, with minor modifications, can place a payload of from 50 to 100 pounds on the moon.

Third, the rocket can also put up a satellite capable of military reconnaissance, equipped with a television playback feature. A few such orbital devices can keep track of the progress of all surface construction projects, ship movements, and airbase operations anywhere in the world. Once they achieve this, and I am convinced that it is only very few years off, open-skies inspection for purpose of disarmament becomes academic.

Fourth, the Russians have a sound program designed to solve the question of safe return from orbital flight and related space-medical problems, with the purpose of preparing for manned space travel.

Now there is a made-in-Russia planet orbiting the sun; and I would recommend that we brace ourselves for other Soviet firsts in the new field of astronautics. We are behind and we cannot catch up in a day or two, since major technological projects necessarily involve lead time. It will require several years of concentrated effort to come abreast, and even longer to pull ahead.

We can waste no time commiserating over the sorry lot of the Russian worker or peasant, comparing his lack of freedom and creature comforts with our prosperity. We should also shuck off another illusion—that of thinking the Russian people will rise up to overthrow the Kremlin and thus relieve us of all our worries.

Perhaps a dream of freedom does exist in the Soviet Union. Perhaps, by exposing more young people to scientific training, a search for truth will eventually react against the dictatorship. But we cannot stand around, hands in pockets, waiting for others to do what can be accomplished only by us. I am convinced that it is man's destiny to enter space and that he who controls the open space around us is in a position to control the earth. All that is left to us is to accept the Soviet challenge or else pay the piper.

I certainly do not suggest that we move into space with any belligerent intentions. To be consistent with the fundamentals for which the United States stands, we should propose to the United Nations the universal acceptance of the principle of freedom of outer space—in analogy with the principle of freedom of the seas.

But any such doctrine would be void and meaningless if we cannot back it up with a position of relative strength.

It has been said that Khrushchev and company launched their eventual downfall by the sputnik, because this country reacted by firing up its missile and space programs.

And indeed, in more than one aspect, this may be our last chance. In the First World War, as well as after Pearl Harbor, the United States had time to marshal her resources. Even in Korea and later, after sputnik, we had time to initiate the necessary counteraction. Next time, in this world of long-range ballistic missiles and thermonuclear warheads, we may not have time. Either we will be ready at a moment's notice, or historians may conclude over the ruins of our cities that we were weighed and found wanting.

I hope that we will not conclude that money alone will turn all the tricks. There are other factors involved which cannot be settled so easily. It would be presumptuous for me to offer school solutions, or even to list all the things which must be considered; but there are some minimum requirements which can be identified and which demand prompt attention.

Our educational offerings must come under scrutiny, since it is tomorrow's generation which will have to cope with the problems developing today. If their preparation is to be compatible with the kind of world they will inherit, our young people must be taught basic and essential knowledge at the earliest practicable age in the elementary schools. We have got to disabuse ourselves of the idea that school is a place solely to teach boys and girls how to live together. They must understand mathematics and the physical sciences, which means more and better teachers and expanded offerings both in scope and number. Better salaries, improved professional status, and more adequate classroom and laboratory facilities are essential to obtain the kind of teachers we need, those who can provide the inspirational leadership to interest young minds in facts.

We want no dictator telling us what to believe and what to do. But we must set about learning the facts and, when we have understood them, buckle down to the challenging tasks which confront us.

We should stop telling the world what we are against. We should tell the world what we are for. We must not fight the Communist ideology with negative statements but with the lofty ideals of the founders of this great Republic. The antidote to communism is not anticommunism but the belief in God and the dignity of the individual. Let us not deceive ourselves; the Communist ideology has a powerful appeal to the have-nots, the uninformed, and the desperate. But ideas are fought not with material means but with superior ideas. And where should these ideas be found in this world today if they cannot be found in this glorious land of the free? The flag of leadership of the free world has been thrust into the hands of Americans. Let us live up to the historical challenge.

We must think in terms of long-range objectives, not on the time scale of next year's automobile models.

It is disquieting to be asked, "But what will all this profit us?" Such questions betray a lack of confidence and, even more serious, the kind or unenlightened approach which has hamstrung our progress in the past. No man can say with assurance what benefits will accrue from our discoveries. With Explorer we made a modest beginning. We have stepped into a new high road from which there can be no turning back. As we probe further into the area beyond our sensible atmosphere, man will learn more about his environment; he will understand better the order and beauty of creation. He may then come to realize that war, as we know it, will avail him nothing but catistrophe. He may grasp the truth that there is something far bigger than his little world. Before the majesty of what he will find out there, he must stand in reverential awe. This, then, is the acid test as man moves into the unknown.

---

## The Face of Poverty

EXTENSION OF REMARKS
OF
## HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third in a series of penetrating articles by Eve Edstrom, of the staff of the Washington Post, at the end of my remarks. Like the two articles which I asked to be printed in the RECORD for March 16, this third column is not cheerful reading. Again I am moved to point to the paradox of such poverty as is herein described in the showplace of democracy:

THE FACE OF POVERTY: ABANDONED BUT RETURNED TO PARENTS, CHILDREN PAY FOR THEIR ELDERS' SINS

(By Eve Edstrom)

(Third in a series)

The official police record on the abandonment of Billy and Betty begins in 1958.

Women's Bureau officers found them alone in a filthy apartment with beer cans strewn everywhere. The youngsters had a rash and inch-thick dirt on their necks.

After they were treated at District General Hospital, however, they were described as extremely attractive, outgoing, and beautiful.

But last December, when their parents finally agreed to relinquish them for adoption, Billy and Betty were described as "wild, not toilet trained" and having "eating problems."

The police record, so filled with repeated complaints about the care of Billy and Betty, no longer mentions them. Instead the other names, Gerry and Tommy, are entered.

Just 10 days after the parents agreed to give up Billy and Betty so they could give better care to Gerry and Tommy, the latter two were picked up by police for having been left alone.

Yet when these parents pleaded for "one more chance" before Acting Juvenile Court Judge Austin L. Fickling last month, they were permitted to take Gerry and Tommy home.

Whether this will be one more chance for the parents to make good or one more chance to damage their children is anybody's guess.

This family makes up one side of the District's face of poverty. Their lack is not so much money as maturity and morality.

The father is a marginal worker who sometimes earns $60 a week but more often than not is jobless and drunk.

His wife—only 23 and the mother of five children has yet to learn to care for herself, let alone her children.

For a decade, ever since she was 13 and know to juvenile court, she has been pleading for and getting one more chance.

She first was given a chance on probation, then was placed in two institutions after she was brought before the court in 1949 for a series of drinking and sex episodes. Not long after she was returned home with promises of good behavior she was in the Florence Crittenton Home where she gave birth to her first child who always has been cared for by the maternal grandparents.

Then in a tavern one day she met a man whom she married about a month later. The first born of her marriage was Gerry, a girl now going on 5. In rapid succession she had Billy, Betty, and Tommy.

Billy and Betty repeatedly were left alone. After they first were picked up by the Women's Bureau in 1956, they were placed in emergency care of foster homes.

What happened then became the pattern for the future. The parents stopped drinking, the father got a job and the children were returned home.

Three weeks later, a welfare worker reported, the case broke wide open. The mother suffered a miscarriage, had been drunk for 2 weeks, had left Billy and Betty alone for 3 days.

ANOTHER TRY FAILS

To win the children back this time the mother sought treatment for alcoholism and the family moved into public housing. But after Billy and Betty were returned home, the mother discontinued her clinic visits, the family lost the housing unit and the mother ultimately deserted. Billy and Betty went back into emergency care.

This type of upheaval went on until last September when the Women's Bureau found Billy and Betty in a dark basement apartment where a man was beating a woman too drunk to identify herself.

The children were placed in Junior Village, the District's home for homeless children. When the parents next contacted the Welfare Department they expressed interest in placing Billy and Betty in adoption. Even then a welfare worker was reluctant to break up this family.

By December the parents agreed to release Billy and Betty for adoption so they could do right by Gerry and Tommy. But when the father's unemployment compensation check arrived he stranded his family and Gerry and Tommy soon were in Junior Village after having been found alone.

When welfare officials brought this case to court in February, however, the parents were back together, the father had held a job for a month, the mother had resumed treatment for alcoholism and there was no evidence of physical damage to their children. Gerry and Tommy were returned home over Welfare Department protests.

"Who protects the interests of children in cases like this?" one welfare worker asked. "Now we must wait until these parents fail again."

And that is the story of how the District deals with many of its impoverished families. It waits for failure after failure—until no one can turn these tragedies into success stories.

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

## CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

## LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

# *Appendix*

## Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
## HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. JOHNSON of Texas. Mr. President, I was pleased and gratified to learn recently that American industry employs between 7 and 8 million workers who are physically handicapped.

In a recent issue of Performance magazine, Mr. Dudley Coursey, assistant vice president of personnel for Texas Instruments, Inc., of Dallas, Tex., writes about the many advances in programs for employment of the physically handicapped. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN EMPLOYER'S VIEWS ON EMPLOYMENT OF PHYSICALLY HANDICAPPED WORKERS

(By Dudley Coursey, assistant vice president, personnel, Texas Instruments Inc., Dallas, Tex.)

In America today I think you'll find the attitude of industry toward the physically handicapped applicant or employee might well be summed up in the statement, "It's Ability, Not Disability, That Counts."

It is currently estimated that between 7 and 8 million handicapped are in today's work force, with another 2 million capable of being employed. Where did all these disabled persons come from? Why are they so much more readily accepted by industry today than they were, say, 20 years ago? How do their work records compare with those of fellow employees? What are some of the special problems involved in the employment of such individuals? These and many other questions must immediately come to mind as you seriously consider the possibility of hiring and working with a deaf mute, a paraplegic, a blind man.

Let's define a "handicapped" person as one who requires special job placement and who, because of some physical disability, cannot easily be shifted from one job to another. Apparently, the first really sizable influx of such handicapped persons into American industry can be attributed largely to the manpower shortage created by World War II. Further, recent advances in medical science are partially responsible. For example, people are living longer and therefore are more likely to acquire the disabling diseases of adult life. (Little chance a caveman had of living long enough to suffer from hardening of the arteries—he was lucky to make it to the ripe old age of 18.) Moreover, medical science is now so much better able to save lives of accident victims. These victims survive—though they're often physically disabled.

SAFETY RECORD EXCELLENT

Now let's talk about why industry is so much more willing to hire handicapped workers today. Previously it was believed that hiring physically defective individuals would reduce a company's production rate, increase its absenteeism, lower morale, and, of course, of great importance to both employer and employee, cause a rise in company insurance rates. This last fear has been proven practically baseless. Insurance companies repeatedly have stated that insurance rates are influenced by the relative safety hazards and accident experience of each individual company. They emphasize the fact that, generally speaking, the safety record of physically handicapped workers is excellent—often better, in fact, than that of the nonhandicapped. Thus, employment of physically disabled individuals actually may tend to lower insurance rates. Further, rehabilitation and subsequent employment of disabled individuals saves money by exempting them from support through employee benefit programs. This money again results in lower—not higher—insurance rates to customer companies.

As for the actual work records of handicapped employees—their production generally is equal to or better than that of fellow employees. In some cases a disability actually may be an advantage, such as deafness in a work environment of highly distracting noise. In our own company there are several deaf people working on our assembly lines. Their supervisors say that their handicaps have definitely kept them from being distracted on the job. For example, we have a deaf boy at Texas Instruments whose job consists of weighing minute amounts of silicon. He does his job expertly and attentively, even though there are many activities going on around him.

HANDICAPPED WORKERS ARE MORALE BUILDERS

Absenteeism, we find, generally is equal to or lower than that of coworkers, and morale is not more of a problem with these people than with any others. In fact, we can report that handicapped workers actually are morale builders. As previously mentioned, the excellent safety records of handicapped individuals are generally recognized. Our own industrial nurses at Texas Instruments report that they rarely are called for by a handicapped employee, and we employ a good many of such people.

Other factors partially responsible for the increasing employment of physically disabled individuals include: Public pressure (the work of the President's Committee on Employment of the Physically Handicapped in sponsoring employment drives, etc.; our own Governor's committee, which is doing such a fine job); a sense of obligation to the community on industry's part; availability of increasing numbers of productive handicapped; our awareness of the increased burden to the taxpayer of unemployed, disabled workers; and, most important of all, it is now recognized that the hiring of physically handicapped people is an economically sound practice. Good employer experience over the years has proven this, and, as a result, hiring of the handicapped definitely is no longer considered "a last resort."

Let's look at a case in point, one of our own employees—let's call him Bob Edwards—who has worked for Texas Instruments for over 2 years and is now a senior inspector in quality control. Bob is only 28, but he has a systolic heart murmur and curvature of the spine which has left him with a short left leg. He can perform only a job which requires no lifting or extreme exertion. He had had considerable experience in the type of work for which he was hired and is fully qualified for his present position. His physical condition is in no way a handicap to his job performance. In fact, Bob's supervisor reports that his productivity rates well above the average of other performing similar duties. Further, Bob's attendance record has been excellent, and his safety record has been flawless. He is exceptionally well adjusted to his work situation and gets along well with both fellow employees and supervisors.

In some instances a job may actually have to be tailored to fit the individual disabled worker. In such a case special attention should be given to the exact physical demands of the job, and every effort should be made fully to utilize the individual's physical and mental capacity and his background of work experience. At Texas Instruments we have an employee who must have his work set up for him because of his lack of mobility, and another who is provided with a constant escort whenever she's in the plant to minimize the danger of her falling. For one assembler, a polio victim with both legs in braces, we changed a manual foot pedal to an electric hand control, and though this causes some loss of speed, her production record is still satisfactory.

On occasion, special arrangements may need to be made to provide personal conveniences to disabled workers. At Texas Instruments we reserve for them special parking spaces close to plant entrances. Some are encouraged to use elevators normally restricted to transportation of freight. It's suggested that they start early for the coffee bars and bring their lunches to avoid cafeteria congestion, etc.

If possible, it's best to give work to a disabled employee similar to the type he's done before. But remember you can kill a man with kindness. It's essential to make him understand that his employment is strictly a business proposition, and thus make him realize that he's still worth something and not just a beneficiary of charity.

There are many factors essential to a successful program of hiring handicapped individuals. First of all, proper attitude on the part of management toward this program must be evidenced. Interest and enthusiasm and respect will then be communicated to the handicapped's supervisor and coworkers and these make for a healthy, cooperative work situation. With backing from above, the idea is much less likely to seem a threat to a supervisor's production record or simply an additional chore in his already overcrowded schedule. He should be well informed about the case and know what to expect.

CAREFUL PLACEMENT ESSENTIAL

Careful placement of the individual in the job is a second essential. It must be remembered, of course, that every single case requires an individual evaluation. Time consuming? Yes—but well worthwhile.

Further, an effective safety program is necessary to keep the handicapped from being a

hazard to himself and others and to keep his coworkers from creating hazards for him. But a good safety program is now an essential part of the management responsibility in a modern industry.

And finally, frequent checks should be made on the handicapped employee to determine both his physical condition and his psychological adjustment to his job.

Perhaps this sounds like a pretty sizable undertaking. Undoubtedly, it is. However, this is a program from which not only the handicapped individual and our community will benefit, but as proven in thousands of cases, our company benefits as well.

## Tribute to the Late Eugene Favell, of Lakeview, Oreg.

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. NEUBERGER. Mr. President, all people in our State of Oregon are indebted to Thomas B. Watters and Eugene Favell, the management specialists named by ex-Secretary of the Interior Douglas McKay to supervise liquidation of the vast Klamath Indian Reservation.

Under adverse circumstances, they performed creditably and with integrity. On many other occasions I have saluted their record; and I do so again.

Last week, Eugene Favell died in Arizona, where he had gone in an effort to regain his health. He literally gave his life for his region, because he carried on as a management specialist when a grave heart condition long earlier had dictated his retirement.

The Bend (Oreg.) Bulletin for March 10, 1959, paid tribute to the outstanding career of the late Eugene Favell and to the equal devotion of his associate, Tom Watters. I know that many Senators who have joined with me in struggling with the thorny Klamath Reservation issue will want to read this moving tribute. Therefore, Mr. President, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

It should be added that Mr. Watters resides in Klamath Falls, while Mr. Favell was a resident of the neighboring southeastern Oregon community of Lakeview.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EUGENE FAVELL

Gene Favell, one of the three management specialists named to work out the troublesome termination of Federal control over the Klamath Indians to the south of us, is dead. Favell died the other day in Phoenix, Ariz., where he had gone in an attempt to regain his health.

Three men were appointed to supervise the termination program, to work out its details, and to inventory tribal property.

One resigned rather shortly thereafter to manage a political campaign. Favell and Tom Watters served considerably longer—Watters until the end of the assignment.

Favell was forced by ill health to resign before the end of the program, although the work was substantially done when he quit his post.

Gene and Tom Watters both had guts. They took the course which was in large measure unpopular, instead of trying to do the job the easy way. They recommended Federal acquisition of the tribal timberlands.

Few central Oregonians knew either man. But those who drive south along Highway 97 through the big stretches of timber and beside the big Klamath Marsh, will have reason to remember both of them for many years to come.

## Visit to India by Paul Robeson

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, for a long time there has been a good deal of discusion as to whether or not it is wise to continue the substantial foreign aid we have been granting to India.

In the light of this, I think is it important to call to the attention of the American public the recent visit to India made by Paul Robeson, American Negro leftist. Indian Prime Minister Nehru and other dignitaries honored this visitor who seized upon the opportunity to focus attention on the problems of Negroes in this country.

An editorial, entitled "Nehru's Glass House," published in the March 16th edition of the Manchester Union Leader of Manchester, N.H., draws an interesting parallel between the domestic situation and the problems of the so-called untouchables under the Indian caste system.

Because I think it is particularly appropriate at this time, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEHRU'S GLASS HOUSE

When Indian Prime Minister Nehru and other Indian dignitaries went out of their way to honor Paul Robeson, American Negro leftist, much was made of the Negro problem in America. At that time this newspaper pointed out that—at its worst—the treatment received by the Negro in America in no way compared to the degradation of India's broken men, the untouchables.

Elie Abel, writing in the March 1 edition of the New York Sunday Times, presents a highly informative and interesting description of the Indian caste system. He tells how an orthodox highborn Hindu will not allow an untouchable to enter his home, except to clean the latrine. Abel describes the construction of Indian homes which force untouchables to use only the door which enters into the bathroom.

Abel writes also of the "highborn Hindu's abhorrence of outcasts. * * * Every society had dirty jobs to be done, but (the) Hindu society alone treated its sweepers and scavengers as men whose very touch was defiling."

It would also appear, according to the late Dr. B. R. Ambedkar, India's first great Harijan (untouchable) leader, that this fate was suffered by the broken men because, about the year 400, the Gupta kings declared cow slaughter a moral offense. The broken men continued to eat beef, probably because they were too poor to forswear eating the carcasses that they handled as scavengers and tanners.

There has been some breaking down of this class barrier, but as in the United States, this has been the result of government intervention, rather than a change of fundamental attitudes. Recognizing this aspect of the problem, the late Mahatma Gandhi taught that the solution depends upon a change of heart among the majority of Hindus. And, as Elie Abel emphasizes, "the fact that (discriminatory) practices are againts the law of the land has not, so far, changed the attitude of the average Indian villager toward the outcast."

Indeed, in some areas untouchables are forbidden to draw water from public wells, to carry umbrellas, to ride horseback, to enter certain Hindu temples, or to refresh themselves at a tea stall.

It would thus appear that Prime Minister Nehru and his cohorts should be the last to cast aspersions on the role of the Negro in American society.

## Security in the Free World

EXTENSION OF REMARKS
OF
### Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. DIRKSEN. Mr. President, President Eisenhower's report to the people on Monday night, March 16, over all American networks, on the subject of Berlin and security in a free world, was tremendously reassuring. I ask that it be included in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SECURITY IN THE FREE WORLD

(Text of the report to the American people by President Dwight D. Eisenhower, delivered in the President's office in the White House and telecast and broadcast by all American networks from 9:30 to 10 p.m. e.s.t., Monday, Mar. 16, 1959)

Tonight I want to talk with you about two subjects:

One is about a city that lies 4,000 miles away.

It is West Berlin. In a divided world it has been, for a decade, a symbol of freedom. But recently its name has come to symbolize, also, the efforts of imperialistic communism to divide the free world, to throw us off balance and to weaken our will for making certain of our collective security.

Next, I shall talk to you about the state of our Nation's posture of defense and the free world's capacity to meet the challenges that the Soviets incessantly pose to peace and to our own security.

First, West Berlin.

You have heard much about this city recently, and possibly wondered why American troops are in it at all.

How did we get there in the first place? What responsibilities do we have in connection with it, and how did we acquire them?

Why has there developed a situation surrounding this city that poses another of the recurring threats to peace that bear the stamp of Soviet manufacture?

Let's begin with a brief review of recent history.

We first acquired rights and responsibilities in West Berlin as a result of World War II. Even before the war ended, when the de-

feat and capitulation of Nazi Germany were in sight, the Allied Powers, including the Soviet Union, signed agreements defining the areas of occupation in Germany and Berlin which they would assume.

As a result, Germany and the city of Berlin were each divided into four zones, occupied by American, British, French, and Soviet troops.

Under the wartime agreements I have mentioned, the Western Allies entered into occupation of West Berlin and withdrew our Armies from the Soviet Zone. Accordingly, the boundary of the Soviet Zone, like our presence in Berlin, was established upon the basis of these same agreements.

Also by agreement among the occupying powers, the Western Allies—the Unitd States, the United Kingdom, and France—were guaranteed free access to Berlin.

Here in my office is a map of Germany. The light portion of the map is West Germany—the darker portion is East Germany. The lighter gray lanes are the air corridors to Berlin—and the dotted lines show both the main roads and railroads that give access to the city. Notice that the city of Berlin is 110 miles inside East Germany.

Shown also is the territory, now in East Germany that was taken by our Army in World War II and was turned over to the Russians by political agreement made before the end of the war.

At the end of World War II our announced purpose and that of our wartime associates was the pacification and eventual unification of Germany under freedom.

We jointly agreed to undertake this task. Ever since that time, the United States has continuously recognized the obligation of the Allied Governments under international law to reach a just peace settlement with Germany and not to prolong the occupation of Germany unnecessarily.

The public record demonstrates clearly that such a settlement has been frustrated only by the Soviets. It quickly became evident that Soviet leaders were not interested in a free unified Germany, and were determined to induce or force the Western Powers to leave Berlin.

Ten years ago Senator John Foster Dulles, now our great Secretary of State, called attention to the basic purpose of the Soviet Government. He said that purpose was "no less than world domination, to be achieved by gaining political power successively in each of the many areas which had been afflicted by war, so that in the end the United States, which was openly called the main enemy, would be isolated and closely encircled."

The current Berlin effort of the Soviets falls within the pattern of this basic purpose.

The first instance of unusual pressure, clearly evidencing these purposes, came in 1948 when the Communists imposed a blockade to force the protecting Western troops out of Berlin and to starve the people of the city into submission.

This plan failed. A free people and a dramatic airlift broke the back of the Communists' scheme.

In the end the Communists abandoned the blockade and concluded an agreement in 1949 with the Western Powers, reconfirming our right of unrestricted access.

Then last November, the Soviets announced that they intended to repudiate these solemn obligations. They once more appear to be living by the Communist formula that "Promises are like pie crusts, made to be broken."

The Soviet Government has also announced its intention to enter into a peace treaty with the East German puppet regime. The making of this treaty, the Soviets assert, will deny our occupation rights and our rights of access. Both morally and legally it is, of course, clear that no so-called "peace treaty" between the Soviets and the East German regime can have any effect upon our rights.

The Soviet threat has since been repeated several times accompanied by various and changing suggestions for dealing with the status of the city. Their proposals have included a vague offer to make the western part of Berlin—though not the eastern part, which the Soviets control—a so-called free city.

It is by no means clear what West Berlin would be free from, except perhaps freedom itself. It would not be free from the ever present danger of Communist domination. No one, certainly not the 2 million West Berliners, can ignore the cold fact that this part of Berlin is surrounded by many divisions of Soviet and Eastern German troops and by territory governed by authorities dedicated to eliminating freedom from the area.

As a matter of principle, the United States cannot accept the right of any government to break, by itself, solemn agreements to which we, with others, are parties. But in the Berlin situation, both free people and principle are at stake.

What, then, are the fundamental choices we have in this situation?

First, of course, there is the choice which the Soviet rulers themselves would like us to make. They hope that we can be frightened into abdicating our rights—which are indeed responsibilities—to help establish a just and peaceful solution to the German problem—rights which American and Allied soldiers purchased with their lives.

We have no intention of forgetting our rights or of deserting a free people. Soviet rulers should remember that freemen have, before this, died for so-called scraps of paper which represented duty and honor and freedom.

The shirking of our responsibilities would solve no problems for us. It would mean the end of all hopes for a Germany under government of German choosing. It would raise, among our friends the most serious doubts about the validity of all the international agreements and commitments we have made with them in every quarter of the globe. One result would be to undermine the mutual confidence upon which our entire system of collective security is founded.

This, the Soviets would greet as a great victory over the West.

Obviously, this choice is unacceptable to us.

The second choice which the Soviets have campelled us to face, is the possibility of war.

Certainly, the American and western people do not want war. Global conflict under modern conditions could mean the destruction of civilization. The Soviet rulers, themselves, are well aware of this fact.

But all history has taught us the grim lessons that no nation has ever been successful in avoiding the terrors of war by refusing to defend its rights—by attempting to placate aggression.

Whatever risk of armed conflict may be inherent in the present Berlin situation, it was deliberately created by the Soviet rulers.

The justice of our position is attested by the fact that it is ardently supported with virtual unanimity by the people of West Berlin.

The risk of war is minimized if we stand firm. War would become more likely if we gave way and encouraged a rule of terriorism rather than a rule of law and order. Indeed, this is the peace policy which we are striving to carry out throughout the world. In that policy is found the world's best hope for peace.

Our final choice is negotiation, even while we continue to provide for our security against every threat. We are seeking meaningful negotiation at this moment. The United States and its allies stand ready to talk with Soviet representatives at any time and under any circumstances which offer prospects of worthwhile results.

We have no selfish material aims in view. We seek no domination over others—only a just peace for the world and particularly, in this instance, for the people most involved.

We are ready to consider all proposals which may help to reassure and will take into account the European peoples affected.

We are willing to listen to new ideas and are prepared to present others. We will do everything within our power to bring about serious negotiations and to make these negotiations meaningful.

Yet there must be a clear understanding of what we cannot do.

We cannot try to purchase peace by forsaking 2 million free people of Berlin.

We cannot agree to any permanent and compulsory division of the German nation, which would leave Central Europe a perpetual powdermill, even though we are ready to discuss with all affected nations any reasonable methods for its eventual unification.

We cannot recognize the asserted right of any nation to dishonor its international agreements whenever it chooses. If we should accept such a contention the whole process of negotiation would become a barren mockery.

We must not, by weakness or irresolution, increase the risk of war.

Finally, we cannot, merely for the sake of demonstrating so-called flexibility accept any agreement or arrangement which would undermine the security of the United States and its allies.

The Soviet note of March 2 appears to be a move toward negotiation on an improved basis. We would never negotiate under a dictated time limit or agenda, or on other unreasonable terms. We are, with our allies, however, in view of the changed tone Soviet note, concerting a reply to that note.

It is my hope that thereby all of us can reach agreement with the Soviets on an early meeting at the level of Foreign Ministers.

Assuming developments that justify a summer meeting at the summit, the United States would be ready to participate in this further effort.

Our position, then, is this: We will not retreat 1 inch from our duty. We shall continue to exercise our right of peaceful passage to and from West Berlin. We will not be the first to breach the peace; it is the Soviets who threaten the use of force to interfere with such free passage. We are ready to participate fully in every sincere effort at negotiation that will respect the existing rights of all and their opportunity to live in peace.

Today's Berlin difficulty is not the first stumbling block that international communism has placed along the road to peace. The world has enjoyed little relief from tension in the past dozen years. As long as the Communist empire continues to seek world domination we shall have to face threats to the peace, of varying character and location. We have lived and will continue to live in a period where emergencies manufactured by the Soviets follow one another like beads on a string.

Whatever the length of that period, we shall have to remain continuously ready to repeal aggression, whether it be political, economic or military. Every day our policies of peace will be subjected to test. We must have steadiness and resolution, and firm adherence to our own carefully thought-out policies.

We must avoid letting fear or lack of confidence turn us from the course that self-respect, decency and love of liberty point out. To do so would be to dissipate the creative energies of our people upon whom our real security rests. This we will never do.

To build toward peace and maintain free world security will require action in every field of human enterprise. It can only be

done by the nations of the free world working together in close cooperation, adjusting their differences, sharing their common burdens, pursuing their common goals. We are carrying out just such an effort. We call it mutual security.

We recognize that freedom is indivisible. Wherever in the world freedom is destroyed, by that much is every free nation hurt.

If the United States, alone, had to carry the full burden of defending its interests from the Communist threat, we would have to draft a much larger portion of our manhood into the armed services, spend many more billions of treasure, and put a more intense strain on all our resources and capabilities. We would become more and more like a garrison state.

Fortunately, we do not have to adopt such a desperate course. Nearly 50 nations have joined with us in a cooperative effort to protect freedom.

This system of mutual security allows each nation to provide the forces which it is best able to supply.

What is the strength of these forces? What are we contributing to the joint effort? What can we count on from our Allies?

Let's look first at our own contribution. Let us look at it from the viewpoint of our own security.

Of late I—and I am sure the American people—have heard or read conflicting claims about our defenses.

We have heard that our military posture has been subordinated to a balanced budget, to the jeopardy of our national defense.

We have heard that our defenses are presently—or they will be sometime in the future—inadequate to meet recurrent Communist threats.

We have heard that more manpower in our forces than I have recommended is essential in the present circumstances, for psychological reasons if for no other.

My friends, such assertions as these are simply not true. They are without foundation. It is not likely, however, that such assertions will lead the Soviet Union to miscalculate our true strength—and this is indeed fortunate.

The design of our defense is the product of the best composite judgment available for the fulfillment of our security needs.

We are devoting great sums for the maintenance of forces capable of nuclear retaliatory strikes. This capability is our indispensable deterrent to aggression against us.

The central core of our deterrent striking force is our Strategic Air Command with its long range bombers. They are reinforced by naval aircraft and missiles of varying types, and tactical fighter bombers. This array will soon include weapons of even greater power and effectiveness.

The capacity of our combined striking forces represents an almost unimaginable destructive power. It is protected by a vast early warning system and powerful air defense forces.

More and more this great retaliatory force will feature intermediate as well as long range missiles capable of reaching any target on earth. As we steadily go through the transition period from bomber to missile as the backbone of this striking force, we nevertheless continue replacing bombers, powerful as we know them now to be, with others of greater power, range and speed. In this way we take care of the needs of this year and those immediately ahead, even as we plan, develop and build for the future.

We are engaged in an endless process of research, development and production to equip our forces with new weapons.

This process is tremendously costly, even should we consider it only in terms of money. If we are to master the problems of security over a prolonged period of time, we cannot forever borrow from the future to meet the needs of the present.

Therefore, we must concentrate our resources on those things we need most, minimizing those programs that make less decisive contributions to our Nation. Effective defense comes first.

Today there is no defense field to which we are devoting more talent, skill and money than that of missile development.

I'd like to have you look at three lists of missiles.

The first list shows 17 different types of missiles now in use by our Armed Forces.

The second list shows missiles that will be available for use in 1959. There are 11 different types.

The third list shows 13 more types of missiles now in the research and development stages. In all there are 41 types of missiles.

There is, of course, a constant parade of improvement, with newer and better weapons constantly crowding out the older and less efficient ones.

The first model of any new piece of equipment is always relatively primitive. The first sewing machine, the first typewriter, the first automobile—left much to be desired. And even the rockets that dazzle us today will soon become the model T's—the tin Lizzies—of the missile age.

We must never become frozen in obsolescence.

In addition to the forces comprising our retaliatory striking power, we have potent and flexible naval, ground and amphibious elements. We have a growing array of nuclear-powered ships, both submarines and surface vessels.

Worldwide deployment of Army divisions, including missile units, increases the ability of the U.S. Army and the Marines to rapidly apply necessary force to any troubled area. At home, the Strategic Army Corps is ready and able to move promptly as needed to any area of the world.

I believe the American people want, are entitled to, can indefinitely pay for, now have and will continue to have a modern, effective and adequate military establishment. In this overall conviction, I am supported by the mass of the best military opinion I can mobilize, and by scientific and every other kind of talent that is giving its attention to a problem to which I personally have devoted a lifetime.

As all thoughtful citizens know, our own security requires the supplemental and reinforcing strength provided by the free world's total.

In the Far East, nations with which we are associated in a common defense system have over a million trained soldiers standing watch over the free world frontiers.

In Europe, the efforts of 15 nations are united to support freedom.

In global totals, our friends are contributing over 200 ground divisions, 30,000 aircraft, and 2,500 combatant naval vessels to the task of defending the free world.

For every soldier we have under arms, our free world Allies have five.

Through each of these stout efforts we strengthen the bonds of freedom.

Our mutual security program supports this joint undertaking by helping to equip our partners with the weapons they cannot by themselves provide, and by helping them keep their economies strong.

This mutual effort provides a constructive, long-term answer to the recurrent crises engineered by the Communists. It strengthens the stability of free nations, and lessens opportunities for Communist subversion and penetration. Its supports economic growth and gives hope and confidence to the cause of freedom. It is America's strongest instrument for positive action in the world today.

Last Friday I sent to the Congress a special message presenting my recommendations for this important part of our defense and security program for the coming year. In my judgment, there is no better means of showing our resolution, our firmness, and our understanding of the Communist challenge than to support this program in full measure.

These funds are vital to our national and free world security.

Any misguided effort to reduce them below what I have recommended weakens the sentries of freedom wherever they stand.

In this conviction, also, I am supported by the military experts of our Government.

Fellow Americans, of one thing I am sure: that we have the courage and capacity to meet the stern realities of the present and the future. We need only to understand the issues and to practice the self-discipline that freedom demands.

Our security shield is the productivity of our free economy, the power of our military forces, and the enduring might of a great community of nations determined to defend their freedom.

We have been, from the beginning, a free people—people who by their spiritual and moral strength and their love of country provide the mainspring for all we have done, are doing, and will do. In these truths we place our faith.

Together with our allies we stand firm wherever the probing finger of an aggressor may point. Thus we lessen the risk of aggression: thus we shall with resolution and courage, struggle ever forward to the dream of a just and permanent peace.

God helping us, we shall stand always equal to the challenge.

Thank you, and goodnight.

## Address by Senator Moss Before the Hibernian Society of Savannah, Ga.

EXTENSION OF REMARKS
OF
## HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. TALMADGE. One of the principal annual events of the historic city of Savannah, Ga., is the St. Patrick's Day celebration of the Hibernian Society of Savannah. This year the society had the good fortune to have as its principal speaker for this colorful occasion the distinguished junior Senator from Utah [Mr. Moss]. His excellent address was enthusiastically received, and I ask unanimous consent that the text of it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR FRANK E. MOSS, DEMOCRAT, OF UTAH, BEFORE THE HIBERNIAN SOCIETY OF SAVANNAH, GA., MARCH 17, 1959

One of the most pleasing aspects of my work in Washington is the opportunity it gives me to widen my acquaintance with people from every part of America. And I am looking forward to other occasions like this one which will enable me to come to know firsthand some of the intensely interesting areas of our great Nation. I am mindful of what day this is, and of the honor bestowed on anyone invited to participate with the Hibernian Society in the celebration of St. Patrick's Day.

And as a native of the 46th State to enter the Union, I appreciate this opportunity of coming again to Savannah, and of addressing your distinguished society in this, the 4th State to ratify the Constitution.

A new Senator in Washington is particularly conscious, often for the first time, I suspect, of this difference in the years in which the States were admitted to the Union. There is a very good reason for this; so many prerogatives in the Senate are based on seniority. Everything from membership and position on committees of the Senate, to choice of office space, even to parking space for your car, is decided on how long a Member has served. As between those elected the same year, other things are taken into consideration: Whether he served as a Governor of his State, or as a Member of the House of Representatives—and, finally, the year his State was admitted.

Now it just so happens that Utah was almost the last to come in—only Aklahoma and Arizona were admitted later. Many portions of the original Utah Territory became States sooner—Nevada, Idaho, Colorado, California, Wyoming. But a little difference of opinion as to how many wives per husband was in the public interest made it hard for Congress to decide what to do with Utah. We thought the question was one for the men of Utah to decide—women didn't vote then—and we weren't suggesting that men in other States should have more than one wife, you understand. But Congress apparently thought the idea might catch on, so through 40 years of trying, and on six separate occasions, we were denied statehood, and it was not until 1896 that a star went into the flag for Utah.

Despite my friendship for Joe Ryan, and my previous visit to Savannah, I must confess that my knowledge of the Hibernian Society has been sketchey indeed, and it has been a matter of great interest to read—all too briefly, I must say—of the very high purpose—that of aiding your fellow countrymen who were less fortunate—that led to its founding 147 years ago today.

As you know, the tendency to organize groups of citizens for all kinds of purposes is peculiarly American, and is restricted to no part of the United States. The French writer, Alexis De Tocqueville, who came to this country during the presidency of Andrew Jackson, and who wrote the famous volume, "Democracy in America," recognized this organizational tendency as something he had not seen in Europe.

He mentions it in these words: "In no country in the world has the principle of association been more successfully used or applied to a greater multitude of objects than in America. Besides the permanent associations which are established by law under the names of townships, cities, and counties, a vast number of others are formed and maintained by the agency of private individuals."

De Tocqueville visited Georgia during his travels, and, since your society was already in existence, it may well have been one of those upon which he commented so favorably. And it may interest you to know that the Hibernian Society of Savannah is 35 years older than the first settlement in the Salt Lake Valley, the place from which I come.

Anyone who has been active in politics and public service as I have all my life would, of course, be fully aware of the great contribution the Irish have made to government and politics in their adopted land. Being energetic, personally engaging and eternally interested in public affairs, and—particularly in our large centers—being anti-English foreigners who still spoke the prevailing language—they have been in positions of power in American Government since the first Irishman set foot on the continent.

Which reminds me of the story of the businessman of British extraction and the name of Cromwell who had wares to sell to the state and municipal governments of one of our populous States. Since Irishmen were in control of the government, he had his problems, and finally concluded that a change of name might help.

Accordingly, he petitioned the court to change his name from Cromwell to O'Brien. His petition was granted, and he went forth to do business.

About a year later he petitioned to have it changed again, this time to O'Flaherty, and found himself facing the same judge.

"Aren't you the man that wanted to be O'Brien only 1 year ago?" asked the judge. O'Brien admitted that he was.

"Didn't the change help your business?" asked the judge.

"Well, Your Honor, said the petitioner, "O'Brien is a fine name, and I am very happy with it. But when I call on my prospects, they ask me two questions. The first is 'What's your name?' When I say 'O'Brien,' they ask: 'What was it before it was O'Brien?'"

It has likewise been pleasant to refresh my memory on the founding of Georgia and Savannah, of the activities of Gen. James Oglethorpe, of his wise measures for governing the colony, of its growth and prosperity, and of the courageous actions of your patriots during the struggle for independence.

And, in preparing remarks on my subject, "The United States," my thoughts turned to the adoption of the Constitution, the effects of the formation of the Union, and the subsequent rise of America to the position and responsibilities of a world power.

As the framers foresaw, ratification of the Constitution gave the Nation the strength it needed. With an effective National Government, it was less temptation to the grasping nations of Spain, France, and England. The removal of trade and exchange restrictions between the States was a great economic stimulus, preparing the way for the development of the greatest market and the most productive economic system the world has known. And other quarrels, such as those over the division of the territory to the west, were speedily settled.

So, for 150 years, our isolated position and our great productive machines rendered us invulnerable to successful attack from without, and gave us the opportunity to devote our energies exclusively to internal problems and development.

The new Republic became a model for liberty-loving peoples everywhere. The royal houses of Europe were quickly overthrown, and following our example, constitutional governments were set up. Our economic influence likewise began to be felt abroad, and our methods copied, and it appeared that the adoption by all nations of what we call the American system would be only a matter of time.

Now, in our lifetimes, a profound change has occurred. No longer may we rely on our geographical position as the cornerstone of our defense. No longer do we expect that our way of life will be, as a matter of course, adopted by the rest of the world.

The most famous of living English historians, Arnold Toynbee, has pointed out how the formerly backward nations of the world are beginning to use the mass-production methods developed by the West; and how—if they succeed in developing productive economic systems—their tremendous advantage in numbers is bound to tell against us.

In one of his articles advocating ratification of the Constitution, Alexander Hamilton noted that the people of this country and of his time had had it fall to their lot to decide whether societies of men are capable or not of establishing good government by reflection and choice, or whether they must always depend on accident and force for their political constitutions.

In the same way, it has fallen to our lot to decide whether a Republic like ours can build a military machine capable of defending us against a ruthless dictatorship armed with modern weapons, and still preserve the individual liberties of the people. It has fallen to our lot to lead the effort to preserve the free world.

If we are to succeed in this endeavor, we must divest ourselves of emotionalism. We must face our world as it exists—not as it used to exist, or as we would like it to exist. We must develop our program in specific terms.

First, we must realize that the greater part of the effort must be made through the instrumentality of the Federal Government. Defending ourselves in the age of nuclear bombs means great power in Washington, and large Federal expenditures, much as we may dislike seeing them.

It is the worst sort of complacency to allow ourselves to be deluded into thinking that the great expansion of Federal expenditures in the last decade and a half has been the result of a plot to destroy our liberties. The great bulk of those expenditures are for war or result directly from the war and subsequent defense measures.

It is also a delusion to suppose that we can substantially reduce those expenditures until we solve the problem that gave rise to them. We must cure the infection, not rail at the symptoms. And the infection in this case is the explosive international situation.

This is not to say that the great Federal budget is no problem, or that we should not make every effort to reduce it where such reduction will be in the public interest.

One change that might help us to see the Federal financial picture more clearly, and an idea that is getting some attention in Washington these days, is a more business-like accounting system for the Government.

The plan is to separate, as businesses do, items that represent capital investments and self-liquidating projects from expenditures for regular expense items. It might be that defense items could be placed in still a third category. This would make discussion of budget items more specific, and enable us to comprehend this complicated subject more clearly. It is hoped that it would promote greater public understanding and interest in the Government's fiscal affairs.

Since World War II, the Soviet Union has increased its territory, expanded its world influence, and greatly improved its productive capacity. Such victories as we have had have been purely defensive.

The men in the Kremlin know what kind of world they want it to be 20 years from now. They boldly plan for that world, and channel their resources, their educational facilities and their diplomatic maneuvers to making it that kind of world.

It is true we have made efforts—great efforts—to stem the totalitarian tide. And in these endeavors the statesmen of the South have been among the wisest and most farseeing of our leaders. Yet most of our actions are taken on an emergency basis. When the Kremlin strikes, we react; and we approach the problem each year as though we expected that year to end it.

But it well may be that neither the decision by arms which we all fear, nor the collapse of the Soviet system which would solve our problem for awhile, may occur. It is possible that our condition for the next many years may be just what it has been for the last 10—a continuing struggle to decide—through economic and political pressure whether our system or theirs will win. Perhaps we should emulate the Soviet example and make an all-out effort to win without a war.

If we are to win in this kind of struggle, we must project our program ahead—we must decide what kind of world we want it to be 20 years from now. And within the framework of democratic individual liberty, make the necessary effort to create that kind of world.

In any case, in the next very few years we are going to have to decide—or let someone else decide for us—such vital questions as what will be done about providing nuclear weapons to Germany, whether we are to be equipped to fight smaller or all-out wars, and how great an effort we are to make to rescue the backward nations from poverty and communism.

Another question that must be decided, and one that is very much in the news just now, is whether we are going to try to become first in the development of missiles and the conquest of space.

We must also make some decisions on the direction American economic policy is to take. I am sure there is no question that the great development of the South and the West will continue and be accelerated—merely our population increase would make that inevitable. And this very growth in population itself complicates our problem.

We must decide whether our irreplaceable resources upon which our prosperity has been built—land, water, minerals, forest, and the others—are to receive the attention they must have to retain and enlarge their productive capacity. We must decide whether the American city is to be allowed to continue to decay, or whether Federal and State Governments will allow sufficient tax sources, grants-in-aid, and political autonomy to allow that problem to be solved.

Coming from an area which must carefully use its water to survive, I am particularly conscious of the necessity of preserving this resource. Water was once an exclusively western problem. Our falling water table has now made it a national one. The Congress wisely decided to build the great Colorado River storage project which will enable the basin States to get many times the value from that river resource than is now realized, and to develop great power, industrial and recreational facilities in the West.

Gentlemen, I have stated our problem as I see it. I am aware that many of the things I have said are not the most pleasant to think about. But we are in a giant struggle—not of our making—not of our choosing. The men in the Kremlin care nothing for cost accounting, nothing for human liberty. They are interested only in results.

In Washington and elsewhere we hear the questions asked, "How much does it cost?" "Can we afford to keep ahead in all the weapons?" "Will our economic system stand it?" Let me remind you that the patriots of the War of Independence did not ask the cost. They had lived under tyranny. They wanted freedom, and whatever the cost, it was worth it. So with us. The cost of winning this struggle can never be as great as the cost of losing it.

Our task may be burdensome—but our resources are great. We have 50 States instead of 13, 150 years of experience with democratic government, and the most advanced economic and educational systems in the world. With them—if we have the will—we can win. We can bequeath to our posterity our most precious possession—the blessings of liberty.

---

## New Goals for Unemployment Compensation

EXTENSION OF REMARKS
OF
## HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. DOUGLAS. Mr. President, one of the most able authorities on the social security program in the United States is Mr. Nelson H. Cruikshank, director of the department of social security of the American Federation of Labor and Congress of Industrial Organizations. Mr. Cruikshank is a keen student of the subject, has taken part in many advisory committees of Government, and has a progressive, yet sane, point of view on the entire system.

I ask unanimous consent that a paper which he prepared, entitled "New Goals for Unemployment Compensation," which he presented at the 58th annual meeting of the National Consumer's League in Washington, D.C., on Friday, December 5, 1958, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEW GOALS FOR UNEMPLOYMENT COMPENSATION

(Paper by Nelson H. Cruikshank, director, department of social security, American Federation of Labor and Congress of Industrial Organizations, presented at 58th annual meeting, National Consumers' League, Washington, D.C., December 5, 1958)

While the passage of the Social Security Act preceded by 3 years the enactment of the Fair Labor Standards Act, it is appropriate at this time to take an inventory of unemployment insurance as well as wage and hour legislation, since it was not until 1938 that the program was in full swing. Nineteen thirty-eight was the first year in which benefits were paid, and the first year for which there are any date on which comparisons can be based. In effect, therefore, we can say that we have had 20 years' experience with the program of unemployment compensation.

During this time the system has acquired experience under varying levels of economic activity. The legislation itself was depression-born. In 1938 the effect of the defense activity had not yet been felt, and there were still 10.4 million unemployed. The system continued through the period of feverish wartime activity, when the number of unemployed fell to the bare minimum of less than one-half million. It has survived the upheavals incident to conversion and postwar reconversion, and the swings in employment levels from the recessions of 1947–49 and 1953–54, to the peak employment periods of 1951 and 1956.

With all its weaknesses and shortcomings, the unemployment compensation system now plays a significant role in our economic life and serves a social purpose in helping unemployed individuals and their families tide over periods of temporary unemployment.

Even as conservative a source as the First National City Bank, testifies to the importance of unemployment insurance along with the other welfare and benefit programs in the manitenance of consumer purchasing power. The following is taken from the June 1958 Letter of Business and Economic Conditions.

"So far the overall decline in consumer income has been relatively slight—1.3 percent from the August 1957 peak through April 1958—but uneven in its impact. The importance of the 'automatic stabilizers' is demonstrated by the fact that fully half of the $8.4 billion drop in wages and salaries has been offset by increases in unemployment insurance, social security, and veterans' benefits.

"These stabilizers do not continue indefinitely, however, as the 230,000 jobless persons whose unemployment benefits expired in April are well aware. (In April, 1.9 million persons—almost 4 of every 10 unemployed—had not worked since late 1957.) The wonder is that heavy and prolonged unemployment has not affected buying more than it has."

During the first 6 months of 1958, a total of $2,447 million was paid in benefits to unemployed workers under the program, in addition to the $61.5 million paid under the special program for unemployed veterans. At the sharpest point of the present recession, in the single month of April, $403.8 million was paid in benefits to nearly 3 million unemployed, who averaged $30.88 per week in benefits.

These benefits were paid as a right, with no means test in any case. When we think of benefits totaling in a year of recession, upward of $4 billion, with the peak of unemployment less than 6 million, we can see that 20 years marks a great advance. Those of us who recall the struggle of getting a $2 billion or $3 billion appropriation for a work-relief program, with benefits paid only in cases of proven need, when there were more than 12 million unemployed, can see that, with all its faults, the present system marks a distinct advance over the programs to which we had to resort 20 years ago.

While we have made some progress, at this 20-year mark as we are setting new goals, it is well to face up to a searching appraisal of the system—if indeed it can be called a system—of unemployment compensation as it now operates. An analysis of the program reveals certain basic structural weaknesses which stem from the original concepts that found their way into title III of the Social Security Act and the provisions of the Internal Reevnue Code, under which the taxes for unemployment benefits are collected.

The basic difficulty arises from the fact that we have not, in this country, made the fundamental policy decision as to what kind of a program we want to have in order to meet the problems of unemployment. The provisions of the present law, in fact, attempt to incorporate two approaches to the problem. First, there is a program of employment stabilization, relying on a set of built-in tax incentives for employers. Secondly, there is a program of social insurance designed, under limited circumstances, to pay under carefully prescribed conditions, benefits designed to cover a part of the wage loss by workers who are involuntarily unemployed for short periods of time. The stresses and strains and many of the glaring inconsistencies of our system arise from the fact that these two are not always compatible.

At the time the Social Security Act was passed in 1935, the contradictions of these two aims were not apparent, and many people, including outstanding liberal leaders of the time, supported the effort to combine them. The representatives of organized labor who sat on the original Citizens Advisory Committee in 1934, which made the recommendations out of which our Social Security Act was developed, did not agree to the introduction of the tax incentive for employment stabilization—popularly known as employer experience rating. The experience of 20 years has shown that they were right, for it is now clear that the two are to a large degree incompatible, and at points mutually destructive. Lest we be too critical of those who 20 years ago thought the oil of social insurance could be mixed with the water of employment stabilization, we must recall that the amendment which introduced experience rating into the unemployment compensation law, was by none other than Senator LaFollette of Wisconsin.

If we were to measure the unemployment compensation system by the generous rewards it has offered and paid to induce employers to level out the peaks and valleys of employment, we would have to award the system an "A" for effort. In the 12 years, from the end of World War II through 1957, a total of $143\frac{1}{4}$ billion has been granted to employers in the United States in terms of tax reductions and rebates and distributions of surpluses. This compares with a total of $15.1 billion paid in benefits under the system in the same period of time. In other words, the cash benefits of the system to the employers has equalled 97.5 percent of the total amount of benefits paid to unemployed workers in this 12-year period. That the stabilization for which such a staggering amount has been given in reward, has not in fact been achieved, hardly needs any comment. In 1949, and again in 1954, 1 in every 18 of the civilian labor force was out of a job. In 1958, 1 out of every 13 was unemployed.

While the system has failed to produce the promised stabilization, it has produced some of the weirdest financial phenomena to be found in any governmental operation in the history of this country.

For example, let us look at the different levels of the average unemployment taxes in the various States in the year 1957. The average for the whole country was 1.31 percent of taxable payrolls. However, the variation as between States ranged from 0.53 percent in Virginia to a standard rate of 2.7 percent in Rhode Island and Alaska. Note that this is a variation of over 500 percent in tax rate. It by no means reflects in direct proportion the amount of unemployment as between Virginia on the one hand, and Alaska and Rhode Island on the other.

The division of the tax burden within the individual States is equally fantastic and irrational. Here the tax rate applied to individual employers ranges from zero (and incidentally, isn't that a nice contradiction in itself—a zero tax rate) to 4.5 percent of the taxable payroll. In the 49 States having a sliding scale in effect, 6 percent of all employers were rated at the zero rate in 1957, and just about one-half of employers were rated below a 1 percent rate, with 4.6 percent of employers paying taxes from 2.75 percent to 4.5 percent on their taxable payrolls. The distribution of the tax burden within some of the States is even more weird. In Colorado, for example, in the year 1957, 94.4 percent of the employers were given a zero tax rate. In other words, 5.6 percent of the employers paid the entire cost of the unemployment compensation program in Colorado, excepting the amount of income from interest on the State's reserve. In Iowa, 50.5 percent of the employers had a zero tax rate, and in South Dakota, 78.4 percent enjoyed a like privilege. In fact, throughout all of the 49 States having the variable tax rate, only 12.7 percent of the employers paid the standard rate of 2.7 percent.

Perhaps the most fantastic fiscal operation in this whole outlandish system was incorporated in the Temporary Unemployment Compensation Act passed in June of this year (1958). At the time unemployment in the 1958 recession reached its peak and Congress was considering some emergency action, the amount of the unexpended reserves in the State accounts, totalled nearly $8 billion. Governmental leaders, both in Congress and in the executive branch, had for years been relying on the States to meet the problem of unemployment. However, with exhaustion of unemployment benefit rights mounting rapidly, and with $8 billion available for benefit expenditures, the Federal Government appropriated $665,700,000 to enable the States to extend the duration of their unemployment benefits. In addition, the Federal Government will pay in the neighborhood of $220 million interest this year to the States for the funds which they are presumably holding in reserve to pay unemployment benefits.

The explanation of this operation, of course, lies in the fact that, in effect, the reserve funds of the States have now been assigned to a purpose other than that of paying benefits to the unemployed. Every State has a provision in its law that when the reserves fall to a certain level, a different scale of employer taxes automatically goes into effect. So now the funds are held in reserve to protect the favorable tax rates given employers. The Federal Government pays interest on the reserve funds, and when there is a threat of depressional unemployment, the Federal Government bails out the States—or to be more accurate—bails out the employers and saves them from having to pay the taxes the State laws require them to pay when their reserve funds are low.

Perhaps even more fantastic than the financial arrangements—and certainly more serious in terms of the social damage—are the distortions of the intent and purpose of unemployment insurance that have resulted from the interpretations applied to the State laws. Of course, any good unemployment compensation law has to have provisions designed to limit the payment of benefits to those who are genuinely unemployed after an actual attachment to the labor market. It cannot pay benefits immediately to the man who, in a moment of pique over some real or imagined grievance, walks off the job. Nor should it pay benefits to the man who willfully provokes his own discharge, or who after a lay-off from one job refuses to accept another just as good.

But take a look at how, under our present system, these legitimate safeguards are distorted.

Here is a case of a millworker in South Carolina who had worked more than 5 years in the mill. On a certain date, all employees were instructed to visit a community clinic for a chest X-ray. This millworker didn't want an X-ray, and considered the order an infringement of his right as a citizen to decide for or against such an examination. As a result of his refusal to obey the order, he was discharged. On applying for unemployment benefits he was denied such benefits for 6 weeks. Now, regardless of the wisdom or lack of wisdom in this worker's decision, certainly his refusal had nothing to do with his work. His unemployment grew out of the employer's wish, as the record in the case states, to have a perfect record of cooperation with the health clinic. But the worker found that unemployment following his discharge was not insured. Incidentally, South Carolina has a so-called right-to-work law. Where was this person's right to work? He found he lost even his right to the meager benefits of South Carolina's unemployment compensation law, when his employer disagreed with him about the desirability of a chest X-ray.

The Iowa law has a provision that a worker loses all his benefit rights if he leaves his job voluntarily without good cause attributable to his employer. A generous exception is made if the worker leaves his job to accept a better job, providing he remains continuously on the new job for not less than 12 weeks. There is on record a case of a construction worker who left one job to accept a better one, and actually worked on the second job for 14 weeks, after which he was laid off. He applied for unemployment compensation benefits and his claim was denied. It seems that while working on the second job his employer completed one construction project and moved his equipment to another. On the moving day, the worker in question was told not to report for work. This day occurred in the 11th week of his employment. Result: he did not work on the second job continuously—as the law requires—for 12 weeks. He was not only denied his unemployment benefits, but under the Iowa law (as indeed under eight State laws) all his wage credits on previous jobs were wiped out. In this case, the credits amounted to $720.

Here, ladies and gentlemen, is experience rating in full flower.

But just one more example of hundreds that are on record:

A woman worker in Dayton, Ohio, claimed benefits for a 12-week period of unemployment from March to May 1956. The employer appealed and a hearing was finally set for January 9, 1957. Now, the Ohio law has been interpreted to require that the burden of proof is upon the applicant for benefits to establish compliance with the law and the court of appeals has ruled that this means evidence given under oath and subject to cross-examination. In the instance case, the court ruled the claimant not eligible, not on the merits of her claim, but based on the fact she did not appear at the hearing. The reason she didn't appear was that she died during the 6 months she was waiting for her case to be heard.

These are admittedly isolated cases, though they are typical of hundreds that could be cited. Most State laws do not contain such extremely harsh disqualification provisions, and some States that have them do not interpret them so heartlessly. But the potential exists in almost every State. The root of such absurd distortions of the purpose of unemployment compensation lies in employer experience rating, which is now operative in 49 of the 51 jurisdictions.

The most serious inadequacies of the program are reflected in the small portion of the total wage loss, during a recession period, that is recovered by benefit payments. There are various methods of measuring the wage loss. Depending on which one is used, the portion of wages lost by unemployment that is recovered by benefits, ranges from about 20 to 29 percent. Accepting the most liberal

of these measurements, an insurance program that covers less than one-third of the loss incurred, is pretty poor insurance. We agree with the statement from the First National City Bank letter quoted above, "The wonder is that heavy and prolonged unemployment has not affected buying more than it has."

From the very inception of the program, it was generally agreed that the weekly benefit amounts for unemployed workers should represent at least one-half of their weekly earnings when employed. This standard was much more nearly achieved 20 years ago than it is today. In the first year of the program, the average benefit paid to the unemployed represented 41.7 percent of his average weekly wage, whereas in 1957, it represented only 34.8 percent. Of course, benefits amounts have increased, but wages have increased at a much more rapid rate. We have failed to do for the unemployed what any prudent householder or businessman would do as he sees the dollar value of his property increase; namely, increase our insurance coverage at the same ratio.

A major factor in holding down the benefit amounts is the arbitrary upper limit placed on them. While most States include in their formula a requirement that benefits be at least 50 percent of regular earnings, they also place an arbitrary maximum on the benefit which is unrelated to past earnings. These maximum benefit amounts are so low, that in the period of April to June 1958, about one-half of the claimants in the country as a whole were at the maximum, while in three States the proportion at the maximum was 80 percent or more. For the 80 percent of unemployed workers in these three States, and for 50 percent in the country as a whole, it can be said we have departed from a wage-related benefit system, and thus have violated a basic principle of social insurance.

Beginning in 1954, the President in his annual Economic Report, and the Secretary of Labor by letters to the States, have repeatedly called for the raising of these maximum limits to a level that would permit the great majority of unemployed workers to receive at least 50 percent of their regular earnings in benefits. At that time, one State met the standard in this respect, called for by the President and the Secretary of Labor. Four years have passed since the first of these exhortations. Now, no State meets this standard.

Another major factor in the total picture of the inadequacy of the unemployment insurance program, is the limitation on the duration of benefits. The clearest evidence that the duration of benefits provided under the State laws is inadequate, is found in the fact that during the first 10 months of 1958, when the average duration throughout the country was about 21 weeks, upward of 2,200,000 individuals were still out of work and unable to find jobs when their regular unemployment insurance benefits had run out. Even in such prosperous periods as 1956 and the first three quarters of 1957, the number of unemployed persons who exhausted their benefit rights before finding a new job, exceeded a million.

Here again, the administration's contribution to meeting this problem thus far, has been to call on the States to extend the duration provided in their laws. The President, in his Economic Reports, backed up by letters from the Secretary of Labor, beginning in 1954, called on the States to take action by establishing a potential uniform duration of 26 weeks. Since the first appeal from the President, there has been a net gain of three States which met the recommended standard. In the 6 years that this administration has been in power, the average potential duration for the country as a whole has been increased by 1.4 weeks. The average potential duration of all benefit claimants in 1957 was still only 23.4 weeks. This is, of course, not including the additional weeks of benefits made possible by the Temporary Unemployment Compensation Act of 1958.

In the light of these glaring shortcomings, inadequacies and contradictions now characterizing our unemployment compensation system, the logical goals for legislation in this area are obvious.

First, as a nation we should make up our mind whether we should go ahead with our attempts to stabilize employment by the application of a variable excise tax. Actually, that decision has been made, as even the most ardent supporters of employer experience rating no longer attempt, in the face of the record of 20 years of failure, to justify it on these grounds. The decision before us is really whether we should attempt to maintain the fiction of stabilization and to develop additional rationalizations to justify keeping the variable tax schedules in effect.

Once having faced up to the realities in this area we should logically set about designing a system of social insurance adequate to tide workers over periods of involuntary unemployment and broad enough in its coverage, and liberal enough in benefits to sustain purchasing power so that each dip in economic activity does not run the danger of a major downward spiral. Recognizing that the causes of unemployment are deep in the structure of our national economy and that its cures are not within the competence of a single employer or industry, nor within the boundaries of any State, we should logically approach this national problem with a program designed on national dimensions.

These are the logical goals. I'm quite sure, however, they are not the next steps. We seldom do the completely logical thing. With respect to unemployment compensation legislation there appear to be three chief reasons why we will not take the necessary corrective steps within the forseeable future.

1. The system with all its faults is such an improvement over the relief programs it has largely displaced, that people accept it, not realizing how much better it could be.

2. The inherent evils, though obvious to the thoughtful student, are too deeply imbedded in the system and the rewards are too great for those segments of the community who still represent the predominant political power, namely, the employer group.

3. The public is not sufficiently informed of the inequities of the system to be aroused to corrective action. They hear about the exceptional cases of fraud where an undeserving person is paid a benefit, but they are not told of the thousands of cases of disqualification based on arbitrary and capricious provisions of State laws.

In the years just ahead, labor, supported by other liberal elements of the community, will concentrate on patching up the present system. The Federal-State program will remain for some time, but within a very short time, I predict success in our efforts to enact standards which the Federal Government will require all the States to meet. These will erase many of the irrational differences in protection afforded workers in one State as compared with others. It will reduce, though not eliminate, the element of tax competition between States. Gradually, after the advantages of the minimal implementation of the Federal Government's interest in meeting the national problem of unemployment have been become apparent, we shall move toward a national program of unemployment insurance.

## New Record Set in 1958 by Farm Income Per Person

EXTENSION OF REMARKS

OF

## Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. DIRKSEN. Mr. President, I submit for inclusion in the Appendix of the RECORD an article, from the American Farm Bureau Federation Newsletter of March 16, 1959, under the title "Farm Income Per Person Sets New Record in 1958."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM INCOME PER PERSON SETS NEW RECORD IN 1958

Farm income—per person on farms—reached a new high in 1958, USDA has reported.

Per capita income from farming was $770, compared to the previous high of $765 in 1948.

Income per person on farms from all sources was also at a new high, although the nonfarm income of farm people declined slightly. Total income per person on farms was $1,068—10½ percent above the 1957 level of $967.

Gross farm income—including Government payments—was $37,965 million in 1958. This was a record high and was $3,635 million above the 1957 level. It averaged $7,993 per farm, a record high.

Farm production expenses reached $24,905 million in 1958. This was a new high record and was $1,415,000 more than in 1957. Average production expense per farm was $5,243.

Realized net income is what is left after production expenses are subtracted from gross income. It totaled $13,060 million last year—a gain of $2,220 million over 1957.

The average realized net income per farm was $2,750—more than $500 above the 1957 figure.

While the per capita income of farm families was at a record high in 1958, there is plenty of evidence in the Department's report that it could have been much higher if two forces had not been at work.

Surpluses, which held down prices received by farmers for several commodities, kept gross income from being higher.

Inflation—which raised production costs—reduced net income substantially.

The accompanying USDA graph shows how production costs have taken an increasingly large share of the gross income of farmers in the past 11 years.

With gross income in 1958 increasing considerably more than expenses, farmers retained as net income 34.4 percent of their realized gross farm income, compared with 31.6 percent in 1957. However, last year's increase in the ratio of net to gross income regained only a small part of the long-run decline in the ratio.

If costs had represented only half of gross income (as in the 1943–47 period) farmers would have had a net realized income of $18,982,500,000 in 1958—or $3,996.50 per farm.

These figures illustrate why inflation and high costs are a major concern of farmers in 1959.

As in any year, there was wide variation among the States in farm income and in the relative change from 1937.

Arizona had the highest net income per farm. West Virginia had the lowest.

Kansas had the biggest gain over 1957. Nevada had the biggest decrease per farm.

Vermont was alone among the States in experiencing a decline in production costs.

## Ten-Cent Dollars

EXTENSION OF REMARKS
OF
### Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. DIRKSEN. Mr. President, recently there appeared in a number of publications an advertisement, over the signature of the president of the Hancock Bank of Gulfport, Miss., under the caption "Ten-Cent Dollars." This is a rather hard-hitting statement which should be of interest to every citizen in the land who values our stability and our fiscal integrity. I ask that it be included in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

TEN-CENT DOLLARS

Speaking before the American Bankers Association in convention at Chicago, William A. Burkett, superintendent of banks for the State of California, predicted that we will have a 25-cent dollar in this country before too long if the Federal Government does not do something to check inflation.

"If the history of the last 100 years teaches us anything," he said, "it is that inflation is more dangerous to a people than any other thing except war."

We who have lived to see a 50-cent dollar well know that some of us could live to see a quarter dollar or a dime dollar, if the Government and its people continue to spend beyond their means and keep going deeper into debt.

The French franc that was worth 5 to a dollar in 1917, and recently revalued, is now worth 493 to the dollar, or 5 francs to a cent.

Federal Reserve Board Chairman William C. Martin, speaking in Chicago, expressed concern over what he called a breakdown in confidence abroad in the American dollar.

This was timely warning, for when the economy of a country cracks, its other defenses crumble. A sound dollar is as essential to our national strength and security as atom bombs and missiles. The people's savings, their life insurance, their investments, their pensions, all depend upon a shock-proof currency.

The integrity of the American dollar at home and its reputation abroad depend upon economy in Governments, Federal, State, and local. There are but three ways to meet the unpaid bills of government—taxation, inflation or repudiation. An individual or a government that continues to borrow to spend creates an artificial prosperity that leads to insolvency, bankruptcy, and chaos.

A nation that piles debt upon debt, refuses to balance its budgets and continues to run in the red, inflates its currency, circulates phony money, undermines its defense and destroys the security of its citizenship.

We the people, dedicated to the preservation of this Republic, will live within our income or perish. Only a government that conserves can survive. We will save or sink. Only the strong stay free.

LEO W. SEAL,
*President, Hancock Bank, Bay St. Louis, Gulfport, and Pass Christian, Miss.*

## Conquest of Illness by Associate Justice Douglas of the U.S. Supreme Court

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. NEUBERGER. Mr. President, we of the State of Oregon are very proud of the illustrious career of Justice William O. Douglas, of the U.S. Supreme Court. Justice Douglas spent part of his youth in our State, and a great deal of his recreation during the summer is taken amidst the scenic grandeur of Oregon.

In the St. Louis Post-Dispatch of March 11, 1959, appeared a most thoughtful and informative article, by Irving Dilliard, of the Post-Dispatch staff, describing how William O. Douglas overcame the handicap of infantile paralysis, which he suffered as a small boy. Mr. Dilliard, in addition to being a brilliant journalist, is one of the foremost authorities of our Nation on the history and development of the U.S. Supreme Court.

I ask unanimous consent that his article, entitled "Supreme Court Justice's Boyhood Struggle," in tribute to the career of Justice Douglas, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPREME COURT JUSTICE'S BOYHOOD STRUGGLE
(By Irving Dilliard)

Riffle back the pages of the calendar almost 50 years to an incident in Yakima, Wash., where the streets stretch toward the foothills and the foothills shoulder up to the mountains. Watch and listen because the episode will have consequences to last a half century and to spread out across the continent.

A 13-year-old boy is walking to school, a stack of books under one arm. He wears knee breeches, knickerbocker style. Black cotton stockings cover spindly legs, left like pipestems by an attack of infantile paralysis when he was a small child. He owes his life to a far-sighted doctor who prescribed frequent salt water massages for weeks and to a widowed mother who kept vigil at 2-hour intervals day and night.

The youth is sensitive to his condition and uses many a stratagem to cover up his physical weakness. But his schoolmates observe it only too readily. A group of boys is walking behind him. As they come near one of them says, "Look at that kid's skinny legs. Aren't they something? Did you ever see anything as funny?"

The boys in the group laugh and one says, "Sure would cover them up if they were mine."

The words are a lash across the face of the boy a few steps ahead. The laughter burns like an iron on his neck. The boy with the thin legs is humiliated. He wants to retort but is too ashamed to answer. Then comes a flood of tears. And the tears only confirm the charge that he is a weakling.

The boy becomes self-conscious and shy. He wants to stop school. He asks his mother for long trousers to cover up his legs. But gradually the tension gives way to revolt. He resolves to prove his superiority in the schoolroom since that field of achievement was open to a boy with weak and puny legs as well as to the strongest.

Good grades in his studies helped, but personal difficulties remained. Close at hand were the mountains and he read what happened to crippled animals in the wilds. Then one day he met a husky boy coming back from a fast walk in the country. He learned that this boy climbed in the foothills every day to develop his legs and lungs.

He resolved to do the same. At once he began to use the foothills as others would use weights or bars in a gymnasium. After a fall and winter of daily hikes, his legs began to fill out. By the next spring he had new confidence in himself and a new boy was replacing the one who had been shy and ashamed.

That transformed boy was William Orville Douglas who as one of the senior Associate Justices of the U.S. Supreme Court was in St. Louis today to deliver the annual Tyrrell Williams lecture for the Washington University School of Law.

For more than 40 years he has been a vigorous outdoorsman, at home in the saddle and in fishing boots, in the summertime often sleeping under the stars, for weeks at a time shut away in the wilderness around Lostine, Oreg. There he built a large mountainside cabin for his family. He did much of the work himself, handling heavy tamarack logs and large stones for the big fireplace.

Since World War II, Justice Douglas has made his own personal, nonjudicial contribution to cooling off the cold war by frequent trips to remote parts of Asia, also to Russia. Expeditions which would have taxed the endurance of many a strong man have become the basis of books some of which have appeared on the best seller lists.

Following "Of Men and Mountains" which told the story of the recovery from polio, these other books have included "Strange Lands and Friendly People," "Beyond the High Himalayas," "North From Malaya" and "Russian Journey."

But the humiliating experience of the 13-year-old schoolboy in Yakima, Wash., did more than start him on the road to robust, energetic manhood. It taught him to endure the isolation of being alone and to see the value and necessity of thinking and acting for himself.

This latter lesson has supported him many times in the 20 years—next April 17—that he has been on the Supreme Court. Appointed by Franklin D. Roosevelt in early 1939, Justice Douglas was then only 41 years old, the youngest Supreme Court member since Justice Joseph Story took his seat in 1811.

Successor to the late Justice Louis D. Brandeis who so often dissented with the late Justice Oliver Wendell Holmes, Douglas has oftentimes been linked in dissent with Justice Hugo L. Black, and, while they lived, with Justices Wiley B. Rutledge and Frank Murphy.

Since the appointment by President Eisenhower of Earl Warren as Chief Justice and William J. Brennan Jr., as Associate Justice, Douglas has appeared in dissent with them. In a 5-to-4 division which goes against the application of the Bill of Rights the dissenters are likely to be Warren, Black, Douglas, and Brennan.

But like the lonely schoolboy—his Presbyterian missionary father died when Douglas was only 6 years old—he can stand all by himself on the Supreme Court when he believes he is right. Such an occasion came last January 26 when he was the solitary dissenter in a narcotics case in which the decision for the majority was written by Missouri's first Supreme Court Justice, Charles Evans Whittaker, appointed from Kansas City.

The case was that of James A. Draper who was convicted in Federal court after his arrest in Denver in 1956. A Federal narcotics agent was tipped off by a paid informer that Draper was peddling narcotics to addicts in Denver and that he would return from Chicago on a certain train with heroin. Using a detailed physical description of a man they had never seen, the agent and a Denver policeman arrested Draper without a warrant as he got off the train. A search yielded a quantity of heroin and a syringe.

Draper contended that the search was illegal and the evidence not subject to use in court. He was found guilty and the conviction was upheld in the Court of Appeals. In the Supreme Court, six justices with Justice Whittaker speaking for them, sustained the arrest and conviction, Chief Justice Warren and Justice Frankfurter did not participate.

Justice Whittaker held that the arresting officer had "probable cause" and that the apprehension therefore was legal even though there was no search warrant. He cited the Narcotics Control Act of 1956 which authorizes arrests without warrent when the arresting officer has reasonable grounds to believe that the person to be arrested, has committed or is committing a law violation.

But Justice Douglas did not allow the offensiveness and criminality of the narcotics traffic to keep him from dissenting on the grounds that Draper, law violator though he was, had rights under the Constitution that should be observed in behalf of a society based on law.

"The education we receive from mystery stories and television shows teaches that what happened in this case is efficient police work," Justice Douglas said. "This is the familiar pattern of crime detection which has been dinned into the public consciousness as the correct and efficient one. It is, however, a distorted reflection of the constitutional system under which we are supposed to live."

Justice Douglas then showed how King George III, of England, had sought, in 1777, to get a bill through Parliament which would have allowed arrests in the American Colonies on suspicion of treason. The Justice summoned John Adams, James Otis, Patrick Henry, and other patriots of the Revolutionary times to testify that arrests based on suspicion alone are illegal.

Quoting Professors Hogan and Snee of Georgetown University Law School, Justice Douglas put these words into his dissent:

"The finger of suspicion is a long one. In an individual case it may point to all of a certain race, age group, or locale. Commonly it extends to any who have committed similar crimes in the past. Arrest on mere suspicion collides violently with the basic human right of liberty. It can be tolerated only in a society which is willing to concede to its government powers which history and experience teach are the inevitable accouterments of tyranny."

Saying that no magistrate would have issued a warrant because the agent could not have presented facts required for a warrant, Justice Douglas concluded:

"We are not justified in lowering the standard. With all deference I think we break with tradition when we sustain this arrest. We said in *United States* v. *Di Re*: 'A search is not to be made legal by what turns up. In law it is good or bad when it starts and does not change character from its success.'"

The Di Re opinion was written by the late Justice Robert H. Jackson and only the late Chief Justice Frederick M. Vinson and Jusice Black opposed it.

The Draper case happens to be only one of the latest of many scores of cases in which Justice Douglas has placed the Bill of Rights higher than the immediate end of locking up some offensive person such as the dope peddler. His position is that if the rights of the least desirable members of society are not secure then the rights of all are also insecure.

The lectureship which brings Justice Douglas to St. Louis was established 11 years ago in memory of the late Tyrrell Williams, much-esteemed professor of law at Washington University. Solicitor Leonard W. Brockington of Canada launched the series in 1949. Four of the lecturers have died: Prof. Max Radin of the University of California, Federal court of appeals Judge John J. Parker of North Carolina, Chief Justice Arthur T. Vanderbilt of New Jersey, a past president of the American Bar Association, and Federal court of appeals Judge Armistead M. Dobie of Virginia.

Justice Felix Frankfurter of the Supreme Court gave the lecture in 1952. Other lecturers have been: Dean Erwin N. Griswold and Prof. Paul A. Freund of Harvard, Prof. Wesley A. Sturges of Yale and Dean Robert G. Storey of Southern Methodist University, a past president of the American Bar Association.

Dean Milton D. Green describes the purpose of the Tyrrell Williams memorial this way: "These lectures are part of the program of the Washington University Law School to bring inspirational figures to our students to imbue in them the proper sense of professional responsibility."

In William O. Douglas the lectureship brings a man who had to triumph over physical handicap and economic hardship—he rode a freight train east to enter the Columbia University Law School—before he could do anything about raising the sights and standards of the legal profession.

## Importation of Russian-Made School Equipment

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, on March 12, I made some remarks in the Senate with respect to the importation of Russian-made laboratory equipment for use in American educational institutions. I pointed out at that time the particular significance of this action as part of the overall plan of economic warfare being waged by the Communists. The Manchester Union-Leader of Manchester, N.H., published an editorial on March 16 on this subject entitled "Red Microscopes for Johnny?" which, I think, is a very clear and concise analysis of this particular situation.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD in connection with my remarks on this matter.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RED MICROSCOPES FOR JOHNNY

Senator STYLES BRIDGES is a man who does not shun taking the unpopular position on an important issue. A good case in point is his recent Senate speech attacking the plan to send Russian-made equipment into American high schools. The natural unthinking reaction to this plan would be that if American schools can purchase much-needed equipment in Russia cheaper than here, and if the equipment is of good quality (as it is), then the equipment should be purchased since this would in no way aid Soviet aggression.

This line of reasoning, of course, is as full of holes as the moon is full of craters. As Senator BRIDGES observed, the plan is part and parcel of the economic war that has been declared on this country by Russia. As in the case of the deliberate low pricing of Communist textile products, the plan is to unbalance first one, then another segment of the United States business community.

Since cost or profit is of no concern in the Soviet Union, where the government can manipulate the economy without fear of public protest, it is the height of lunacy for American educators to aid the Communist strategy by purchasing Russian-made equipment for our schools, to say nothing of the poor psychological effect on the students who use these materials.

Senator BRIDGES might be accused of belaboring the obvious. But, unfortunately, in this crazy world today the obvious often needs reemphasizing.

## Importation of Russian Films

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, there has been considerable discussion of late concerning the importation of Russian films to this country as part of the so-called cultural exchange program. I am among those opposed to this plan because, as I see it, while the program will serve no useful purpose for our Nation, it will allow the Soviet Government a further means of channeling their propaganda into this country.

It is interesting to note that a film has recently been completed in the Soviet Union which is based on the life and work of Paul Robeson. An editorial on this subject entitled "Paul Robeson Film" was published in the March 16th edition of the Manchester Union Leader of Manchester, N.H., and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAUL ROBESON FILM

Those who would protest this newspaper's assertion that films imported from Russia under the so-called cultural exchange program will contain subtle, although not necessarily viciously anti-American propaganda, should pay heed to the recent dis-

closure that a film on the life and work of Paul Robeson has just been completed in the Soviet Union.

Could this mark the beginning of a series of films glamorizing American subversives which will be foisted on the unsuspecting American public in the name of cultural exchange?

## The Berlin Crisis

EXTENSION OF REMARKS
OF
**HON. WAYNE MORSE**
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Berlin Crisis."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BERLIN CRISIS

Why should the American people be asked, in the name of patriotism, repeatedly to unite behind an immoral foreign policy. Yet that is exactly what our State Department is proposing, and what a compliant and wishy-washy Congress may approve by voting blank-check authority to the President in the present Berlin crisis.

The real issue, as we pointed out in an editorial in the December issue, is not the status of Berlin. This is a phony, designed by the State Department to hide the real issue which is whether or not Germany should be armed with nuclear weapons.

The U.S. State Department, under the leadership of Mr. Dulles, has based its whole German policy on a German military revival. The German militarists are determined to have nuclear weapons—and Mr. Dulles is equally determined to see that they get them. But our safety, as well as the safety of the German people themselves, requires that there be strict provisions against allowing the Germans to have atomic, bacteriological, or chemical weapons. Nothing must be left undone to prevent a third try on their part to embark another world war.

The Russians, having seen their countryside devastated twice in the last 40 years by German militarism, are determined that it will not happen again. This is the crux of the dispute over Berlin. The Russians would gladly compromise at Berlin if the West would settle for a neutralized, demilitarized Germany. A paragraph from Mr. Khrushchev's note of November 27, carefully suppressed by most of the American press, clearly indicates that the Russians are thinking of the German military menace in their concern over Berlin. Said Mr. Khrushchev:

"The best way to solve the Berlin question would be for a decision to be taken, based on the enforcement of the Potsdam agreement on Germany. (Editor's note: One of the principal points of the Potsdam agreement which the United States signed provided for a demilitarized Germany and for keeping her disarmed by prohibiting war industries.) In the present circumstances, this would mean the withdrawal of the Federal Republic of Germany from NATO with the simultaneous withdrawal of the German Democratic Republic from the Warsaw Treaty Organization, and the achievement of an agreement whereby in accordance with the principles of the Potsdam agreement, neither of the two German states would have any armed forces in excess of those needed to maintain law and order at home and to guard their frontiers."

I. F. Stone's Weekly in its current issue (Feb. 23) states the matter succinctly:

"All the talk here (in Washington) of a new flexibility on the part of Mr. Dulles reveals when examined only a deft reshuffling of the same stale cards. The strategy is to give the appearance of flexibility without the reality. For all our supposed concern with free elections, the one offer we will not make is to demilitarize and neutralize Germany in return for them. This would liquidate the East German dictatorship, open the way for disagreement, and allow East Europe to breathe more freely again. The choice is between East European liberation and German military revival. The two are incompatible. The latter has been Mr. Dulles' real concern. His retirement might make possible a shift toward wiser policies."

Senator MORSE is a member of the Foreign Relations Committee. During the Formosa crisis, it was his lone voice which aroused the American peoople to a realization that Mr. Dulles was again taking them to the brink of war. Public opinion spoke with a mighty voice against "brinkmanship"—and Mr. Dulles grew more flexible.

We call on Senator MORSE again to speak out and give the people the facts on the newest Dulles-inspired crisis. And the American people had better start raising their collective voices for a peaceful settlement—or this phony issue on Berlin could be the spark to set off world war III.

## The Kennedy-Ervin Labor Bill Is Not a Reform Bill

EXTENSION OF REMARKS
OF
**HON. BARRY GOLDWATER**
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. GOLDWATER. Mr. President, the Senate Committee on Labor and Public Welfare has been engaged for the past 12 days in attempts to report a labor reform bill to the Senate.

Mr. President, across the Nation in increasing numbers are being published editorials which are critical, and rightly critical, of the bill which will be reported by the committee, the so-called Kennedy-Ervin bill.

Mr. President, I hold in my hand an editorial from the Jeffersonian Democrat of Brookville, Pa., in which it is stated:

Whatever you may have heard, this is no reform bill. It does not strike down the vicious and indefensible secondary boycott, under which unions may attack at will any customer of any business against which they claim a grievance, real or fancied.

Mr. President, because the editorial well expresses criticism of the proposed legislation in an intelligent manner, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CRY FOR HELP

Congress, we are told, is in a mood to enact labor legislation. As for what kind it may be, there is the distressingly likely prospect of getting the ineffectual, labor-dictated, 1959 version of the Kennedy-Ives bill—now known as the Kennedy-Ervin bill or S. 505. Debate on this innocuous measure begins any day now, and—in the absence of protests from home—there is good reason to expect passage.

A vote for the Kennedy bill is an easy out for the nervous lawmaker who, for a number of reasons, may prefer not to irritate the labor bosses, and whose constituents are uninformed or indifferent or both. He can then please the labor barons and pose at the same time as a champion of labor union reform. On the other hand, the conscientious Congressman or Senator who realizes what a phony this bill is must be a very brave man to vote against it when there is no hint of support or appreciation from the home folks.

Whatever you may have heard, this is no reform bill. It does not strike down the vicious and indefensible secondary boycott, under which unions may attack at will any customer of any business against which they claim a grievance, real or fancied. It does not outlaw organizational or recognition picketing, whereby unions may victimize a business and abuse workers who have previously voted against unionizing. It does nothing to wipe out in free and democratic America the double standard of conduct under which the plain people are expected to be lawabiding and labor goons have come to be considered as having extra-legal rights in the departments of intimidation, skull-cracking and the destruction of property. It does not even protect union members against the very sort of exploitation revealed in the McClellan labor rackets hearings.

But, once this bill is passed, it will be seized upon by union gauleiters as a new Federal health certificate, as evidence that they have been purified and as a new weapon in more aggressive membership drives than we have yet seen. Correction and control of racketeering, hoodlumism and assorted mayhem will be farther off than ever. Historically, labor legislation is passed by Congress approximately every 10 years.

Useful as this bill could be to the union hierarchy, whose "fat cats" will bring every pressure to bear for its passage, it is a disservice to the rank and file union member and an insult to the public at large.

It is therefore the privilege of the people to resent the Kennedy bill. And it is their duty to demand of their servants in Congress that it be thrown out—bodily. They now have the choice of acting immediately—or repenting at long leisure.

## Jobs and Government Policies

EXTENSION OF REMARKS
OF
**HON. HARRISON A. WILLIAMS, JR.**
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the

RECORD, an editorial from the Camden Courier-Post of Thursday, March 5, 1959, dealing with the policies of the Federal Government in relation to the unemployment situation in Pennsylvania and in my own State of New Jersey.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOBS AND GOVERNMENT POLICIES

In spite of general recovery from the recession, unemployment remains high in New Jersey and Pennsylvania.

In January the national average of joblessness was 6 percent, but in Pennsylvania it was 10 percent. Labor Department statistics showed 508,000 unemployed during the month, which was only 12,000 fewer than at the worst part of the depression last June.

Pennsylvania's unemployment figures were believed to be the highest in the country, but New Jersey was not much better off. The State division of employment security says those out of work in January numbered 221,000, or 9 percent of the State's labor force. This was a sharp increase from the December total of 188,000 jobless, and only 1,000 fewer than the peak mark of 222,000, which was touched in 2 months last year—March and June.

According to Carl Holderman, State commissioner of labor and industry, new workers are also invading the New Jersey labor market at the rate of 50,000 a year. Regular unemployment compensation payments of $186 million last year set an all-time high mark, while a special recession program extending payments for 13 weeks to those who had already received the maximum amounted to another $31 million. Payments in January totaled $16,238,052, a 12-percent increase over December.

In the face of unsatisfactory employment conditions such as these, appropriate branches of the Federal Government might be expected to take corrective action or at least abstain from doing anything to make conditions worse. However, several moves have been made by Federal officials that will hinder rather than help employment recovery in this area.

The Philadelphia Naval Base is gradually and in part being deactivated and work it has done in the past is being scheduled for other Navy installations. This means the loss of jobs for skilled Pennsylvania, New Jersey and Delaware workmen.

A realignment of district boundaries by U.S. Army Ordnance is taking place, with the primary consideration theoretically to give all possible assistance and service to industry. Actually, Philadelphia Ordnance Workers charge through their Civilian Employees Council, this realignment will transfer much work from Philadelphia to Birmingham, Ala., and this area's industry and business will suffer in the long run. The transfer, it is alleged, means that the South rather than the Delaware Valley will reap the advantage of missile programs totaling over $100 million.

Of most direct impact to Camden is the holdup of the $130 million superliner contract which appeared set for New York Shipbuilding Corp. a few months ago. President Eisenhower has objected to the plan approved by Congress for financing the ship, and has blocked it from going into effect. Congressmen CAHILL and GLENN and Senators CASE and WILLIAMS are cooperating with officials of the shipyard and employees in efforts to get Mr. Eisenhower to reverse his stand and allow work on the big ship to proceed. It will mean an estimated 4,000 jobs for a period of 3 years, which would be a big help in relieving the unemployment situation in the area.

No one who has the slightest respect for the principles of economy can ask the Federal Government to adopt policies or spend large sums of money on projects of dubious benefit. On the other hand, anyone has the right to ask the Federal Government not to adopt policies that will retard economic recovery or produce the same effect by cancelling worthwhile projects.

The Delaware Valley, with a serious unemployment problem on its hands, is not asking Washington for any special help in our own efforts to combat it, but does ask Washington not to hinder us.

## Issues at Stake in the Berlin Crisis

EXTENSION OF REMARKS

OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Berlin Is Not Munich," from the March 13, 1959, edition of the Manchester Union Leader. This editorial comments favorably on a statement made by Prof. John Holden of the University of New Hampshire, an outstanding authority in his field.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BERLIN IS NOT MUNICH

Prof. John Holden, of the University of New Hampshire, in the third of his recent series of lectures at the Institute of Arts and Sciences on "Russia, China, and the United States," displayed a keen understanding of the central issues at stake in the Berlin crisis when he said that "the power that controls Berlin will control Germany."

Professor Holden was speaking not only of the importance of this piece of land from a military point of view, but also from a political and psychological point of view. "Germany," he said, "is the symbol to both the Communist and the free world * * * a refutation to the power of the Soviets * * * Khrushchev has no desire to free either Germany or Berlin. He seeks to vitiate the promise of NATO, the threat of European federation in the economic life of the continent (also apparently feared by the British—editors) and the promise of a more active political union of the German, French, and British."

This newspaper firmly believes that no American worthy of the name will favor an American retreat from Berlin, no matter how carefully such a suggestion is camouflaged by such deceptive phrases as "disengagement" and "flexibility."

As Professor Holden emphasized, "The United States must adopt a posture that indicates that Berlin is not Munich. Berlin is the symbol to the West that communism can be stopped and turned back."

## Labor-Management Reform Legislation

EXTENSION OF REMARKS

OF

### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of editorials dealing with proposed labor-management reform legislation.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Carlisle (Pa.) Sentinel, Feb. 13, 1959]

GOOD CHANCE FOR LABOR BILL

Chances appear good for passage of a labor bill at this session of Congress. If one is approved, it will be the first such legislation in 12 years, the first since the disliked Taft-Hartley law was approved by a Republican-controlled Congress.

The Kennedy-Ervin measure seems to us to be a better one than that proposed by the administration, but both call for a strict accounting of union funds, both crack down on labor bossism, and both give rank-and-file members more control of their unions. The principal differences involve secondary boycotts and picketing. The Kennedy-Ervin bill would make no change in boycott restrictions and would apply but limited curbs on certain picketing practices. The administration bill would contain provisions to ban secondary boycotts and picketing. The real difference is that the Kennedy-Ervin legislation might be said to be slanted a little more to the side of labor, and the administration bill is designed to give more support to the employer.

Senator KENNEDY and the CIO–AFL maintain that mixing antiboycott and picketing provisions with anticorruption remedies, as does the administration bill, might mean no legislation at all. That is what happened in the last session. The Ives-Kennedy bill passed the Senate, but through maneuvering of Secretary Mitchell the labor bill failed of passage in the House. This must not happen again. The McClellan committee has presented ample proof of the need for anticorruption legislation. The need is clear. If necessary, let there be a compromise bill drawn.

[From the Louisville (Ky.) Times, Jan. 30, 1959]

KENNEDY'S BILL DESERVES PRIORITY IN CONGRESS

So far two programs for labor legislation have been handed to Congress. One, a relatively mild measure designed primarily to curb racketeering inside unions has come from young Senator KENNEDY, the Massachusetts Democrat who almost got through a similar bill last year. The other program is the administration's broad 20-point plan which embodies many of the features of KENNEDY's bill but goes much farther. Still a third program, one likely to contain even stronger curbs, is expected to come from Senator MCCLELLAN, head of the Senate rackets subcommittee.

There is, then, no lack of ideas about what should be done in the field of labor legislation. There is, however, a very strong doubt that any really radical legislation favoring either labor or management can be enacted. Ever since 1947, when the Taft-Hartley Act was passed, Congress—whether Republican or Democrat dominated—has been most reluctant to act in this field. Just a decade ago, Harry Truman's presidential victory was supposed to assure repeal of Taft-Hartley, but it did not. Just a year ago, the disclosures of the McClellan committee were supposed to assure passage of a labor reform bill, but no bill was passed.

In this Congress, as a result of the November elections, labor will have many friends. Union leaders assert that labor backed 25 of 32 winning Senators and 70 percent of the winning Representatives. This, coupled with labor's influence in the defeat of five State right-to-work proposals, indicates a political punch that should be able to knock out any new legislation labor does not like.

The prospects, consequently, are that the only legislation which stands a chance is

that on which there is already a large area of agreement. The only field in which labor, industry, and the public are agreed on the need for reform is in curbing racketeering.

KENNEDY's program is designed simply to meet this need. It would attempt to assure democratization of union affairs and would require a strict accounting of union funds. The AFL–CIO wants this reform, the public wants it, and industry wants it.

Because this reform is needed and because it has a good chance of passage, we hope Congress concentrates on the Kennedy bill and refuses to be sidetracked into arguments over other issues. That is not to say that other measures might not be needed (we believe some points of the President's program are desirable) or that the Kennedy bill will cure all ills.

But to tie KENNEDY's measure up with other plans might well mean that no labor legislation would be enacted. Let us have the Kennedy bill first and go on, if possible, from there.

---

[From the Erie (Pa.) News, Jan. 27, 1959]

CONGRESS MUST PASS SOME KIND OF LAW TO CURB RACKETEERING

One of the most disappointing episodes of the last congressional session was the failure of labor reform legislation, as exemplified by the Kennedy-Ives bill.

It will be recalled that public pressure for such legislation had been generated by extensive committee investigations, but when the Kennedy-Ives bill came to its test in the House, it was scuttled by a singular amalgam of forces, including some big-business and big-labor interests, plus Secretary of Labor James P. Mitchell.

Now Senator JOHN F. KENNEDY has come up with another bill with approximately the same objectives.

It would bring union finances out into the open by requiring public accounting and establishing penalties for mishandling of union funds. It would promulgate ground rules for democratizing union elections. It would specifically par persons with criminal records from high union offices. It would prohibit the payment of union funds to criminals.

It would also make several non-controversial modifications of the Taft-Hartley law.

In the opinion of most observers, these changes would go a long way toward eliminating the grosser abuses uncovered in the labor racket hearings.

KENNEDY is more specific. He believes they would mean the end of the road for James R. Hoffa and his unsavory crew. For, he says, even the strongly entrenched bosses would find it more expeditious to bow out.

In an apparent effort to modify those critics who see his bill as a new primer of labor-management relations in the Taft-Hartley tradition, KENNEDY emphasizes that the bill's primary concern is with labor racketeering. It is not a full-scale updating of labor legislation, but a circumscribed attempt to deal with known abuses.

This emphasis is expected to draw the sting from some of the opposition furnished by business groups the last time around.

Whether the new Kennedy bill is the best one that could get through Congress in this session is, of course, less certain. There will be other bills in coming weeks, formulated by Mitchell and Senator JOHN L. MCCLELLAN of Arkansas, among others.

Yet there should be no doubt that some sort of legislation is in order to establish democratic processes in all unions and protect union members against their occasionally crooked leaders.

If the Democratic-controlled Congress is still unable to pass the Kennedy bill or something akin to it, then the public may justifiably wonder how the party could face up to even greater tests after 1960.

[From the Lynn (Mass.) Telegram-News, Jan. 27, 1959]

INSIDE LABOR

(By Victor Riesel)

WASHINGTON.—Miami's sunny real estate has not seen its last tycoon. A fellow by the name of Jim Hoffa has just put $4 million into the refurbishing of the Everglades, a residential hotel on the mainland. It is some distance from the Gold Coast's motel row where the teamsters already have put $1,250,000 into a sandlot drive-in palace called the Castaways. All this is atop some $4 million in a west coast housing project and some $12 million deposits in as many Midwest banks.

So when Senator JOHN KENNEDY says he has a law to put Hoffa out of business—it's a pretty big business, for there are other millions I've not listed here and tens of millions more in welfare funds still available. Some experts put these funds at a billion dollars for Hoffa's dollar diplomacy.

But Senator KENNEDY's proposals are big enough to contain even Hoffa.

This antiracketeering bill will get more kicking around than an English soccer ball. But if it survives as the minimum law we, the people, get this year, this is how KENNEDY believes the public can win this final conflict:

There are nine main assaults on racketeering. KENNEDY's most dramatic proposal calls for the summary dismissal of all ex-convicts from their union posts. This means that any union leader anywhere with a long police sheet which has a conviction for arson, larcency, extortion, narcotics pushing, mayhem, or any other major crime must be dropped from his post the moment the Kennedy bill becomes law. If the ex-convict stays in office, the Justice Department can automatically move in, demand his ejection, and bring criminal proceedings against the union leaders. The union itself can also be fined heavily.

No union official ever will be able to draw dues money for yachts, homes, or major items like convention hotel bills without everybody getting a real X-ray look at his personal accounts. KENNEDY's bill calls for full public disclosure of all salaries, expenses, and other disbursements of every single official and employee who receives more than $7,000 annually from a union. This will include virtually every paid national and local labor leader.

In the past, the looting crowd has been able to cover up by passing by-laws enabling leaders to hide or destroy union books each year. If the Kennedy bill passes, it will be a Federal offense, punishable by a 5-year jail term and heavy fine, to steal, deface, or destroy union records.

Believe it or not, embezzlement of union funds is not a Federal offense. Under this bill, it will be illegal to steal union funds. That's progress. Imagine having to fight to pass such a law in the Congress of the United States.

Under the bill, the rank-and-file can go into a State or Federal court and sue the till thieves for recovery of union money even if the union itself does not act to recover the stolen funds. This means that a rank-and-file committee can ask the court to turn boats, cars, country homes, furniture, and even clothing back to the union if officials simply paid for the comforts out of expense accounts or just lifted union dues.

There are other powers for the rank-and-file. If they believe there's been a crooked election, the bill gives them the right to ask the Secretary of Labor of the United States to investigate. He would have subpena powers. He could seize all records affecting the election (any records for that matter). He would then have the right to set the election aside—whether a local or an international union was involved.

The proposed law would give him the power to call new elections. He could see to it that no intricate union statute kept any member from voting or running for office so long as his dues were paid on any day of the month, not just on the first of each month as is called for in the Teamster by-laws.

There are 6 specific rules against any union official, who earns more than $5,000 a year, buying into companies which deal with his labor outfit, thus causing a conflict of interest. There are proposals against union loans to officials of more than $1,500; proposals against employer loans to union men, and proposals against the use of picket lines for extortion.

If we, the people, get all this written into law this year, some of our heartaches will have been worthwhile.

---

[From the Garden City (N.Y.) Newsday, Jan. 21, 1959]

PASS THAT BILL

If Congress were a rational body, Senator JOHN F. KENNEDY's labor-management reform bill, introduced yesterday afternoon, would now be on its way to the President with a rousing okay from both the House and Senate. Instead, it is likely to languish in committee for weeks to come, with the eventual result uncertain. This bill does no damage to honest unions; it could put crooked unions such as Jimmy Hoffa's Teamsters out of business by forcing disclosure of all business dealings, ousting criminals, and requiring genuine, democratic relations.

We think it ought to be passed.

---

[From the Charlotte (N.C.) Observer, Jan. 29, 1959]

IKE'S PROPOSED LABOR BILL AN ALL-OR-NOTHING GAMBLE?

President Eisenhower asked Congressional action Wednesday on a 20-point program to eliminate union abuses and uproot some of the existing snags in the collective bargaining process.

His plan embodies, in less specific terms, most of the reforms proposed in the Kennedy-Ervin bill to curb labor racketeering.

But it goes much further.

The President would amend the Taft-Hartley Act in several particulars. In addition to less-controversial changes he would:

1. Ban secondary boycotts aimed at forcing firms not involved in a labor dispute to cease doing business with firms that are.

2. Outlaw picketing to force recognition of a union that has not clearly and legally established its right to represent a group of employees.

The President's program has obvious merit. It represents the much stronger labor bill desired by critics of the Kennedy-Ervin measure. But its strength may prove to be a fatal weakness.

The danger is that a predominantly Democratic Congress, many of whose Members owe their election to union support, will extend their fight against the Eisenhower proposals to the retaliatory point of opposing any labor legislation whatever.

Senator KENNEDY recognized this possibility when, in submitting his racket-reform bill, he warned:

"This is primarily a labor-management reform bill, dealing with the problems of dishonest racketeering—it is not a bill on industrial relations, dealing with the problems of collective bargaining and economic power. The two areas of legislation should not be confused or combined.

"If this Congress, in its consideration of anticorruption legislation, becomes bogged down in acrimonious controversies over

broad and controversial Taft-Hartley revisions—in technical and emotional issues such as boycotts and picketing—then we can only delay and defeat a vital measure already thoroughly considered and debated."

KENNEDY proposed that the antiracketeering law be adopted as a first order of business and that the Taft-Hartley revisions (which have been neglected too long) be incorporated in a second labor bill later this year.

But the stancher critics of labor unions are attacking the Kennedy-Ervin bill in much the same terms that they attacked the Kennedy-Ives measure, rejected by the House at the last session.

They call it a weak bill that will effect no substantial reform * * * a mild wrist tap.

The charge is unwarranted.

The proposed act will not destroy organized labor, if that is what the critics desire; it will eliminate some of the artifices under which labor corruption thrives.

Its major provisions:

Election of union officers, at stated intervals, by secret ballot.

Full public disclosure of all union financial data, including salaries, expenses, and other disbursements.

Barring union offices to all ex-convicts.

Making it a Federal offense, punishable by a 5-year jail term and heavy fine, to steal, deface, or destroy union records.

Prohibiting any union official from buying into companies which deal with his labor outfit.

Employing the rank and file to sue for the recovery of embezzled funds if the union itself fails to act.

Making such embezzlement a Federal offense.

Extending to the Secretary of Labor the power to institute court action to set aside improper union elections, and to conduct new elections.

Establishing strict standards for the imposition of trusteeships, and limiting such regimes to 18 months duration.

Prohibiting picketing for purpose of extortion or to obtain payoff from employer.

Prohibiting solicitation or payment of fictitious fees for unloading cargo.

These are some of the curbs the bill proposes—restraints that are now nonexistent.

Labor columnist Victor Riesel, long an archenemy of the union crooks, says the measure is "big enough to contain even Hoffa," and adds:

"If we, the people, get all this written into law this year, some of our heartaches will have been worthwhile."

The estimate is sound.

---

[From the Ogdensburg (N.Y.) Journal, Feb. 4, 1959]

KENNEDY TRIES AGAIN

Senator JOHN F. KENNEDY of Massachusetts is trying again this year for a Federal law to curb racketeering in labor. Those who recall the fate of the Kennedy-Ives bill, of which this is a refinement, will believe such legislation can be passed only when they see it.

Last year's Kennedy-Ives bill, passed by the Senate 88 to 1, couldn't have had much wrong with it. But in the House it was ganged up on by (1) prolabor Congressmen and (2) the bitterly antilabor faction in the House which thought that by killing it they could get right-to-work bills passed in the various States where such legislation was then pending. As it turned out, right-to-work laws were snowed under in the States where it mattered, notably Ohio and California, and they wound up with nothing.

After that experience, this unholy alliance of extremists shouldn't be in operation again this year. But the ways of politics are sometimes dark and inscrutible; Congressmen who pay their first allegiance to labor bosses may find other allies during this season; conceivably even the same ones.

In any event, while it clearly is possible to lift out and criticize segments of this bill—something that's true of all but the simplest pieces of legislation—this fundamentally is a good measure. Had it been in effect over the last few years, either Jimmy Hoffa would have acted differently or been in jail right now—and it's hard to find many impartial observers who don't believe that's where he belongs.

Among other things, the Kennedy measure would impose criminal penalties for false reports on union fiscal affairs and punish the misuse of union funds, require secret ballot elections of officers at regular intervals, prohibit shakedown picketing and the solicitation or payment of extortionate fees for unloading cargo from interstate carriers.

It looks like a list of the offenses with which Hoffa was charged.

Maybe that isn't a good way to arrive at legislation. But Hoffa represents a distillation of just about everything that's wrong with the labor movement. Laws that will block him will trip up most of the unscrupulous labor leaders.

---

[From the Mitchell (S. Dak.) Republic, Jan. 24, 1959]

LABOR CONTROL BILL SHOULD BE PASSED

The new labor control bill introduced by Senator JOHN KENNEDY and which will be pushed by Representative GEORGE MCGOVERN in the House should be passed by this session of Congress, regardless of what other changes in the Taft-Hartley law are proposed during the year.

The only way they can be passed is to keep them separate from other controversial labor issues. We sincerely hope that President Eisenhower and his administration will recognize this fact by backing the Kennedy bill ahead of their own proposals.

This legislation is similar to that which passed the Senate a year ago but was defeated in the House. It is aimed primarily at cleaning up labor unions such as the Teamsters and elimination of such labor bosses as Jimmy Hoffa of the Teamsters.

It is stronger than some labor groups want and it is far weaker than antilabor segments of the Congress desire, but in the face of last year's elections it is about the only compromise that has a chance of passage this year.

The most important feature in the Kennedy bill is the guarantee that rank and file members shall have the right to vote regularly and secretly for their officers. Other points would provide criminal penalties for mishandling of union funds.

Given the opportunity to select their own leaders in secrecy and without fear we believe the labor union members will go a long way in eliminating some of the abuses of new power-hungry, unscrupulous leaders. No one can deny that members should have this right. That is why the Kennedy bill should be handled ahead of other proposals dealing with collective bargaining and economic power now held by unions.

## Junior Colleges Called Next Step in U.S. Education

---

EXTENSION OF REMARKS

OF

## HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article about the public junior college in Quincy, Mass., which was written by Glenn A. McClain, an assistant professor at the college, and was published in the Christian Science Monitor of February 18, 1959.

Quincy Junior College was formed as a result of the initiative and effort of citizens of Quincy, without Federal or State financial subsidies of any kind. It is a heartening demonstration of energetic local self-reliance which deserves the attention of all of us who are concerned with how our Nation can best perform the task of furnishing adequate school facilities for our young people. I am proud of what the citizens of Quincy have done, and I urge that their efforts be imitated in communities throughout the Nation which are suffering from a shortage of adequate school facilities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

QUINCY, MASS., ILLUSTRATES JUNIOR COLLEGES CALLED NEXT STEP IN U.S. EDUCATION

(By Glenn A. McLain)

Pioneering educational efforts of citizens' groups in this city have finally resulted in the establishment of the third publicly controlled junior college in the Bay State.

The other two, Newton and Holyoke, have firmly rooted programs which have contributed much to the educational and business resources of their cities.

Publicly controlled junior or community colleges sprang up in the United States in 1902 to provide transfer courses for 4-year colleges, terminal programs beyond high school, and adult education.

New England, and especially Massachusetts, lagged behind the rest of the Nation in these developments apparently because of the historical educational strength of its private schools and colleges.

Postwar changes in Quincy started community plans in 1945 which gradually materialized in 1954 when Dr. Frank Wiley of Harvard University issued a report which spotlighted the new educatfonal needs of the area. The survey stressed changing social, economic, and educational patterns which were forcing new answers to the old issue of what to do with the graduating class each year—shall it be work or college?

EFFORTS MOBILIZED

Immediately, citizens from all walks of life mobilized their efforts to study developmental plans, to backstop the school committee and the city council in this direction, and to place these problems before the general public.

Critics of the plan doubted the need for a new tax burden; whether or not instructional standards could be kept high, and whether or not the program should be supported from the city budget.

From 1954 until the first experimental program began in 1956, an imaginative citizens' committee of 100 moved steadily to educate the general public concerning the issues at stake. The lively community debate which followed was in the true tradition of Quincy's educational greats—John Adams and John Quincy Adams.

The two courses offered in the local high school in 1956 grew to a full-scale program of 11 in 1958 with an enrollment of 83.

LESSONS LEARNED

High peak of this cooperative community effort came on December 18, 1959, when the Massachusetts Board of Education approved the 2-year Quincy Junior College program. Citizens see important lessons in the Quincy record for other civic groups which might

wish to move in similar directions. These lessons involve community leadership, financial planning, and institutional control.

The action of Quincy citizens in mobilizing public opinion to support a vital community project shows that civic leadership resources must be fully utilized for final success. Communities in favor, and those against, such plans must be careful to give the other side their day in court, it was pointed out. Steamrolled blueprints rushed through city governments in the name of educational expediency are not the answer to our pressing problems, the leaders said. The free flow of public debate is the best way in the long run.

Quincy learned that it is essential to use caution and a great deal of old American horsesense in planning new educational programs such as public junior colleges. In these days of skyrocketing tax rates it is fundamental to move with calculated speed.

PART-TIME BASIS USED

Experimental programs started on a part-time basis until exact needs appear are good ways to build for a permanent future, they discovered. Once community demands and resources are professionally analyzed then a full-speed-ahead program might well be in order.

Institutional control is an important matter for any community to consider. New England traditions force community leadership to view critically any possible State or Federal control of school programs. It is important to note that few junior or community colleges have existed for any long period of time without State sanction, however.

In Quincy, State approval has been received for course development and it may be necessary to get State financial support to expand facilities in the future.

It will not curb or change local control in any way if State aid is received in the future by Quincy Junior College. In the more than 660 junior colleges in the United States all types of combinations of local-State authority exist without any loss of local educational freedom, it is pointed out.

Finally, these Quincy leaders assert that the junior college movement in the United States is such a fast-moving and vitally challenging one that all citizens must keep their minds alive to these exciting new educational possibilities. Community cooperation backed up by available State resources can further help to make the junior college a flexible, expanding educational growth in the true American tradition.

## Uruguayan Subsidies for Wool Tops

EXTENSION OF REMARKS

OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, many of us in the Senate who represent States in which the growing distribution and manufacture of wool are important industries were deeply disturbed by the recent decision of the Secretary of the Treasury to remove the countervailing duty on wool top imports from Uruguay, which has been in effect since 1953. Recalling the devastation wrought in the U.S. wool industry by the flood of wool top which entered this country in the years immediately preceding imposition of the countervailing duty, we are distressed to anticipate a recurrence of this situation.

I ask unanimous consent to have printed in the Appendix of the RECORD a significant news dispatch from Montevideo which was published in a textile industry trade paper, the Daily News Record, on March 9, 1959. It reports that the wool trade in Uruguay considers that the U.S. Treasury erred in concluding that the Uruguayan Government has ceased to subsidize exports of wool tops to the United States. According to the article, the Uruguayan industry itself recognizes that the subsidy has not only been maintained but actually increased in the years since 1952.

Another significant point raised in the article emanating from Uruguay is the fact that a recent decision of the Uruguayan Government to permit imports of certain nonessential articles into that country is apparently the reason why, under our Treasury's weighted average formula for determining the existence of a subsidy, the Treasury concluded that the subsidy on wool top exports no longer exists. It is difficult to understand how the Uruguayan action concerning imports of nonessential goods could bear any possible relation to the question whether a subsidy on exports of wool tops continues to exist. A nonpartisan group of 10 Senators who participated in a hearing held recently on this subject by the Senate Finance Committee advised the Secretary of the Treasury that in their opinion his Department's formula is inconsistent with law and logic and is not consonant with commercial reality, and urged him not to revoke the countervailing duty. With that position, I am in complete accord.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PREDICTS ACTIVITY FOR URUGUAYAN WOOL TOPS IN UNITED STATES

MONTEVIDEO.—Nicolas Duran y Veiga, president of the Uruguayan Wool Board, stated at the weekend that removal of countervailing top duties meant for Uruguay the reopening of the American market, hampered since 1952, when the United States acquired $22 million worth of Uruguayan tops.

Waiving of these duties is interpreted here as a friendly gesture and a sign of economic cooperation in this hemisphere. It will redirect Uruguayan top exports from Eastern countries, especially Red China, to the United States.

Trading with Eastern countries is complicated, since many of their products find no ready market in Uruguay, while the situation with the United States is just the opposite.

The local trade believes that the Treasury Department erred when assuming that Uruguayan subsidies for top exports had been discontinued. They were maintained and even increased since 1952. However, it is believed that the Treasury Department's decision to waive countervailing duties was based on the figuring of an average foreign exchange rate for Uruguayan exports and imports of all classes of goods.

Due to the recent granting of import permits for nonessentials of the so-called second and third categories at the free financial rate of around 9 pesos a dollar, the average exchange rose substantially, thus justifying top duty removal. The Uruguayan peso continues firm.

## All or Nothing in Berlin

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial, "All or Nothing in Berlin?" which appeared in the Boston Herald on March 13, 1957, in which, among other things, the editorial pointedly stated:

What is needed now is not another off-the-cuff session with reporters, but a considered, open, comprehensive statement on American military policy in Europe.

The air must be cleared.

The editorial follows:

ALL OR NOTHING IN BERLIN?

President Eisenhower raised more questions than he answered in his press conference this week.

His warning that the United States would not fight an old-fashioned ground war against the Soviet Union over Berlin made sense. Western troops now stationed in Europe are no match for Russia's 175 divisions there, and we would be hopelessly outmatched in a conventional struggle.

But must we assume, as the President seemed to do, that the only alternative is nuclear war? Is there no in-between response to Red aggression in Berlin?

Mr. Eisenhower didn't rule the possibility out. But he ridiculed the idea that strengthening our troop commitments would help. "What would you do with more ground forces in Europe?" he asked. "Does anyone here have any idea?" If we are to enforce our will in Berlin, he said, "we must go to other means."

The other means? Apparently the big bombs, the ultimate force.

If this is indeed the choice, perhaps it is well for the President to let the Russians and the rest of the world know. There is less apt to be a misunderstanding and an accident which will bring everything down around our ears. But most people have assumed there were other choices.

The initial challenge on Berlin is expected to come from the East Germans and not the Russians. Are we going to react to this by dropping bombs on Moscow or are we going to make a limited answer to a limited challenge on the spot? And if the Soviets intervene with token force, are we going to answer with more than token forces or feel the situation out?

Only a few years ago we were talking of fighting a ground war in Europe with tactical atomic weapons. Admittedly the strategy has changed somewhat since then. But are these weapons obsolete?

We don't believe the President meant to say that our first, or only, response to aggression in Berlin would be massive retaliation. But our NATO allies may interpret his remarks that way and for them it would be even more startling than for us. Why should the Germans or the French struggle to meet their troop quotas for NATO, if troops are no longer important? What, indeed, becomes of the whole notion of collective defense if the only significant weapon is the bomb and that weapon is under the exclusive control of the United States?

The President's frankness at his press conference was laudable. But he didn't go far enough. Only more frankness can clear up the misconception and ambiguities which his first answers have created. What is

needed now is not another off-the-cuff session with reporters, but a considered, open, comprehensive statement on American military policy in Europe.

The air must be cleared.

## Classes for Blind Children

EXTENSION OF REMARKS
OF

### HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mrs. Wilberta L. Woods, braille teacher in the Braintree, Mass., public schools, which was published in the Massachusetts Teacher for February 1959. I take pride in the educational leadership of Massachusetts, as reflected by the fine work which is being done in Braintree in teaching blind children with sighted children.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLASSES FOR BLIND CHILDREN

(By Wilberta L. Woods, braille teacher, Braintree public schools)

Perhaps you have wondered about classes for the blind in the public schools; maybe there have been many questions on your mind concerning this program. Some of the questions which are consistently brought up by lay leaders are: How can blind children be educated in a public school? How can they be integrated and become oriented? What can the sighted children offer to the blind children? What can the blind offer to the sighted? Why should the blind be integrated in a public school when there are residental schools especially for the blind?

The answers to these questions were revealed in an intangible manner in 1956 when this program was introduced in the Braintree public schools. This marked the beginning of teaching the blind with the sighted in the public schools in the South Shore area. It was a challenge in which the public schools in Braintree met, under the leadership of Superintendent Ralph W. Proctor, to recognize increased facets of an educational program in a period of social change.

SETTING TO WORK

After the program policy had been worked out by the school officials, the superintendent appointed the writer as the resource teacher for the blind students. The Perkins-trained resource teacher (who had previously taught sighted children in the Topeka, Kans., public schools) immediately began to carry out the school policy concerning this program.

The class began with five children. There were two in the first grade, one in the second grade, and two in the sixth. They were the pioneering students in this new special-education progrom on the South Shore, and they were the kind of students who were able to take their places in this new program with the sighted. Otherwise, the program would have faced obstacles at the beginning.

The first-grade pupils who began this class had attended public kindergarten, but had not received any braille instruction. The second-grade pupil had also attended a public school, with the advantage of braille training under a resource teacher. Both sixth-grade pupils had attended the Perkins School for the Blind. So it is obvious that the group was composed of pupils with varied backgrounds. The program was underway.

EXPLAINING THE PROGRAM

However, this program in special education for the blind, like any new venture, had to be explained to the school publics. It was imperative that the program win acceptance in the community. Therefore, it was necessary to bring together the attitudes, opinions, and ideas of all school publics and the community through an educational public-relations program.

Since this program was beginning in a public school, the logical place for the winning of acceptance was the teachers. Consequently, the resource teacher prepared the following statement for distribution to the teachers:

"Integration of the blind and the sighted in the Donald E. Ross School:

"There are five blind children in the program of this school, two of whom are members of the first grade and will become integrated into the first-grade rooms, one in each room. One child is a second-grade pupil and will become a member of that classroom. Two of the students are members of the sixth grade and will likewise become members of the sixth-grade classrooms, one in each room.

"It is the duty of the resource teacher to meet and greet the blind children as they arrive each morning. It is also her duty to dismiss the children each afternoon as they leave school. She will orient the children to find their way in and out of the building, and once she is positive that they are familiar with it, it is their responsibilty to go to and from their classes, unaided.

"She will expect full cooperation from each member of the faculty, but she does not expect any sympathizing, overprotective help from them. The work will be explained to the children and the braille will be taught in the resource room so that the children will be able to do the same type of work as the pupils in the regular class.

"The fundamental teaching of the blind children is done in the resource room with the braille equipment. The purpose of this equipment is to create an individualized and enriched program. This tends to orientate the child with experiences with braille in order to pave the way for regular academic work. The goal for the blind child is—as for all children—the growth and development of the whole child.

"The classroom for the blind children is known as the resource room. By referring to the homeroom of the blind as a resource room, it tends to give the blind children a feeling of being a participating group in the total school program. It has a tendency to remove the feeling of being somethings special in the overall program. This feeling could quite well become prevalent without the efforts of all concerned to avert this group thinking. But at the student level, the blind children are referred to as the children of the braille class."

OTHER DETAILS

The training for this facet of special education in our system ranks along with the regular academic staff. The writer prepared for this service at Washburn University in Topeka, Kansas, at the Perkins School for the Blind, and at Boston Universsity, where she received a master's degree in special education.

In the Braintree system, each child is assigned a "buddy" at the beginning of the school year in order to help both children become acquainted with each other. Subsequently, as the school year progresses the "buddy" is no longer needed.

The following is a typical school day of a second-grade pupil of the braille class, whom we shall call Marie. She is age 7. Her school schedule is a flexible one; however, she is always informed about a program change and the reason for it.

When Marie arrives at school in a taxi (the expenses are borne by the Commonwealth of Massachusetts) she places her wraps in the place assigned to her. The racks are marked with the names in braille. But in the event that Marie arrives before time for school to begin, she utilizes the time in the resource room by playing games, listening to the talking book, or writing on the blackboard. She is free to select the type of play which she desires.

Subsequently, when the bell rings, she places the playthings back in their places and proceeds to her second-grade classroom. She participates in opening exercises in the regular classroom. Consequently, Marie has the regular academic studies in the same regular classroom as the sighted children. However, she returns unescorted to the resource room throughout the day for spelling, reading, writing, and arithmetic, which may be written or oral according to the needs of the pupil. Frequently, she has finger painting in the resource room.

LUNCH AND RECESS

Marie has lunch with the braille teacher, and during her recess period is always under the supervision of the braille teacher. However, during lunch and recess she is encouraged to associate with the sighted children. At the close of the schoolday, she returns to the resource room and is dismissed there.

During the last school year, we had two blind girls enrolled in the South Junior High School. They were honor students and participated in extracurricular activities, including dramatics and the glee club. Outside of school, the girls learned to roller skate, were members of the Girl Scouts and worked toward the Marian award (a medal given to Catholic Girl Scouts). They were active members of a church choir. In addition, one girl played the piano while the other played the organ.

They gave various demonstrations to sighted students at the junior high school. In their regular classes, the girls took dictation on a braille writer and, during study periods, they transcribed the braille into print with the standard typewriter. Typing is taught to all braille students, beginning with the fourth grade.

EQUIPMENT

The equipment furnished by the Commonwealth of Massachusetts and the town of Braintree includes braille writers for each child, slate and styli, standard typewriter, talking book with records, recording machine, radio, braille books, and games. The desks and other furniture are furnished by the Braintree school system.

The integrated program of teaching the blind with the sighted will tend to enable the blind children to adjust socially, intellectually, and physically in the overall school program. This will lead to an acceptance and a contribution to our society.

## Food Storage Depots

EXTENSION OF REMARKS
OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, one of the problems we must consider in case of a major war, which we all hope and pray will not occur, is the destruction or

breakdown of our transportation system.

This would leave many sections of our country without access to food or fuel. The lack of fuel in our northern States, such as my own New England area, could have as devastating an effect as the lack of food because of the rigors of the northern winter climate.

I believe that a plan could be worked out for surplus food use by the creation of big food storage depots strategically located where food, which could be protected against radiation and nuclear fallout, could be stored.

I feel that those who are studying our agricultural surplus problem, as well as those who have the responsibility for the civil defense of this Nation, should give this their early attention.

To this end, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Concord (N.H.) Daily Monitor of Thursday, March 12, 1959, which discusses in a general way this subject that I commend for consideration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOD FOR NEW HAMPSHIRE

War talk is being discouraged by the President, but if there is a war, New Hampshire would be hard hit. Not, perhaps, by enemy attacks, but by the sudden and acute lack of food and other essential items.

In this State stores and warehouses carry limited amounts of food and these could be used up rapidly in an emergency. Some military leaders are of the opinion that in the next war transportation on the eastern seaboard could be seriously crippled or eliminated.

The Government has huge stocks of surplus food and some thought might be given to what can be processed and made available for storage against an emergency in this area.

This might, in part at least, ease a food crisis. But New Hampshire still would face the monumental task of heating homes and buildings. Now there is widespread reliance upon fuel oil and these supplies could be used up quickly.

President Eisenhower has asked for a food for peace campaign in which the United States would distribute food to reinforce peace and well-being of peoples throughout the world.

Admittedly, nobody has worked out a plan yet on what to do with this Nation's huge stocks of surplus foods. There may be some merit in the suggestion food depots be set up at strategic points around the world so no one would be hungry.

This might be a happy solution for the complex and politically-dominated farm crop surplus problem. It might even build friendship instead of the resentment America's easy flow of dollars abroad is creating.

While Washington is scanning the globe as it considers what to do with surplus food, some official should find time to take a look at the eastern seaboard and more particularly at New Hampshire.

Some of the surplus food would be gratefully received in this State if and when there is a war and if there were stockpiles available that could be drawn upon.

One of the Nation's biggest chemical firms reports it is working with the Atomic Energy Commission and is irrigating a high intensity cobalt source to be used for food preservation for the Army. These experiments at DuPont might be worth examining to determine whether they can benefit New Hampshire as well as the military services.

## St. Patrick's Day

EXTENSION OF REMARKS
OF
### HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD a statement I have prepared regarding St. Patrick's Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

Yesterday all America celebrated St. Patrick's Day. All Americans, regardless of their creed or land of origin, paid their respects by the wearing of emerald green in their hearts and on their clothes.

Today, we in Congress have been honored by the presence of that great representative of the Emerald Isle, President Sean T. O'Kelly of the Republic of Ireland. I have had the distince pleasure of meeting President O'Kelly, and can therefore testify at first hand to his wit, his charm and his general embodiment of the fine characteristics we have come to associate with his justly famed native land.

President O'Kelly's visit to the United States will do much to strengthen even more the already firm bonds of friendship between Ireland and the United States. This recognition and mutual liking results from our understanding of the great contributions made by peoples from both lands to the progress of each land. We in this country have been blessed with many hearty sons of the Emerald Isle. In every walk of life, they have made valuable contributions to the building of America.

Among their greatest qualities, the Irish have brought to our land a deep and reverent love of God, and a firm resolve to oppose all philosophies and forms of government which seek to destroy man's faith and freedom. They have brought their unique qualities of humor and musical talents. And they have infused into all sections of our land their infectious laughter.

While we pause to pay tribute to the Irish who have done so much to help establish our Government, it would be well also for us to pause in recognition of him whose name March 17 bears. St. Patrick's selfless devotion to his fellow men—a quality so often reflected in his countrymen—has served as an inspiration to men the world over.

For surely, St. Patrick belongs to all the world, not just the Irish alone. He belongs to all men who look upon service of good and love of man as our chief duties on this earth. The evocation of his name, and the observance of the day which bears his name, thus carries the deeper significance that every man should give of himself so that others might benefit.

That is the great lesson of March 17. That is the great lesson we would all do well to ponder and put into practice throughout the year.

## Need for Limitation of Governmental Power

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. BRIDGES. Mr. President, Life Line Foundation, a religious and patriotic educational movement, produces a daily radio program featuring Mr. Wayne Poucher, a minister who has a keen insight into the nature of the threats of our traditional American freedoms.

Life Line broadcasts are carried by a large number of radio stations all over the country and are rendering a fine service to combat the dangers confronting out Nation. A recent broadcast dealt forthrightly with the need for a limitation of governmental power, and I ask unanimous consent to have the text of that broadcast printed in the Appendix of the RECORD.

There being no objection, the radio transcript was ordered to be printed in the RECORD, as follows:

One has only to observe the everyday workings of government in Washington, D.C., the Nation's Capitol, to understand the wisdom of the statement that the history of liberty is the history of the limitation of governmental power.

As government grows bigger, individual freedom grows smaller. As government becomes more powerful, human liberty shrinks in like proportion. When governmental power becomes absolute, human liberty disappears completely.

Liberty therefore depends absolutely on the strict and enforceable limitation of the powers of government. This truth was well known to the men who founded this Nation of ours. That is why the Founding Fathers carefully inserted in the Consitution a series of enforceable limitations, checks and balances upon every branch of our government. In our Constitution, man was given the means of defending his God-given rights, not only against his fellowman, but also against his own government.

What have we been doing in recent years to preserve this precious gift?

What have we done about the personal liberty of the American farmer when the right and the power to control production and prices are placed in the hands of an anonymous bureaucrat in Washington?

What have we done about the preservation of the constitutional limitations on governmental powers while the courts were ruling that 10,000 international agreements could increase the powers of the Government at will without regard for the traditional system of limitations, checks and balances?

What have we done about our own liberty when our earnings are confiscated and our cash reserves reduced in value in order to finance fruitless adventures in foreign lands?

Have we been asleep? Are we sleeping still?

You know and I know that when our forefathers threw off the yoke of tyranny they were seeking freedom.

Let us read the Declaration of Independence and learn again the conditions from which those early Americans sought relief.

They sought relief from oppressive centralized government, from back-breaking taxes,

from judges and courts with unbridled powers, from swarms of officers to harass our people, and eat out their substance.

Where do we stand today with respect to those matters?

We have a powerful central Government that every day reaches out for more power.

We have the heaviest taxes in our history.

We have a Supreme Court that has exceeded its jurisdiction, assuming for itself the powers given by our Constitution to the executive and legislative branches of our Government.

And certainly we have swarms of officers—read bureaucrats for officers—to harass our people, and eat out their substance.

Is it true that we have become so accustomed to losing our liberties that we scarcely know that they are being stolen? Have we become so hardened to big government's constant push for more power that we no longer care very much whether or not we remain free?

No. This cannot be, must not be.

Liberty is something that is bred in the bones of Americans. The love of freedom is immovable in our hearts as the majestic mountains are immovable in our land.

This is what we must always remember that liberty is never won or lost in a single day. Liberty is won always by a continuing struggle. Whenever it is lost, it is lost by a continuing negligence and complacency.

So finally, the answer comes down to you, to all of us. And the question we must answer is whether the ever-quickening process of power concentration in Washington foretells the ultimate wreck of American freedom.

That trend, if continued, could foretell the death of freedom. This we know to be true. History teaches its truth.

The only sure way to preserve the liberty which God intended men to have on earth is to make freedom flourish here in its homeland * * * in America. The only sure way to accomplish this is to begin, quickly and effectively, to drain off the deep pool of concentrated bureaucratic governmental power that threatens to engulf us.

That, again, is a job for all Americans who love freedom.

## Salute to the Campfire Girls

EXTENSION OF REMARKS

OF

### HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. KEATING. Mr. President, I have prepared a brief statement regarding the 49th anniversary of the founding of the Campfire Girls. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

Yesterday marked the 49th anniversary of the founding of the Campfire Girls. From modest beginnings, this outstanding organization has grown to the point where today it has over 500,000 members.

By providing recreational programs for girls between the ages of 7 and 18, the Campfire Girls not only teach valuable skills, but encourage these young people to contribute innumerable services to their communities. They learn in many ways how to become useful and valuable citizens.

Of particular concern to this organization is the preservation of our natural resources and the protection of our wildlife. All too often, these valuable aspects of our national life are overlooked in the hustle and bustle of our everyday activities. The Campfire Girls' theme, "She cares—Do you?" helps teach these young people the tremendous need for conservation in our land.

I am pleased to join with their many friends and admirers in saluting the Campfire Girls on the occasion of their anniversary. May this fine organization and all its members continue to grow and prosper in all their endeavors which are doing so much to make a better America in which to live.

## Need for Continued Sacrifice in Foreign Aid

EXTENSION OF REMARKS

OF

### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial published in the March 16 Boston Herald. This editorial presents most effectively the need for continued sacrifice in foreign aid and the need to consider very carefully whether or not we are making sufficient efforts in meeting those economic needs for nations that give promise of developing independent and growing economies. This editorial points out, too, how the Development Loan Fund must be the central instrument of our economic assistance program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHARED STRENGTH

There was a time when foreign aid was looked upon as a temporary expedient, a means of helping the older nations recover from the war and the newer nations get on their economic feet.

Now, however, it is clear that foreign aid must be considered a permanent claim on our resources. Military aid has become an essential and highly beneficial part of our defense program. And economic aid has become an investment in the future stability of uncommitted Africa and Asia. We need both now, and we shall continue to need both at least as long as the cold war continues.

It is to be hoped, therefore, that Congress will take seriously the President's plea that his $3.9 billion foreign aid program for 1959–60 be passed without cuts.

Congressmen are acutely conscious of the heavy burden U.S. taxpayers are now carrying. And when they look around for places to reduce, the foreign aid item always looks tempting. No large group of voters is directly benefited by this spending. There is no powerful lobby to push it. Yet realistically, as the President says, this is one of the bargain items in the budget. It is one of the last places we should economize.

During the past 10 years the United States has spent a total of $54.8 billion on various aid programs, mostly to bind up the wounds of war and guard against the outbreak of a new war. But in 1945 we spent twice that amount ($114 billion) to prosecute 1 year of war. And wars come higher all the time.

The question which agitates many people is whether the President has put enough in his budget for foreign aid. Mr. Eisenhower himself has hinted that the real struggle between East and West may be going on in the economic field. Not only is the Soviet Union making a strong bid to overtake the United States in overall production, but Red China is competing with free India, and all the Soviet-bloc nations are vying with all the western-bloc nations in wooing the neutrals of Asia and Africa with economic aid. This is a struggle we can't afford to lose.

Mr. Eisenhower's budget requests for the coming year are actually less than they were for 1958–59, although his program calls for some increases in subsequent years. Foreign aid supporters in both parties have advocated higher appropriations for economic aid this year and hereafter, particularly for the development loan fund. The President is certainly not being spend-thrift.

We can afford to spend what the President asks and more. We cannot afford to spend less. The United States is still the richest and most powerful Nation in the world. But we won't remain in that enviable position unless our friends grow along with us, offsetting Soviet growth. We must lend a helping hand lest, in the President's vivid phrase, we become "the richest Nation in the graveyard of history."

A $3.9 billion aid bill is a small price to pay for survival.

## The North Atlantic Treaty Organization

EXTENSION OF REMARKS

OF

### HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article about NATO, written by its Secretary-General, Paul-Henri Spaak. The article appears in the March 30, 1959, issue of Life International. Next month, NATO will be 10 years old. The reasons for its existence are just as compelling today as they were when it was formed in April of 1949. There must be no relaxation of joint effort on the part of the United States and the 14 other members of NATO to assure that our alliance will serve as effectively in its second decade as it has during its first decade, to deter Communist expansion in Europe and North America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUCCESS OF NATO—REAL VICTORIES HAVE MARKED ITS 10 YEARS

(By Paul-Henri Spaak, Secretary General of NATO)

Early in 1948 a bold coup d'etat had brought the Communists to power in Prague. A democracy ceased to exist. The work of Masaryk and Benes was wrecked. This political and human tragedy, by shaking the free countries out of their easy going optimism, was to have significant repercussions.

It was the Communist coup d'etat in Czechoslovakia which marked the decisive turning point of foreign policy after the

end of the Second World War. Until then, the United States and the free countries of Europe, with infinite patience, a number of illusions and a certain lack of courage, had stood by passively and watched the process which, even viewed dispassionately, can only be called the expansion of Soviet imperialism.

The scales fell at last from the eyes of the Western Powers. Warned already by Churchill in his prophetic speech at Fulton, Mo., the political leaders now realized that, if they failed to react energetically, the blow which had just fallen on Prague might be repeated in other parts of Europe, and that it was urgently necessary to raise a barricade against the Communist drive which was engulfing a whole continent against the clearly expressed will of the immense majority of its inhabitants. Early in April 1949, 1 year after the Prague coup d'etat, the Atlantic Alliance was born.

This defensive Atlantic alliance, designed to deter communism in Europe and on the North American Continent, has a record of success. Without having to resort to force, by its mere existence and by its efficient presence, it has halted Soviet imperialism in Europe. Since 1949 the latter has made no further progress.

This fact cannot be overemphasized. In this one corner of the world, as a result of the union of the free countries of the West, not only has Soviet diplomacy failed to score a single point for 10 years, but the influence of communism has perceptibly declined.

It is this spectacular success which we are preparing to celebrate in Washington in April on the 10th anniversary of the Alliance.

This short account points to two conclusions. It is understandable why the mere mention of NATO so infuriates the Communists and why they regard the Atlantic Alliance as enemy No. 1, which must be overthrown and destroyed. Their acrimony is all the greater because they are aware that it is their bad foreign policy which has made the Alliance necessary. They detest NATO, for NATO's success is their greatest defeat and this defeat is demonstrably due to their own mistakes.

But it is also necessary to realize fully how dangerous the disappearance, or even serious weakening, of the Alliance would be. Should the Alliance disappear, Europe would revert to the conditions which permitted the steady advance of communism between 1939 and 1958. Without the Alliance, Europe could not defend itself against an attack made with either atomic or conventional weapons. All the countries of free Europe, even combined, would be incapable of carrying this task to a successful conclusion.

The Atlantic Alliance is a defensive military alliance. It respects both the spirit and the letter of the United Nations Charter which, in Article 51, recognizes the inherent right of individual or collective self-defense. This defensive character of the Alliance must be highlighted since the Communists repeatedly refer to NATO's aggressive policy.

The countries which brought the Atlantic Alliance into being formed their own group only when it became apparent that neither the disarmament they had sought, the United Nations they had set up, nor the alliance with the U.S.S.R. they had hoped to preserve after the war could be achieved. In every possible situation the Russians, who had maintained their army intact, or even increased its power, had sabotaged the United Nations by abusing the veto and had not shown the slightest respect anywhere in the world for the most vital interests of their war allies.

The one and only reason why the countries of the Alliance have united is their determination to resist a possible Soviet attack. For their part, they have never thought that their differences with the U.S.S.R. could be settled by force. They have always been resolved to negotiate, to seek reasonable compromise solutions and to practice, even before the term was invented, true peaceful coexistence.

In reality, the Soviet Union cannot accuse them of a single act which could be described as aggressive or even provocative. But, although this is the truth, the Soviet leaders continue to give free rein to their imaginations and to seize every pretext for protests., complaints, and threats.

It is first and foremost the very fact of the alliance which the Soviet leaders cannot stomach. Already opposed as they are to any union of the European countries, they naturally find it still more intolerable that the latter should be joined by the United States and Canada, since it is to the membership of these two countries that the alliance owes it efficacity.

The Russians have not yet understood that the free countries are prepared voluntarily to forego part of their liberty and independence rather than to lose all. Western Europeans are neither humiliated nor apprehensive when American and Canadian troops join them to mount guard on the eastern frontiers of the free world. On the contrary, they welcome this proof of fearless solidarity.

The Russians find fault with the countries of the alliance for having decided to equip their forces with atomic weapons. They believe—or at least pretend to believe—that this proves the aggressive aims of NATO.

It is indeed a curious situation. They, who claim to be stanch partisans of peace, have no hesitation in proclaiming that they possess all the atomic weapons, including the most deadly and those with the longest range. What they consider to be perfectly right and natural for them becomes a mortal sin for the western democracies.

It would be absurd and even criminal, however, for us to equip our armies in a way which we know to be ineffective and to compel our soldiers to fight with the obsolete weapons of the Second World War.

As a matter of fact, the very idea of offensive weapons is contrary to NATO's philosophy because we do not intend under any circumstances to take the initiative of opening armed hostilities. On the other hand, should we be attacked. I confess that I can see no political, strategic, or moral reason why we should not employ the most efficient weapons to repulse the aggressor and why we should not destroy the far-off bases from which the attack would be launched.

Language such as this is not really as warlike as it sounds. The determination to build up a powerful defense system against a possible aggressor and even, or above all, the determination to possess a deadly instrument of retaliation, far from bringing war nearer, makes it more difficult and perhaps impossible.

It is the number and wide dispersal of the reprisal bases which are likely to make any warmonger think twice and draw back. The aggressor's problem is not how to drop a few isolated bombs, however devastating, on his enemy's territory. His problem is far more complicated and fortunately more difficult to solve; he must be capable of destroying at one fell swoop, all the points from which possible retaliatory action can be taken. Consequently, the more bases there are and the more widely they are dispersed, the fewer chances the aggressor has of solving the problem and the more likelihood there is of the establishment of a lasting peace.

I readily admit, however, that this equilibrium is precarious—we must always reckon with madmen and accidents—and we should try to find an alternative.

What alternative? General and controlled disarmament would obviously be the ideal solution. There is little hope of achieving this, however. The Soviet rulers have a highly individual approach to the question of control. In their view, control can only be exercised on their territory by themselves; any other form of control is merely a cover for military or economic espionage. Mr. Khrushchev has repeatedly expressed this view.

What confidence can we have in a system of this kind? Absolutely none. This explains why, as long as the Russians persist in their peculiar theory, no great progress can be expected in the matter of disarmament.

This must not prevent us, however, from seeking a solution to the most urgent problems confronting us, which implies that the foreign policy of the countries of the Atlantic Alliance must be, if not united, at least genuinely coordinated.

In this we have one of NATO's essential tasks.

The time is over when a great alliance could be exclusively military. It can be military only if it rests on sound political foundations. We cannot hope to fight successfully one day against a common enemy unless we have first learned to live together during the years of peace, to understand and respect each other in full awareness of all we have in common.

These truths, all the more fundamental because they are simple, are accepted by NATO. During the past few years, therefore, the chief concern of the western leaders has been to strengthen the political aspect of the alliance.

In 1956, 3 wise men—Gaetano Martino, Italian Minister for Foreign Affairs, Lester Pearson, Canadian Minister for Foreign Affairs and Halvard Lange, Norwegian Minister for Foreign Affairs—were chosen by their colleagues to study the problem. Their conclusions were adopted all the more readily because, in the course of that year, the alliance suffered its most serious upheaval on account of the Suez crisis. So serious was it, in fact, that any repetition of it would gravely compromise the alliance.

Their conclusions were simple, but audacious in their very simplicity. They recommended that every member of the organization, from the smallest to the most powerful, refrain from doing or saying anything in the field of international politics which might be prejudicial to, or create difficulties for, one of its partners until it had consulted all other members of the alliance.

The idea of diplomatic consultation is obviously not a new one. But the idea of prior, systematic, loyal and exhaustive consultation among 15 countries as different in size as the United States of America and the Grand Duchy of Luxembourg, or with such different traditions as Turkey and Greece, is more than an innovation, it is a diplomatic revolution.

This revolution is taking place as all revolutions take place, accompanied by a series of disappointments and even setbacks but nevertheless making very definite progress towards the goal. Public opinion is not yet fully aware of what is happening. It does not know that the NATO Permanent Council, which meets at least once a week, now discusses all problems of world policy. It does not know that, in the specific case of relations between Western countries which are members of the alliance and the U.S.S.R., not a single diplomatic note was dispatched during 1958—and heaven knows there were many such—until the Council had discussed, analyzed, criticized its contents, and until the result of this consultation had, in the vast majority of cases, been taken into consideration.

It is clear that a new form of diplomacy is being evolved: a collective diplomacy.

We cannot deny that we need it. In the face of the numerous Soviet initiatives, frequently demagogic and therefore dangerous, we often give the impression of being grievously irresolute. We match our individualism against the unity of concept and action of the Communist world. Admirable, but not always effective.

Ten years ago I was already defending the ideas of European union and, eventually, of Atlantic union. Ten years of wide experience have convinced me that I was not mistaken.

It becomes clearer every day that the global challenge—political, military, economic, social—which communism has thrown out to the free world can only be taken up globally. This is a task which is too great for even the strongest of us working alone.

If we could organize our forces effectively, put an end to clostly duplication, not indulge in rediscovering in Europe what has already been discovered by the Americans, and no longer hide from our friends secrets known to our enemies, I should be far less anxious.

Shall we have the courage to do all this?

We have undoubtedly made some progress in Europe and in the Atlantic community. If we had eternity before us and had not an adversary of the stature and inventiveness of the U.S.S.R., I should be satisfied with our slow but steady progress. But I sometimes feel that events are outstripping our progress.

Too many people in our camp still refuse to realize the true meaning and the precise magnitude of the threat hanging over us.

A vast country—with a population of over 200 million—possessing virtually unlimited material riches and with docile allies under its yoke in every corner of the world, dreams of imposing its authority over the whole earth and of subjecting the world to its laws.

Not only does Russia trust in its strength, which is immense, but it is inspired by a deep-rooted faith, one of whose main tenets is that communism must necessarily and inevitably triumph, that its victory is predestined and that nothing can stand in its way. Russia's ambition is not to carry out certain social reforms or to live by the rules of a planned economy, but radically to transform the most fundamental principles of our civilization. In short, it is indefatigably opposed to our conception of man and human dignity, as well as to our idea of human relations and of the relation of the individual to the state.

A policy such as this does not make for progress. It is reactionary in that it denies the spirit of freedom and tolerance the political democracy which has been brought to fruition after centuries of strife and sacrifice.

The struggle between the Communist world and the free world can and must be a peaceful one. This does not depend on us. But even if it is peaceful, it will be relentless; and what is at stake is of immeasurable importance.

If we remain united, I am convinced that we shall triumph and we shall belie all the pessimistic prophecies foretelling our decline. But it is essential that we remain united.

During the last 10 years the Atlantic alliance, as a primarily military organization, has fulfilled its main purpose: It has halted Communist expansion. This is, of course, a great achievement, but it is not enough. Our alliance must maintain its military strength with the most modern weapons of warfare and avoid being lulled into smugness by its past successes. Equally as important, the Atlantic alliance in the next 10 years must become a true community. It is this community of resources, interest, and ideals which alone can remove the threat of communism forever.

## What the Constitution Means to Me—Prize-Winning Essay by Charlotte Jo Pearson

EXTENSION OF REMARKS
OF
## HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. MUNDT. Mr. President, the term "good citizenship" can imply either a pleasant-sounding philosophy, or a working practice of devoted citizens.

One example of turning the philosophy into a working practice is carried on each year in the Daughters of the American Revolution good citizenship contests.

Typical of these events is the DAR program in South Dakota, where school children participate in writing essays on good citizenship. I think that providing our youngsters an opportunity to express themselves on the fundamental concepts of our democracy accomplishes more than mere writing exercise.

It provides the stimulus to these young Americans to not only learn more about the great heritage that has been given us, but also to take an active part as good citizens in preserving this heritage.

South Dakota's winner of the DAR good citizenship award this year is Miss Charlotte Jo Pearson, of Sisseton, S. Dak.

I believe students such as Miss Pearson typify the youth of America rather than do the stories of juvenile delinquency which so often appear in our newspapers these days. The delinquents may make the headlines, but their number is small; while it is the Charlotte Jo Pearsons who truly represent the great body of American youth standing ready to assume the tremendous responsibilities of good citizenship which will be thrust upon them as they step into their roles as responsible adults.

Mr. President, I ask permission to have printed in the RECORD the prizewinner essay in South Dakota's DAR good citizenship contest.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHAT THE CONSTITUTION MEANS TO ME

(By Charlotte Jo Pearson)

As an American citizen I have always taken our way of life for granted. Now, through education, I'm just beginning to realize why living in America is a precious privilege.

The Constitution, our plan of Government, was written over a century and a half ago. Through the years this amazing document, needing very few changes, has given individuals the opportunity of fulfilling their lives' goals.

My goals in life are not unlike those of other girls. After graduation from high school I plan to enter college and pursue the career of my choice. Eventually I hope to marry and raise a family. I am eager to take my place in society because there is so much to be seen and done, so many challenges to be met, and so much to be learned in a relatively short period of time.

Under the Constitution our basic freedoms of religion, press, speech, assembly, and petition as found in the first amendment are guaranteed. Our Government of the people recognizes the dignity and worth of each citizen. Because I live under this democratic Government, I have the opportunity of accomplishing my goals. It is now my duty to take advantage of my opportunities, to do more than is expected of me, and to be a good American.

## American Bar Association Criticisms of Supreme Court

EXTENSION OF REMARKS
OF
## HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "American Bar Does Civic Service Specifying Supreme Court Wrongs," published in the Houston (Tex.) Chronicle of February 21–27, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICAN BAR DOES CIVIC SERVICE SPECIFYING SUPREME COURT WRONGS

The board of governors of the American Bar Association late last year made certain pointed criticisms of the Supreme Court and its capricious decisions of recent years, particularly as to the High Court's invasions of States rights and the powers of Congress.

Meeting in Chicago, this week, members of the house of delegates adopted the report. As a result, the Supreme Court of the United States stands indicted before the American Bar and the Congress is asked to enact such legislation as will put a halt to the vagaries of an errant court.

In clear, sober language, the report demands of Congress that whenever and wherever the High Court rules in such manner as to weaken the internal security of the Nation remedial legislation be enacted forthwith. This recommendation comes out of a Snrpeme Court opinion which reversed the Pennsylvania conviction of a Communist conspirator and the subsequent necessity of dropping other prosecutions based elsewhere on State security statutes. Specific legislation is asked to give State security statutes concurrent jurisdiction and enforcement.

Of even greater gravity is the delegates' resolution asking that the "House continue to maintain a committee to investigate matters relating to national security with particular emphasis on Communist activities." As far back as the days of Representative Martin Dies, the House Committee on Un-American Activities has been a special target of leftwing and Communist criticism. The bar's strong support of the House committee is invaluable.

Nor is the bar association content to let the consequences of erratic Supreme Court decisions stand. It recommends prompt and careful study by Congress of the recent decisions of the Supreme Court and passage of amendments to the laws involved so as to remove any doubt as to the intent of Congress.

The house of delegates of the American Bar Association has done the American people a great and timely service, not only in spotlighting the errors of the Supreme Court and the dangers to which these errors expose us, not only in memorializing Congress for relief, but in informing the great mass of

the people specifically what is wrong and specifically what is neded to make our future secure from the conspiracy which is boring from within.

## Needed: An International Language

EXTENSION OF REMARKS
OF
### HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. HUMPHREY. Mr. President, the March 1959, issue of Parents' magazine contains a very interesting article entitled "Needed: An International Language." The article has been written by George J. Hecht, publisher of Parents' magazine.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEEDED: AN INTERNATIONAL LANGUAGE
(By George J. Hecht)

History tells us that in ancient Babylon the people who cradled our civilization tried to build a tower to reach heaven. But the tower became the Tower of Babel, according to the Bible, for "a confounding of the language of the people took place." In modern New York, a new tower, that of the United Nations, thrusts its shining mass skyward. But the realization of its aspiration—and with it the aspiration of the world—is threatened by our contemporary Babel: About 3,000 different languages are spoken in the world today, without counting the innumerable dialects that confound communication between peoples of the same land. In China, for example, hundreds of different dialects are spoken. In the new African State of Ghana, 5 million people speak 50 different dialects. In India, more than a hundred languages are spoken, a mere 14 of them official. What's more, as the old great empires break up and new states are spawned, new official languages are created at an increasing rate.

Thus, in a world recently made smaller by jet travel, man is still effectively isolated from his neighbors by the Babel-barrier of proliferating languages. Meaningful communication is blocked daily in scores of ways: travelers are handicapped; scientists in one country are unable to read and benefit by the work of scientists in another; the ways of international trade, world accord, of conferences between nations, scholars, technologists, humanists—are blocked at every turn. Even in the shining new tower in New York, speeches and discussions have to be translated and printed in the five official U.N. languages: English, French, Spanish, Russian and Chinese. Confusion, misunderstanding, delay, suspicion and hostility follow in the wake of our modern Babel.

How much dimmer are the chances for world understanding, if in the literal sense of the phrase, we all don't speak the same language? We stand in urgent need of a common tongue, an international language, one simple enough to be learned by travelers, businessmen, Government representatives, scholars and also by children in school.

Of course, this proposal isn't new. Just as everybody is against sin, so everybody is for an international language. But what with one thing and another—our natural state of drift as human beings, our rivalries, resentments and jealousies as nations—we have so far failed to do anything effective. I propose that we stop just talking about it, as Mark Twain said of the weather, and do something about it; that we make the concerted, massive effort it takes to reach international agreement on the adoption of a single, common, auxiliary tongue.

But first, let's take a quick look at the realities of the problem today. One of the principal barriers to the adoption of an international language is the fact that there is Babel even among the candidates for choice. A number of different simplified languages vie for the spot of the language, and their respective advocates defend and attack with the fervor of political campaigners. Basic English, for example, with its vocabulary of only 850 words with which virtually anything can be expressed, has many advocates. But the Soviet Union and many nations of Asia and South America object to it. Why English? they ask. Why not basic Russian, basic Spanish, even basic Latin?

In addition to basic's of the so-called natural languages there is another category—the so-called constructed languages of which some 600 more have made their appearance since the end of the 19th century, only to be doomed to almost immediate failure. The two best known survivors among them are, of course, Esperanto and Interlingua.

Esperanto was developed in 1887 by a Russian-Polish physician named Zamenhof who gave it to the world not under his own name but under a pseudonym, "Doktoro Esperanto" or "Doctor Hopeful." For 10 years before he published it, Zamenhof had worked on Esperanto which is based on absolute regularity and ease of grammar plus a Romano-Germanic vocabulary. By 1896, Esperanto had taken hold in Western Europe.

Interlingua made its appearance much more recently—in 1951—although its development took a group of international linguists nearly 30 years. In effect, Interlingua is Latin stripped of its difficulties—its introducer, Dr. Alexander Gode, refers to it as "a kind of 20th century kitchen Latin." And indeed, Interlingua can be read by most college-trained people almost at sight.

I am by no means an authority on the relative merits of the various proposed international languages. But Professor Mario Pei of Columbia University, New York, who is, and who has written a fine book, "One Language for the World" (published by the Devin-Adair Co., New York, $5), believes that it makes little difference which language or what kind of language becomes the international language, so long as agreement can be reached on any one.

For my own part, it seems to me that the main requirements of an international language are that it be easily learned, with the simplest possible spelling and grammar, phonetic pronunciation and the smallest possible vocabulary. With several hours of study daily, an adult should be able to master such a language within 3 months.

What can be done specifically to achieve the goal of a working international language? In my opinion, this: The United Nations Educational, Scientific, and Cultural Organization (UNESCO) should call a conference of leading linguists from each of its 80 member nations. (This includes virtually every major populated area of the world except the Peoples' Republic of China.) The purpose of the conference would be, as Dr. Pei recommends, to choose an already existing language agreeable to the preponderant majority of the nations represented. Such an agreement won't be easy. It may take more than one conference.

A first such conference should be called promptly. We are sorely in need of such a first step. Only with an international language in effect, with children learning it as their second language in schools all over the world, with the proceedings of the United Nations and UNESCO eventually being published in it, can we close the gap between the one world so recently established in terms of travel time, and the one world we hope for in human terms.

Because I strongly believe that the closing of this gap is an imperative without which international accord remains only a pious hope—I've taken it upon myself to try to implement this proposal. Since it's most unlikely that either UNESCO or the nations involved have funds available to finance the linguists' conference, I feel that one of the great philanthropic foundations, such as the Ford, Carnegie or Rockefeller Foundations, should make it possible.

I have already approached one of these foundations for such a grant—and been turned down. I shall approach the others in turn. If I am turned down by all, I shall look for other ways of making this conference possible.

I urge you as parents to do whatever you can in your communities to make this goal of one language for one world, a living reality for our children.

## Nineteen Hundred and Fifty-eight Highlights of Activities in Nicolet National Forest

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. WILEY. Mr. President, recently I received a résumé of the highlights of the 1958 activities in the Nicolet National Forest in Wisconsin.

These activities have included a variety of constructive accomplishments—similar, of course, to the activities in other forest areas across the Nation.

We recognize that over the years the preservation of our forest lands has made an important contribution to the economy, as well as to the enjoyment of our people.

During 1958 in the Nicolet Forest, for example, considerable progress was made toward timber harvesting and tree planting, development of recreational sites within the forest, constructive fish, game, and wildlife projects, participation in educational tours to interested students, teachers, and other groups, and other constructive activities.

Significantly, the management of our national forests is not, as some might think, solely a matter of cost to the taxpayer. As a matter of fact, it is a pleasure to point out that within the past 10 years, the income from the Nicolet Forest program has amounted to about $1.7 million. Of this, about 25 percent goes to the local counties in lieu of taxes; the remaining portion is turned over to the Treasury.

Currently, there are a number of measures before Congress relating to forest preservation, improvement, and expansion. To provide wider familiarity with the constructive accomplishments now

being achieved within our forests, I ask unanimous consent to have the résumé of the highlights of the Nicolet National Forest received from Mr. K. P. Butterfield, forest supervisor, of Rhinelander, Wis., printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HIGHLIGHTS OF SOME OF THE ACTIVITIES OF THE NICOLET NATIONAL FOREST IN 1958

Markets for wood products in 1958 were poor compared to previous years. Consequently, we did not make much progress toward attaining our goal of a harvest of 66,000 cords of pulpwood and 5,200,000 board feet of sawtimber. However, we were able to do about the same amount of business as we did in 1957. The situation for 1959 looks considerably better and we hope to increase timber production considerably in the next 12 months.

Other timber management activities were carried out at a more or less normal rate. These include tree planting, timber stand improvement, insect and disease control. The Saratoga spittlebug and pine sawfly continue to give us trouble in our red pine plantations. It was necessary to spray 4,239 acres in 1958.

I am happy to report that we had no serious fire situations during the year. Thirty fires burned 143 acres during 1958, compared to the average during the last 5 years of 26 fires and 79 acres. Although, as can be seen from these figures, the 1958 fire occurrence was greater than the 5-year average, it is not serious considering the unusual amount of severe fire weather that we had.

Considerable progress has been made on Operation Outdoor during the year. Thirty-two new camping and picnicking sites were established. In addition, 40 sites were rehabilitated and modernized. One new area on Seven Mile Lake in Forest County containing 11 camping and 6 picnicking sites will be ready for occupancy at the beginning of the camping season. Visitors continue to increase. There were an estimated 47,000 recreational visits in 1957 and 56,000 in 1958 at camping and picnicking areas alone.

The work in game and fish management has been given a boost by the employment of a wildlife biologist. He is Mr. Roger Kirkman, who has been with us since September. All of our work continues to be done with the excellent cooperation of the Wisconsin Conservation Department. Together we have been able to survey 145 miles of fishing streams which are now being classified as to suitability for trout management. As soon as the data collected has been compiled and analyzed we will have a good base for planning a stream improvement program.

Deer harvest increased slightly over 1957 under the party permit law, but it was not great enough to reduce the herd to a point where it can live safely on the available range. Some additional access roads have been built to provide access into the more critical areas as an inducement to hunters. A great deal more needs to be done. The inadequate harvest of deer continues to be our greatest land management problem.

No annual report about the Nicolet would be complete without mentioning Trees for Tomorrow. In cooperation with that organization the National Forest Rangers conducted some 1,500 students, teachers and other groups to points of interest throughout the forest.

The attached fact sheet gives some statistics on the national forest and its activities:

*Some facts about the Nicolet National Forest, 1958*

| | |
|---|---|
| General information: | |
| Gross area of forest (acres) | 988,853 |
| Net national forest ownership acres | 638,923 |
| Area protected from fire (acres) | 937,453 |
| Number of developed recreation areas | 28 |
| Fishing streams (miles) | 840 |
| Lakes (number, 207) (acres) | 34,614 |
| Yearlong employees | 28 |
| Seasonal employees | 60 |
| Area planted to date | 69,614 |
| Accomplishments during the year: | |
| Timber sold (pulpwood) (cords) | 39,000 |
| Timber sold (sawtimber) (million board feet) | 2,400 |
| Timber harvested (pulpwood) (cords) | 53,000 |
| Timber harvested (sawtimber) (million board feet) | 2,500 |
| Tree planting (acres) | 203 |
| Timber stand improvement (acres) | 6,107 |
| Insect and disease control (acres) | 4,239 |
| Roads maintained (miles) | 416 |
| Roads constructed (miles) | 10 |
| Number of recreational visitors to the forest | 301,000 |
| Number of hunters | 49,000 |
| Number of fishermen | 83,000 |
| Total national forest receipts | $179,753 |
| Receipts per acre | $0.28 |

| | |
|---|---|
| Receipts returned to counties for local schools and roads: | |
| Florence | $5,691 |
| Forest | 23,533 |
| Langlade | 2,181 |
| Oconto | 9,585 |
| Oneida | 703 |
| Vilas | 3,245 |
| Total | 44,938 |

## Administration of the REA Program

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter received by me recently, from a lady in the State of North Dakota, in regard to the REA program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. WILLIAM LANGER,
*Senate Office Building,*
*Washington, D.C.*

We members of the Vesta Farmers Union Local, Walsh County, gathered in the city hall at Adams, N. Dak., for the regular monthly meeting on February 20, after discussing the attacks made by the present administration on our REA program passed the following resolution:

"Whereas electric power is of utmost importance in our lives on the land and its use is being greatly increased every year to the extent that present REA equipment must in many cases be replaced by more adequate facilities and as many rural areas are developed requiring REA service; and

"Whereas REA is bound by its area coverage covenant to serve all rural areas regardless of location; and

"Whereas REA came to the rescue of our rural people when private utilities ignored this segment of our population even when low-cost Government funds were made available to them: Therefore be it

"*Resolved*, That we urge our entire delegation in Congress to:

"1. Support legislation which will make adequate Federal funds available to REA for lending purposes.

"2. Continue the present 2-percent interest rate as provided by the Pace Act of 1944.

"3. Return the lending authority to the REA Administration as provided by the original REA Act.

"4. Impose no unfair income tax on REA or other nonprofit cooperative association."

Respectfully,

Mrs. JOHN L. JOHNSON,
*Secretary.*

## The Communists' Most Deadly Weapon: Brainwashing

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address given by Mr. Edward Hunter, who first analyzed for the world in his classic book, "Brainwashing in China," the diabolical use of psychiatry, not to heal mental illness, but to produce it. The Communist objective is not that of former conquerors—to seize land and possessions. It is to gain control of man—the mind of man, the soul of man, the whole of man. It cannot be denied that they will continue to make gains, here as well as elsewhere, until we wake up as a people, analyze this new type of total warfare, develop effective countermeasures to defeat its program of subversion and positive measures to further our own philosophy of freedom. It is for the accomplishment of these all-important tasks that the Freedom Commission and Freedom Academy are proposed in H.R. 3880 and H.R. 3881 introduced by Congressman HERLONG of Florida, and myself.

The address by Mr. Hunter follows:

MILLIONS OF CHILDREN BRAINWASHED—TO DESTROY AMERICA

There is something particularly reprehensible about taking helpless babies and trusting children, with their truly pure minds, and deliberately planting evil ideas into them, deceiving them into accepting falsehood and crime as good and true.

Dickens' character, Fagin, is a particularly loathsome creature to us, but far more loathsome is he who goes even further than Fagan, and teaches not only the tricks of thievery but calculatingly deforms little minds into unnatural, sick patterns. We do not even attribute such bestiality to the devil.

Yet the Reds are doing it. It is the smaller children now, those still babies in arms, against whom the Communist hierarchy aims

its most intensive propaganda pressures, literal braining of a clinical, hospital nature.

Children have always been the target of the Red network, but usually after they reached school age. Never before have they been so methodically seized while so very young, out of the very arms of their parents; never before with such mad singleness of purpose.

We know that students who had never been taught anything but communism fought it in Hungary with their bare hands. We should know that never before did a people cast a greater vote of nonconfidence in a regime than did the Chinese, in the brief period of the "Hundred Flowers" movement of plain-speaking, during the less than 6 weeks before the Communist Party angrily called it off, replacing it by a purge.

As a consequence of these setbacks, the Peking-Moscow Axis made a cold reapprisal of tactics. They should have taken a new look into the rationality of communism, to determine whether it wasn't fundamentally wrong and unworkable. Instead, they made a study of the strategy used in enforcing it, "the better to devour you with, my dear little children," as the wolf said to Little Red Riding Hood.

The world has seen the burning hatred displayed against the Reds by the Hungarian people in their revolt. But too few of us know that Red China is a land of continuing revolt. During the "Hundred Flowers" movement, instead of criticizing inside of the approved political framework of all roads leading to socialism (by which communism is meant), the Peking Government was denounced and cursed and warned that the people would rise up and kill the Communists.

A flood of hatred poured like hot lava out of every stratum of Chinese society, in the professions and among the students and intellectuals, even among Communist functionaries, some holding high positions.

Editors who ran stories about it later confessed that they had opened their pages freely to this material because it represented their own sentiments, too.

FOREIGN AID CANNOT COMPENSATE FOR U.S. INDIFFERENCE

What was the reaction of our country, which we proclaim the home of the brave and the land of the free?

Put yourself in the place of people abroad, and you will understand why our stock has fallen so low, after the way we let down the Hungarian freedom fighters, and the way a concerted campaign attempted to hush up the anguished Chinese cries with indecent demands that we even turn over more Chinese people to the Red maw. We haven't enough dollars to funnel out in our aid programs to counterbalance the reputation thus sadly lost.

Meanwhile, the Red hierarchy resorted to new control measures, setting up a network of communes in China that spelled out the utter destruction of the family—not merely the family system—but the family as such.

All women were sent into the fields and factories to labor and into dormitories to sleep. The line between the person called prisoner and the individual called free was erased in China; the same collective prison life was imposed on both. Slave labor took over from the prison and the village alike. Babies were taken from their mothers, to be raised and indoctrinated collectively.

Children between 9 and 13 were organized into supplementary youth production corps and males of 13 to 60 were put into work battalions, all militarized. One estimate by Taipei says that 25 million children were taken from their homes and placed in state nurseries.

This is the Pavlovian system, now applied generally and cunningly throughout the Soviet Union, from Leningrad to Tashkent. It is being applied even more rigorously, but sloppily and much less scientifically, in these new Chinese communes.

Pavlov showed that predetermined reactions could be induced in dogs and monkeys by ringing bells and flashing differently colored lights. For humans, the Reds have substituted words and slogans—often along with the bells and lights. A controlled environment is absolutely necessary for this.

It goes back to Marx's mad vision of a so-called "New Soviet Man," who would rise almost overnight—and naturally. Lenin, who saw that nothing of the sort could happen, took recourse in Pavlov's experiments, to try to bring it about by force.

But, Hungary and China are evidence that, even when people are brainwashed for years, if given the chance, they will destroy the Red network. Realization of this was what made the power-mad Red leaders extend their psychological warfare all the way to the cradle.

They intend to raise a generation that can have no memories except false ones, that will be utterly insectivized, expecting nothing as individuals, everything only in the collective, that will look upon the Communist Party as mother and father, and the sole repository of faith.

Of course, this is sheer madness and cannot work. Left to itself, it would explode. Only by inducing the free world to betray its own principles and to doublecross the tortured peoples in the Red lands can communism save itself.

This is the task it has given to us. This is the mission of the Mikoyans; he is the perfect emblem, a murderer in Budapest and the gigolo in American economy.

With all the toadying we did for Mikoyan, and all the opportunity we gave him to soften up the Americans during his recent visit, he couldn't control our environment—and that was his Achilles heel.

Our Hungarian and other refugees awoke us from our trance state by constant reminders who he was. These refugees from Communist horrors might yet save America. They, at least, have saved our honor. What more wondrous repayment could they make for the haven our country has given them.

Our softening up, as part of the brainwashing pattern, is the objective of the pro-Red coexistence movement, in which cultural exchanges work out as a pro-Communist operating arm. We had an introduction to it in the Bolshoi Ballet with its accompanying horde of secret agents, and in Mikoyan's barely concealed anti-American propaganda while a guest of the United States Government.

Is anyone fooled by the obvious hoax that he came uninvited, as a tourist? He engaged scathingly in overt and covert psychological warfare while on our shores. Why blame Moscow and Pekin for it? We let them get away with it.

Haven't the Red theorists all along maintained that we will dig our own graves? Isn't this exactly what the free world has been doing? It is a matter of character, of convictions. These examples of how easily we bite at the Red bait are powerful pressures exploited by the Reds against their own peoples, to deprive them of all hope.

REDS PLAN A ROBOT ARMY

Meanwhile, babies and the youth generally in Red China are being brainwashed by Pavlovian techniques into regarding the free world as a symbol of everything that makes them unhappy, of what must be wiped out before they can enjoy the Communist paradise. Persia's "Old Man of the Mountain" perpetrated no greater deceit.

The Hungarian revolt rid communism of its ideological mask, and showed it nakedly as a sheer power system, the hordes of Genghis Khan all over again.

This new Pavlovian rape of the children's minds reveals the objectives of the revised Red strategy as the formation of new janissaries, a robot army, that will be available to march or fly anywhere, against any part of the earth that remains uncommunized by then.

The children on China's mainland are given texbooks that teach hygiene of the body on one page, and political hygiene on another page, representing ourselves as the bacteria.

This is no new policy. We have tried to forget it, and to hush up the books that told us. Try to get them at your bookshops. Have we forgotten the kidnapped Greek children, and the so-called Little Devils recruited by kidnaping by the Chinese Red armies? And the little boys and girls in Korea who were taught that American soldiers were handing out poisoned candy? And the classroom songs that breathe the hatred of America?

Woe be to whatever man or nation collaborates wittingly or unwittingly in such an evil design. We will not be able to hide behind any such flimsy diplomatic evasion as the Communist code word of noninterference, which Adlai Stevenson found out in his interview with Khrushchev meant only one thing to the Reds—noninterference in Communist intrigue, espionage and expansion anywhere in the world, even on American soil.

Stevenson said that events inside the Communist world are none of the West's business, Khrushchev told him it must stand aside while his new system of society exploits the nationalist awakening and social unrest in the world, and spreads from country to country.

When Red leaders expose their doublethink so openly, how can any man or woman claim ignorance as an excuse?

The longer we ignore, the more the cancer spreads. Face to face with this sickness in our world, no man can call himself guiltless who does not oppose it every way he can, and no man can hope to escape the price for his sins of omission.

## West Point Day

EXTENSION OF REMARKS

OF

## HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 18, 1959*

Mr. KEATING. Mr. President, I have prepared a statement regarding the celebration of March 16 as West Point Day throughout New York State. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

March 16 was celebrated throughout New York State as West Point Day. Carrying on the tradition of his predecessors, Gov. Nelson A. Rockefeller issued a proclamation in honor of the anniversary of the establishment of the U.S. Military Academy.

We in the Empire State are proud that this bastion of our military strength is located in our midst. We are proud of the fine record established by graduates of the Academy, for over the years they have written their names boldly and gloriously on the pages of our Nation's history. In war and in peace, their distinguished performances have reflected great credit on their alma

mater. For at West Point, these young men learn not only the skills of war, but the ability to lead in time of peace.

Often, I believe, we tend to overlook the many, many ways in which our Army contributes to the Nation's welfare in peacetime by means other than strictly military activities. Through the Corps of Engineers and numerous other programs, the Army contributes greatly to our internal strength.

As Governor Rockefeller noted in his proclamation:

"In the new challenges which confront us, West Point men are in the vanguard of those not only coping with today's problems, but also preparing to meet those of tomorrow."

We in the United States can truly look to the future with confidence, secure in the knowledge that West Point graduates, in cooperation with their fine brothers from the other service Academies, will be constantly on the job.

I am proud to take this opportunity to salute the men and traditions of the U.S. Military Academy. As we pause to observe another West Point Day, we can be confident that the Academy's future graduates will continue to hold high the famed heritage which has brought security and progress to our Nation.

## Tribute to Representative Leo W. O'Brien, Sponsor of Statehood for Hawaii

EXTENSION OF REMARKS
OF
### HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. CHURCH. Mr. President, with Hawaii approaching the hour when she assumes her well-deserved membership in our Union of States, I am sure we all share the pride and the pleasure of her people and her many friends in this great accomplishment.

It was my privilege last fall to visit Hawaii, with a five-member delegation from the Senate and House Interior and Insular Affairs Committees, and I returned more than ever convinced that Hawaii should become a State.

A member of that delegation was Representative LEO W. O'BRIEN, of New York, the articulate and determined voice for Hawaiian statehood in the other body. No man could have been a more delightful or interesting companion, and it was my pleasure to enjoy his company much of the time the delegation was in Hawaii.

While we were there, the Honolulu Advertiser of November 28, 1958, published what I consider to be an excellent word portrait of LEO WILLIAM O'BRIEN of New York's 13th Congressional District. I take this opportunity to request the insertion of this news article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEHOOD FOR HAWAII WILL COST O'BRIEN JOB

(By Al Goodfader)

LEO W. O'BRIEN, a smiling Irishman from upstate New York, has taken over the headlines here in his efforts to work himself out of a job.

He's the man who will spearhead a drive to make Hawaii a State within the next 2 years. If he's successful, he'll lose his job as chairman of the Territories subcommittee of the House Interior Committee. The committee won't have any business to conduct.

O'BRIEN is determined to finish a double play that will place his name in American history books. He was successful last year in leading Alaska to statehood. He's confident Hawaii will become a State within 2 years.

He and his colleagues are here informally investigating Hawaii's fitness for admission.

At 58, O'BRIEN has spent more time writing about the news than he has in making it.

He was a newsman for more than 30 years before his first election to Congress.

He's worked for the New York Times and other papers in New York State. He headed the International News Service bureau in Albany, the capital of New York, for 25 years.

He covered the presidential campaigns of Al Smith, Franklin D. Roosevelt, and Thomas E. Dewey.

When he branched out into television commentary, he won the Sigma Delta Chi (professional journalism society) and Ohio State University awards for excellence as a commentator.

Then, in April 1952, the Democratic Party in Albany offered O'BRIEN its nomination in a special congressional election. He's never looked back.

He beat his opponent for reelection to his fifth term this year by more than 50,000 votes. He credits his statehood activities for part of his election bulge.

But his manner probably helped also. He's a quiet man who unleashes the force of his convictions indirectly. He makes his points with a quip. But if they are challenged, O'BRIEN's ruddy face draws into earnest lines and he leans toward the speaker to reason intently.

His path and that of Hawaiian statehood endeavors crossed accidentally. When he first went to Congress he was stuck on the Interior Committee because there weren't any other committee assignments open.

He first became concerned with Alaska's and Hawaii's cause when two bills proposing their admission were being debated on the floor of the House.

"I noticed that they were defeated largely because a man from New York pinned the Communist tag on Hawaii," he says. "I thought that rather unfair when you consider the number of Communists in New York State."

The man from New York was Representative JOHN R. PILLION, O'BRIEN says. They became antagonists on the statehood question although a previous personal friendship has remained unshaken.

That 1955 experience also convinced O'BRIEN that the two bills should be separated.

He followed that conviction last year, leading off with the Alaska bill. The plan then was to pass the Alaska bill in 1957, then bring in Hawaii.

His newspaper friends told O'BRIEN he was naive in thinking he could pass either.

It took some doing. He ran into a filibuster in his own committee. He says he made a mistake in giving Alaska opponents free rein to maneuver against it.

Then the Rules Committee of the House dragged its feet. By the time O'BRIEN had outflanked that road block in 1958 it was late in the congressional session. Too late, he says, to try for Hawaii.

The decision to wait until next year was his, O'BRIEN says.

He wants the bill to be a fresh issue. He's sure it would have been defeated if it entered the last minute-log-jam as Congress was heading home this year.

He hopes to have the Hawaii bill up for a vote in the House before the Easter recess of 1959. Then, he thinks, senatorial opponents won't be able to filibuster it to death when it reaches the Senate the same year.

"It's possible the Senate could block it during the first year (of the next Congress)," he says, but not in 1960. He feels there are enough votes in the Senate to pass Hawaiian statehood after the filibuster ends.

What's in it for him?

He's happy about the fact that Alaska is going to name a small body of water "Terence Lake" after one of his grandchildren.

"I just happen to have some other grandchildren," he told a reporter.

"If you happen to have an unnamed small volcano over here——"

## Extravagant Handouts by the Government

EXTENSION OF REMARKS
OF
### HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 18, 1959*

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the California Grange News. This editorial endorses my position that there should have been a limit on payments to large farmers under our agriculture program.

Our present agriculture law is underwriting the expansion of the large corporate type farming at the expense of the small family type farm.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HURRAH FOR SENATOR WILLIAMS

The revelation that 10 large farm operators in 1957 received a total of $500,000 from the Government in soil bank payments plus an additional $3,500,000 in price support loans comes as something of a shock to a number of Congressmen.

One of them, Senator JOHN J. WILLIAMS, of Delaware, has made two speeches in the past few weeks on the extravagance of these Government handouts.

He cites a large operator in Stratford, Calif., who in 1957 received $854,450 of price supports on cotton and another $129,942 for placing 1,293.9 acres in the soil bank.

WILLIAMS points out that the purpose of these programs is to help the family farmer, yet actually the opposite is the inevitable result. "The time is long overdue," he said, "when Congress should recognize the unfairness of the present program not only from the standpoint of the American taxpayers and the American consumers but also from the standpoint of the bona fide family farms."

This kind of talk from a Congressman is precisely the sort the California State Grange likes to hear. For the past 3 years State Grange Master George Schlmeyer, in all parts of California and the Nation's Capitol as well, has been thumping upon this point.

Whatever the program adopted to relieve the economic pressure on the farmer, the Grange leader has said, a limit must be placed upon the amount any one producer

may receive. Otherwise, the program planned to aid the small will only further enrich the big operator.

This rule, the State master has emphasized, applies equally to the soil bank, acreage reserve program, price support, any form of the Brannan plan—and any other new idea which comes along.

## Effects of the New Farm Law on Cotton Producers

EXTENSION OF REMARKS
OF
### HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. SMITH of Mississippi. Mr. Speaker, Mr. George C. Cortright of Rolling Fork, Miss., is one of the outstanding agricultural leaders in the country. I am proud of the recognition he has received in being named president of the American Cotton Producer Associates, and I am sure he will have a distinguished record as head of that group. As chairman of the agriculture committee of the Delta Council, and as president of the council for 1 year, Mr. Cortright has given valued service to the Nation's agricultural community. In these many capacities he has appeared before several congressional committees, and he is well known in agricultural circles, currently serving as a member of the Cotton and Cottonseed Research and Marketing Advisory Committee.

Mr. Cortright published an article in the Cotton Trade Journal on the effects of the new farm law on cotton producers, and I think it is one of the best brief summaries of this law that I have seen. I am glad to have this statement in behalf of the bill, which we worked out last year after so long a struggle. I think everyone who is interested in agriculture will be interested in Mr. Cortright's article, and under unanimous consent I include it here:

EFFECTS OF THE NEW FARM LAW ON COTTON PRODUCERS

(By George C. Cortright, president, American Cotton Producer Associates)

Many Members of the Congress when engaging in between-session discussions of the Agricultural Act of 1958 with their constituents, began by saying "I voted for S. 4029; but—." One would infer that they were half apologetic for their support of this act, and had serious misgivings as to the wisdom of its enactment. True, the new farm bill is not perfect, not a panacea for all of cotton's ills, but it represents a major step toward meeting cotton's problems in a realistic manner. While all of no one individual's thinking is incorporated into the bill, it contains the composite best compromise of ideas in the Department of Agriculture, farm organizations and the cotton industry. Such legislation often serves the national interest better than that developed by single individuals or interest groups.

No producer, indeed no segment of the cotton industry, is due an apology for anyone's support of the bill. Its merits, as the merits of any situation, must be judged on a basis of the alternatives. How then does it affect producers and what were the alternates?

A drastic cut in acreage at the national level that was inevitable under the then current law was avoided. This cut would have been 22 percent below the 1958 allotments, which many producers believed was too small to permit development of efficiencies. The provision pertaining to the national reserve for small farms expired in 1958, so the actual cut to individual farmers in States having a large number of small farms would have been still greater. For many this would have meant the end of cotton production as a major farm enterprise. Additional reductions of 22 to 25 percent would have forced some farmers out of business.

By providing a choice program, the bill enables farmers to make their own decisions in 1959 and 1960, and those who feel that they can produce cotton with less price protection can expand their acreage. It seems a dilemma has been created by permitting producers to have a free choice between two options. The mental gymnastics and contortions some are subjecting themselves to are ludicrous. For them though, this is a healthy dilemma for it forces a thorough reappraisal and reevaluation of all phases of their operations. Farmers who choose to increase acreage will still have a stop loss loan that can be used as an orderly marketing tool. An expanded acreage will permit those who have good land, equipment, and labor available to lower per unit production costs provided that yields can be maintained.

The acreage reduction required by the bill for farmers who do not feel that it is to their advantage to increase acreage has been minimized. An inevitable 22 percent cut in the national allotment has been reduced to about 8 percent. Little change will therefore be required in their farming operation as compared to 1958. Then, too, these farmers will be insured a price about equal to that for the 1958 crop.

The provision in the bill providing that any farmer who had an allotment of 10 acres or less in 1958 will not have to take a reduction in future years is of major political, economic and social significance. Sixty-six percent of the farms growing cotton in the United States had allotments of 10 acres or less in 1958. In some States this figure exceeded 80 percent, and in one State it amounted to 98 percent. The cotton acreage, however, on farms of this size group accounts for only 16 percent of the total cotton acreage. This provision therefore virtually solves one of the greatest headaches connected with the cotton program. While many of these small producers will probably go out of production as a result of the soil bank termination and for other reasons, they will not be legislated out of the picture.

Cotton has suffered sharp losses in markets under current pricing policies. The domestic consumption has declined steadily in recent years, primarily because of market losses to rayon, which has sold for a cheaper price. This trend gave every evidence of continuing at an accelerated pace until only 5 to 6 million bales would be consumed annually in the United States. Cotton farmers therefore faced dwindling markets and continued reductions in acreage. The new farm bill will make cotton more competitive price-wise with rayon. It will also guarantee a more stable supply of the grades and staples needed by the mills. At the termination of the option features in 1960 and with the institution of a single support level for all, 70 percent in 1960 and 65 percent thereafter, based on the average grade and staple of the crop; cotton should then be fully competitive with domestic rayon. Instead of dwindling markets, there is now hope for expanding markets in the future.

The bill also safeguards the export program by providing that nothing in the act should be construed to affect or modify the provision of the Agricultural Act of 1956 which directs that such a program be initiated and that such quantities of cotton be offered and sold as will reestablish and maintain a fair historical share of the world market for U.S. cotton. This section is of major importance to producers since it specifically gives the Secretary of Agriculture full authority ever to maintain foreign markets on which the U.S. cotton producer is dependent. This provision becomes even more significant in the light of the trade war that is now taking shape between Communist-dominated countries and the free world. It could well be the deciding factor in the battle for markets through which the Communist bloc seeks to extend its sphere of influence. Should such a battle for markets develop, producers could not pay the price for fighting it alone since two-fifths of their market would be involved.

Those sections of the act that deal with the method of determining the national marketing quota will give much stability to the level of planting on individual farms in future years. With average yields per acre advancing rapidly the minimum allotment consistent with 10 million bales appeared extremely low. This minimum was changed to set the national marketing quota at the greater of:

1. The number of bales needed to provide a normal supply of cotton (the basic formula).

2. Ten million bales or one million bales less than estimated domestic consumption plus exports.

3. Bales required to provide a national acreage allotment of 16 million acres.

Thus, after 1961 the annual variation of farm allotments should not exceed 7 percent and never be below the allotments offered under the A option in 1959.

It is true that the new farm bill will not immediately solve all of cotton's problems. It will not regain markets overnight. It assures manufacturers that the price of cotton will be more competitive in the future and that the supply will be more stable. It gives hope to the volume-dependent segments of the industry: ginners, crushers, warehousemen, shippers. It permits the futures market to fluctuate in a wider range and should stimulate hedging opportunities. It provides producers with a transition period during which they can make needed adjustments, and enables each to plan his production for the next 2 years based on his own individual capabilities and desires. It is constructive, forward-looking legislation. It deserves the support of the entire industry.

## Rockland Plans Tests for Cancer

EXTENSION OF REMARKS
OF
### HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the New York Times of March 12. I know it will be of great interest to us all, because we are all deeply interested in anything that can help us to eradicate one of the greatest scourges in our midst: cancer.

Mr. Speaker, the plan described in the article is being carried forward in Rockland County in my district. The plan is a detection plan and we know that the early detection of cancer is essential to its cure. Lawrence deNeufville, Mrs. Coyle, and Mrs. St. Lawrence are to be congratulated, as are many others in Rockland County, who are working for what we all hope will be a most successful

program. It is something that may well sweep the country if it proves to be as successful as the sponsors and workers believe it will be.

ROCKLAND PLANS TESTS FOR CANCER: MASS DETECTION PROGRAM TO BEGIN IN APRIL, WITH COST CUT TO $25 A PATIENT

SPRING VALLEY, N.Y., March 11.—Plans for a countrywide cancer detection service were announced here tonight by Alan Stevenson, executive director of the New York State division of the American Cancer Society.

Rockland County has been selected for the experiment, which it will begin in April and will be carried out by the Rockland County Medical Society in collaboration with the Rockland County unit of the American Cancer Society.

Only Rockland County residents who are free of symptoms, regardless of age, will be eligible for the detection examination, which may be arranged at the Friendly Red Door in New City. Mrs. Harry Coyle, county director of the Rockland unit, will set up the program.

The medical society has assembled a panel of physicians to perform the examinations. The patient may select any physicians to perform the examinations, from an alphabetical list. The doctor's office will be the focal point for the examinations, which include X-rays, blood studies and smears.

This type of screening examination ordinarily would cost more than $75, according to Lawrence deNeufville, president of the Rockland County unit. In this project, however, the cost will be $25.

The applicant must fill out at home a history sheet. He also will receive a specimen kit and will arrange for a lung X-ray. All specimens will be examined in either the Nyack Hospital or Good Samaritan Hospital in Suffern. Reports will be made to the physician selected by the patient.

Mrs. Joseph I. St. Lawrence, a director of the local unit, will be in charge of publicizing the drive and organizing large groups such as employees of the larger local industries to participate in the program. The American Cancer Society will send observers, who will prepare for the installation of the program nationally.

---

## Danger: Pollution

EXTENSION OF REMARKS

OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the Appendix of the CONGRESSIONAL RECORD an article from the International Operating Engineer of October 1958 entitled "Danger: Pollution."

DANGER: POLLUTION

Signs such as the above are appearing with greater frequency along some of America's streams. These signs spell out the unpleasant fact that water pollution is one of our most critical problems. Behind these signs is a long and complicated story, a story of population growth, industrial expansion, waste of resources and a failure of America to keep pace with its needs for one of our simplest but most important resources: Clean water.

Most people realize the importance of water in every day living, but few realize its importance in industrial use. The growth in demand for good water is spelled out in figures of astronomic magnitude.

In 1900 our 75 million people were using about 41 billion gallons of water daily. A half century later, the population had doubled, but the demand for water had risen to 185 billion gallons a day—almost 5 times as much as in 1900. Today our population is 175 million and our industry is expanding tremendously to meet the greater stepped-up demands.

Water is the most important single resource in industrial manufacture. It takes 18 barrels of water to refine a barrel of oil and 300 gallons of water to make a barrel of beer and 10 gallons of water are used refining a gallon of gasoline. Some 250 tons of water are used in handling a ton of sulfate wood pulp and from 600 to 1,000 tons of water are used for each ton of coal burned in a steam powerplant. A large paper mill will use more water each day than a city of 50,000.

While our industry is growing and our population is exploding all over the landscape, another heavy demand is growing in the use of water, the water of our streams and lakes. This use is the composite of needs shown by the recreation industry—fishing, swimming, boating. Recreation in these days of shortened workweeks and increased leisure through union-won vacations has become a major American industry. The sales of fishing licenses is growing with astonishing degree. In the most recent national survey by the U.S. Fish and Wildlife Service almost 12 million people hunt and 21 million people fish.

The number of boats being used is increasing year by year as more and more water enthusiasts take to the water for power boating or sail boating. And swimming has always been a popular sport in America.

The whole business of water use is complex. Irrigation uses billions and billions of gallons daily in what the experts called "consumptive use" whereas those engaged in recreation are both "nonconsumptive" and "nonpolluting." On the other hand, cities and towns and industries consume water and pollute it. The conflicts arising over the many and complex needs for water is leading to serious problems in the availability of good water.

While these many demands for water have been growing another development of almost tragic proportions has been taking place: pollution. Water is polluted by soil runoff caused by erosion or careless land use. Erosion grows progressively and as the runoff increases so does the silt which is taken to the streams to pollute the streams and fill up reservoirs behind our great dams.

The other form of pollution are wastes—sanitary sewage and industrial wastes. Sanitary sewage includes most of the material which goes down the drain through the sewer system: water from toilets, bathtubs, sinks, washings from restaurants, laundries, hospitals, hotels, etc. Industrial wastes include oils, greases, chemicals, animal and vegetable waste discharged by America's factories.

America used to be a rural Nation, but today most of our people live in city or urban areas. This means that a heavier burden is imposed on our sanitary system. When our population was smaller and largely rural, our streams were able to handle the burden of waste. But when the streams are overloaded they cannot handle the burden. The wastes thrown in the rivers use up the oxygen in the water and when the oxygen is gone, life is gone. Thus with pollution comes death to aquatic life and an end to fishing. In other words the water is dead.

Polluted water is dangerous water—dangerous to health and in most situations worse than no water at all. One of the most telling effects of pollution was stated by Charles H. Callison, director of the National Wildlife Federation in testifying before a House committee. He said:

"The contamination of the public water of America by dumping untreated sewage and industrial waste into the water is nothing more than literal, physical destruction of natural resources. What happens when a stream is befouled and poisoned by pollution?

"Industries requiring clean water for their processes have to seek plant sites elsewhere.

"The water cannot be safely used for swimming, boating, water skiing, or other forms of aquatic recreation. Parks and playgrounds along the shoreline must be posted with warning signs.

"Farmers cannot use the streams to irrigate their fields or water their livestock.

"Fish die in these waters. Waterfowl and other wildlife shun them.

"Real-estate values decline along the polluted river, because no one wants to live above the stench of an open sewer * * * all this is sheer waste. It is worse than waste; it is needless destruction of natural resources that this Nation can no longer afford."

America is faced with the water pollution problem which demands attack on a broad front. We have only so much water. We will not have more. We must make better use of what we have and quit wasting it through destructive pollution. The cities and towns which have been polluting the streams are awakening to the problem as is the Federal Government.

In 1956 Congress passed the Federal Water Pollution Act to be administered by the U.S. Public Health Service and here is the way we stand on the construction program encouraged by the practical application of the act.

As of the first of this month 1,203 offers of grants under the law had been made to cities and towns. These Federal grants provide 30 percent of the eligible cost of sewage treatment plants or $250,000, whichever sum is less. This may not seem like a large grant and it is not to cities, but to smaller areas $250,000 is a substantial lift.

By the first of this month $101,330,686.24 had been made in grants under the Federal Water Pollution Act. These grants will aid in the cost of about $464 million in treatment plants. Almost 600 plants are actually being built in the United States and about 200 have been completed with Federal aid. These range in size from small plants serving a local community to facilities of substantial size in our major metropolitan cities.

But these figures do not tell the whole story. Public health experts who live with this problem of pollution says that we should spend $575 million a year on sewage treatment plants each year for the next 8 years—just to catch up with the need and to handle the expanded needs and growth during this 8-year period. If we ever do catch up, no one will hazard a guess or an estimate as to how much will be needed to keep abreast of needs.

Conservation of the Nation's water supply for all needs is a problem of top priority, experts agree. A recent Rockefeller study of the national economy gives an estimated expenditure need for water supply and disposal at from $2.7 billion to $3.5 billion by 1967—which is at the rate of triple the 1957 expenditures.

The construction industry and construction tradesmen have a great stake in these needs. We are told that $1.4 billion is needed now for completely new treatment plants and another $321 million for enlargements and additions.

The cities and States are becoming alarmed at the pollution problem and a host of committees, authorities, organizations, and special groups have been created to do research,

activate legislation, and do what it takes to attack the pollution problem.

As the cities clean up their problem, attention on antipollution efforts will be directed to industry. And the story in industry is spotty indeed. Some forward-looking industries have realized that it is plain good business to look after pollution problems immediately while others have lagged. No one knows, not even the U.S. Public Health Service, how good a job is being done—or how bad.

If no one knows how much industry is spending, there are those who will hazard a guess. W. F. Bixby of the B. F. Goodrich Co., speaking before the Kentucky-Tennessee Industrial Wastes & Sewage Works Association last year said that 50 companies, according to a survey, are spending $18 million a year on water and air pollution elimination. "If this activity is typical," adds Mr. Bixby, "industry as a whole may now be spending $300 to $500 million per year to prevent the contamination of air and water. These figures constitute a powerful answer to the charge that industry, as a whole, does not want to participate in the program to clean the country's atmosphere and streams."

It would constitute a powerful answer, if true, but in this uncertain area of estimating what is being done, one wonders how many will accept the big figure which the speaker projected. The same speaker did outline in his address basic points essential for industry to pursue. He said that industry must maintain a realistic attitude toward waste disposal; it must use expert advice in designing, installing, and operating pollution control equipment and must be willing to install pollution control equipment in spite of the fact that investment return is limited; it must insist that pollution control equipment be properly used and finally plant management must insist that extreme care be used to prevent the discharge of objectionable material.

These are fine points—if carried out by all industry. That some steps are being taken is shown by the work of the National Technical Task Committee on Industrial Waste, a group organized several years ago to work with the U.S. Public Health Service. These task groups cover food industries, mineral products, chemical processing, and general industries. As technical advances are made in disposal problems, they are compiled in guides or booklets for the particular industries.

A constant body of technical knowledge is brought home to the technicians and management personnel of industry through professional publications, a leading one of which is the Journal of the Federation of Sewage and Industrial Wastes Association. This is an excellent publication, but as good as it is or as fine as the speeches are the ultimate success of industrial pollution control rests with what management does.

Spokesmen of the U.S. Public Health Service are encouraged by industry's steps and a realization by management that sheer economics is compelling practical attention to industrial wastes. Examples are cited whereby a chemical company dominant in a community has set up a control project which even handles city waste in the small area where it operates since it is the principal pollution agent. A paper company in West Virginia has built a plant to handle the waste of three small communities. These projects may be setting a laudable pattern for attacking the pollution problem.

A new type of waste problem is adding to the headaches of industry and government: radioactive waste. They cannot be oxidized or destroyed like ordinary wastes, nor do we know how deadly or how long these wastes may be lethal. Attention to this problem is one of immediate and critical importance.

In the meantime, sportsmen look with regret at the diminishing areas of fishing and boating and are determined to lend their influence to public agencies in saving our most precious asset—clean water.

## Ireland's Future Related in St. Patrick's Story by William James Conlon of Lynn, Mass.

---

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on Ireland's future by my constituent, William James Conlon of Lynn, Mass., as it appeared in the Lynn Telegram-News on March 15, 1959:

IRELAND'S FUTURE RELATED IN ST. PATRICK'S STORY BY CONLON

(Ireland's future in the world and its place in the present crisis and the future struggle is related in the following St. Patrick's Day feature story by William J. Conlon of 23 Breed Street, outstanding scholar of Irish history. In this interesting article, Mr. Conlon places the ancestors of the Irish in the context of our times and points out what he thinks they would say on these matters. The article follows:)

In the course of my 40-odd years, I have attended a great many St. Patrick Day celebrations—listened to a great many speeches in praise of St. Patrick in particular and the Irish, God love-em' in general. I have even made a few myself. Looking back on them now—my own included—I think they may have been bad speeches, although they went over big. They were pretty much the same. They recounted the glorious history of St. Patrick, followed up with the accounts of the Irish heroes of history and their heroic deeds and then the speaker sat down with his audience emotionally charged and cheering.

I think now that those speeches may have been bad. Not because they were not oratorical masterpieces, nor because they were not true—but because they dwelt too much on the glories of the past and said nothing constructive about the future in which we and our children and their children must live.

Now I do not intend to ignore St. Patrick—he wasn't the kind of man you can ignore. Neither do I intend to forget the countless other Irish heroes, saintly or warlike or both. What I want to do is to place those ancestors of ours in the context of our times and to say what I think they would say about the future of Ireland and the world and Ireland's place in the present crisis and the future struggle.

The age in which St. Patrick lived was one in which the ancient institutions were breaking down and confusion reigned in men's minds. The Roman Empire was disintegrating and with it the political structure of the civilized world. Fear and uncertainty were everywhere in that chaotic time. Into his part of that world—into Ireland St. Patrick brought two great and related ideas—faith and freedom. He was first and foremost an apostle of the Catholic faith. There were apparently Christians in Ireland, but he made the country dominantly Christian and so thoroughly that Ireland became for the next several hundred years a center of learning and a center of missionary activity. It remained so in fact until the energies of the people were consumed in fighting off the attempts of their neighboring island to conquer them and they had no more left for teaching their arts and ethics to others. Up until that time Irish missionaries had gone to Scotland, to northern and central Europe, and Ireland was a kind of headquarters of culture and religion for western Europe. As well as being an apostle of faith and quite as logically, St. Patrick was an apostle of freedom. He had been a slave.

He endeavored to make people free. He challenged the royal authority of the pagan chieftains, protested and opposed raids by British bands, who carried Irish captains off into slavery and raised money for the ransoming of these captains. Ladies and gentlemen, the story of St. Patrick has peculiar relevance today because we live in a chaotic age. When the old structures, political and otherwise, on which humanity rested, are breaking down under the force of wars and history. Fear and uncertainty reign in many places and in many minds. Moreover, there is a great and powerful concerted attack on just the things for which St. Patrick stood. The specter of Soviet communism, which is stalking over the world today, is the denial of religious faith and at the same time the denial of human freedom. (Communism is Godless.) It is also a system of slavery, based on contempt for and oppression of the common man.

But there are weapons which will defeat Stalinism and Khrushchevism. They are the same weapons as those wielded by St. Patrick in his fight against false gods and inhuman men. On the one hand he held to his faith in God. On the other to his faith in human freedom and the human will to be free. These are indestructible and when we cling to them we are indestructible, too. That is the lesson of St. Patrick for this year, 1959. We know how these weapons served the Irish people—helped along, it is true, by other weapons which Irish courage saw fit to use—in the long struggle against domination, a struggle not yet completely won from the three O'Neills to the days of the immortal Wolfe Tone, from O'Connell and Parnell to the immortal Terrence McSwiney.

The Irish have kept their faith and freedom of spirit and their fists alive to fight against religious persecution and foreign control. The present government in Dublin is only a hindrance to complete freedom of all Ireland as advocated by the immortal Wolfe Tone and the united Irishmen of his time. Though the illegal wall built by the English stooges and partitioners is a scourge inflicted upon the Irish by the puppet stooges known as the Stormount clique and dictated to by England temporarily casts a gloom over Ireland. But the Almighty God never put a dividing line around the six northern counties.

Therefore it must definitely be wiped out. The coming generation of Irish youth will take care of and see to it that the six northern counties will be part and parcel of an all Ireland. As the immortal Mohart Emmett and Wolfe Tone advocated that it should be. There we will have a sovereign Irish state as the Almighty God left it by his own hands. The Irish have not fought for freedom in Ireland alone. The United States can count an endless number of heroes of Irish birth or descent. Charles Carroll, founder of the State of Maryland, was one of these and it was in Maryland that religious freedom was really born in this country. Twelve signers of the Declaration of Independence were Irish.

Eleven Irish generals of the Revolutionary Army, including a Sullivan and a Conway. The American Navy's Barry and McDonough and thousands of others who were either of Irish birth or descent, who fought to set this

country free from British tyranny and domination. Andrew Jackson, great defender of democracy, was of Irish descent. The list goes on through Gen. Phil Sheridan to Alfred Emanuel Smith, ex-Governor of the great State of New York, and the many Irish heroes of World War I and II, including General McAuliffe who said "Nuts" to the Germans at Bastogne. Cohen Kelley, who gave us renewed courage after Pearl Harbor, and the five Sullivan brothers who gave up their lives when the crusier *Juneau* was sunk by the Japanese in the Pacific. Now the achievements of these men were remarkable but they did not achieve what they did simply by sitting in admiration of St. Patrick. They followed the old precept of "go thou and do likewise." The glory of St. Patrick was reflected in their deeds but they also infused something of their own spirit. They took the good saint's principles and they fitted them to their own hour and their own need.

There is a lesson in that for we Irish, both here in America, in Ireland and throughout the world. Ireland and God knows our hearts are with her is now in what may be hoped are the last stages of the fight to end the pernicious partition and to become what Cardinal O'Connell referred to as "Ireland, one and indivisible, though the heavens fall. The opposition to partition—the fight for a United Ireland—are in the very best of Irish tradition. It has been a bitter war marked by British deceit and brutality and by typical Irish courage and patriotism.

It should not be forgotten nor should it be shelved. The world today has great need for the courage and faith in God and His principles that St. Patrick gave to the Irish. The whole world is now lined up in a cold war in which the issues are clear. The choice is between Western democracy and man's right to his belief in his God, on the one hand, and godless communism on the other. A world conflagration may break out at any moment.

In such a situation, I have no doubt at to what St. Patrick would do or say. He would be in the vanguard of forces for freedom and christianity leading the drive to rid the world of the serpent of communism. St. Patrick did not do his fighting from the sidelines, he led the way. It may be a bitter pill for the people of Ireland and for its leaders to realize that while the United Nations with the United States in the lead, are throwing the weight of the Western World into the battle in Korea, in an effort to throw out a foreign power occupying a part of the nation and to end the partition if possible. Ireland herself suffers under a no less unjustifiable occupation and partition and the rest of the world does nothing about it. England is left to work her will in the six stolen countries against the overwhelming majority of the Irish people in all Ireland.

In spite of this, we of Irish blood cannot afford to ignore our obligations to the principles laid down by St. Patrick, the principle that faith and freedom must be fought for if they are to be won and held. Communism has made fewer converts in Erie than anywhere else in the civilized world in proportion to population. It is up to Ireland to beat down the English threat which faces it and please ladies and gentlemen believe me very sincerely, this won't be accomplished by the tactics of the present Dublin government in power. DeValera and his spineless crew in the Dail in Dublin are holding young Irishmen in the Curragh Internment Camps in County Kildare without a trial. This is the exact same thing that Khrushchev is doing in Hungary and England is doing the self same thing in the six counties of Northern Ireland.

And remember ladies and gentlemen DeValera fought side by side with those young men he is holding in the internment camps in the Curragh Camps in Kildare. It means just one thing, that DeValera and England are working in conjunction with each other to keep Ireland a mutilated nation as she stands today and to think of what The Easter week martyrs died for. The late Gen. Michael Collins was shot in his own native County Cork for signing the so-called Free State which split Ireland into two parts, because England wanted it that way. The mutilated portion of Ireland now known as Eire has a delegate sitting in the United Nations for the past 6 or 7 years and he never opened his mouth about what England is doing in the 6 stolen counties. This delegate is just a dummy in the United Nations. He is not telling us what the government is doing in the 26 counties. Frank Aiken, Minister of External Affairs in the Dublin government came to the United Nations in New York and officially voted for the admission of Red Communist China into the United Nations and all this was taking place.

When His Eminence John Cardinal Dalton and Eamon DeValera were in Vatican City Rome, Italy having an audience with the late Pope Pius XII, and when Eamon DeValera returned to Dublin he stood up in the Dail and defended Frank Aiken's un-American and un-Irish tactics in the United Nations. So both DeValera and Aiken are looked down on in this country. Ireland and the Irish all over the world are disgusted and disgraced with this un-American and un-Irish job in the U.N.

Both Aiken and DeValera have lost all their millions of friends in these United States. In the city of New York, where DeValera was born, he has lost all of his hordes of friends over this matter. It's high time we had a new election in Eire and let DeValera retire to private life and the members of the Dail government should retire also. The present government is doing nothing only England's police work in Ireland. Their activities are a disgrace to the memory of the Easter week martyrs of 1916, who were executed by the British Government because they represented a free and independent Ireland. We have been thrilled by the details of the battle around Dublin Castle, and the heroism of the martyrs of Easter week. We have grieved over those who died in the uprising, or were executed afterward.

We know that though the uprising failed of its immediate purpose, it lit fires in the hearts of Irishmen everywhere which have not yet been extinguished. For 2 years thereafter the civil conflict continued with the Sinn Feins leading the way and leading the Irish people in their resistance to British rule. Eventually in December of 1918, a general election was ordered for the whole of Ireland, supposedly to settle once and for all the question of independence for Ireland.

The costly attempt to maintain control by force and the weight of world opinion as varied in the proclamation of the night to self-determination by the victorious democracies in World War I, has forced England to this step. Despite the fact that the election was carried out while a British army occupied the whole island, the result was overwhelmingly in favor of national independence. Out of 105 electoral divisions 79 voted for independence and only 26 against. The popular vote was over 80 percent in favor of complete independence. In response to this expression of the national will, the elected representatives of the people of Ireland assembled in Dublin on January 21, 1919, and declared Ireland an independent nation and established a government, and the Dail Eireann, the national legislature.

The English, going back on their promises, refused to recognize this action and thus a virtual state of war broke out between the Irish Republic and Great Britain. The British sent in their Black and Tan's, imposed martial law, and tried to force Ireland to give up her national independence. Ireland of course continued the battle. Finally, as a last resort, the British Parliament, on December 23 ,1920, without an Irishman voting, passed a Government of Ireland Act—the Act of Partition—whereby the six stolen counties were cut off (from the homeland) by England, of course without a political mandate of the people of Ireland.

The Irish people rightfully refused to accept this settlement. The Sinn Feinn again led the war against the Black and Tans that constituted the British occupation forces and the attempt to force the acceptance of the British was wholly unsuccessful in the greater part of Ireland. Despite the fact that a Northern Ireland Parliament was set up in Belfast, even this was the will of the English Government only and was opposed by the majority in the six stolen counties cut off by England. It was during this period that the heroic hunger strikes took place and Terence MacSwiney, in giving up his life, brought world sympathy to the Irish cause.

In the partition election of May 1941, intended to put the Government of Ireland into effect, out of a total of 186 seats in both the north and south parliaments, 140 won by the Republicans. Thus Ireland, as a whole, repudiated the act. The British again set up martial law and bitter fighting again took place. Finally on December 6, 1921, after 6 months of negotiations between the leaders of Sinn Feinn and the British, a treaty was signed establishing the Irish Free State and partition became an absolute fact. Even with this, the English deceit was not ended. Since the treaty called for raising the boundary between Northern Ireland and the Free State to free some of the Irish Republicans who form a majority in four of the six stolen counties, and this was never done.

England's latest act, intended to cement her position in Northern Ireland, was to pass the so-called Ireland bill in May of 1949. In this bill they presumed to declare that Northern Ireland would never cease to be a part of the United Kingdom, without the consent of the Parliament of Northern Ireland.

Incidentally this is a fine time for England to begin to worry about obtaining the consent of her northern subject Government, when questions of how they are to be ruled came up. This Ireland bill has served to keep Ireland out of participation in the North Atlantic Defense Treaty. Since one of the purposes of that treaty is to preserve the territorial integrity of participating nations and Ireland fears that her adherence to the pact would be interpreted as recognizing England's claim, that Northern Ireland is an integral part of the United Kingdom.

That is where the matter stands today. Despite protest after protest, the English have refused to concede that by any standard. Ireland should be one and united. Irishmen in either north or south, consider themselves as Irsh and not English or British, or anything but Irish. The population is homogeneous. The island is one geographic unit. Her history and traditions are distinctly national and even her churches, whether Catholic or Protestant are organized on a national, all-Ireland basis. Her learned bodies and her sports organizations are nationwide. Ireland is divided only in the minds of the Government of England and in measures England has forced upon that gallant little nation. What can we here do to end this intolerable situation?

It is true that our State Department has said that we should be concerned. But I say that is no more internal than South

Korea and we are certainly involved there. It is no more right that the island of Ireland should be divided, than that the Korean peninsula should be.

Fortunately we Americans of Irish descent or birth do have a program for putting the great moral weight of the United States behind the fight to end partition in Ireland and to end English rule there forevermore. In April of last year the committee on foreign affairs of the House of Representatives held hearings on a number of resolutions which had been introduced in the House and which would have put the United States solidly on record as favoring the unification of Ireland. Some of these resolutions provided means for our active participation in action leading to unification. Those resolutions had been introduced by Members of Congress of Irish descent and received strong support in the hearings on the subject. Unfortunately the Foreign Affairs Committee did not see fit to report any of them to the floor of the House. You may be sure, however, that this program will not be allowed to die and we hope that the U.S. Congress will eventually take action, placing this country in the fight to end partition and leading this fight as it should. Ireland has made great contributions in culture and leadership to the United States. She has given the same strong support to democratic ideals. It is high time that the United States do something to help Ireland gain her complete freedom.

We of Irish blood in Congress did something else last year to open the eyes of the English to how strong the feeling in this country is in opposition to the partition of Ireland by England.

On March 29 of last year or I should say 2 years ago when the Foreign Assistance Act of 1950 was under consideration by the House, an amendment was introduced by Congressman JOHN FOGARTY, and was accepted. This amendment was designed to withhold assistance to the United Kingdom until partition in Ireland was ended. Although the amendment was later stricken from the bill it did awaken England to some consciousness of American and world feeling on the matter. As a matter of fact, there was much scurrying about the Capitol and the State Department by worried British diplomats during the period of debate on the bill. These actions have forced England.

To take a new look at her policy in Ireland, you may be sure and all the other Congressmen who have engaged in this fight until England does more than simply take a new look. We want her to take positive action and get out of Ireland and we will not be satisfied until she does so. If Irish people everywhere get behind this program of pressure on England from the United States we may be able ot write a new page in Irish history for our grandchildren to read. The story of how the English were finally driven out of Ireland knowing this history of persistent courage and remarkable leadership on the part of the Irish people who can doubt that their full participation in the titanic world struggle now shaping up would provide inspiration for the rest of the democratic world. Inspiration, which might spell the difference between victory and defeat.

I realize however, quoting an official Irish Government memorandum, that although "Ireland is earnestly desirous of playing her full part in protecting Christian obligation and the democratic way of life. * * * (She) is faced with grave difficulties from the strategic and political points of view." This is true, both because the continued partition of Ireland is naturally and bitterly resented by the Irish people and because without a single integrated authority either the defense, or the effective utilization of the island's capacities are impossible.

Therefore call upon the Irish people at home to stop hobknobbing with the enemy (England) and come out for a general election. Clean out the present government DeValera, Aiken & Co. Ltd. Liberate the Irish freedom fighters in the internment camps and let nature take its course. You cannot stop the onward march of any nation that wants to be free. Sinn Fein and the IRA won a complete victory in the 26 counties. Now for God's sake, stop quibbling with England in the six stolen counties. The only language that England understands is the language of the IRA. But before this is done the Irish people will have to elect a government in Dublin with a determination to be absolutely free and let them recall their delegate in the United Nations who represents a mutilated Ireland and not a nation (as such). Then when this is done the millions of Irish in the United States and all over the world will be with them to a man. And by this constructive change in policy you will make the soul of our immortal St. Patrick happy in heaven forever afterward.

I am respectfully yours,

WM. JAMES CONLON.

23 BREED STREET, LYNN.

## Real Progress in Laos Despite Communist Intrigues

EXTENSION OF REMARKS

OF

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 17, 1959*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor. When we started our mutual security program in Laos 2 or 3 years ago, many believed it was a hopeless task. Two Provinces were occupied by Communist forces. The economy, with the withdrawal of the French, was practically nonexistent. Yet with a cause to fight for—freedom; strong leadership within; and effective support from a strong friend and ally, the United States—the picture has been greatly improved. There are always losses as well as gains in such a worldwide program, and it is gratifying to see Laos now in the winning column. The article follows:

[From the Christian Science Monitor, Mar. 5, 1959]

LAOS RED GAINS REVERSED

(By Gordon Walker)

HONG KONG.—It is not very often that a reporter on the rim of Communist China can write of definite progress in the continuous struggle against Communist aggression and infiltration. But the tiny kingdom of Laos, wedged in between Communist North Vietnam and with an undefended common frontier with mainland China, offers such an opportunity.

While this corner of Asia may not make the headlines that are common to Formosa, Japan, or South Korea, it now is taking actions which provide poignant lessons for Western capitals, and which may well have a salutary effect upon other nations of southeast Asia.

The story really begins after the collapse of French resistance in Indochina, when the armistice provided for an international commission to supervise the armistice in Laos and block any further fighting between the Royal Laotian Army and the so-called Pathet Lao Communists.

DEAL ARRANGED

Negotiations between government and Communists failed to achieve any tangible results under this setup, and so the government in 1957 chucked out the international commission and made a new deal with the Communists to take them into the government and to integrate their military forces.

For a time it looked as though Laos could be crossed off the list of loyal anti-Communists allies in Asia. Not only did many observers here feel that Laos was misusing U.S. aid, but it puts administration of U.S. aid into the hands of Prince Souphanouvong, leader of the Pathet Lao, and one of two Pathet Lao chiefs taken into the Cabinet.

Then in July 1958, something clicked. A sudden spurt of anti-Communist nationalism, spearheaded by youth groups, took place. Premier Prince Souvanna Phouma resigned, saying he had lost faith in the Pathet Lao leaders he had brought into his government. His successor, Phoui Sananikone, made it clear that he intended to cut the rug out from under the Communists in every way possible.

Alarmed, the Communists sought to call an emergency session of Parliament in January, hoping to capitalize on gains which they had made in previous elections. But the government blocked this move and clearly indicated that if the Communists pressed the matter it would result in a military coup along the lines of those which have occurred in Pakistan, Burma, and Thailand—with adverse results for the Communists.

BATTALIONS LOCKED UP

As things stand today, the Communists are at bay and losing ground rapidly. A border tour de force mounted by Communist North Vietnam has failed to shake the stand of Premier Phoui, backed by strongmen Crown Prince Savang and Army Chief of Staff Ouan. Communist Pathet Lao battalions, which were supposed to be integrated into the Royal Laotian Army, are being held indefinitely in what amounts to a concentration camp outside of the northern city of Luang Prabang.

Any overt move by the Communists might result in an immediate military coup, which would be greatly to their disadvantage. And to tidy things up, Premier Phoui has minimized misuse of U.S. aid funds by inaugurating a more realistic revaluation of the local currency, the kip.

INTERFERENCE RESISTED

Foreign observers recently in Laos report that all of this has been undertaken without United States interference or advice—except for the revaluation of the currency. It has been a spontaneous movement, undoubtedly inspired by the recent experiments along the same lines in Burma and Thailand. And U.S. officials are delighted to see the doughty little "kingdom of a thousand elephants," as it is called, refusing recognition of or aid from Communist China, and even indicating a desire to extend recognition instead to Chinese Nationalist Formosa.

A cynic might say that what is happening in Laos is merely an effort by entrenched vested interests to eliminate any threatening opposition. But there is more to it than that. The Laotians are a proud though normally docile people. They want an easy-going life and they do not want anyone coming in and telling them what to do.

## David Dubinsky Speaks on Small Business Problems

EXTENSION OF REMARKS
OF
## HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. PATMAN. Mr. Speaker, it was recently my pleasure to hear a distinguished labor leader, Mr. David Dubinsky, deliver an address which speaks very wisely of many of the problems facing small business. And in this address Mr. Dubinsky, who is president of the International Ladies' Garment Workers' Union, reminds us most persuasively of the reasons for small business—the reasons for opportunity, for independence, initiative, and growth.

This was an address delivered to the national executive board of the national coat and suit industry recovery board at Miami, Fla., on February 4. The cloak and suit industry is an industry of small-business firms. It has a record of many firsts, not the least of which is its record of pioneering in the field of worker-employee relations.

The system of labor-employer relations in this industry was fathered by the late great Justice Brandeis, and it was advanced and refined in many respects by a special commission appointed in 1924 by the late and great Gov. Al Smith.

Many of the Members of the House will, I know, be keenly interested in Mr. Dubinsky's speech, and I invite their attention to it as follows:

ADDRESS BY DAVID DUBINSKY, PRESIDENT OF THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION AT THE ANNUAL MEETING OF THE NATIONAL EXECUTIVE BOARD OF THE NATIONAL COAT AND SUIT INDUSTRY RECOVERY BOARD, AT THE HOTEL EMPRESS, MIAMI BEACH, FLA., FEBRUARY 4, 1959

I always feel particularly good when I come to the annual meeting of the recovery board. As head of an organization representing all the branches of the women's apparel industry I should probably be impartial but I confess to a specially warm feeling for the cloak industry. It is because the cloak trade is the oldest organized branch of our industry. It was the first to inaugurate collective bargaining, to establish impartial machinery to resolve differences, the first to introduce higher work standards and industrial reforms and to set the pace for all branches of the women's apparel trades and for industry generally.

The cloak industry was the first of the apparel trades to obtain an NRA code. This code was the first to provide for labor representation, an industry label and a 35-hour workweek. The cloak industry was also the only one in the country, after the Supreme Court in 1935 nullified the NRA, to carry on the NRA principles of labor-management cooperation through the establishment of the national coat and suit industry recovery board, a national institution which is unique and has no parallel in American industry.

Yours is the industry in which factory production of ready-to-wear first made its appearance a century ago and it is the industry which has reached maturity in the field of industrial relations. The pages of your history are replete with many innovations, many reforms, many accomplishments, many problems which you have successfully met. But as is always true in life, the problems are never fully resolved and there are always new ones that come to the fore.

It was a hard, rocky road you traveled marked by great industrial conflicts.

The industry has gone through many stages of development both in its industrial structures and its worker-employer relations. At the turn of the century the industry was plagued with sweatshops, with tenement-house production, with workers toiling from sunrise to sunset, with pitiable wages and a dog-eat-dog struggle with many casualties and meager returns for employers. It required all the ingenuity of the best and most farsighted elements among the empolyers and the union, as well as outside distinguished citizens, to deal with these problems. The industry can take great credit for eradicating these conditions.

In the early years, large shops took the place of tenement sweatshops but it was not long before contracting and the jobber-submanufacturing system developed. The auction block approach to the handling of jobber-contractor relations set in motion destructive competition which in the end not only ruined the contractor but drove the manufacturers to the wall and, in the process, undermined the living standards of the workers and the health of the industry.

The protocol of peace in the New York cloak industry fathered by Justice Brandeis was a milestone in industrial statesmanship. Aside from setting minimum work standards it sought to resolve day to day grievances and provide arbitration for their ultimate disposition. This nobly conceived early pioneering effort faced many roadblocks for neither the industry nor the union were as yet accustomed to working or living together. Like a young married couple, they found that the first few years of mutual adjustment were the hardest. The early arbitration system, therefore, failed to prevent bitter disputes and strife. But the desire to find solutions to mutual problems continued to persist both in the ranks of management and of labor.

When Governor Smith appointed a special commission in 1924 to study the problems of the coat and suit industry, the parties gave it their cooperation. As a result, the Governor's commission was able to provide the first full-scale review of the many vexing problems of the industry and to come forth with a far-reaching basic program of reforms for the well-being of all factors.

The Commission recognized that the continuance of an uncontrolled outside system of production was ruinous to the maintenance of decent standards and that its unrestrained operation was contrary to the public interest. This is why the Commission in 1926 recommended that jobbers and manufacturers in the industry be limited in their use of contractors and submanufacturers to their actual needs. Unfortunately, the internal situation in our organization coupled with the great economic depression prevented full implementation of the Commission's program. It was not until 7 years later that these reforms were made part of the coat and suit NRA code and the collective agreements.

During and after the NRA period the union and the employers showed an increasing understanding of each other's problems. Each of the parties, of course, continued to pursue its own interest but gradually learned to adjust their differences so that the end result would be beneficial and not destructive to the parties, to the industry, and the public.

All of us have reason to feel gratified because there was no general strike in the cloak industry during the last 25 years. It was not because we always saw eye to eye on every matter, but rather because we both shared the sincere desire and will to resolve our differences. On the one hand, the union took account of existing industrial conditions while framing its proposals for improving the working conditions of its members. We did not hesitate to restrain our demands on the employers at times when depressed conditions prevailed in the industry even though we felt that workers were entitled to improvements in their standards, and bided our time until conditions in the industry were more favorable. This we have done even at the time when large segments of American industry were granting large-scale wage increases. On the other hand, the industry was ready to recognize its obligations to workers when conditions were proper and the union did not have to invoke its economic power to cease work.

The cloak industry can take full credit for pioneering in the field of pensions by its adoption of marketwide retirement funds. It can take credit for providing for its employees health and welfare benefits. These accomplishments, attained not by threats but through discussion, do not constitute the last page in our efforts to improve the conditions of those who invest their health and labor in the industry just as employers invest their capital. As you know, several other branches of the garment industry have recently established severance pay benefits. In the light of its record I am confident when the cloak industry begins negotiations for new agreements in the coming months, it will give sympathetic consideration to this and other just and necessary proposals. After all, the industry would surely not wish to fall behind in this field.

I do not want to suggest by this brief review that virtually all the problems facing the industry have been resolved. Sometimes when problems are solved they create in their wake new problems. Thus, for example, when the retirement fund was established in our industry we were all gratified that it helped to cope with the problem of the older workers. But now we realize that the pensioning of older people has created a new problem—obtaining skilled workers to replace the retirees. There are problems that exist. They cannot and should not be overlooked or minimized. They deserve attention, study, and action.

The cloak industry is plagued by problems peculiar to small business. It is predominantly composed of small units. When the Federal Government speaks of small business it includes firms with as many as 500 employees. In our industry a firm which employs 400 to 500 workers is not considered small—it is a giant. The average shop in our industry employs around 40 workers. When the Government made a study of concentration of business in the different industries it discovered that the women's garment industry generally and the women's coat and suit industry more particularly had one of the lowest rates of industrial concentration.

In our present day economic climate, operation of a small business is beset with many difficulties. In recent years there has been a rash of official pronouncements giving lipservice to the need to aid small business but precious little has been done. I understand that, although a Small Business Administration was created in 1953, its accomplishments to date are small, for our industry in particular. The agency was supposed to aid small business financing but its efforts in that direction are only a drop in a bucket. Furthermore, hard-money policies—tighter credit and higher interest rates—placed their heaviest burden on the smallest business units in our country.

Despite the growth of large corporations and their predominant power in our economic life, small business continues to be an important factor in our economy. There is urgent need for special consideration for small business. It is important to create a

climate which would enable it not just to barely survive, but to prosper, to expand, and to retain its ability to operate on a par with larger concerns. There should be no further delay in enacting additional legislation for special tax consideration for smaller enterprises to encourage their stability and expansion. Provision should be made to give smaller units greater access to ample credit at normal and reasonable interest rates. They should not be hampered by the preferences which are normally given by lending institutions to their larger customers.

More also needs to be done for small business in the field of Government procurement. Some consideration is being given but not enough. Incidentally, I want to tell you our union has succeeded in getting some action favorable to women's garment manufacturers in connection with Government contracts. At conferences held with Department of Defense officials, they informed us that they are ready to recognize that women's wear producers who are capable of manufacturing to Government requirements in their plants, will no longer be barred simply because they did not previously manufacture men's wear. Firms interested in this type of work should request to be placed on a qualified bidders' list.

In view of the existence of a large number of small business units in the women's garment industry there is active competition among manufacturers for the favor of the retailers and of the ultimate consumers. However, notwithstanding the generally recognized fact that the industry is highly competitive, it is surprising to find that some governmental agencies do not, or choose not, to understand the background, the needs and the problems of the garment industry. This is incredible. Contractor designation, for example, is made to appear as an effort to restrain competition instead of a means to protect the fair work standards of the industry's workers, as was originally recognized by the commission created by Governor Smith.

Monopolistic practices generally tend to increase the cost of products to consumers. The garment industry, of course, has no such practices and the consumer continues to get some of his best values when he purchases its products. Figures compiled by the Government clearly prove this point. While wholesale prices of all manufactured goods rose from 1947 to date by over 33 percent, the wholesale prices of women's garments actually dropped by 2 percent. What industries other than apparel can match this showing? The lack of significant advance in the prices of women's wear is all the more remarkable because in the interim period our members did get a number of wage adjustments as well as improvements in fringe benefits. The consumer clearly benefited by the statesmanlike approach to pricing exhibited by this competitive garment industry. It did not pass on all of its cost increases to consumers. Instead, the industry seems to have exerted every effort to provide its customers with garments at reasonable prices. How different are these policies from those which typify some other American industries. The automobile industry, for example, deliberately, as a matter of policy, seeks ways to load its products with more gadgets, more frills, in order to exact an ever higher price from the consumers.

The businessmen responsible for the production of women's apparel deserve public commendation for their restraint and responsibility to the public in pricing their products.

In 1932 when we were at the bottom of the depression, the industry worked on a one-fourth of 1 percent net profit on sales; between 1935 and 1939—on an even smaller margin. At its peak in 1946 the industry's return was 7¼ percent. From then on it dropped substantially. Between 1951 and 1957 it fluctuated at around 1 percent. Last year in 1958 it was only one-half of 1 percent. This is the industry's average. Some firms, of course, are more prosperous than others. What these figures demonstrate, however—and they are typical of all branches of our industry—is that the keen competition in the trade, fostered by the smallness of powerful retail interests, have kept both prices of the industry's products and profits of its firms at a minimum.

It is high time that governmental agencies cease their search for a ghost of restraint of trade in—of all places—the coat and suit industry, with its thousands of small firms and its sharp competition. Surely this is a case of misdirection—they are after the wrong target. Apparently, however, they prefer to squander their energies by going after the little fellow rather than challenging the giants. The Government, instead of harassing small business should instead give it all possible assistance.

One example of a constructive approach was the enactment of the Robinson-Patman law. I cannot enumerate its specific benefits to small business, but of this I am convinced: That during the past 20 years, without the moral strength, without the legal support of that law the plight of the small businessman would have been unbearable. It is the obligation of Government to create an economic climate in which small business not only can survive but which will encourage it to flourish and to prosper. Maybe the subject requires further study, but in my opinion the facts are clear: We need understanding, we need prompt, speedy, and effective action.

Now there is a curious paradox in the way certain people look with suspicion on the generally harmonious relations which have developed between labor and management in the cloak and the other branches of the garment industry. You would think that labor-management relations are sound only if there is continuous strife, a wave of disputes, an avalanche of strikes. To their minds, so it seems, the absence of industrial strife spells collusion. Though most of these individuals would pride themselves on being the firm supporters of our economic system, in effect what they indirectly advocate is class warfare, in the manner visualized by Karl Marx.

Now what is the current state of the cloak industry in terms of its volume of business?

During the war years, unquestionably the coat and suit industry, together with other women's garment trades, enjoyed peculiar advantages. Women entered the work force of the Nation in large numbers. Incomes were expanding. Due to the virtual stoppage of residential construction and restriction of the production of hard goods, apparel provided an important outlet for consumer spending. As a result, we witnessed an abnormal spurt in the demand for coats and suits and other apparel. This period of abnormal prosperity obscured actual trends in the industry. Many people measure the prosperity or decline of our industry by comparisons with these abnormal levels. Of course, by wartime standards, the industry is definitely down. But all this is highly misleading.

No one could expect the wartime levels of demand for coats and suits to persist after the reappearance of hard goods and the introduction of many new products in the postwar era. All of these commanded their share of the consumer dollar. It was inevitable that clothing should yield, to some extent, to the lure on consumer pocketbooks exercised by these other products. In addition, coats and suits had to face competition by allied apparel lines.

I suggest that a much longer perspective is needed to obtain a realistic evaluation of the current state of the industry. If we take 1929 or 1939 as a point of departure, we will find that on a per capita basis, American women bought more coats and suits in 1958 than in these 2 preceding prewar years. This is no idle statement. Last year, in 1958, this industry produced, on the average, 43 coats per 100 potential consumers. In 1929, 40 coats; and in 1939 only 36 coats. Normal variation in per capita production of coats is not great. The examination of past trends indicates that we can expect, at the worst, that coat production over a period of years to come will expand in line with the growth of our population. I am not suggesting that the industry should be content with this normal development. But I will speak about this a bit later.

Now I want to take a look at suits. Here, too, we will find that the per capita production in 1958 was higher than before the war. To be exact, 18 suits were produced per 100 potential customers in 1958, sharply contrasting with only 9 suits in 1939 and only 4 suits in 1929. Variations in the production of suits showed extreme changes in development over the last 40 years. It rose prior to the twenties, declined thereafter until the great depression set in, began to grow again, advanced all through the war years, and receded in the postwar period. The swings in the demand for suits are clearly cylical. In the past the decline in the popularity of suits lasted for about a decade and was followed thereafter by a revival. Currently, the decade of decline is about up. If history is any indication, a rebirth of suits is not too far off. As a matter of fact, I understand, this spring is witnessing a revival of suits.

Of course, as I have already intimated, the industry cannot sit still and merely hope that historical forces, such as the long term increase in our population and general well-being of our economy will keep the coat and suit trade on an even keel. Though I have indicated the need for some governmental action, reliance on government alone does not suffice. In the final analysis, the initiative, drive, and momentum must come from within the industry.

This industry should not remain content to see its volume expand over the long pull merely by one and one-third percent a year—the tempo at which our population grows. It should raise its sights. The industry cannot rest content with the knowledge that every woman, whatever her age, must at one time or another replace her existing coat or suit. It is necessary to induce her to seek a larger wardrobe of coats and of suits and not mere replenishment. This may possibly involve further search for styling ideas away from the traditional and even new and diverse functions for garments. The industry has, I know, been striving to do this of late, not always with satisfactory results. It should not, however, allow itself to be discouraged. As the industry knows by experience, while newness involves a risk, it also provides the major hope for better business.

Fashion, however important, will fail to realize the industry's objective of higher sales volume unless it is coupled with mass promotion activity. I am aware of the advertising or publicity by individual firms and, of course, this must go on. And needless to say retailers, too, are performing an important task in publicizing specific garments they have to offer. But, as I see it, all these efforts are inadequate. It is ironical, for example, to note that advertising lineage devoted to coats and suits in daily newspapers declines at the very time when the demand for the industry's products weakens. One would expect just the opposite, a strong advertising effort to combat downturns in sales and not the reverse.

An entirely different approach to advertising the industry's products is therefore needed, a collective effort devoted to institutional promotion in addition to the efforts

of the individual firms promoting specific styles.

This calls for a concerted effort, for concerted planning, for concerted action on an industrywide basis. I want to remind you of my standing pledge, on behalf of our union, to share with you in the development and financing of such a promotion program.

Long-term forces favor the growth of the industry's volume but its full sales potential cannot be realized without action on the part of all who are concerned with the welfare of the industry. The union will give its full cooperation to the industry in obtaining necessary governmental action and in the development of an industry promotion program designed to expand markets for its products. We are hopeful that we can count on the industry's cooperation in recahing a mutually satisfactory renewal of the collective agreements that are soon to expire.

The union has long recognized that the industry must be prosperous to provide a good living for its workers. Let us continue, therefore, to work together for a healthy and prosperous industry which will be able to improve the conditions of the workers, provide management with a fair return and enable the coat and suit industry—the oldest trade, the pioneer and trailblazer in industrial relations—to keep pace with changing conditions.

## The Importance to the United States and the World of a Free, Democratic China

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 2, 1959*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given recently at Marquette University, Milwaukee, by Honorable George K. C. Yeh, Chinese Ambassador to the United States:

THE IMPORTANCE OF A FREE, DEMOCRATIC CHINA

It is both a pleasure and a privilege for me to address this distinguished gathering of professors and students of Marquette University and those who are interested in current world problems. I am particularly glad to find among the sponsoring organizations the Institute for Asian Studies of the University, which is headed by such an eminent Chinese scholar as Dr. Wu Yuen-li who is also an expert on the Communist problem in China.

I have chosen as the subject for this evening "The Importance of a Free, Democratic China." It is my purpose within the limited time at my disposal to state briefly certain important facts in relation to events in Asia and particularly the problems arising from the continuing Communist rule on the Chinese mainland.

For centuries, China, with her vast territory and population and her highly developed art and culture, has occupied a pivotal position in Asia. Although the Chinese people are not by nature a seafaring race, they have always been eager and expert traders with their neighboring countries. Chinese porcelain, jade and ivory carvings, silks and embroideries, and other handicraft products had found their way into the countries of the Near and Far West even before the visit of Marco Polo. China has also been a great importer of foreign goods and raw materials, including spices, precious stones, pearls, various species of hardwood and jade. Many of the famous art works now usually associated with China were for centuries wrought on raw materials not found in China, but imported from other parts of the world. For instance, neither jadeite nor nephrite is found in China, but it is in China where so many lasting objets d'art in jade have been produced.

I have brought out these simple facts just to show that China was not, as is often supposed to be, an isolated country. In fact, China's history has undergone a long continuous process of mutual exchange and enrichment of religious, cultural, and moral ideals with her neighbors. No people, for instance, have devoted so much time and effort in translating the religious books of Buddhism, Mohammedanism, and Christianity as the Chinese. For a period of almost 300 years, with short intermittent intervals, the translation of the Buddhist scriptures was the main cultural effort of the Chinese people. There exists today, for instance, at least two complete Chinese translations of the Tripitaka. Similarly, the translation of the Old and the New Testament into Chinese was an epochmaking enterprise which ranged over a period of at least half a century. One may indeed say that the cultural strength of the Chinese people, coupled with China's vastness in population and in territory, was for many centuries an important determinant for peace or for war in Asia, depending largely upon the type of government or leadership that existed in the country. During the Mongol dynasty when she was ruled by the Khans, China became undeniably a great conquering power. In short, if China is to serve the best interests of peace, she must have a peace-loving, free, and democratic government. This is a basic factor for peace not only in Asia, but in the world as a whole.

Let us briefly consider China's history from this point of view. The results of the Opium War of 1839–42 had led to rapid exploitation by a number of European powers, each seeking to establish an exclusive sphere of influence. To be sure, the impact of western commerce also had its beneficial aspects. An increasing number of Christian missionaries came to China and brought in science and modern political ideals. Christian schools were established. Modern methods of production and transportation were introduced in the treaty ports. But toward the end of the 19th century China was quickly becoming a bone of contention, an adventurers' paradise and a breeding ground for international conflict. It was clear that China was quickly losing her independence, and her internal weaknesses were providing causes for serious conflicts among the Western Powers. It was to avert the danger of international rivalry in China that the American Secretary of State, John Hay, formulated his famous "open door" policy to "preserve Chinese territorial and administrative entity." John Hay no doubt realized that if China should be dominated by, or placed under the exclusive influence of, any single European power, she would be an interminable source of conflict and war.

But just to keep China's door open to all was not, as history has shown, an adequate solution to the Chinese problem. China's newly awakened sense of nationalism must find concrete expression. Her desire to become industrialized and thus to be on an equal footing with the Western Powers became an irresistible national aspiration. When Dr. Sun Yat-sen led the revolution which overthrew the Manchu dynasty in 1911, he laid down the blueprint for the establishment of a republic in China. One of his master plans was the international development of China. Before and during the First World War, he and many Chinese patriots had earnestly hoped that after the war China's unequal treaties could be abolished and that western financing in cooperation with Chinese capital could be made available in order to set China off on the road to industrialization. Dr. Sun's ideas of government and society were basically western, though not without some elements of modified socialism. He was, above all, a stanch patriot and a man who had sought to preserve the best of China's own cultural heritage, while introducing western ideas of popular government and social justice.

Unfortunately, the Western Powers paid little attention to Dr. Sun's ideas and plans. At the peace conference after World War I, China's rights and interests were blandly ignored. The hopes of the Chinese people for complete independence and for industrial development were tragically shattered.

It was at this time when the Chinese people were in a mood of despondency that the Soviet Union entered upon the scene by offering to renounce its special rights and interests in China and to return without compensation all the concessions, including the Chinese Eastern Railway which czarist Russia had seized. A Soviet emissary by the name of Joffe was dispatched to China at this time to negotiate with Dr. Sun Yat-sen for a coalition between the Soviet Communist Party and the revolutionary party led by Dr. Sun. The purpose was to help overthrow the then Peiping government, denounce the West, and place China on the road to independence. This was, of course, a strategic and sinister move on the part of the Soviet Union, but it had the ring of hope and it captured the imagination of the Chinese people.

Dr. Sun, who was a realist as well as a revolutionary, was not so gullible as to believe that communism was a solution to China's problems. In the agreement he made with Joffe in 1923, it was specifically stated that the "Communist order or even the Soviet system cannot actually be introduced into China, because there do not exist here the conditions for the successful establishment of either communism or socialism." In the same agreement it was also made clear that Chinese Communists, who were then under the direction of the Russian Communist Party, were to give up their identity and ideology and join with the Kuomintang in a combined effort to support a new national program for unification. Subsequent events proved that Chinese Communist members operated as Communist cells within the Kuomintang and continued to promote the cause of communism in contravention of the Sun-Joffee agreement. The result was that Russian advisers and Chinese Communists, working hand in glove, almost turned the nationalist movement into a Communist revolution.

I do not wish to burden you with details, but it is important to realize that President Chiang Kai-shek and the Chinese Government now in Taiwan or Formosa have had over 30 years' experience in fighting communism and that they had tried more than once to practice peaceful coexistence with the Communists but found to their chagrin that this was not possible. The loss of the Chinese mainland to communism was, indeed, a world tragedy of the first magnitude. It tipped the balance in favor of communism. Since then, hundreds of millions of the Chinese people have been subjected to the worst forms of Communist rule, and the Chinese Communists have become the watchdog and the aggressor for international communism in Asia.

If the Chinese mainland had not been lost to communism, there would not have been the Korean war and the 130,000 American casualties would have been spared. There

would have been no division of Vietnam. Malaya and Singapore would not have been threatened by the existence of Communist bandits. And elsewhere in Asia, there would certainly not have been the degree of Communist infiltration and subversion as is found today.

The Chinese authorities in Taiwan today are ready to admit the mistakes they made on the mainland. They do not disown the responsibility for the loss of the mainland. But there is one factor in the episode of the Communist take-over in China which may serve as a useful lesson to us all today. It is the fact that for quite a number of years the Chinese Communists with their independent army and their own government within China were regarded not as true Communists but as agrarian reformers.

The sad thing was that even on the eve of the fall of the Chinese mainland, many people in the West, among them some high government officials and leading parliamentarians, still believed that the Chinese Communists were social or agrarian reformers and that they were, in fact, the liberal progressive elements of the country. The fight between the Chinese Government and the Chinese Communists was widely believed by many people in this country as one between the corrupt reactionary forces of the Government and the liberal progressive reformers of a new China. As a result, the position of the Chinese Government, after V–J Day, became virtually isolated. This was at least a contributory factor to the defeat of the Government on the Chinese mainland by the Communists. This defeat brought to a temporary halt the efforts of the Chinese people to achieve unity and gradual democratization by peaceful evolution.

We are witnessing today a phenomenon which is almost reminiscent of the epoch of Chinese history. It is true that the nature of international communism is now perhaps better understood, but it is equally true that much wishful thinking continues to influence our conduct in international affairs. In a sense, the type of wishful thinking today is even more dangerous because, while it does recognize communism as such, it continues to indulge in the thought that we have to find a way to coexist with Soviet Russia or with communism, and that Soviet Russia or Communist China, in fact, so desires.

Let me quote to you a short paragraph from a well-known speech by Dimitri Z. Manuilsky, one-time Foreign Minister of the Ukraine and for many years a spokesman of the Comintern, delivered at the Lenin School of Political Warfare in Moscow in 1931. He said: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists." These words, spoken almost 30 years ago by the leading Communist authority at the time, remain perhaps the best proof that in Communist eyes there can be no meeting ground between our way and the Communist way of life.

I have no desire to take an alarmist view or to dwell on a danger which does not exist. The terrible thing about communism, as it has been practiced in the last 30 years in Asia, is that it is relentlessly persistent. Like a plague, it is not something you can live with and hope for the best. You either have to fight it or you will eventually succumb to it. This has happened to the people of the Chinese mainland, of Korea, of Vietnam and of Germany—the four countries which remain today divided as the result of international Communist aggression. The captive peoples of these four countries are now under one rule of communism—in spite of minor differences that exist between these regimes in their methods of regimentation.

Let us have no illusions about the immutable character of communism: its ultimate aim of world conquest, its exploitation of any political dissidence, and the unity of its members when confronted with the free world. When the people's communes were started last April in Red China, and there were subsequent reports of adverse commentary by Russian and Polish Communists, the free world was again speculating that the Chinese Communists were falling out with Russians, and that eventually Mao, instead of Khrushchev, would lead the Communist world. All this is now settled by an unmistakable statement appearing only a few days ago in the Chinese Communist Party magazine, Red Flag, which reads: "All the Communists of the world wholeheartedly acknowledge the great historic role of the Soviet Union and the Soviet Communist party," the journal said. "The Soviet Union is the first shock brigade of the International Proletariat to scale the heights of communism."

Both the Russian and the Chinese Communists admit that they are still in the stage of socialism, but they are both determined and dedicated to advance to pure communism. The real question for us in the free world is whether we should change our system so as to go along with them, or how we can resist this type of communism which seeks to overwhelm us all. I for one do not consider it practicable to adopt peaceful coexistence as a policy. For basically, this is something alien to communism, and even if we were to practice it ourselves, it would not achieve the purpose of peace. In short, coexistence means for all of us a slow surrender by installment.

It is not the purpose of my talk this evening to deal with the larger problems of how the free world as a whole should act in order to deter and fight communism. I have sought to establish the fact that there cannot be peace and freedom in Asia unless there is a peace-loving, free and democratic China. That is my firm conviction and also the belief of the 23 million free Chinese in Taiwan and other parts of the world.

Based on this belief, the Government of the Republic of China on Taiwan is maintaining a nucleus of freedom for the Chinese people. We have implicit faith that the cause of freedom will eventually triumph. We are certain that the Chinese people on the mainland will not long endure communism. They have demonstrated their abhorrence and opposition to Communist rule in the past 9 years in their continuing struggle against it. Since their occupation of the mainland nearly 10 years ago, the Chinese Communists have tried and have failed in all their methods of regimentation. The early purges and public trials, followed by the setting up of farm cooperatives and collectivized farms, failed to extinguish the fire of opposition. On the contrary, following the "100 flowers bloom" movement, the outburst of criticism and opposition was so violent that the Communists immediately reverted to more brutal and repressive measures. The system of the communes was adopted as a quasi-military form of control because all the previous methods and measures of control had proved ineffective. For lack of time, I do not intend to go into details regarding the people's communes. Many news stories and articles have been published about them in this country, and most of them based on Communist reports and statistics. I am concerned here chiefly with the fact that the Chinese people on the mainland, the overwhelming majority of whom are, of course, not Communists, cannot long endure this form of rule which is totally alien to their heritage and their character. For instance, the commune has practically done away with the family system as it has existed for centuries in China. According to reports from official Communist sources, a large number of the listed complaints from those who dared to speak out were connected with the family. Another example of the continuing opposition on the part of the people to the communes is the complete elimination of the professional guilds and organizations and their replacement by a centralized control of forced labor. Although trade unionism had not been developed to a great extent in China when the mainland fell, there had existed for many centuries trade guilds which, among other things, had helped to perpetuate the high standards of craftsmanship in China. Now, in a Communist commune, a man is a mere laborer. He is trained quickly to do a job. But he is liable to be shunted to other jobs before he learns enough of one job and does it well. There is, of course, a tremendous waste of labor and material implicit in this system. One of the reasons why agricultural production is claimed to be on the increase is because by far the largest number of people were they could still continue to use their skill born and brought up as farmers and as such and experience to some advantage.

It may be too early to say whether the communes will be a success or a failure. One thing is, however, certain. It is a system calculated to facilitate intensified aggression abroad and oppression at home. Communism might not be as harmful as it is if it could be confined within certain limits. But this is not possible. Let me explain what I mean. You have all heard that since the occupation of the Chinese mainland by the Communists, there has been an officially conducted hate-America movement. This movement reached its height on the eve of the invasion of Korea by the Chinese Communists. This movement is being intensified following the adoption of the commune system. In fact, the anti-America policy has been formally written into the preamble of their rubber-stamped constitution and is considered prerequisite to socialism. This is to say that the people of China, as long as they remain under Communist rule, will be required to hate America and Americans forever. Americans are depicted by Chinese Communist leaders as imperialists, aggressors, warmongers, but, nevertheless, "paper tigers" whom they would sooner or later crush and bury even if, as the Communist Minister of Defense Peng Teh-huai said last October, they, the Americans, "take to hiding in the moon." The truth is that like Hitler both Khrushchev and Mao must artificially create in the people a sense of insecurity in order to justify the oppressive measures that are imposed on them. Just as Hitler used to falsify to the German people the increasingly threatening encirclement of Germany by the democracies, Mao has been drumming daily on the ears of the captive Chinese people the danger of an attack by the United States. This naturally falls in line with Communist policy because the United States is the leading capitalist power in the world and, therefore, the archenemy of the Communist world. But Mao has turned the hate-America feeling into one of national movement. It has been suggested that if the United States should recognize Red China, this hate-America movement might be dropped. This is, of course, wishful thinking, because the hate-America policy has become a necessary part

of the Communist system of control and regimentation in the mainland.

A little while ago, I was referring to the purpose of my Government on Taiwan. I think it is fortunate for the free world that there exists outside of the Chinese mainland a rallying point for the Chinese people in their defense of freedom. The continuing existence of my Government serves as a beacon of hope for the millions of enslaved Chinese on the mainland. This is particularly important as the Chinese people's hatred of communism is mounting. Despite the "3-anti" and "5-anti" campaigns which resulted in the mass murder of some 20 million people and the herding of another 30 million into slave labor camps, widespread uprisings are still being reported in the Communists' own papers. The chief of the Communist scret police himself admitted in January 1958, that during a period of 2 years his men had found it necessary to investigate 18 million workers for counter-revolutionary thoughts, had smashed 3,000 reactionary groups, and had uncovered 100,000 active counterrevolutionaries, of whom 5,000 were in the Communist Party itself.

In sharp contrast to what the Chinese Communists are doing, my Government on Taiwan is trying its utmost to preserve the best features of China's cultural heritage and, at the same time, to achieve progress and change within the framework of a social democracy with particular emphasis on the welfare and living standard of the people. To confirm my point, I need only quote you a few passages from a New York Times report, carried in its issue of February 11, 1959:

"Taiwan's economy has attained its most stable level since 1952. * * * Industrial production has risen 80 percent since 1952. * * * Last year saw a big increase in the output of chemical products, textiles, hardwood, and machinery."

"Living standard is high by Asian level. To the visitor, clothing, food supplies and housing all seem to be adequate."

"The Government has carried out a land-reform program and adopted other progressive plans, but at the same time it has kept a steady eye on promoting family solidarity and maintaining Chinese traditions. Religious freedom has been safeguarded."

"Unexpectedly, life in small villages appears more comfortable than in the larger cities. Without exception, the cheerful young women of the village wear lipstick of various shades. * * *"

"Every town and village has its schools. Books, printed by the Government and furnished at nominal cost, are available to all."

Yet, however bright these spots may appear, the prospect for the reemergence of a free, democratic China on the Asian continent would soon be lost if the Western Powers fail to maintain their solidarity against international communism. Recent history has shown us that whenever there is a weak link in the free world, the rescuing efforts being put in often entail concessions to the Communists.

Let us remember that the Communist nations are united by one ideology and their movements are coordinated. On the other hand, the free world is not even united. In addition, there are certain neutralist or neutral countries which are playing the game of simultaneously bargaining with both the West and the East. It is my considered opinion that we must achieve greater solidarity before we in the free world can deal effectively with the Communist countries. Above all, we must not increase the prestige of the Communist world by recognizing the fruits of its aggression or by being a party to any arrangements which may raise the prestige of any Communist regime in the eyes of the people whom it seeks to control. Above all, let us not yield one further inch of free territory or surrender another free soul to Communist rule.

Mr. President, we have just celebrated the sesquicentennial of Abraham Lincoln's birthday. Let me conclude my remarks by invoking a famous saying of Lincoln: "A house divided against itself cannot stand," and the world "cannot endure permanently half slave and half free." We, who are yet free, owe it to ourselves and to posterity to help restore freedom to the enslaved.

I thank you.

## The Society of the Friendly Sons of St. Patrick of Washington, D.C.

EXTENSION OF REMARKS
OF
### HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. HERLONG. Mr. Speaker, last evening I was indeed happy to attend the annual dinner of the Society of the Friendly Sons of St. Patrick at the Mayflower Hotel. This society antedates the American Revolution, having been founded in Philadelphia on March 17, 1771. Three Presidents of the United States have held or hold active honorary membership in this historic and great society: George Washington, Harry S. Truman, and Dwight D. Eisenhower.

President Eisenhower was present at the dinner last evening when the president of the society, James Francis Reilly, bestowed honorary membership on the Honorable Sean T. O'Kelly, President of Ireland.

The society's annual citation was awarded to its secretary, Simon F. McHugh, Esq.

In my opinion, however, the highlight of this fine dinner was the inspiring, dynamic and challenging address of the distinguished junior Senator from Arizona, the Honorable BARRY M. GOLDWATER. In all my experience and public life, I have seldom seen a speaker receive such attention from his audience or the lengthy standing ovation which he received at the conclusion of his speech. I am proud to insert Senator GOLDWATER's address in the RECORD and urge all my colleagues to read it.

President Reilly, Mr. Chief Justice, Mr. Secretary McHugh, on introducing Bishop Hannan, Jim mentioned something to the effect that he was concerned over what his father in heaven might be thinking with him being president of the Friendly Sons of St. Patrick, when his father was a good Hibernian. I couldn't help wondering what some of my ancestors in heaven might be thinking with one of their brethren addressing this group. I wonder, for instance, what that Russian Jew who came to the shores of California 110 years ago, and to Arizona 100 years ago, would be thinking of his grandson addressing this auspicious group of Irishmen; and then I could not help but wonder what my uncle, whose only mistake in life was to found the Democratic Party in our territory, might be thinking of his nephew, a Republican. I have come to the conclusion that they would both be happy.

It has been said that this is the one day of the year when the world is divided into two classes—those who are Irish and those who would like to be Irish.

To me, a festive occasion such as this is a display of Americanism at its best. For here we are—men whose forebearers came to this land from all parts of the world—helping to celebrate the feast of St. Patrick with our friends of Irish descent in our own American way.

This is, indeed, the fabric and pattern of our great country.

And I pray that good people everywhere, armed with the love of God and following the example of St. Patrick, can provide a stimulus and a hope to those less fortunate in other lands so that they, too, may one day breathe the grand, free air that blows over Ireland.

I am sure you know that scholars still wrangle over the subject of just exactly where St. Patrick was born. Some say France. Some say Scotland. Some say Wales. It is definitely known, however, that he spent his young manhood in Ireland.

Fourteen centuries have passed and yet the memory of St. Patrick remains as green as the living shamrock itself.

It was St. Patrick who changed the character of the Irish people from pagan to Christian; from a chaos of marauding bands under rival chieftains, stealing and destroying, to a land of order and peace.

This proves conclusively to me that if St. Patrick was not indeed an Irishman himself, he was at the very least a Republican.

Now, those Republicans of Irish descent in Congress may be outnumbered, but they yield to no one in being endowed with the missionary spirit of St. Patrick.

Actually, they have so much missionary work to do before 1960 that they're plugging hard for a divine intercession.

As a matter of fact, right now you can't find an unlit candle in any church in town.

In this respect, I would like to counsel moderation among those of you who are Democrats of Irish descent.

Just because a fellow named Kennedy will be in the picture, there's no reason to lose your heads.

And to those of you who happen to be Republicans of Irish descent, I give you my solemn word that among the membership of the United States Senate, you can count on O'JAVITS, O'DIRKSEN, O'BRIDGES, and O'GOLDWATER to be in there pitching for the cause.

And I would also tell you this: Lest there be overconfidence on the side having the greater numbers, let it be said that the fighting Irish may be outnumbered, but never outfought.

St. Patrick's Day is a day for remembering. Today across our land and around the world, the hallowed names of Ireland will be honored, honored as they rightly should be. The towns and villages, the lakes and the rivers, the names of her scholars, her patriots, and her leaders will be properly called to the attention of the world—Donegal and Tyrone; Kildare and Dublin; Limerick and Galway; and the names of men who made the Irish proud: Cormack, O'Conner, Murray, Plunkett, Hyde, and all the other leaders of Ireland.

Today the world will remember and more greatly appreciate the great loves of the Irish, out of which the rich character of her people has grown. Their love of their native land, of its towns, and its people. The love of political freedom and the love of learning. Their love of things spiritual. The love of religion and their recognition of its place in their lives. We will remember those loves, because love is a sacred tenet of religion and a charge of God.

People are prone to recognize their own assets, but the rest of the world will pay tribute to the meekness and humility that mark the virtues of the Irish. Because in these times when more stress and value are placed on the material things, we should rightly remember that St. Patrick conquered Ireland meekly, and made of those conquered humble champions of Christ, men who, with these virtues, went forward with nothing but the Cross and their faith and conquered and made friends.

Here in America today the contributions of the Irish to our freedom can most properly and thankfully be recognized. It would take days to recite all the contributions, but I mention just a few. It was an Irishman named Patrick Henry who said, "Give me liberty, or give me death."

It was a group of 29 Irishmen, all members of the Friendly Sons of St. Patrick, in the city of Philadelphia, who gave a half-million dollars when it was sorely needed to our fight for independence.

To mention a few of the Irish signers of the Constitution we recall Pierce Butler, who was born in County Carlow; Daniel Carroll, an ardent supporter of the Constitution's first amendment, which provides for religious freedom; Thomas Fitzsimmons, who recruited and led a patriotic band of volunteers; James McHenry, who was born in County Antrim, as was William Patterson; George Read of Maryland, whose father was an Irishman; and Richard Spaight of North Carolina, who was also the son of an Irishman. These are names connected with our early fight for independence, and in just recent days Gen. "Wild Bill" Donovan, a hero and a leader in two wars for the preservation of freedom, passed on to his Maker.

Thus, today, as the world stands troubled and quaking in fear, we can remember Ireland's long fight for freedom. Seven hundred years of invasion by the Danes, the Normans, and the English, during which time her answer was to absorb the invader and make him more Irish than the Irish themselves.

All of these are hallowed memories of name and places and deeds and they will be dealt with by voices far more able and eloquent than mine, so to them the challenge of adding luster to the names and history that already shines with the brilliance of a midday desert sun in my Arizona.

This evening I suggest that all Americans might learn something from the Irish, and it is to this that I wish to direct my remarks. That something would be gathered and constructed from the many facets of Ireland and her people on which I have briefly touched. It would include the love of her people for their country and their love of political freedom. It would include the virtues of humility and meekness, and it would include what to my mind is already a distillation of those virtues and loves—a determination expressed in her fight for freedom. This something would become a lesson to us all in that area in which we profess such devotion and yet display such apathy.

The freedom of America has the same fundamental and basic sources that freedom everywhere achieved has had, including the freedom of the Irish. That is man's instinctive desire to be free; to be able to say what he thinks; to be able to print what he says, to be able to worship in the religion he chooses; to be able to associate himself with those of his picking; to be able to earn property and retain it; and to be able to walk God's earth with dignity because of the possession of these freedoms.

Like the Irish, our forefathers knew what they wanted and what they sought, and they knew this from the oppression they had lived with. Our forefathers came to a raw, new country, and fought those forces from abroad who would deny them success in the achievement of freedom. The Irish for 700 years devoted themselves to that fight on the soil of their homeland, and won. Our forefathers devoted themselves to this same fight on our new soil, against the same forces, and won. In our determination to rid ourselves of oppression and achieve freedom, we accepted as freedom's source the words of Thomas Jefferson, in the Declaration of Independence, "That we hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with cerain inalienable rights; that among these are life, liberty and the pursuit of happiness."

We based our freedom, then, on the same grounds on which the Irish had fought for many years before we found that base ourselves, namely a spiritual one. In less than 200 years we have, through this spiritual strength acquired freedom never before known by any people, and because of this freedom a material power that has never been known by any civilization in history.

Strangely, though, as we were enjoying the heights of this freedom and its many benefits, at about the same time the Irish won their freedom, we began to lose ours. We fought and won wars for freedom and then lost them at the peace table, mainly because of a misunderstanding as to what kind of peace the world was looking for. Ours was a conception of material peace, when the world wanted the comfort and assurance of a spiritual peace, out of which a material one could grow.

People have always wanted liberty, and people today want liberty. They want us to show them the way to liberty and the peace that comes under it, rather than to show them how to obtain more dollars, more automobiles and the other hard goods materialism.

This weakness of the material has been further manifested by more and more of our people looking to a paternalistic government to do for them those things they could better do for themselves.

Slowly materialism began to be our goal, and even to some of our people, their God, and we find ourselves more and more willing to sacrifice our basic principles for the material attainment our people would settle for.

We laugh at laws, and coddle the hoodlums, the gangsters, and the crooks. We allowed the Communists to crawl into our lives. Then when their intent became evident, those who spoke out against them and would have removed them were chastised. You know of whom I speak: John Flynn, Dean Manion, Frank Hanighen, every one is an Irish name. And then there was another Irishman, Joe McCarthy.

There is a peculiar difference in this situation involving these Americans of Irish name and their ancestors, because instead of acting together as their ancestors did in fighting a common enemy—the English—these Americans are arguing with other Americans over how an announced enemy and destroyer should be treated. Should he be coddled and banqueted and respected, or should he and his forces be denied access to American soil and American people?

We have come to that point where we blandly and rather ignorantly say that a little socialism isn't bad; that a little inflation won't hurt; and that an already tax-sick people can be taxed more.

Public servants who swear on the Bible to defend and protect the Constitution have allowed the freedom of association, the freedom of choice, and the freedom of property to be denied the working people through an act of compulsion that requires membership in an organization regardless of the desires of the workingman, in order that that man may support himself and his family.

By this same action, they have legalized violence and corruption and graft; and yet Americans ho-hum the whole dangerous display, admitting that something is wrong but being afraid to do anything about it, and putting off the time for decision until their children and grandchildren will be concerned, this despite the fact that one of the basic desires of all people, be they Irish or not, is to leave for their sons and daughters something good and fine and decent, by which they will be remembered.

Instead of that drive today in this country we find weak-kneed excuses as to why fathers and mothers will not rise up and demand a stand of courage on the part of our leaders in order that these things be corrected in our time before the devastation cannot be corrected in the time of our children.

We hear the taunts of people who have been lied to by Communists about us. We have witnessed our Vice President spat upon by people the Communists have brainwashed. We have not helped those who would stand up to this godless philosophy. Yet we propose further meetings with these devastators, when in practically every instance of agreement and promise—in fact, all with the exception of two—they have lied and cheated their way out of their responsibilities.

Yes, our freedoms are slowly being whittled away, and yet we, as a people, go on and on like the country boy who never learns that the pea isn't under any of the shells he is playing with.

The frightening thing about our situation, both within our country and without, is that history records that every government since man's first attempt to govern himself as having approached the identical situation and not having had the courage to make the proper decisions and movements. There is no new magic we have discovered that can bridge this crossroad. There is no new formula that has been devised by which our path can be made easier and at the same time our freedoms more secure. Ours is the greatest philosophy of government ever developed, and it was developed by people from every country and added to during the years when the friendly invasions of peoples added to what we called, "the melting pot."

Today, though, there are those among us who feel that we have an entirely different situation; that man's problems are now material problems and not problems of the spirit. Those are the people who look upon the harnessing of the atom as being so fearful that no force of the spiritual can overcome it, forgetting at the same time that problems of equal importance have come before man during our history and they have been conquered by the faith of man in his God, his country, and himself.

So I wanted to talk briefly tonight about what we Americans might learn from the Irish, and I think that it can be summed up by saying that we can look across the waters to that green island and to her people, and to the great lesson that freedom is not only man's goal—it is God's goal for man. That we have had freedom and we still have a large share of freedom, we know, but that we are losing it, and that it will not be lost in one afternoon or morning by the appearance of material forces from the outside, but that it will be lost by the termite-like chewing away from the inside by people who have lost faith in their God, their country, and themselves, we won't recognize.

We again look to Ireland's 700-year struggle for freedom and recognize that freedom is something that must be fought for to be attained, just as our forefathers discovered the same thing. Then we can look to Ireland and see a people who have not gone on the American dole, who have built up in their country a free economy, and who have maintained the spiritual ideals which gave them the strength to fight a desperate battle for freedom for more than 700 years.

Yes, we can learn from the Irish. We can learn to defeat the enemies of religion and our Republic. We can learn to protect our Constitution. We can learn from them how to perpetuate liberty. If we study the Irish and their many attributes I think we will find that dominating their lives is a sense of love, not only for their fellowmen but for the principles of life and for the country in which they live, be that Ireland or America.

We need men of that quality; men who love their God and who love their country; men who are proud of our Nation and who do not hesitate at any moment to extoll its virtues, even though they may be criticized for feeling too deeply about their country. Today people who feel too strongly that the United States is the best country in the world are actually criticized. They are told that national feeling should be subjugated to one of broader vision. Well, I say to you I will take the Irish approach and join with them in declaring to all that America is the best place to live.

We need men who feel so deeply about principles that they will not compromise for evil for one moment's delight. We need men who believe that, simple as it is, the spiritual basis is the only basis on which true liberty and freedom can live. We need men whose eyes will moisten as they see their flags pass by, men who do not require the reminder we see on the parade ground at West Point, "Gentlemen will remove their hats when the flag goes by." We need men who are strong and who will never bow down to an aggressor be that aggressor weak or strong.

These lessons are the lessons of the Irish. They are the lessons drawn from everything that has made the Irish and their sons around the world what they are today—men of warmth, men of love, men who are humble and meek, but men in whom these qualities have developed a strength of character that is reflected down through history in man's search for freedom. I, as a descendant of a family who came from another part of the world but who, nevertheless, became just as strong Americans as I am today, join with those not of Irish extraction in offering a prayer to God that the qualities of the Irish will be forever perpetuated on this earth, so that liberty may have a chance to live forever, and be born where it does not live today. The lessons of the Irish are truly lessons of liberty.

---

## Statement of Vice President Jerome J. Keating, National Association of Letter Carriers, Before the House Committee on the Judiciary

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting statement given by Jerome J. Keating, vice president of the National Association of Letters Carriers, before Subcommittee No. 2 of the House Judiciary Committee in support of H.R. 3283.

STATEMENT OF JEROME J. KEATING, VICE PRESIDENT, NATIONAL ASSOCIATION OF LETTER CARRIERS, BEFORE THE SUBCOMMITTEE NO. 2, COMMITTEE ON JUDICIARY, HOUSE OF REPRESENTATIVES, ON MARCH 18, 1959

Mr. Chairman, my name is Jerome J. Keating. I am vice president of the National Association of Letter Carriers, an organization representing 110,000 letter carriers throughout the United States.

We are very much interested in H.R. 3283, introduced by the distinguished chairman of the Judiciary Committee, EMANUEL CELLER. When one says "letter carrier," undoubtedly you think of the foot carrier with the load on his back; however, letter carriers deliver parcel post; they make collections, and drive mounted routes. All in all, in the city delivery service, we have 36,898 men driving motor vehicles. The present mechanization program will mean more and more letter carriers being placed on a mounted basis. We have approximately 3,300 letter carriers delivering mail from the three-wheeled vehicle known as the mailster.

The problem of driver protection is a very real one. The present method of solving claims of citizens who are involved in accidents with Government-operated vehicles is a most unsatisfactory one and decidedly unfair to the drivers of Government vehicles. In every State in the Union, there is some law providing financial responsibility for those who operate motor vehicles. The laws operate in a variety of manners, but in every instance, the responsibility is placed upon the owner of the vehicle. Perhaps the most popular method now in operation is the so-called fleet plan, in which the operator of a fleet of vehicles assures the responsible law-enforcement people that he will assume all liability where any of his vehicles are involved in accidents.

Prior to the passage of the Torts Claims Act in 1945, the person involved in an accident with a Government motor vehicle had no recourse except to sue the individual driver. He could file a claim against the Government only if the Government agreed to it. With the passage of the Torts Claims Act in 1945, an aggrieved individual was then permitted to file a claim with the department or agency and, if the claim amounted to less than $1,000, the department or agency could make settlement without recourse to court action. If the claim was in excess of $1,000, then the plaintiff could bring action under the Federal Torts Claims Act. After the law was passed, it was apparent that either many people did not know about the act, or they still were of the opinion that they had a more fertile field in suing the individual driver, because for a long period of time after the pasasge of this act, the claims against the individual drivers continued. I am happy to report that, within the last few years, there are not as many actions brought against the individual drivers.

When an individual driver is involved in court action and judgment is rendered against him, the only recourse he has is to take the matter up with his Congressman and have a private relief bill introduced, which bill is referred to and acted upon by this committee. This committee has always been most cooperative in the treatment of such claims, but for more than 3 years, the Senate committee refused to take any action on such bills. At the end of the 85th Congress, we were successful in prevailing upon the Senate committee to change their policy and, as a result, a number of private bills were passed at the end of the last session.

The Senate committee established its policy because some members contended that it was not proper to authorize a private claim bill when court action had been secured against the individual. In studying these cases, however, we find that many, many times judgments were rendered against the individual when all signs pointed to the fact that the individual should be absolved of all responsibility in the matter. A major factor involved in accidents in a fleet of motor vehicles such as operated by the Post Office Department is that these vehicles are required to maintain the same schedule, regardless of the weather or the condition of the streets. Accidents frequently occur due to icy streets, even though the operator is shown to be operating the vehicle with the utmost of caution.

On many occasions, the driver of the Government vehicle is referred to the U.S. district attorney and, evidently in many cases, is of the opinion that with such a referral his responsibility ceases. It has been our experience in studying these cases over a number of years that many of the judgments that have been secured are secured because of inadequate representation. This is not meant to be a criticism of the U.S. district attorneys. We are fully aware of the fact that they have a very heavy load and, obviously, first consideration would naturally be given to suits wherein the U.S. Government is the defendant. The claims referred to them for individual drivers are obviously odd jobs. An additional factor is that the normal work of U.S. district attorneys does not take them into State courts and, when they leave the familiar Federal court to look after a case in a State court, to many of them it is a strang manner of operation. Many drivers are adequately represented but, in many instances, the cases are not thoroughly or expertly prepared.

It is extremely unfair to the drivers of Government motor vehicles to place them in a position where they must stand suit for from $5,000 to $50,000 in some instances for accidents incurred while they were zealously performing their duties as letter carriers employed by the Post Office Department. It is also unfair to require these men to put out substantial sums of money and then have to wait from 2 to 6 years to be reimbursed through action of the Congress for their legitimate claims.

The Celler bill will provide a better form of relief for the private citizens who are involved in accidents with Government motor vehicles, and this will be particularly true if the Congress concurs in legislation being proposed by the administration wherein the amount of money that can be paid without litigation for a claim by a department or agency would be increased to $3,000. Obviously, such legislation would help to break the logjam that is now found in every Federal court, and it would provide a more satisfactory way for the aggrieved individual to have his or her claim taken care of promptly.

We believe that the passage of H.R. 3283 is justice long overdue. To indicate the type of action that has been taken against the drivers of post office vehicles, I am attaching to my statement brief synopses of some of the details of accidents where the driver has been compelled to pay and where the Congress in its wisdom has seen fit to pass remedial legislation.

We sincerely hope that this subcommittee will favorably recommend H.R. 3283 and that the bill will become law at this session. Mr. Chairman, you and the members of this committee have always been most considerate and I am sure that we will receive that favorable consideration at this time. I appreciate having had the opportunity of presenting this testimony.

SAMPLE CASES

1. Letter carrier was driving truck going east; other party was going north. At a blind corner, the driver of the other car hit the right rear fender of the post office truck with his left front. The other car hit with such force that the truck was forced over the curb into a picket fence. The other party left skid marks 40 feet in length before he hit. In court he testified he was only going 20 miles per hour. The case was tried in a judge's court before a lady judge who had the reputation of disliking drivers of Government vehicles. It is reported that the lawyer for the other party was greatly surprised when a judgment for $251.19 was rendered in favor of his client.

2. On a wet rainy day, a letter carrier driving a post office truck was returning to the garage; the driver of a truck ahead suddenly put on his brakes; the driver of the post office truck did likewise but, due to the condition of the streets, skidded into the other truck. The carrier was sued for $5,000. The U.S. district attorney recommended that he settle, which he did for $442. The letter carrier, fearful of a large judgment against him, paid the claim. The accident occurred early in 1952, a relief bill was approved in September 1958.

3. A carrier driving a post office truck was involved in an intersection accident on the ice and snow. The driver of the other car was traveling at a higher rate of speed. Counsel was assigned from the U.S. district attorney's office. He immediately tried to work out a settlement. After the trial, the attorney from the district attorney's office made an off-the-record statement that he should have prepared a better case.

4. A carrier attempting to make a left turn from a busy street into a side street was struck from the rear. The Post Office Department absolved the carrier from blame. The party who struck the mail truck sued the letter carrier. The driver of the other vehicle was fined for careless driving, as well as for operating without a permit. The defense attorney did not prepare his case well, claiming that he did not believe that the plaintiff would let the matter go to court. The plaintiff did and secured a judgment against the letter carrier driver.

## The States and the Supreme Court

EXTENSION OF REMARKS
OF
## Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
*Monday, March 16, 1959*

Mr. DIRKSEN. Mr. President, on Monday I asked for the inclusion in the CONGRESSIONAL RECORD of an article appearing in the March issue of the American Bar Association Journal, written by the Honorable Charles H. Davis, associate justice of the Supreme Court of the State of Illinois, on the subject "The States and the Supreme Court."

Because the article is at once timely and scholarly, it is a valuable contribution to a subject that has received much attention during the last several years.

I learned on submission that the article is estimated to make 3¼ pages of the RECORD, at a cost of $263.25, and I ask unanimous consent that notwithstanding this fact it be included in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTITUTIONAL LAW: THE STATES AND THE SUPREME COURT

(By Charles H. Davis, Associate Justice of the Supreme Court of Illinois)

(A Federal system of Government of necessity involves areas of penumbral jurisdiction between National and State Governments. Even before the ratification of the Constitution, this problem was recognized, discussed, and analyzed. Now, more than a century and a half later, the line between State and National authority is still often disputed, sometimes heatedly. Justice Davis discusses recent decisions by the Supreme Court of the United States that illustrate the difficulties of this perplexing problem.)

Under the American scheme there are two complete structures of Government, one for the Nation and one for each State. Each of these dual sovereignties, with its executive, legislative, and judicial branches of government, is supreme in its own sphere of activity, and thus complements the other, but there are also areas of overlapping authority which give rise to complex Federal-State questions. The Supreme Court of the United States stands at the apex of the Federal-State judicial branches of our Government and, while the State-Federal judicial systems are separate, the ultimate power of review rests in the U.S. Supreme Court and, to this extent, the total judicial system of the Nation and States is integrated.

The prime question of the power of the Supreme Court to hold unconstitutional and judicially unenforceable an act of the President, of Congress or of a constituent State of the United States rests, at least, on logical inference. This thought was succinctly expressed by Alexander Hamilton in "The Federalist," No. 78. Many authorities urge that such a power is explicitly granted by the supremacy clause of article VI and section 2 of article III of the U.S. Constitution.

Early in the history of our country, these powers were recognized and exercised by our Supreme Court. In 1803 in the case of *Marbury* v. *Madison*,[1] and act of Congress was held to be unconstitutional; in 1810 in *Fletcher* v. *Peck*,[2] and in 1813 in *Fairfax's Devisee* v. *Hunter's Lessee*,[3] acts of the legislatures of the States of Georgia and Virginia were held to be unconstitutional; and in 1821 in the case of *Cohens* v. *Virginia*,[4] the Court reviewed and set aside a criminal judgment entered in the State court where a Federal question was involved. These early cases established the power of the U.S. Supreme Court in these areas. By necessity, as well as by almost universal accord, these powers are regarded as vested in the Supreme Court. Any other allocation of such power would seem to lead to chaos.[5] Thus, it is no longer a question of the power of the U.S. Supreme Court to act in these areas, but rather the delicate question of the proper use of such power.

Since the adoption of our national Constitution, there has been a continuous expansion of the exercise of the powers of the National Government and a consequent contraction in the employment of the powers of the State governments. This centralization arose from the necessity for a strong central government in our ever-shrinking world. It resulted from the increased interdependence of the people within this Nation and the world at large, from the aggressive and continuous exercise of power by the Federal authorities in the many areas properly designated as State-Federal areas, and from the unwillingness or inability of the States generally to shoulder the responsibilities that are properly theirs.

In a limited manner, I shall discuss State-Federal relations as affected by judicial decisions in the areas of subversion and loyalty, criminal law, labor law, occupational discrimination and segregation.

STATE-FEDERAL RELATIONS IN SUBVERSION AND LOYALTY

The Federal Government bears the primary obligation of defending the Nation from internal subversion and external aggression. However, since colonial days, the States have acted in the areas of subversion and loyalty and have never left such issues to the Federal Government.[6] In recent years, long standing State legislation of this type was refurbished and expanded. The Federal Government since World War II has likewise enacted comprehensive new legislation in this field. Under this background, *Pennsylvania* v. *Nelson*,[7] reached the U.S. Supreme Court.

Nelson, a member of the Communist Party, was convicted in a State court under the Pennsylvania Sedition Act which sought to impose a penalty for conspiracy to overthrow the Government of the United States by force or violence. On review, the Pennsylvania Supreme Court found that the case involved only sedition against the United States, reversed the conviction and held that the Smith Act of 1940 had superseded the enforceability of the Pennsylvania Sedition Act.[8] The U.S. Supreme Court affirmed, applied the doctrine of Federal preemption, which had its origin in cases decided under the commerce clause, and held that the Smith Act[9] and other Federal statutes,[10] dealing with communism and other loyalty problems preempted the field and thereby invalidated or suspended the Pennsylvania Sedition Act. Apparently, this was the first case in which the Court held that a Federal criminal statute, not involving a regulatory scheme under the commerce clause, in the absence of conflicting provisions, superseded the enforceability of a concurrent State criminal statute. The Court based its preemptive holding on the dominance of the Federal interest, the pervasiveness of the Federal scheme and the possible conflict in the administration of State and Federal laws in this area. It also suggested that the possibility of double punishment was a factor in its decision.

However, in 1920, in the case of *Gilbert* v. *Minnesota*,[11] the U.S. Supreme Court affirmed the conviction of Gilbert who had been prosecuted and convicted in the State court pursuant to a State enactment against interference with military enlistments during World War I, conduct which was proscribed by the Federal Espionage Act.[12] In that case the Court emphasized the cooperative nature of the Federal and State interests in the preservation of the Federal governmental structure and added that the State statute was also justified as a local police power measure designed to prevent breaches of peace. A similar conclusion could have been reached in the Nelson case.[13]

The effect of the Nelson decision on State criminal prosecutions for other overlapping offenses in connection with State Communist control measures, State loyalty oath programs, and State legislative investigations is uncertain. The Nelson decision announced that the States cannot punish for sedition directed against the U.S. Government, but remain free to punish for offenses involving a local breach of peace. Situations intermediate between these penumbral extremes can be rendered clear only by the progressive course of litigation.

Had Congress incorporated in the Smith Act itself a saving clause in substantially the language of the second sentence of section 3231 of the Criminal Code,[14] its intent would have been crystal clear and the Supreme Court would have been precluded from basing its decision on the theory of Federal preemption. A present like amendment to the act would nullify the decision prospectively. Through better legislative draftsmanship, and the amendment of existing statutes, Congress may prevent and correct erroneous decisions of the Supreme Court predicated on congressional preemptive intent. Thus, greater congressional awareness of the implications of its legislation on the State as well as the Federal system of government is desirable.

While it was early established that U.S. courts had no jurisdiction to try persons for common law crimes not proscribed by any specific Federal statute,[15] our Federal Code is replete with criminal statutes prohibiting specified conduct and creating substantive

Footnotes at end of speech.

crimes independently of any administrative or statutory regulations. Such legislation is found in the Mann Act,[16] the Harrison Act,[17] the Dyer Act,[18] the Lindbergh law,[19] the Fugitives From Justice Act [20] and many others which create Federal crimes out of activity either criminal at common law or under State statutes. However, I cannot believe that the theory of preemption should or would be applied by the U.S. Supreme Court to invalidate State statutes which prescribe punishment for murder, the robbery of a national bank, kidnapping and other crimes, which are recognized as crimes against both the State and Nation. In these areas, as in the Nelson case, the doctrine of concurrent cooperation would seem more desirable than that of Federal preemption.

In 1951, the Legislature of the State of New Hampshire enacted a subversive activity statute which imposed various disabilities on subversive persons and organizations [21] and in 1953 adopted a resolution which constituted the attorney general a one-man legislative committee to investigate violations under the act and recommend additional legislation. Sweezy, summoned to appear at an investigation, testified about various matters but refused to answer inquiries concerning: (a) The activities of the Progressive Party in the State during the 1948 campaign, and (b) a lecture he delivered at the University of New Hampshire in 1954. He was thereafter adjudged in contempt by a State court, and his conviction was affirmed by the Supreme Court of New Hampshire.[22] The U.S. Supreme Court reversed the conviction in *Sweezy* v. *New Hampshire*,[23] without a majority opinion. Four justices, after reaffirming the position established in *Watkins* v. *United States* [24]—that legislative investigations can encroach on First Amendment rights—then attacked the New Hampshire act by holding that the definition of subversive persons and organizations was so vague and limitless that it extended to "conduct which is only remotely related to actual subversion and which is done free of any conscious intent to be a part of such activity."

Heretofore the power of State legislatures to compel testimony during the conduct of legislative investigations had been unquestioned and the constitutional limitations on this power had not been explored. This decision recognized the right of a witness to remain silent before a State legislative committee and suggested that free expression of ideas outweigh a State's need for information in the area of subversive activities. It provides but little guidance relative to the controlling factors in balancing the interest of the State in obtaining information by legislative investigation as against the constitutional rights of the individual. The decision leaves clash and confusion in the State-Federal interest in this area.

STATE-FEDERAL RELATIONSHIPS IN THE AREA OF DUE PROCESS

It is only in recent years that the Supreme Court of the United States has extensively exercised Federal power as it relates to local criminal law and its administration. In 1915, in the case of *Frank* v. *Mangum*,[25] the problem of mob domination of a trial reached the Court; in 1932 in *Powell* v. *Alabama*,[26] the Court held that failure to furnish effective assistance of counsel to defendants unable to procure counsel in a capital case is a denial of due process of law; in 1935, in *Mooney* v. *Holohan*,[27] the Court announced that the knowing use of perjured testimony by a prosecutor violates the concept of fundamental fairness and due process of law; in 1936 in *Brown* v. *Mississippi*,[28] the Court reversed a conviction wherein a confession obtained by physical violence had been admitted in evidence; in 1946 in *Carter* v. *Illinois*, and in 1948 in *Young* v. *Ragen*,[29] the Court held that each State must afford prisoners "some clearly defined method by which they may raise claims of denial of Federal rights" and have "an opportunity to open an inquiry into the intrinsic fairness of a criminal process even though it appears proper on the surface," so that "questions of fundamental justice protected by the due process clause may be raised * * * dehors the record"; in 1956 in *Griffin* v. *Illinois*,[30] the Court adjudged that Illinois must henceforth furnish an indigent prisoner a complete transcript of record without cost in order to meet the requirement of the equal protection clause, as well as the due process clause, of the 14th amendment; and in 1958 in *Eskridge* v. *Washington State Board of Prison Terms and Paroles*,[31] the requirements of the Griffin case were given retroactive effect. In each case the strong local interest in the enforcement of criminal law was subjected to the Federal counterbalance of a general ideal—fundamental fairness at the trial. The transcendency of the ideal inevitably left dissatisfaction in its wake.

In all of these cases except Griffin, the Federal referrent was the due process clause, one in which a greater generality exists than in any other area of federalism. In this area Congress has not acted and the U.S. Supreme Court has no choice other than defining due process in the light of the cases presented for decision. In thus determining due process, the Court defines an ideal for the future without the benefit of past precedent. Conformity to the new concepts of due process created by the Supreme Court requires constant changes in the State criminal procedures. While few quarrel with the concepts of fundamental fairness at the trial established by these decisions, many disagree with the manner in which the Supreme Court has applied these and other principles of criminal law to cases before it. The main thrust of the criticism is that the Court disproportionately exalts the facts which pertain to the rights of the individual and thereby disregards the rights of the public to be safe and secure in person and property.[32]

STATE-FEDERAL RELATIONS IN LABOR MATTERS

The Labor-Management Relations Act of 1947 or the Taft-Hartley Act,[33] superseded the Wagner Act,[34] and in, general, had as its purposes, among other things: (a) Protection of employee self-determination against union pressures as well as those brought by the employer; (b) protection of the public interest and the interests of neutral employers against the disruption flowing from certain improper practices by unions; and (c) a general increase in the power of employers relative to that of unions whose power had been extended during the war and postwar period. To achieve these aims, the Taft-Hartley Act regulated picketing, boycotts, and strikes, and sought to protect the integrity of collective bargaining agreements. It thus dealt with matters which heretofore, except for the impact of the Sherman Act, had been left wholly to State regulation. The act did not define the standards for distinguishing between protected and unprotected conduct, and its provisions failed to specify the areas in which the States may act and where State action is forbidden.[35]

At the risk of oversimplification, it may be stated that under the decisions of the Supreme Court, State action is permissible where actual violence is involved in a labor dispute, and in other areas under the act, uncertainty exists. The Supreme Court has endeavored to fill in the interstices in the legislation, but in certain areas the gaps are too wide and the task amounts to fashioning a new body of Federal labor law by the slow process of judicial decisions. The Court has identified many of the major problems and the act should be supplemented by Congress. Failure in this respect causes further strain on the judiciary and increases the confusion now existing in State-Federal relations in this area.

STATE-FEDERAL RELATIONS IN THE RIGHT TO PRACTICE LAW

In general, the supreme courts of the various States license individuals to practice law after proof of requisite academic achievement and good moral character. In *Konigsberg* v. *State Bar of California*,[36] and in *Schware* v. *Board of Bar Examiners of New Mexico*,[37] the Supreme Court held that freedom of occupational choice is an important freedom which is within the protection of due process of law.

At his hearing before the bar examiners, Konigsberg refused to state whether he was a member of the Communist Party, or whether he had ever been a Communist, or whether he belonged to various organizations, including the Communist Party. However, he denied any present advocacy of the overthrow of the Government of the United States or of California. The bar examiners refused to certify him to practice law in that he failed to prove good moral character and to establish that he did not advocate overthrow of the State and National Governments by unconstitutional means. Without opinion, the Supreme Court of California declined to review Konigsberg's petition. The U.S. Supreme Court found that the evidence did not support the findings of the bar examiners and reversed and remanded the action.

Schware admitted membership in the Communist Party at a time when it was a recognized political party in the United States and refused to answer questions relating to his past affiliations and beliefs. The board of bar examiners denied him permission to take the bar examination on the ground of failure to prove good moral character. The State supreme court affirmed and the U.S. Supreme Court reversed. In each case, the respective bar committees pursued questions along the lines of past political affiliations and beliefs in order to test the truthfulness of the respective petitioner's denial of advocacy of the overthrow of State and national governments. Two quotations from the dissenting opinion in Konigsberg point up the inherent conflict as follows: "The case involves an area of Federal-State relations—the right of States to establish and administer standards for admission to their bars—into which this Court should be especially reluctant and slow to enter," and "What the Court has really done, I think, is simply to impose on California its own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern."

STATE-FEDERAL RELATIONS IN THE AREA OF SEGREGATION

While we must remember that it is a constitution which is being expounded and that it is intended to endure for the ages,[38] there is no clear historical evidence that the 14th amendment, when adopted, was intended to apply to jury service, voting rights, or segregation. Public education after the adoption of the amendment continued on the same segregated basis as had been the pre-Civil War practice, and the doctrine of separate but equal facilities was merely confirmed in *Plessy* v. *Ferguson*,[39] wherein the Court held that the furnishing of separate but equal facilities in connection with passenger transportation complied with the equal protection clause of the 14th amendment.

The 14th amendment was adopted in 1868 and its fifth section provides:

"The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

Yet Congress has never legislated concerning segregation in the public schools.

Footnotes at end of speech.

In 1954, the U.S. Supreme Court, in *Brown* v. *Board of Education*,[40] and in the companion case of *Bolling* v. *Sharpe*,[41] decided that in the field of public education, the doctrine of separate but equal facilities had no place, and that separate educational facilities are inherently unequal. In the second decision in *Brown* v. *Board of Education*,[42] the Court remanded the respective cases to the courts of origin and stated that these courts in fashioning and effectuating decrees should be guided by the practical flexibility of equitable principles, give weight to public and private considerations and require the defendants to make a prompt and reasonable start toward compliance with the court decree.

The decisions in the school segregation cases could reasonably have been forecast. In 1889 in the case of *Strauder* v. *West Virginia*,[43] the U.S. Supreme Court ruled that selection for jury service could not be made on the basis of race. In *Shelley* v. *Kraemer*,[44] judicial enforcement was denied to restrictive covenants between private persons where segregated housing was the objective. This case was cited by the Supreme Court in its recent decision in *Cooper* v. *Aaron*,[45] as authority for the proposition that the prohibitions of the 14th amendment extend to all actions of the State denying equal protection of the law. Segregated transportation was condemned in *Gayle* v. *Browder*,[46] and segregated recreation, in *Mayor and City Council* v. *Dawson*.[47] In the field of higher education, the Court abandoned the doctrine of separate but equal facilities in the cases of *Missouri* ex rel. *Gaines* v. *Canada*,[48] *Sipuel* v. *Board of Regents*,[49] *Sweatt* v. *Painter*,[50] *McLaurin* v. *Oklahoma State Regents*,[51] and *Lucy* v. *Adams*.[52] Thus, in the school segregation cases, it was not surprising that the Court renounced the doctrine of *Plessy* v. *Ferguson* and applied to the area of primary education the principles announced in its prior decisions which dealt with secondary education. While the decisions pertaining to higher education were exoteric in nature and received but little attention, those affecting the basic local school units were exoteric and struck at the heart of local administration in the field of public education. It is in this area of State-Federal relations that perhaps the most emotional and violent reactions exist. The public response to these decisions has varied throughout the Nation and the problem of enforcing the decrees which supplement these decisions will vary in proportion to their conflict with the customs, mores and public conscience of the people of the areas involved. It is a truism which cannot be ignored, that the people, and not the courts, are the ultimate guardians of the Constitution.

As a result of the foregoing and other decisions in the delicate area of State-Federal relations, public criticism, both constructive and otherwise, has been heaped upon the U.S. Supreme Court. Such censure reached into the Halls of the 85th Congress. In its original form, the Jenner-Butler bill,[53] removed from the Supreme Court jurisdiction to review (1) any function of a congressional committee or any proceeding against a witness charged with contempt of Congress, (2) any action of any officer of the executive branch of the Federal Government in regard to security cases; (3) any statute or executive regulation of a State aimed at the control of subversive activities; (4) the rules and regulations of a school board regarding subversive activities; and (5) any rule of a State board of law examiners pertaining to the admission of persons to the bar. The bill was aimed at Supreme Court decisions and denied appellate jurisdiction to the Supreme Court in these five fields. Under its provisions, the decisions of the 11 U.S. Courts of Appeals would be final in such cases. This bill was amended by a proposal submitted by Senator JOHN M. BUTLER, of Maryland, which denied appellate jurisdiction to the Supreme Court in admission cases, but relaxed its provisions in the other four areas. In its amended form, the bill was defeated on the floor of the Senate by a motion to table, which carried by a vote of 49 to 41. On August 21, a bill reached the Senate which had passed the House by a vote of 241 to 155 and would have altered the so-called Federal preemption doctrine by providing that no past or present Federal law should be construed to preempt and exclude State laws on the same subject unless Congress specified such an intention or there was a direct and positive conflict between the Federal and State laws. This bill was offered as an amendment to a narrower preemption bill which applied only to the field of State subversion legislation and would, in effect, have overruled the Court's decision in *Pennsylvania* v. *Nelson*. The narrower bill would probably have carried, but the broader measure, which was opposed by the Department of Justice was defeated by a 41 to 40 vote.

Many other bills were introduced which reflected disagreement with Supreme Court decisions and attempted to restrict the Court's appellate jurisdiction in various areas. Further bills were aimed at the political method of selecting Justices of the U.S. Supreme Court, one of which provided for such selection by a vote of the judges of the highest courts of the several States. Various constitutional amendments were presented to Congress which provided for specific terms of 4-, 10- and 12-year periods for such Justices.

The worth of such proposals should be viewed in the light of a recurrence to the fundamental principles of our civil government. America was conceived in the philosophy "That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. * * *"[54] Under this concept it is recognized that men have rights because they are men and these rights are bestowed by our Creator and not by government. Our forebears adopted written State constitutions which vested all powers in the States that were not expressly reserved in the people; they then adopted a Federal Constitution which delegated specific powers to the central government. And, during the first session of the First Congress, a resolution was adopted which provided for submission to the respective legislatures of the States of 12 proposed amendments to the Constitution "in order to prevent misconstruction or abuse of its powers"[55] Ten of the twelve amendments were adopted on June 15, 1790, and are commonly called the American Bill of Rights.[56]

It was provided in both the Federal and State constitutions that the powers of government should be divided among the legislative, executive and judicial branches. The constitutional authors knew the tyranny which had existed where too much power was vested in one branch of the Government and therefore separated such powers. They understood the desirability of friction between the authority of the legislative, executive, and judicial departments of the governments and between the States and the Nation.

While I would recommend the enactment of amendments to existing statutes to correct an existing erroneous statutory construction by the U.S. Supreme Court and to clarify and make certain the intent of Congress in reference to the preemption of State power, I believe that it is unwise to tinker with the established division of powers which exists between the coordinate branches of our Federal Government by restricting the reviewing power of the Supreme Court. A change in these balances may well cause greater difficulty, confusion, and loss of individual rights than that occasioned by any of the protested opinions.

Abraham Lincoln, in discussing the Dred Scott decision,[57] after affirming his belief in obedience to and respect for the Supreme Court, stated: "But we think the Dred Scott decision is erroneous. We know the Court that made it has often overruled its own decisions and we shall do what we can to have it overrule this. We offer no resistance to it."[58] The decisions of all courts should be submitted to the light of public scrutiny and criticism. If unsound in principle, they will not survive; if sound, they may become lasting precedent.

The recent "Report of the Committee of the Conference of Chief Justices on State-Federal Relations as Affected by Judicial Decisions" made no reference to segregation or the segregation decisions. While it found fault with many decisions of the U.S. Supreme Court in other State-Federal areas, it was not critical of the Court as a part of the judicial department of the Federal Government.[59] While I do not know the thoughts which impelled the chief justices of other States to vote for the adoption of the report, my vote was based upon a belief that either sincere and articulate criticism of judicial decisions, or action by Congress to amend existing legislation and thereby correct any erroneous statutory interpretation by the U.S. Supreme Court, affords a better method of shaping its policy of future action than does legislation withdrawing from it appellate jurisdiction in given areas.

In passing judgment upon the right and propriety of the decisions of the U.S. Supreme Court, and in voting for the adoption of the Report of the Committee on State-Federal Relations, I realized that the conference, in urging the desirability of self-restraint upon the Supreme Court of the United States in the exercise of the vast powers committed to it, might well be violating the precept which it was entreating the Justices of that Court to observe. And I likewise recognize that the Conference may be in error in its analysis and conclusions concerning the propriety of such decisions. However, while the activities of the Federal and State judiciary are correlated in certain respects, it is wholesome for our States and the Nation that each branch of the judiciary zealously guard its own prerogatives and areas of activity, and stand ever ready to be critical when there is an apparent invasion of the judicial domain of the other. In all branches of Government, eternal vigilance is the price of freedom from encroachment; and freedom of expression, even though critical in nature, is a requisite to vigilance.

Courts generally have been guilty of errors, occasionally have sought to wield more power than was proper and, as all other human institutions, are fallible. Yet courts, and particularly the U.S. Supreme Court, have been a vast agency for good, have averted many a storm which threatened our peace and welfare, and have greatly aided in unifying our people in law and justice. There is no other agency to replace them. Strip them of their power and you have discord and confusion; unrestrained power within the legislative and executive branches of the Government; statutes and laws without observance; court orders and decrees without obedience; and ultimately Government by men and not by law.

In the past, the public has sustained the bench when under frontal attack. It will do so again if the courts will recognize that their goal is to make the administration of justice as near perfect as the frailties of human endeavor will permit; that the greatest power within the domain of the judiciary is that of self-restraint; and that their obligation is to serve mankind through the administration of justice and thereby leave order where they find chaos, peace where

Footnotes at end of speech.

they find strife, and confidence where they find doubt and suspicion. This is the road which leads to public approbation of the judiciary and to the private dignity of its judges. May the judiciary of our Nation and its States have the wisdom and courage to travel this course and may it ever by zealous that these coveted attributes are maintained.

"The district courts of the United States shall have original jurisdiction, exclusive of the courts of the States, of all offenses against the laws of the United States.
"Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof."
Since the Smith Act is contained in that title, this section itself could have been a basis for a different conclusion in the Nelson case, however, the majority opinion, in a footnote, held the saving clause merely limited the effect of the jurisdictional grant of the first sentence and was not intended to "resolve particular supersession questions."

"It is our earnest hope, which we respectfully express, that that great Court exercise to the full its power of judicial self-restraint, but adhere firmly to its tremendous, strictly judicial powers and by eschewing, so far as possible, the exercise of essentially legislative powers when it is called upon to decide questions involving the validity of State actions, whether it deem such action wise or unwise."

## Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare, has devised the now-famous Flemming formula whereby he says 75,000 classrooms will be built to alleviate partially the need for 140,000 classrooms to properly house our boys and girls. Dr. Flemming's formula is to change the constitutions, statutory debt limits, and tax procedures of the various States. But these are minor obstacles according to Dr. Flemming and with their change, thousands of classrooms can be built next year.

Now that he has solved the classroom shortage, Dr. Flemming can put his considerable talents to work in other fields. One of the sports that has enjoyed a rapid growth in popularity is golf, perhaps in some measure due to the interest Dr. Flemming's boss takes in the game. But hundreds of new players have to forgo the pleasure of making a hole-in-one. Applying Dr. Flemming's formula, by changing golf rules slightly and modifying the equipment somewhat, all players can make a hole-in-one. Each golf ball is to be equipped with a guidance mechanism modeled after that in our most advanced missiles, and each hole on the golf course will be outfitted with radar and tracking devices that will guide the ball to the hole. Golf is an ancient game so the rules are obviously obsolete and it will not be difficult to change them in order to use this improved mechanism. But getting the guidance mechanism down to the size and weight of a golf ball; and the radar and homing devices to a size that will fit in the hole on the green will be a little more difficult. But these are minor obstacles and it can be safely predicted that millions of golfers on every modern and properly equipped golf course in America will be making holes-in-one next summer.

## Let's Face Our Responsibilities

EXTENSION OF REMARKS
OF
## HON. JAMES G. O'HARA
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. O'HARA of Michigan. Mr. Speaker, under the Employment Act of 1946 it was recognized that the Federal Government has a responsibility to promote maximum production, employment and purchasing power. To achieve these goals requires policies designed: First, to promote adequate growth and productive capacity; second, to insure high and steady use of labor and natural resources; third, to maintain reasonable stability in the general level of prices.

These are coordinate objectives of public policies, however, and undue emphasis on one without regard for the others is detrimental to the public interest. Changing economic circumstances require shifts in the relative emphasis to be given these objectives.

At the present time we are in a recession. Almost half of the major labor markets of the Nation are suffering from substantial unemployment. Our rate of economic growth has come to a virtual standstill. The concensus of expert opinion is that we can expect relatively stable prices in the coming months.

Refusing to take cognizance of these facts, the administration places absolute priority on balancing the budget. They say that to do otherwise would be inflationary. I recognize the danger of inflation, but it is not the danger that is confronting us. The problem is not the level of government expenditures but the character of the activities for which the budget provides.

Unless the Federal Government follows policies which result in expansion of employment and production, it will be derelict in its duties under the Employment Act of 1946. It will have abdicated its responsibilities to provide for the Nation's security. It will have relin-

quished the leadership of the free world.

Mr. Speaker, unemployment in February again showed an increase over the preceding month. It now stands at 4.7 million which is in excess of 6 percent of the total labor force. Adding to this, the full-time equivalent of involuntary part-time unemployment raises that total by another million. Over 7.2 percent of our labor force is therefore currently unemployed. These alarming statistics are further evidence of the critical situation of our Nation's economy in spite of the rosy predictions regularly published by the administration. The time for action was yesterday and tomorrow may be too late.

Since the administration has refused even to recognize the existence of this problem much less recommend measures to effectively deal with unemployment and economic stagnation, it is incumbent upon the Congress to act and to act now.

A few days ago we passed a measure extending, for a short period, temporary unemployment compensation benefits. This legislation, which I supported, does nothing for those who have already exhausted temporary benefits or for those not presently covered by unemployment compensation insurance.

It is no substitute for long overdue reforms in the unemployment compensation system. The Karsten-Machrowicz bill to establish Federal standards for unemployment compensation is needed more now than ever before. I am hopeful that there will be no unnecessary delay in bringing this measure before the House.

But Federal standards for unemployment compensation are not a cure-all. It is but one of a battery of measures that should be brought to bear upon the stagnation afflicting our economic life. National bankruptcy will not result from Federal expenditures and capital outlays that recognize the needs of a great people, but it can result from reliance upon an outmoded economic dogmatism having as its first principle a belief that the best course of action is no action at all.

We must adopt a program to meet two imperative needs.

First. Alleviating the effects of unemployment.

Second. Eliminating the unemployment.

The first involves measures to cushion the hardship, misery, and economic impact of unemployment. The need for overhauling our unemployment compensation system has been mentioned. The distribution of surplus commodities has been of assistance but leaves much to be desired. Enactment of a workable food stamp plan to improve distribution of a greater variety of foods, including meat, poultry, and other items acquired through surplus removal programs is badly needed. A review of surplus food distribution eligibility standards should be undertaken by the appropriate committees of the Congress.

However, these steps are no substitute for full employment, production, and purchasing power. If we face up to our responsibilities in the fields of education, water resources, defense, public health, resource development, public facilities, and economic and technical assistance to undeveloped nations, we need not fear underemployment of America's productive resources. Here, too, Congress must take the lead and I am confident that the American people, when the facts are made known to them, will applaud our efforts.

I am convinced that such a course of action is more apt to balance the Federal budget than is a program of retrenchment. The Members of this body need not be reminded that the huge Federal deficit for the current fiscal year is principally attributable to the decrease in tax revenues resulting from underemployment. The administration's budget proposals would, if anything, intensify this unhappy situation.

The most promising of the measures designed to promote economic growth and prosperity is the Douglas-Flood area redevelopment bill. This measure, with a relatively small Federal investment, would give impetus to the industrial redevelopment programs of communities which because of industrial migration, technological change, or other reason are suffering serious and persistent unemployment. It is in the enlightened self-interest of the Nation as a whole to expedite the implementation of the depressed areas legislation.

Mr. Speaker, I am sure that the sentiments expressed in this short statement are shared by almost every Democratic Member of Congress, and I am confident that the 86th Congress will realize its obligation to exercise the vision, resolution, and courage expected of us by the people who elected us and that it will provide the public framework within which America will realize its greatness.

## Who Pockets the Profits on the Food Dollar?

EXTENSION OF REMARKS
OF
### HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, when the Wisconsin Farmers Union held its 28th annual meeting in Wausau, Wis., the end of February, delegates went on record in favor of a congressional investigation into the causes behind the ever-widening spread between the prices farmers receive for their products and the money consumers have to pay for food. Under leave to extend my remarks, I would like to include the resolution on this subject passed by the Wisconsin Farmers Union in the RECORD:

PRICE SPREAD INVESTIGATION

Whereas there is a great difference in the amount of money received by the farmer for his products as compared to the amount of money that the consumer pays; and

Whereas the farmer's share of the consumer's dollar is getting less and less; and

Whereas there are excessive price spreads, increases, and profiteering in business and industry causing the present high cost of living: Therefore, be it

*Resolved*, That the delegates attending the 28th annual Wisconsin Farmers Union Convention at Wausau, Wis., February 22–24, 1959, go on record demanding of the Congress of the United States that it conduct an investigation into the cause of the widening price spread between the farmer and the consumer, and the excessive profit-taking in business and industry, for the purpose of formulating legislation to be acted upon by the Congress to correct these abuses.

## What Is Nasser Doing With His Egypt?

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the RECORD an article from the Western World of December 1958, entitled, "What Is Nasser Doing With His Egypt?"

WHAT IS NASSER DOING WITH HIS EGYPT?

(The Cairo-Moscow financial agreement for the Aswan Dam should not blind us to certain facts of present-day Egypt. The author of this article is an American residing in Egypt. We recognize that an unsigned article loses its effectiveness. But signing, the writer might well have landed in one of Nasser's jails. We prefer to print his contributions anonymously and, on his leaving Egypt, to let our author write a signed sequel.)

An appraisal and a forecast. Gamal Abdel Nasser—leader of pan-Arabism, pan-Africanism, and pan-Moslemism—has passed the peak of his popularity and influence in Egypt. His failure to carry out promised reforms and improvements at home is already beginning to tarnish his luster as a two-continent leader. In chalking up his impressive international gains, Nasser keeps notably silent about his internal record with his several 5-year plans.

Nasser is still the personification of many emerging peoples' dreams as the great leader. To the Arabs he sold himself as a fellow Arab; to the Africans as a fellow African of color, and to the West as their understanding friend. We Americans need not feel superior about this because we fell for his universal pretentions more heavily than most. Our erstwhile Ambassador, Jefferson Caffery, accredited Nasser with doing in 2 years more than any ruler of Egypt had done in 2,000 years. John Gunther found as early as 4 years ago that Nasser had done more for Egypt than any Egyptian king in the last 150 years.

Nasser, with a dictator's vanity, displays his photo in color anywhere and everywhere, including plastering it on the public monuments of other Egyptian heroes. His favorite photo is the one with the confident smile, gleaming teeth, and smart western clothes. His picture is displayed on walls of souks and in the humble huts of peasants across Africa and Asia. The same picture, circulated as propaganda in the States, ends up on the walls of many Negro housewives who identify Nasser as an attractive fellow African of color. In a crowd of his drab and physically handicapped fellow countrymen Nasser looms up impressively. To them he personifies concretely all that they have lacked: power, a fine athletic build and smart clothes. He talked their vernacular

and identified himself with them and promised them anything, everything. But today both his glamor and his promises are wearing thin. Those living in places remote from Nasser are the most impressed partly because they are the least able to check up on his actual performance.

WHAT NASSER COULD HAVE DONE

Nasser could have become the Ataturk of Egypt. He had a free field to carry out a bold and daring program. For a time the West gave him a free hand in pulling the Arab nations together. The monarchy had crumbled of its own decay. There was no serious political party opposition to his taking power. No leader ever received more enthusiastic and widespread support. What an opportunity Nasser has had—and may still have—to deal with Egypt's underlying problems of health and education and to bring his people into the modern world. Nasser could have put through a national agricultural program, more far reaching and efficient than his limited land redistribution. He could have tackled a whole range of population problems more urgent in Egypt than almost anywhere in the world. With over 80 percent of the population illiterate, he could still come up with a national program to do away with illiteracy in our time. He could undertake long-term slum clearance plans and gradually relocate or rebuild the mud villages. All these would be preliminary steps toward improving the health and well-being of the entire nation—programs which could readily win support from the Western World. But no such large imaginative projects are being put into operation.

It should be noted that Nasser and his Junta early in office discussed many of these needs and ways to meet them. For example, one of his associates, Rashid el Borawi gave an outline which today can serve as a convenient checklist of Nasser's defaults. He wrote:

"The achievement of social justice is possible only by relieving the middle and poorer classes by carrying on a campaign against the high cost of living * * * Among the Army's principal aims is to stamp out corruption in all its aspects. * * * Introduce efficiency, speed and precision in the discharge of official business, establish a decentralized system."

Borawi indicated what Nasser should do further.

"Abolish martial law, lift censorship on correspondents and the press, shatter the system of political police, restore constitutional life and strengthen the bonds between those in authority and the people."

Let us check Borawi's list against Nasser's actual performance in several of his 5 year plans now that more than 5 years have elapsed.

THE CIVIL SERVICE

Egypt has long been notoriously overstaffed with civil servants. Nasser promised to reduce the number and to instill efficiency. Instead, he had added a new layer of bureaucrats on top of those already existing. A quarter of them, if organized, could do the work more efficiently than the whole lot. Nasser gave new offices and housing to loyal civil servants. There has been no noticeable speeding up in transaction of State business except perhaps the substitution of bicycles for donkeys in mail deliveries in the countryside. It should be observed, however, that some of Nasser's political promises were too grandiose to have been realized within a few years anyway, even though he had made a serious effort. Instead of decentrallization of official business there has been intensified centralization with Nasser's own desk the principal bottleneck. Martial law was abolished but other restrictions were clamped on. Censorship of the Egyption press is complete. The blight to independent thinking is as withering as in any of the Soviet countries. There is no independent political writing coming out of Egypt today. Journalists land in jail on the slightest provocation. A Communist taint to Egyptian utterances is in part due to the fact that Nasser released a number of ex-Communists from jail and they are now writing for government newspapers and radio programs.

Any campaign against the high cost of living in Egypt is bound to fail because many goods are still imported and in the last 3 years alone the Egyptian pound has lost half its free market value. There are several policies of Nasser's which have driven prices up: Outlays for armaments far in excess of Egypt's capacity to pay; a continuous flood of hostile Nasser propaganda against precisely those Western nations, including the United States, best able to give Egypt financial aid. Foreign tourism is discouraged, yet of all countries, Egypt is one of the three in the Mediterranean area which has the most to offer tourists. Political unrest and threat of war are the principal deterrents. Secondary ones are petty bureaucratic annoyances and local police harassment.

THE POLITICAL POLICE

"Shatter the system of political police," recommended Borawi. This Nasser did, but he set up a bigger and more efficient system for his own use. The old leaders of the Kremlin installed commissars in the army to keep tab on the generals. Nasser has gone them one better by using officers in his personal spy service to spy on officers.

"Restore constitutional life," recommended Borawi. But since then Nasser has suspended parliament and stopped members' salaries.

"Strengthen the bonds between government and the people," Borawi advised. One of the major defects in Egyptian social life has been precisely the gulf between the few haves and the many have-nots. Government and city people kept as far away from the villages as they possibly could, and still do. Fellaheen, disease ridden and huddling with their cattle in mud hovels, always seemed a hopeless gigantic problem. But for social progress this gulf must be bridged. Nasser with his small village origin, and his mass backing was the one best placed to bridge it. Instead Nasser has fallen into the traditional antisocial pattern of sacrificing his people for grandiose schemes abroad. He has made the rich poorer, but he has made the poor still poorer so that the gulf is as wide as ever. He made frustrations greater by giving privileges to a new middle class, his supporters.

The weakness in Borawi's recommendations came to light later. He had advised that the army's principal concern should be to stamp out corruption in all its aspects. But since writing the book Borawi himself has gone to jail on charges of corruption. There are still many of Nasser's associates in high places involved in corruption. Perhaps Nasser also did not like Borawi's views.

EDUCATION AND THE PRESS

Nasser seemed to think education a good idea, but has so little notion of how to implement it that his educators are unhappy and frustrated. He emphasized that he wanted to enlarge and build up the University of Cairo and the other two secular universities. But he put so little money into them that highly trained educators today are the lowest paid professionals in Egypt.

He talked of modernizing education, but at the same time he increased the subsidy to the old Moslem university of El Azhar with its 12-year courses based principally on memorizing the Koran. Actually it receives almost as much in government grants as does the University of Cairo. Thus Nasser seeks to emphasize both the traditional Moslem and modern ways of thought, and has failed to support either adequately. As a result, Egypt has large numbers of frustrated students ill nourished and ill taught, wondering where and how they can exercise their talents.

In true dictatorial tradition Nasser sees to it that only favorable things are published in the Egyptian press. There is a line of prudent doubletalk lauding Nasser which Egyptians on first meeting with foreigners now use. Americans particularly, get a strong pro-Nasser line at first, because Egyptians credit Americans with helping to build up Nasser in the first place, and with helping to keep him afloat since.

A visitor, however, who stays longer and seems to be openminded, attracts an unsolicited flood of anti-Nasser sentiment. The quantity, variety, and intensity are startling. Many of those who display the most conventional pro-Nasser sentiment at first meeting, on further acquaintance turn out to be actively plotting against him.

WITHIN HIS OWN CAMP

The fact which is now causing Nasser most anxiety is the hostility growing up against him inside his own camp. Those who benefited most by his favors are the young officers. But among them are idealists who expected great social changes through his reforms. But now they see nepotism and graft carried on much as before but by different people. The young idealists feel frustrated. The older professionals also feel frustrated because they see young officers being advanced ahead of them. Some of these were old fellow conspirators of Nasser's in the Moslem brotherhood. Some of the police were also in the brotherhood. Nasser knows that he has mortal enemies among them.

In view of Nasser's complacency toward Moscow, it comes as a surprise that there is a militant group of Egyptian Communists who are also bitterly anti-Nasser. They resent the fact that so many of their followers are still in jail while Nasser let out those who are willing to collaborate and gave them good jobs.

Then there are Egyptian nationalists who feel that Nasser, because of his shortcomings at home, is defeating their nationalist movement abroad. Many feel so strongly about this that they are working against Nasser in existing international organizations like the Arab League and the United Nations delegations. Some would even welcome foreign intervention to put an end to Nasser's domination and express the wish that the British and French had held on a day or two longer and ousted Nasser. Treason has a different ring when it challenges tyranny.

Nasser had the choice of attempting to meet reasonable grievances by satisfying them or by cracking down on the complainants. He chose to crack down. He has created a large army of Nasser spies estimated now at over 30,000. In addition to those in the army and in the police Nasser has even built up a large force of what are called 20 piastre, 5-cent spies: doormen, waiters, tax drivers, and the like.

In best Hitler style people unfriendly to Nasser disappear. Interment camps have been reopened. Remote oases are also used for political prisoners. Bodies are found floating in the Nile. Families are left in the dark as to whether the arrested are dead or alive.

While Egypt has become a police state, it is fortunately not yet an efficient totalitarian one. Egyptians are great talkers and are reckless about expressing their opinions. This could be disastrous to many. But fortunately the Egyptian police are also casual, and are less efficient in political arrests on a wholesale scale. Typical of a police state,

guesses vary widely as to how many people have been put away. Estimates run from 5,000 to 20,000, the smaller figure being more likely.

This is the sad picture of Nasser's Egypt. Nasser had a wonderful opportunity to lead his people by the hand into the modern world. Instead he has them by the throat. He looks more and more like the kind of military dictator who from the times of the Pharaohs down has oppressed his Egyptian people to satisfy a thirst for power. One wonders how much longer they will put up with him.

## Lipscomb and the Trade War

EXTENSION OF REMARKS

OF

### HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. HOLT. Mr. Speaker, I would like to call to the attention of my colleagues this editorial from the Los Angeles Times, of Tuesday, March 17, 1959:

LIPSCOMB AND THE TRADE WAR

Representative GLENARD P. LIPSCOMB has pointed at an international sore that does not heal and wants the doctors of Congress to make a thorough clinical examination.

DISTURBING INCREASE

The Los Angeles Republican is concerned about the trade with the Communists which, he finds, grows disturbingly and in violation of the spirit of the congressional act of 1949. Lipscomb has uncovered some recent trade with Russia and its satellites, not imposing by the cash measurement ($4,951,522) but disturbing because of its strategic nature.

Export licenses are issued deep in the bureaucracy of the Commerce Department, and when Admiral Strauss, the Commerce Secretary, discovered what was going on, he cut off further shipments of fabricated copper, in wire and other forms—the stuff that is essential to electronic and missile manufacture. Mr. LIPSCOMB wonders whether the Commerce Department ought to be the place where export licenses to the Communists should be issued, inasmuch as the Department's prime function is to promote trade, not to weigh its implications in the cold war.

Perhaps it shouldn't be, but perhaps the Commerce Department would be as good a bureau as another to issue export licenses if the public received through Mr. LIPSCOMB's proposed inquiry a thorough understanding of the nature of Communist trade both ways. LIPSCOMB thinks that American companies which receive licenses to export to Communists should be publicized and it would be well, too, if we knew which American companies are receiving Communist goods.

RED TRADE WEAPON

Mr. LIPSCOMB understands, as all of us should, that Russian trade is never the innocent exchange of goods that is usually meant when we speak of international commerce. The Russians use trade as a weapon. They do not import consumer goods, only the items which aid Communist industrial and military power. They can't come into the international market for all kinds of goods which may be in demand by the Russian people because they don't have enough foreign exchange and have never attempted to acquire it by normal trading.

They always know exactly what they want, and their desire usually involves techniques of design or manufacture in which they have been behind. About 10 years ago the British sold the Russians some Nene jet engines, and when Americans lifted an eyebrow the sellers protested that the engines were becoming obsolete and had no strategic importance. Then came the Korean police action in which Russian Mig jets were the premier plane—at least the fastest. Our side captured one of these Mig's after much trouble, and when the engine was examined it was found to be based on the Nene, with some plumbing innovations.

Trade the other way, from Russia to other parts of the world, is usually a cold war operation. There are exceptions, of course, as when they are bartering for something they themselves want very much. If we remember correctly, the Nene engines were paid for with timber and like materials the British needed. But the normal Russian export operation is the dumping operation.

ADVERSE EFFECTS

Mr. LIPSCOMB cites some examples. Last year the Russians dumped platinum on the market and so depressed the world price that the normal producing sources suffered. They have done the same with manganese and with tin. They have even done it with benzene. Price seems to be no object, and of course costs of production in the U.S.S.R. have no relation to costs in the western world. As LIPSCOMB says, "This is not trade, be it ever so sweet and ever so cheap. This is an economic war."

Our NATO partners in the Coordinating Commitee on International Export Control have been more guilty than we in trading with the Communists. Their pressures are in large part responsible for our own relaxation from the congressional intent of 1949. But it is a serious question whether we should be so complacent about our allies' acts, and there is no question at all about us ourselves lowering our guard. We have the most to lose and the occasional bargains offered this country comprise a piddling compensation to throw into the opposite side of the balance.

The Lipscomb investigation would be a good thing. We ought to know more about this trade war and how we can lose ground in it. The Russians would rather wage economic war than war with rockets and we seem to be letting them choose all the battlefields.

## Establishing Cooperative Research Units

EXTENSION OF REMARKS

OF

### HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. METCALF. Mr. Speaker, I have just introduced a bill to authorize the Secretary of the Interior to permit the U.S. Fish and Wildlife Service and other agencies within his Department to enter into cooperative agreements with other Federal agencies, colleges, and universities, State and Territorial fish and game departments, and nonprofit organizations for the conducting of research, training, and demonstrational programs through the establishing of cooperative research units, which may be named for the various States and Territories in which they are formed.

The research work authorized under this program definitely would constitute valuable training for graduate students who are required to perform field research as part of their formal educational training. This kind of a program, confined largely to wildlife units and which was started in 1935, now is in operation in 16 of the land-grant colleges and universities—among them Montana—throughout the United States. My bill would stabilize, strengthen, and broaden this program.

The present cooperative research unit program, which has been operating successfully for more than 23 years, has proved itself to be a highly valuable and economical method of getting research work done while training men for future professional careers in fish and wildlife research, management, and administration.

The 16 colleges and universities affiliated in the present cooperative research unit program have bestowed 2,964 bachelor, master, and doctor degrees upon wildlife students since the program started. A high percentage of these graduates are employed in State and Federal agencies and educational institutions in all parts of the country. The existing unit program, which merits greater stability, has created splendid cooperation between the Federal and State agencies and colleges and universities. Such local units are effective and have functioned in the public interest.

## The Need for a Strong Marine Corps

EXTENSION OF REMARKS

OF

### HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. RUTHERFORD. Mr. Speaker, we have read and heard a great deal in recent weeks of the responsibilities of Congress in the creation of our Nation's military policy. We have read and heard some misinformed commentators who seem to believe that the responsibility for the military policies and posture of our armed forces rests solely on the Executive. As we know, nothing could be further from the truth. The Constitution makes the role of this great body perfectly clear.

I know of no finer example of the marked success Congress has enjoyed in its rightful role of military policy making and in creating forces to implement that policy than the United States Marine Corps.

As all of you know, we don't maintain the Marine Corps, the Army, the Navy, or the Air Force out of pure sentiment. In today's market military power is far too expensive to be perpetuated for reasons of sentiment or in memory of past glories.

Congress has insisted upon maintaining a Marine Corps—and an Army, Navy, and Air Force—because we know they are needed. We know that these forces are necessary tools in a world where the survival of freedom must depend upon our ability to meet the challenges of Communist aggression with determination, but also with precision and restraint.

What do we demand of these forces which we create? In particular, why do we insist upon a Marine Corps of three combat-ready Marine divisions and three air wings? What place does the Marine Corps hold in our military posture?

The United States is an island nation. Our land borders are touched by only two nations, Canada and Mexico, both good friends and good neighbors.

The most easily used, the most economical, and the most practical highways between us and the rest of the world are the seas. The seas of the world are the arteries along which flow the commerce and the strength which bind the countries of the free world into the great alliance it is. The seas of the world are the highways over which we can come to the aid of our friends with supplies and military power in meaningful quantities.

We must control and use these highways of the free world is to survive.

We control the seas through the intelligent use of seapower. But without the ability to project that power ashore, promptly and efficiently, the meaning of seapower is lost; these great highways are useless. Amphibious operations are the means by which we project navalpower a shore and secure the benefits of these highways.

Without this ability to project our power from the sea to the land, much of the significance of seapower is lost—to our friends and our enemies alike.

The key to victory in our last two wars lay in our ability not only to control the seas, but to project our military might from the sea onto the land.

Our ability to do this rested upon the doctrine and the techniques developed by the Marine Corps between World Wars I and II. These techniques must change constantly with the refinement of weapons and machines. The necessity for maintaining this art is not gone. If anything, the need is greater than ever before.

Congress decided after World War II, with the lessons of that great conflict still vivid in its mind, that the continual development of the art of amphibious warfare was a full time job—not a sideline for one of the larger services, but a job for a comparatively small organization that could devote its full efforts to the art and always be ready to use it at a moment's notice.

In an effort to insure that we would continue to develop new techniques and doctrine for this highly specialized military art and would continue to have a force constantly ready to execute such operations, the Marines were assigned this mission by law after World War II.

Assignment of this function to the Marine Corps was and is a perfectly natural solution to the problem. This mission involves a close and absolutely unique association with the Navy; one that makes the business of getting aboard ships and away—fully ready for combat—an instinctive thing. This unique relationship is the product of over 175 years of close association. It's the result of living with the problem for generations.

In developing this capability over the course of many years, the Marine Corps became the Nation's force-in-readiness.

This too was a natural development. In its close teamwork with the Navy and its increasing efforts to provide amphibious forces that were always trained and ready to go, the Marines provided a force that was expert and available in one package. Their forces did not need to be collected, trained, and equipped as each emergency arose. They were in existence, fully trained, and an integral part of the fleet. To put it simply they filled a need in our defense structure.

Congress was quick to recognize that our country has a continuing need for such a versatile, highly trained, always ready force. But, for various reasons, there have been those outside Congress who refuse to recognize this need, or claim that the need can be filled by other forces. As a result, in spite of the clear prescriptions of law, the Marines were steadily whittled down after World War II until by 1949, on the eve of the Korean conflict, they had been reduced to six battalions.

With the lessons of Korea unmistakably clear to all who would learn, Congress sought again in 1953 to insure that the country would never again be without the services of an amphibious force in readiness.

In approving legislation that would require the maintenance of a Marine Corps of a specified combatant size and capability, the House Armed Services Committee made the intent and the aims of Congress clear beyond argument. The committee stated the purpose of the legislation as "to require the maintenance of a versatile expeditionary force in readiness, always combat ready."

To further expose the need for such a force the committee stated:

> American history, recent as well as remote, has fully demonstrated the vital need for the existence of a strong force in readiness. Such a force, versatile, fast moving, and hard hitting, will constantly have a very powerful impact in relation to minor international disturbances. Such a force can prevent the growth of potentially large conflagrations by prompt and vigorous action during their incipient stages.

These reasons for maintaining a strong Marine Corps are just as valid today as they were when they were written in 1952.

The need for a Marine Corps of not less than three combat divisions and three air wings is, if anything, greater today than it was in 1952.

The place of the Marines in our national military posture is best expressed in simple terms. If we did not have a Marine Corps—we would have to go right out and get one.

They provide, as an integral part of the balanced fleet, the force-in-readiness which is essential to a flexible military and foreign policy.

## Education Act Test Oath Ineffective and Detrimental

EXTENSION OF REMARKS
OF
## HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. SCHWENGEL. Mr. Speaker, on March 16 I introduced a bill to repeal section 1001(f) of the National Defense Education Act of 1958. This section requires a person obtaining payments or loans under the act to swear to an affidavit that he does not believe in, or support any organization that believes in, the violent or unconstitutional overthrow of the United States Government.

Why, it might be asked, should anyone want to eliminate this provision from the act? Certainly, it has a valid purpose—to prevent the granting of benefits by the Government to persons bent on destroying it. I am in complete agreement with that purpose. However, I do not think that the disclaimer affidavit will accomplish that purpose. Moreover, I believe that if the provision is allowed to remain, it will do more harm than good in carrying out the general purpose of the act in stimulating and helping to satisfy the educational ambitions of the country's youth.

The justification for any law's existence should be found in the answer to the question: "Will it promote the general welfare?" Unless this can be answered in the affirmative, a law has no reason for being and is better off repealed. Clearly, a law which is ineffective—which is destined not to accomplish its purpose—cannot meet this test. Section 1001(f) of the National Defense Education Act is such a law.

I agree with the Secretary of Health, Education, and Welfare when he said that the requirement of section 1001(f) will not uncover any persons who seek or who belong to organizations that believe in or teach the overthrow of the Government by force or violence. For, as Secretary Flemming further pointed out, such persons have no scruples about signing an affidavit or taking an oath.

Moreover, I believe that this section, in addition to being ineffective, is actually detrimental. Some colleges have refused to participate in the programs offered under the act because they find this section so obnoxious. The students at these colleges have thereby been denied the benefits offered them under the act, principally those contained in the student loan program.

I have not, by the way, been able to find a satisfactory answer as to how this provision found its way into the act or who is responsible for its being there. All that the legislative history shows is that it first appeared in the bill produced by the committee of the opposite body. My guess is that some clerk in the Department of Health, Education, and Welfare thought that this would be nice to

have in the act, and that this suggestion was passed on and accepted without receiving proper consideration by the committee members.

I see no reason why students and educators should be put in the position of affirmatively denying subversive affiliations in order to participate in the programs available under the act. The natural implication of this requirement is that they are a particularly suspect group. I have not been shown one shred of evidence to back up this implication. I can justly sympathize, therefore, with the many objections which they have raised against the affidavit.

This is why I have introduced my bill and I intend to offer my complete support to the present effort to delete this ill-conceived requirement from an otherwise outstanding piece of legislation.

## Political Emphasis Week

EXTENSION OF REMARKS
OF
### HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. FORD. Mr. Speaker, our colleague, the distinguished gentlemen from Maine [Mr. COFFIN], yesterday on the floor of the House presented an excellent report on the Political Emphasis Week which was held at St. Olaf College, Northfield, Minn., March 12, 13, and 14 It was our honor and pleasure to attend and participate in certain portions of this excellent program. I can assure each of you that both of us, one representing the Democratic Party and the other the Republican Party, were tremendously impressed with all aspects of this interesting and enlightening effort to create among our youth of today, the leaders of tomorrow, a more vital interest in State, National and international politics.

The gentleman from Maine, [Mr. COFFIN], most ably described the atmosphere which prevailed and the workings of the Mock House of Representatives. I join him in commending the 200-plus students of this fine liberal arts college who diligently and intelligently studied seven major issues now before the U.S. Congress—all basic problems which must be considered and be resolved by the 86th Congress. However, I sincerely believe that Dr. Clemens M. Granskow, president of the college; Dr. James R. Klonoski, head of the political science department; and other members of the faculty deserve high praise for initiating and successfully guiding this overall effort.

In 1958 the political emphasis week concentrated on the United States in the Middle East. The program a year ago included three sessions of a mock United Nations General Assembly with three major addresses by authorities in the field of the Middle East. The lively student interest and the constructive results prompted the college officials to continue the political emphasis week in 1959 with mock house of representatives sessions.

In addition to the actual mock sessions of the house of representatives, I found the entire atmosphere and activities at St. Olaf very stimulating. It was my pleasure to attend a political science class under Dr. Shepherd where our Nation's mutual security program was discussed in considerable detail. The informal Thursday luncheon with student questions and answers by Dr. Stephen Bailey, professor of Public Affairs, Princeton University and myself was very interesting. The afternoon tea and reception at one of the dormitories illustrated the intense faculty and student concern with the problems on the agenda of political emphasis week.

In closing my remarks may I congratulate Dr. Bailey who gave the convocation address and Dr. Robert E. Van Deusen of the National Lutheran Council office in Washington, who was also a principal program speaker. Their contributions were outstanding. The combined efforts of many made this a memorable experience for me, and I am deeply indebted to those who invited me to be a participant. I wish to reemphasize and reiterate my praise for those at St. Olaf, both students and faculty, who made such a tremendous effort for a most worthwhile project.

## Shame on Us

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. O'KONSKI. Mr. Speaker, and now we have come to this. Trafficking in other people's rings and watches. Intruding into the intimacies of family relationships. Taking heirlooms.

These tawdry personal effects, confiscated private property, are being sold in America's name. Your name and mine.

The guilt of the former owners? Principally, being born German or Japanese.

Our guilt? So far—idly standing by.

At what point should revulsion begin to set in?

OFFER FOR SALE BY THE ATTORNEY GENERAL OF THE UNITED STATES OF AMERICA

Notice inviting citizens of the United States of America to make offers to purchase from the Attorney General all his rights, title, and interest in and to seven lots of personal property vested in the Attorney General pursuant to the Trading With the Enemy Act, as amended, described as follows:

Lot 1. One man's watch, yellow metal.

Lot 2. One man's watch, yellow metal with chain and Masonic emblem set with six diamondlike stones.

Lot 3. One Zeiss Ikon camera with leather case. One tripod in leather case. One box of camera filters.

Lot 4. One lady's yellow metal ring set with a diamond-like stone.

Lot 5. One cocktail shaker (stainless chrome). One matching tray and four cocktail glasses, one broken.

Lot 6. One man's diamond ring.

Lot 7. One man's diamond ring (about 1½ carat). One lady's diamond ring, Tiffany setting (about 1½ carat).

Dated at Washington, D.C., this 3d day of March 1959.

WILLIAM P. ROGERS,
*Attorney General of the United States.*

## Admission of Hawaii

EXTENSION OF REMARKS
OF
### HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. HALPERN. Mr. Speaker, it is a heartwarming experience to witness this historical culmination of the aspirations of the people of the Territory of Hawaii for statehood. I have long supported this deserving cause, and I say with all humility that it is a truly memorable experience as a freshman Representative, to participate in history in the making.

As a Representative from 1 of the original 13 States, I welcome our newest sister. This moment of profound importance to the Nation provides an opportunity to reflect with pride upon our magnificent national heritage, for the admission of Hawaii is inseparably linked to every event in our past by which this mighty Republic was irretrievably forged into a whole.

Numerous speakers have already eloquently referred to the many, strong arguments supporting Hawaiian statehood. I do not propose to retrace the ground which they have so ably covered.

What is especially important to me are the consequences and benefits which will accrue from this momentous action.

Mutual interests and growing common ideals have bound the mainland and Hawaii increasingly together for over 100 years. Now, at last, Hawaiians will have the opportunity to wholly establish their own State government, and to participate, through their elected representatives, in the Government of the United States. They will now have the chance to vote for a President and Vice President. They will attain the full rights of citizenship.

These blessings of freedom are particularly significant at a time when the world is engaged in a desperate struggle to contain the dark forces of totalitarianism.

For the rest of us and for the peoples of the world, the admission of Hawaii is graphic and striking evidence of the dynamism of the great principles of the Declaration of Independence and the American Constitution. This is living proof of the vitality of our belief that all men are created equal.

This is our faith and our message. Let the rest of the world perceive and rejoice.

The dignity of man, good will, and democracy under law will take on new meaning, new clarity, new luster to those who can see their reflections among the peoples of our newest State.

This is the clarion example of the dynamic strength of freedom. Let it be a beacon and an inspiration for all mankind.

## Democracy Versus Communism

EXTENSION OF REMARKS
OF
**HON. J. T. RUTHERFORD**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. RUTHERFORD. Mr. Speaker, at the request of Mrs. John P. McKinley of Midland, Tex., I ask unanimous consent to insert in the RECORD an article "Democracy versus Communism". This article was written by Stephen Driscoll, son of Dr. and Mrs. E. T. Driscoll of Midland, Tex., and won first place in the annual Americanism contest conducted by the Lt. William Brewer Chapter, DAR, of that city.

The article follows:

DEMOCRACY VERSUS COMMUNISM OR THE EAGLE VERSUS THE HAMMER AND SICKLE

In these troubled times of the sputnik, world tension, the cold war, and the struggle for survival the United States of America symbolizes democracy and the U.S.S.R. symbolizes communism. Democracy versus communism is freedom versus tyranny, religion versus atheism, and morality versus evil.

As Lincoln said in a democracy the government is a "government of the people, by the people and for the people." The power rests with the people. Under communism the power rests with government. Communism is a totalitarian government by which a few have unlimited, concentrated power.

In a democracy the government is the servant, not the master, of the people. In Russia the government is the master of the people and the people, except for the Communist leaders, are virtually slaves.

Here in America we are free to think, act, and speak as we please; we have the right to attend the church of our choice, and choose the medical care we want. Our choice prevails in the selection of our political party, our occupation, and the locality in which we live. We also have the right to own our home, business, and private property. In Russia the government under the Communist party owns practically all land, minerals, resources, and controls all means of production. Only a select few own property. It is true the people can vote, but there is only one legal party in Russia, the Communist party. Only in very recent years have Russian people been able to go to church; it is under Communist domination. Medical care is also under Communist control.

In America the people choose the field of work they want. They are able to develop their talents according to their abilities. In Russia they do what the Communist Party tells them to do. It's true that those who do the best in school get the best jobs, but they have little real choice.

Under a democracy the schools are under local control. The teachers and principals have latitude in curriculum and teaching methods. Under communism the schools are under complete government control. The government dictates exactly what the teachers must teach. Students are not allowed to think for themselves; they must go along with the party ideas.

A democracy is based on a recognition of the rights of the individual and a belief in God. As Jefferson said in the Declaration of Independence, "We hold these truths to be self evident that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness." In other words, these rights that God gave no man can take away. The Communists do not believe in God. They do not believe that anyone has any individual rights. They believe a dictator has the right to control the lives of the people. What the government gives it can also take away.

The men who wrote the Constitution were far seeing patriots who had lived through England's unjust rule and had fought through the Revoluntary War. They knew what it was to want freedom. Once free they wanted to preserve freedom for future generations. These statesmen wrote the Constitution with great care. It gave some power to the Federal Government, some of the States, and some to the people. It set up a system of checks and balances by which no branch of the Government can gain too much power. Early in this century the Russian people revolted against the Czars. A period of confusion followed. A small group of Communists took over the government. Then followed murder and bloodshed. They liquidated millions and put about 15 to 20 million more in slave labor camps. Never have so many suffered as at the hands of the Communists.

Our Government has helped 72 countries in the world. It is not trying to enslave anybody. The Communists have shown plans for enslaving the world. They now have about 900 million people under their tyranny. Most of these people are living under horrible conditions. At one time Khrushchev said to an American ambassador, "Whether you like it or not history is on our side. We will bury you." This means that the Communists intend to destroy democracy.

Which shall survive? It would seem that democracy should. But history shows that great civilizations and principles do not always survive because the are good and right. Can the Americans keep their freedom, made possible for them by the men who wrote the Constitution? Can they keep their own Government under control? The threat to our freedom is not only from the Communists but also our own Government is a threat with its growing power.

We can remain free only if the President is restrained from usurping power not granted to him, if the Supreme Court is limited to interpretation of the law, if the Congress is limited to its function of passing laws, and if the States keep the powers not specifically granted to the Federal Government (the 10th amendment).

Wilson said, "Concentration of governmental power always precedes the death of human freedom."

## Full of Problems

EXTENSION OF REMARKS
OF
**HON. GEORGE M. WALLHAUSER**
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. WALLHAUSER. Mr. Speaker, our social agencies and those who give thoughtful consideration to the problems of others, are increasingly aware of the many and varied difficulties that become a part of growing old.

The proposed White House Conference to be held in 1961 under authorization of Congress is a very worthy project and I am pleased to include a pertinent editorial that appeared on March 17 in the Newark Star Ledger.

It is, I submit, important for all of us to be ever conscious of our responsibilities in this vast area of human interest.

FULL OF PROBLEMS

A White House Conference on the Aging will be held in 1961 under authorization of Congress.

Our senior citizens, who know only too well how numerous and serious these problems are, will applaud the decision to hold the conference.

While a White House conference cannot be expected to result in any immediate action it will draw nationwide attention to the subject and help in drawing up a program which may elicit nationwide support.

Some senior citizens may ask, Why wait until 1961 to hold the conference? It's a good question. Perhaps the answer lies in the fact that this is a relatively new field and one with so many problems that it will take time just to get the conference organized.

## Flexibility Means More Cowardly Appeasement, Nothing Else

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. O'KONSKI. Mr. Speaker, for a thousand years the leaders of Irish independence declared they would stand by their principles "Until hell freezes over." It was a picturesque way of saying "never."

Now we would like to suggest a modern paraphrase: "When Pope John goes to Moscow, that will be the day." It, too, means "never."

Nobody in this world expects Pope John to go to Moscow to beg for peace or negotiate for mercy or to plead for cooperation. And why do they not? Because they know that to try to make a deal directly with atheistic murderers, mass killers, unprincipled destroyers of the people's liberties, liars, and persecutors of religion would be unthinkable for the pope, the leader of Catholic Christianity.

This is so because the pope has taken an inflexible, unchangeable and absolutely firm stand on the question of the existence of God. He does not believe there could be any compromise on that important matter. Any flexibility on that issue would of course destroy the church, the Christian religion and indeed our whole civilization. There can be no coexistence agreement between God and Satan, and you cannot reconcile good with evil. Neither can you reconcile democracy and freedom with communism and slavery.

But if it is unthinkable for the pope, why is it not for the leaders of Christian

nations, of religious peoples, of free institutions? Why does Prime Minister Macmillan trot obligingly off to Moscow at the behest of the evil Khrushchev and permit himself to be slapped in the face with insult and treachery? Why does President Eisenhower even consider going to Moscow or sending Vice President NIXON as his emissary to the Kremlin to receive the same rough treatment? Why does Dag Hammarskjold, Secretary General of the United Nations, plan a trip to Moscow where he, too, can only expect to be received with calumny and sneers?

Do you know why? Because they are afraid not to go. That is all there is to it. Khrushchev, the dictator of a backward and brutal tyranny, has become like a Roman emperor in our world, calling in the neighboring kings to be exhibited scornfully to the jeering crowd of onlookers just to prove that he is master of the world.

By these craven missions to Moscow the leaders of the free world are acting like those European and Asiatic ambassadors who trekked across the Russian plains to the abode of the great Khans to grovel and beg for mercy when these Mongol tyrants were sweeping half the world before their murdering cavalrymen. But Khrushchev is no Ghengis Khan. Nor is his force so irresistible. As Adm. Arleigh Burke told us the other day, the United States of America has the power to destroy the Soviet Union should Khrushchev trigger an attack. Our Nation is the most powerful nation, with or without allies, in the world.

But power, without the will to use it when necessary, is useless. The British and French discovered this when they faced a daring and rearming Hitler across the Rhine—and ended up with appeasement at Munich and war. The Romans, centuries before them, discovered this when their great and glittering empire was assaulted by the barbarian tribes from the north who coveted their riches. The Babylonians, with their brilliant but decadent civilization, had the same experience when the Assyrians came down like a wolf on the fold, their helmets all gleaming with purple and gold.

Are Americans or Europeans no different from these faded civilizations which have risen to the heights only to die in the depths when they lost their will to independence and freedom from barbarous tyranny? Will we, too, quail before the rough and arrogant barbarian ruler who now tells us that he intends to bury us and all we hold dear?

The Communists in the Soviet Union are openly bent on the destruction of free Europe and the United States. They have told us, as repeatedly as Hitler told his neighbors what he intended to do to them, that they will make us Communist captives if they can. Yet while we still have the power to resist and defeat them, while we have the strength to protect our liberties and secure our nationhood against these terrors, we accept with honor and hospitality Khrushchev's suave and cunning Ambassador Mikoyan, the murderer of thousands of Hungarian patriots. The British Prime Minister went on his pilgrimage to Moscow only to be rudely insulted while he was forced to listen to our own leaders being reviled. And still some of our legislators in Washington entertain thoughts of accepting this tyrant's term for a summit conference and the Berlin seizure, calling it flexibility. There can be no flexibility when compromise and surrender mean tyranny and slavery.

Flexibility is just a new diplomatic word for cowardly appeasement.

It is better to die on your feet, if you must, than to live on your belly. It is better for the United States to revive its old Revolutionary slogan, "Don't Tread On Me," and face the consequences of a brave and determined policy against communism than meanly to give away, a bit at a time, our pride, the liberties of our friends, our treasure, and finally our independence as a nation.

## "Meet Me in St. Louis" Set as TV Spectacular

EXTENSION OF REMARKS
OF
### HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mrs. SULLIVAN. Mr. Speaker, I have just been informed that the Columbia Broadcasting System on Sunday, April 26, plans to present a 2-hour spectacular based on the motion picture, "Meet Me in St. Louis," which we in St. Louis feel was just about one of the best pictures ever produced.

The people connected with the CBS show assure me the TV production will be modeled closely after the Judy Garland movie. The cast sounds wonderful—Tab Hunter, Jane Powell, Myrna Loy, Ed Wynn, Walter Pidgeon, and Jeanne Crain.

Normally, I would not utilize the CONGRESSIONAL RECORD to call attention to an entertainment on television, but it seems to me—in view of the many Federal programs now under way in the St. Louis area including some of the largest and most ambitious urban redevelopment projects in the Nation—that Members of the Congress and others will find it well worthwhile to watch this TV program for an indication of the spirit and warmth of a great city where friendliness and neighborliness are traditional.

As I remember the 1944 movie, centered in the Kensington Avenue section of St. Louis in my congressional district, I was struck by the similarities in outlook and attitude of our present day St. Louisans with the delightful family scenes of 1903 depicted in the movie. Yes, we still feel the same way about St. Louis—as the best place in the world to live.

May I, therefore, Mr. Speaker, urge that every Member of Congress who is able to do so that evening, watch the CBS production of "Meet Me in St. Louis" on Sunday, April 26. If they do, I am sure we will have no difficulty at all in convincing the Congress that a city with that kind of spirit and friendliness well merits the cooperation we are receiving from the Federal Government in flood control, urban renewal, and the majestic Jefferson National Expansion Memorial commemorating the Louisiana Purchase and the opening of the great West.

## An Address by Hon. Beverly Briley, County Judge, Davidson County, Tenn.

EXTENSION OF REMARKS
OF
### HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. LOSER. Mr. Speaker, a most thought-provoking address was delivered by the very distinguished county judge of my county of Davidson, in Tennessee, the Honorable Beverly Briley, before the Urban County Congress of the National Association of County Officials, here in Washington.

This very capable county official is probably the best informed man in the Nation on this subject and the very fine address he delivered should be read by all of the Members of the Congress. Unanimous consent having been first obtained to insert the same in the RECORD. It follows herewith:

Mr. President, distinguished guests, ladies and gentlemen, the response of so many county officials and national leaders to the call for this conference is most encouraging. Those of you present here today represent a cross section of those most closely acquainted with local level governmental conditions in the United States.

Your very presence is evidence of an awareness of problems and of opportunities so great that they demand the attention of every public agency.

Once a problem or a set of problems is recognized and fully understood, progress toward eventual solutions tends rapidly to accelerate.

Since this is the first conference of its kind ever held by leaders from the county level of government, and since we have the assistance here of many experts participating in our program, I believe there is good reason to expect our proceedings and conclusions may stimulate the thinking of people across the Nation. Furthermore, I believe there may grow out of this meeting the plans and procedures that will go far to solve some of the basic governmental questions that challenge our local jurisdictions.

Frequently, the political scientists have stated, and from our own experience, I believe we can agree, that no single formula possibly can solve the problems of each and every American community.

It seems to me that our chief benefit as participants in this first meeting will come from observing the experiences of others and analyzing our own situations in relations to those described here. It is I hope possible, that through discussion of the factors contributing to our local problems, we can come to some common agreements as to the basic nature of these problems. With the addi-

tional stimulation that will come from contributions by those who have succeeded in their home areas in changing concepts of county government and of local government generally, we may be able to approach all the problems of providing services so necessary for our local existence. We may even be able to approach some wise solutions.

It is understatement to say that universal use of the motor vehicle, better highways, and even commuter railways have established the background for the problems that perplex us and the people whom we serve. The surge to suburban living of the past two decades and its acceleration in the past decade can only amaze us all. A study of the recorded history of man discloses no comparable change in mass living habits, unless it was the original mass movement to the cities. The movement out of the cities into the suburbs creates impacts upon local government even more formidable than the impacts of the original clustering of population.

The exodus of people from the central city has wrought mighty changes in population densities. Many of the resulting problems are clear to all. Many other problems certain to rise are only dimly visible over the horizon to the most discerning of us.

Quite naturally, public administrators all over America are deeply concerned. Historical policies of the governments that always have existed to serve the people in areas that now are called suburbs, their tax base, and their fiscal problems also begin to attract the attention of the scholar, the researcher, and the theoretician of local government.

The hard-pressed economies of these local governments and their questionable ability to withstand the shock of this change, unaided, merits attention from both State and Federal Governments. Today, interest shown by these two levels of Government is slight. Indications of effective action or the possibility of effective action are very few and far between.

We may not all be able to agree that interest and effective action taken to date by officials of State and Federal Governments may have been due in some measure, at least, to complacency on the part of the county officials who might have prodded them to awareness.

But all of us can agree to this. We can agree that in our democracy people have the basic right to seek and to achieve the kind of living conditions they desire, with the single qualification, their ability to pay for what they seek—on a credit, if you please.

What has been the attitude and the appraisal of the more professional observers of this vast change in America's living habits called the march to the suburbs"?

May I say, parenthetically, before answering this question—the practice of kidding, ridiculing, or baiting a sizable population minority in this country at least is generally considered to be immoral and antisocial. It is likely to get the practitioner into serious trouble.

Currently, I know of only one exception to that rule. It is open season on one king size minority. I refer to the millions of people who live within a few miles of the corporate limits of the great American cities.

Sophisticated magazines like the New Yorker, Atlantic Monthly, Harpers, and Time Magazine outdo each other in coining names for this class of Americans. Terms like "commuter" and "suburbanite" have given way to slur words like "exurbanite" and "urban irresponsibles."

Many of the college professors of government and public administration have outdone the magazines.

Whatever you may call him, I remind his detractors that there are nearly 100 million of him in this country, a minority large enough, if well organized, to answer back in a thundering voice.

Why even the planners Mr. Suburbanite pays to diagnose his problems and recommend solutions refuse to take him seriously or even sympathetically. He has become the target of their abuse and the whipping boy of the sophisticates.

If within the sound of my voice there is one of these sneerers, let him be reminded that 100 million people cast a lot of votes. That, if still an undirected force, Mr. Suburbanite is potentially most powerful. By March of 1959, after this great decade of migration, he may be fed up with all this cartooning and joking, may be on the verge of recognizing his mass identity, and may prove more than willing to defend himself and demand that his interests be looked after.

Would that be good for the country?

I am convinced that the answer is "Yes." And most particularly at this time. I'll tell you why.

Right now the American governmental system of checks and balances is having its difficulties. For many, many years after industrialization swept our country and the race to the cities began, the American farmer existed as the great third force that could exercise compromising restraint on the two other great forces in our economic and political life. By switching judiciously from one side to the other when either threatened to assume a dangerous level of power, the farmer helped vastly to keep our country a stout, free democracy.

Capital, management, or big business, or whatever you want to call the monetary power in our society, could not pinch the workingman, wage earner, or union member too hard. Likewise, a restraining hand could be used on labor at the right time, because the farmer, sensing the need for a balance, would join with management and tilt the scales in the needed direction. In each crisis the shift of the weight of the farmer restored the equilibrium of this Nation.

It does not take a particularly discerning man to see that the day of the American farmer as a balancing wheel in the politics and power struggles that are inevitable in a democracy is done with. Today there are so few of them. Some 11 or 12 million, and his number is diminishing so rapidly that he soon will exist as a powerful force only in the imaginations of some older politicians.

If we are not exaggerating the role he played, we think there is a serious question raised. What happens to the country, and to this highly desirable political balance as the farmer fades from the scene?

The prospect that big business and big labor would set out in the absence of some new third force to kill each other off is distressing enough.

The additional prospect that big business and big labor might choose to sit down together and split up the economic pie with no aggressive third party to intervene becomes even more frightening.

In my opinion the giants of capital and labor already are getting too close for the comfort of those of us who individually enjoy our democracy. The labor strike to accomplish a specific bargaining task is one thing. But a national strike just for window dressing to provide an alibi for industrywide price increases is quite another thing. We have evidence in recent years that such an act has been put on by a few of these giants. In our economic system that could become a trend and a custom that would threaten the economic balance of our country. Think of what the upcoming steel strike will do to the price of your next new car.

Like most politicians I cannot claim to be very profound or very courageous. You may be assured that I would not have dreamed of raising such questions unless I felt that there are some ready answers.

I believe that the mass might of the American suburbanite, America's greatest consumer, and also producer, will act as the new balancing force. If we can agree that he possesses this potential for great service to our country in its hour of need, we need to understand him better. We need to try to learn why and how he got to be what he is. What are his problems and how can we, of his only local government better help improve and preserve his sound judgment.

First, because in the American tradition he worked hard—got ahead, or at least got a line of credit and enough cash for a down-payment on a house, we must admire him. I don't think this should make him a subject of ridicule. In Davidson County, Tenn., I won't stand for such ridicule.

Next, when he moved out of the crowded residential area of every American city and settled in his time payment home outside of the city limits, was he really the refugee from reality, ducker of citizen responsibility, tax dodger, or something for nothing sponger and snob his critics have claimed?

I say, "Absolutely no."

I think that potentially at least he is aware of his civic responsibilities. I am absolutely certain from my 9 years experience as an administrator of county government that he recognizes his own needs, and the needs of his community for a variety of urban type services. I am convinced that he is willing to pay his reasonable share of these services.

Furthermore, with the least bit of encouragement I believe that he is thoroughly capable of moving intelligently to solve his problems and to fully assume his citizenship responsibility.

In fact, he is doing just that all over the country. In many cases he is doing it with a degree of ingenuity and quality of imagination never exhibited by the leadership and certainly not by the average citizen of the big cities.

I cite a few examples that each of you know from your own home communities: the activities of the civic and service clubs that rise out of the neighborhood centers and schoolhouses of the respective areas. I cite you the further effort of the volunteer service and functional companies that have been established within these areas on a private or nonprofit basis to solve the essential problems of each neighborhood adjusting to local needs and demands.

One thing is most certain, and all must realize it. And when I say all, I means the American Municipal Association, the U.S. Conference of Mayors, and the Federal Government. This citizen we are describing is never going to voluntarily move back inside the city limits again. Neither will his children.

One authority writes:

"These new living conditions mean less congestion and tension—gives more privacy and safety for children. Gives further escape from the problems created by high density of population.

"This provides more opportunities for hobbies and more of the broader opportunities from living than can ever come from past city living."

In this realistic flight from these things that do exist this citizen has found from his experience with his county government that he is closer to his government, and has more to say about his governmental services than he ever did in the city.

This is especially important to him in connection with his schools, police, and the complete freedom he has from the regimentation that has so frequently come from the city regulations and inspectors.

There is a feeling in the suburbs that county schoolteachers, the county police force, and all the other county officials know

him better and are more interested in his problems than he believed was apparent in the big city.

As he considers his economic condition he feels that he gets more for his money in the suburbs. He gets more house, more land, more up-to-date living, and far more opportunities for recreation than he can get within a central city.

Further, he feels he gets better services and better education for his children and thereby is saving money.

It is obviously easier to get more in the way of housing, and more mortgage money available in the suburbs; and I believe sometimes the salesmen are even more persuasive in this area in which he has settled.

In many instances it is even easier to get to and from his work than from the crowded areas rapidly becoming slums where he lived in the central city.

This citizen finds that he lives in a more genial atmosphere of people of his own kind that are culturally, racially, religiously, politically, and otherwise of his own group than he could find in most of the residential areas available in the central city.

In general he has a stronger feeling of belonging to his community and to its social, church, and political life in this new place that he calls home.

There will be additional factors nourishing his developing sense of community identification. These will rise from the additional leisure time that is working itself into the economic and social structure of the Nation. With less and less time necessary to spend in employment, more and more time will be spent in the homes and the activities surrounding this more abundant family community life.

All of the urban renewal programs—all of the expressways, all of the air pollution, all of the cleanups, paintups, slum clearing in the central city, and all the king's horses and all the king's men can't drag him back to live inside again.

The quicker the leaders of the local governments of these geographical jurisdictions recognize this condition, and the sooner they wake up to the fact that this citizen wants urban type services and, furthermore, is willing to pay for them, the better off we will be.

If we don't wake up to the opportunities, we can expect a crop of new leaders to replace us who are more in tune with the thinking among the citizenship of our respective communities.

What he has been fleeing from, is in truth a reality rather than the fictional flight from reality that his critics allege. The day to day experiences that the suburbanite left behind him in the central city, indeed, were enough to leave him somewhat suspicious of what any government might try to do to him under the guise of providing services.

Personally, if we are realistic we will not blame him for this reaction.

Let us think what he left when he moved out. Substandard housing, spot zoning, many times the rule of machine politics with it handouts, special favors at the expense of the total community. The political direction of affairs often controlled by a hodgepodge of minorities. Publicity of these conditions over the years gives support to the reputation of high cost of city services whether deserved or not.

Who can blame him when he says, I want no more of it?

Who can blame him when he became dissatisfied with the makeshift metropolitan area authorities or the special districts that were created to provide urban services when in practice the control forces of these boards turned out to be only additional layers of government.

He wants no more of makeshifting. I believe he wants the county government where he lives to undertake to provide a sufficient number of the genuine, necessary, and needed urban services at their cost and no more.

He has had a dose of the word "city" and the things it connotes. By his own experience he is convinced.

He therefore dreads annexation by any city, and will consider, and has formed satellite city governments, not to furnish services, but solely to prevent the city from reaching out to grab him.

Although the students of government cry, "Shame, shame," this citizen as we observe him is perfectly willing to see the old central city ringed in by a county government providing the same, or even duplicating, services. His reasons may seem irrational, subtle, and in cases totally incomprehensible. But whether or no, we are not going to change him. I think we need to stop wasting the time in trying. Certainly, the city governments of this country are doing little to inspire a renewal of his confidence.

But in understanding this typical citizen of an urban county our responsibility is to establish for him a capable government that can render the services necessary for his existence and the opportunity for him to survive and to enjoy the domestic tranquility pledged in our Constitution. This includes the right to be let alone.

Many of America's county governments have started performing a series of governmental services normally considered the exclusive province of city governments. Groups of several metropolitan area counties have gone together to provide services for an area much greater than that of any single county. We are familiar with the many instances of this kind of thing. Names such as Baltimore County, Multnomah County, Jefferson County, Cuyahoga County, Fulton County, Baton Rouge Parrish, have become famous across the country because of their pioneering in the field of low-cost but high-quality services. Other pioneers are represented here but their names are too numerous to mention.

If any of us here fail to accept the similar challenges offered in our own counties and fail to understand these conditions, future generations will pay a price in discomfort, uneconomic living, frustrations, and even indignities.

While it is true that the State government has the responsibility of giving us through legislation the powers to establish suitable and efficient forms of local government, I believe lack of State action has been due to our failure to present the problem adequately.

Since the best of county governments can only exercise those functions which have been delegated and assigned by the respective legislatures, we must learn to tell our story better.

We must alert the people of the suburbs, including the business, labor, professional, educational, and religious leaders, and even the editors and the owners of TV and radio, we must solicit them to present and demand a consideration of their problems. The problems of county government services, indeed, are their problems, because 95 percent of all these leaders live outside city limits. Legislative authority or the granted power of home rule should be employed to create countywide agencies to provide the essential services for this new way of life.

New governmental machinery is required at this local level. We have a need of both Federal and State consideration for the problems. Nationwide and statewide attention must be focused upon the pattern of urban development in these metropolitan and urban counties.

We must seek the administrative controls to efficiently manage the affairs of these areas both in regard to local planning and services. All the functions a rural American required were offered by the original county system of government. We must expand these functions in line with the needs of this date and time.

I would like to quote some observations from an editorial recently appearing in Better Roads, the national highway magazine.

"Probably the most defeating part of the entire urban situation is the complexity of urban governments. In the 174 metropolitan areas listed by the 1957 census, there were 3,422 municipalities, more than 1,000 of less than 1,000 population and underlying them 2,317 townships.

"States have so far failed to take the leadership in finding a basic solution to the urgent problems of metropolitan areas. Whether representation is to blame or not is a question that will never be answered satisfactorily. But certainly the representation controversy is part of the whole problem.

"The State must take the lead in finding a way to integrate metropolitan communities, to change the very structure of local government if need be, to establish a unit that can deal adequately with the manifold problems of urban communities without regard to politics and the preservation of traditional but often outmoded forms of government.

"No other agency but the State can do the job of integrating metropolitan communities to eliminate countless overlapping areas of responsibilities. It is no longer a matter of denying anyone the privilege of self-government.

"It is a matter of making local self-government the unified voice of strength instead of a babble of many voices."

I agree with the editor of Better Roads. I say that the way to focus the babble of voices into a single strong voice is to make county government in this country once again the dominant local government. I say this is the only way.

To begin with the dominant forces in the legislatures of all the 49 States still are the so-called rural forces. Reapportionment of legislative representation can never come quickly enough to gain for city governments collectively the friendly reception that county governments traditionally have enjoyed, even the county governments of the giant urban areas.

If there is a potential governmental vehicle for efficiently serving the governmental needs of these urban areas with a sympathetic ear in the seats of existing legislative power it is the county governments. Let us now organize by States and across the Nation to take advantage of this sympathetic ear. That we have failed up to now to organize and strike for what our people want and need is, I am convinced, our own fault.

Let us make sure that nobody can say the same thing 10 years from now.

There are forces at work, powerful forces, to enhance the sense of common identity that already exist between urban and rural counties. I refer to the massive super highway construction program. The burden of right-of-way acquisition, large scale right-of-way acquisition, is new to both urban and rural county governments. The tools for assuming this burden must be jointly forged by both. A common effort in this direction can lead to common efforts in the entire area of providing services for the mass populations that will spill out of the urban counties first onto the counties immediately adjacent and then out farther onto the second, the third, and even the fourth tier of rural counties.

The program for this first Urban County Congress will review a dozen different improvised solutions to the problems of services for suburban areas. The list is long: reallocation of functions, federations, metro government plans, consolidations of city and county, contractural arrangements of various types, metropolitan districts, all the best

possible for local communities under existing legislative authority.

If they share a single weakness, I would be tempted to identify that weakness as failure to assume the existing county government as far the most suitable vehicle to which all needed additional functions might be entrusted.

Such improvisations will cease to be necessary, if the county governments will recognize the opportunity for service and the call for them to assume power raised by the suburban citizen when he cries for somebody, anybody, even a brandnew hodgepodge of governmental agencies to provide him with the sewers or the urban services he must have.

If county officials are found willing to assume the responsibility for providing for such services and willing to organize on a statewide basis to obtain the legislative enabling act or even the constitutional amendments necessary to clothe their governments with new authority and new taxing power, the vacuum that demands makeshift solutions will cease to be a vacuum. The suburban dweller will waste no time in designating the governmental agency he prefers to serve his needs. It will be a county government or perhaps a combination of two or even three county governments.

Already, county government has the geographical jurisdiction over these suburban areas. In the minds of the average citizen we have the jurisdiction. The citizen who would rise up in holy horror at any suggestion that a city government or any hybrid county-city arrangement of government be given jurisdiction over his courts of law infinitely would prefer that his county government provide him with water and sewer and other services.

Often he is mystified that he must turn elsewhere in order to be assured of these latter services. Although I admire the ability and the political sagacity of every county official present in this room. I would suggest that in Davidson County, Tenn., and in too many other counties across the Nation, the average citizen does not know that his county must have assurance of greatly broadened taxing power, before it can more fully serve his needs.

One very competent political scientist recently made this observation:

"Unless fairly drastic remedies are applied soon the financial plight of many local governments in metropolitan areas will be aggravated to the point of crisis. Basic troubles here seem to be three: (1) The regressive inflexible character of the principal sources of local tax revenue; (2) antiquated, unrealistic debt limitations; (3) the Balkanization of local government jurisdiction that result in (a) many local areas that are uneconomic for the provision of at least some services, and (b) often great disparities in tax paying and borrowing capacity from local jurisdiction to local jurisdiction. To this is now added substantial higher costs of money to local government. It is urgent that we develop our programs of metropolitan planning and servicing on as broad an areawide base as is possible to reduce costs and to obtain substantially higher levels of service at the lowest possible cost."

This is the story we must get across to our people. Everybody must be taught that the real property tax long ago ceased to be a tax base adequate for supporting any but the least expensive services. Rural legislators must be informed that counties need enabling legislation to enter the modern fields of consumer taxation, a right they began to grant the cities more than 50 years ago.

Once the broader taxing power is achieved, county governments can assume new functions and discharge them with their characteristic efficiency and economy. That is the first door we must open. That is the solid base upon which all the desirable assumption of urban-type service must rest.

Let us begin at once the educational effort that will win for county governments, the broadened taxing powers that will clear the way for greater achievement in all other fields.

A modern variation of county government can continue to administer the State affairs and at the same time through local initiative develop the service institutions that are necessary for the preservation of the homes and institutions that are the interest of this new type of living.

I believe that experience and adoption of a modern home-rule principle will bring cooperation with the central city and satellite cities around our Nation to develop an areawide allocation of functions that will ultimately bring about a functional consolidation. We can better serve and finance the needs of the total area in such a program.

In conclusion I am taking the liberty of paraphrasing the eloquent words of our own Mr. William R. McDougall. When the county governments of this country acquire the needed authorization for raising substantial new moneys, expand the needed services on an areawide basis, then, indeed, will:

"The dark continent of American politics" quickly become "the Shangri-La of local democracy."

## Court Again Criticized

EXTENSION OF REMARKS
OF
### HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of March 14, 1959:

COURT AGAIN CRITICIZED

The criticism of the Supreme Court from the American Bar Association, at its recent meeting in Chicago, is the latest evidence that the highest Court is seriously out of step with the vast majority of legal experts in the United States today.

The latest criticism, concerning Supreme Court decisions favorable to Communists, followed a repudiation of the top Court by the supreme court justices of the various States. It also follows criticisms made by the Governors of the various States.

Considering, also, the fact that many of the controversial decisions differ from the traditional concepts of past Supreme Courts, one wonders what further evidence be needed to prove the case against the present top Court—the charge that judicial training and experience is lacking and needed among the Big Nine.

Congress, and the President, should see to it that qualifications for membership on the to Court are carefully raised. For example, there is little in the present plan of bestowing Supreme Court appointments as political plums to commend itself.

Just as Chief Justice Earl Warren won his appointment because of his part in getting the California delegates at the 1952 Republican Convention to support Mr. Eisenhower, other inexperienced men have won seats on the High Court as a payoff for some political service rendered to the right person at the right time.

To be a Supreme Court Justice one should have judicial training on a high level over a number of years. This should be an inviolate prerequisite. The least Congress should do at the current session, or this Congress is to pass a bill, or constitutional amendment, requiring such qualifications.

## Egypt and the U.S. Press

EXTENSION OF REMARKS
OF
### HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 25, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker, the importance of a free press and unhampered communication between nations is graphically underlined by an American correspondent in Egypt. Frank Kearns, in an oversea broadcast for CBS, describes the problems and difficulties that confronted him when he tried to report the news through Egyptian censorship.

I include here the text of the broadcast as it appeared in the Near East Report of February 2, 1959:

EGYPT AND THE U.S. PRESS

Several days ago, Gamel Abdel Nasser's Ambassador to the United States, made some remarks which have just reached this part of Africa. His remarks reflect seriously upon those of us who work as American reporters in the Middle East and upon our employers.

First of all, the Ambassador, Dr. Mustafa Kamel, is reported as charging that many American newspapers and radio stations are owned by or, as he puts it, "have fallen under the influence of forces which would distort news of the United Arab Republic."

Being a diplomat and in the United States, Dr. Kamel obviously is being indirect. In Cairo, he would, I'm sure, identify these so-called forces as pro-Zionist or pro-Israeli. Yet, after almost 6 years out here, I know of no reputable American correspondent in all the Arab world who has ever received orders to slant in any way a single story—pro-Israel or anti-Arab. Or, for that matter, pro-Arab or anti-Israel.

The American tradition of journalism is to present the facts—in this case, from both Israel and the Arab world—and let the reader make up his mind. Dr. Kamel reportedly declared Americans are not correctly informed and advised of true conditions in the United Arab Republic. We correspondents do our best or, in the old American way, we would be fired.

But in one way Dr. Kamel is right: We cannot always inform Americans of true conditions in the U.A.R. because of something Dr. Kamel neglects to mention: censorship. I've talked to three correspondents who worked in both Moscow and Cairo, and all agree it's tougher to work in Cairo than in Moscow. In Moscow, for example, you're advised if something is cut from your press cable. In Cairo, a sentence, a paragraph or an entire section may be sliced out of a press cable, perhaps changing the point of the entire news story, then dispatched without the correspondent knowing anything of the change. It's called "blind censorship." Sometimes a whole dispatch is withheld.

For radio, we have to submit four copies of each script before broadcast time. The connection to New York sometimes is unusable because too many persons are listening in, or too many tape recorders are attached.

One day, for example, when several young kids stoned the USIS library in Port Said, we were unable to inform Americans of its true condition. I tried 3 days straight; each

day it was censored from my script. I've had the censor delete any reference to enemies, even opponents of Gamel Abdel Nasser.

Everyone in Egypt and Syria knows that Nasser has opponents and enemies, but Dr. Kamel is right. We cannot correctly inform Americans of this true condition in the UAR. We cannot even refer to Cairo's controlled press; the word "controlled" is censored out.

Yet, if ever a nation's press were controlled, it is Cairo's. Every day Cairo's newspaper editors receive official direction on handling of the day's news, especially editorials, right down the line: one, two, three, four.

Reaction to major news developments is occasionally delayed 24 hours or more until editors get the official line from above. Sometimes local news is blacked out completely in the local press by direct order as though it never happened. No Cairo editor has ever had the courage of Beirut editors, who during last summer's troubles often left big white spaces to show where the censor's pencil had murdered sentences or entire stories.

Perhaps courage is not the right word. In Cairo, such a paper would never even reach the streets. And papers which do reach the streets carry news distorted by propaganda, even by imagination.

To document this statement, it would take hours. Offhand, I can remember fantastic outright lies about King Hussein, the late and murdered Nuri-as-Said, Camille Chamoun, a long detailed interview with an American ambassador who had never even met the reporter. I can remember charges that UNRWA doctors were trying to kill off Palestine refugees in Gaza by fatal injections. Untruths, half-truths, fabrications, distortions without number.

Yet Dr. Kamel, Cairo's Ambassador to America, charges it is Americans who are living under the biggest propaganda curtain which has ever been made over world history, a curtain which he says is distorting news from the Middle East. Anyone living in Cairo or Damascus, including the foreign Communists, knows which country is living under this propaganda curtain, and its initials are not U.S.A., they are UAR (United Arab Republic).

Furthermore, the only reason I can say all this is that I'm in Khartoum, over 1,700 miles up the river from Cairo censors.

## Northern Textile Association Endorses the Conclusions and Recommendations of the Special Senate Subcommittee on the Textile Industry

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the board of directors of the Northern Textile Association:

NORTHERN TEXTILE ASSOCIATION,
BOSTON, MASS., *March 16, 1959.*

Hon. THOMAS J. LANE,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN LANE: The members of the Northern Textile Association are wholly in agreement with the conclusions and recommendations of the special Senate subcommittee of the Committee on Interstate and Foreign Commerce, which recently concluded hearings on the textile industry.

Our board of directors has adopted a formal resolution on this matter urging our New England Senators and Representatives to assist where possible in the implementation of the recommendations of Senator PASTORE's subcommittee. A copy of our resolution is enclosed. Your assistance in these matters as they develop will be greatly appreciated by all in the industry.

Sincerely,

BILL SULLIVAN.

---

The Northern Textile Association endorses the conclusions and recommendations of the Special Senate Subcommittee on the Textile Industry, and commends Senator PASTORE, the chairman, and members of the committee and the staff for a comprehensive, timely, and constructive report.

The sympathetic and thorough hearings conducted in key textile areas have been effectively distilled in the report to bring the problems of the industry clearly and forcibly into focus, and to demonstrate the harmful results of Government policies. The report is a significant contribution to a better national understanding of the textile industry.

The recommendations, if carried out in good faith by the executive departments and implemented where necessary by legislation, should solve the major problems imposed on the industry by Government.

We urge our Senators and Representatives to assist in the implementation of the recommendations of the subcommittee, including the appointment by the Senate of a Textile Subcommittee within the Interstate and Foreign Commerce Committee.

We also urge the Secretary of Commerce, in accordance with the recommendations of the committee, to establish forthwith a Textile Interagency Committee and an Advisory Committee as a first step in carrying out the other recommendations of the committee.

## Birthday of Amerigo Vespucci

EXTENSION OF REMARKS

OF

### HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. KOWALSKI. Mr. Speaker, the supposed rivalry between Christopher Columbus and Amerigo Vespucci has too long been allowed to stand in the foreground of our view of Vespucci, and block out our true view of him. Really, Columbus and Vespucci were no rivals, but close associates and intimate personal friends, throughout the period from 1492 to Columbus' death in 1506, and the bitterness and detraction common in later historians writing about Vespucci is completely absent from the testimony of the sons of Columbus. It is difficult to imagine a warmer tribute of personal friendship, or of trust, than is contained in Christopher Columbus' letter, written shortly before his death, introducing Amerigo Vespucci to his son Diego. And this, it must be borne in mind, was written 2 years after Vespucci had published his generalized account of the New World, called Mundus Novus, and a year after his letter to Piero Soderini describing his four voyages.

On the birthday of Amerigo Vespucci, more than half a millennium after he came into the world, let us remember and repeat in his honor the warm words spoken of him by the great navigator and discoverer, Christopher Columbus: "The bearer of this, Amerigo Vespuchy, is going there to the court where he has been summoned in connection with matters of navigation. It has always been his desire to give me pleasure; he is a man of good will; fortune has proved contrary to him as to others; he has not profited from his labors as justice would demand. He is acting on my behalf, moved by a great desire to do something which shall be to my benefit if it lies within his power. From here I do not know what I can enjoin upon him that will be to my benefit, because I do not know what they want of him there. See there what would be advantageous, and work toward that end, and he will do everything and talk and put it into effect; and let all this be done secretly so no one gets wind of it."

Amerigo Vespucci lives today in the name given in his honor to two continents, North and South America; let him live also in our hearts as the man to whom the great and good Christopher Columbus paid this tribute of confidence in his discretion, in his judgment, in his good will and personal affection. Nowhere on the continents named for him is there a monument to Amerigo Vespucci, and our historians speak of him with scorn and disbelief. Perhaps what Columbus said is still true, after the passage of almost five centuries: "He has not profited from his labors as justice would demand."

## "Not an Inch"

EXTENSION OF REMARKS

OF

### HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. BOSCH. Mr. Speaker, the President of the United States on Monday night, March 16, 1959, gave a very frank report to the citizens of the United States on the Berlin crisis. It is my belief that the people of the United States stand firmly behind the President.

Under leave to extend my remarks, I include a letter which appeared in the Tablet proposing a free world meeting in Berlin on May 27, 1959, under the slogan: "Not an Inch." I believe that there is great merit to this suggestion which would demonstrate to the Soviet that we of the free world are united on the Berlin issue.

The letter follows:

[From the Tablet, Mar. 14, 1959]

SUGGESTS FREE WORLD MEET IN BERLIN MAY 27

DEAR SIR: As the Berlin crisis gets worse and worse and Mr. Khrushchev's well-calculated war of nerves with its present and future zig-zags threatens to befuddle a great many people, the world, the free as well as the enslaved, needs nothing more urgently

than a dramatic and convincing gesture of the leaders of the free world.

May I therefore suggest such a free world performance under the slogan: "Not an inch."

The free world should convoke a Berlin free world congress, starting at noon May 27 in the American-built new Congress Hall of Berlin.

This congress should last at least 3 days with a selection of American, British, French, and German speakers, among them President Eisenhower, Mr. Macmillan, General de Gaulle, and Dr. Adenauer, professing the iron resolve of the free West not to yield an inch.

That congress should also hear, besides the above-mentioned leaders, many others, among them Messrs. Churchill, Truman, Acheson, Senators, Congressmen, British MPs and last but not least Germans.

Such manifestation, broadcast in 60 languages to the entire world, whether free or oppressed by Communist tyranny, would find a tremendous response and could not fail to impress the Pankow regime.

By organizing such an historical manifestation of the free world, unprededecented in its entire history, the United States would undoubtedly earn the gratitude of the free as well as of the oppressed peoples who have already been longing for far too long a time for such dramatization of our will not only to defend West Berlin, but the whole orbit of freedom still left in this world.

Such a demonstration would, of course, only make sense if we are really unitedly resolved to defend West Berlin's freedom at any price, including the horrors of nuclear warfare, and if we are not using President Eisenhower's most wonderful remarks about "not an inch" as just another empty propaganda slogan without any backbone.

JULIUS EPSTEIN.

## The Berlin Crisis

EXTENSION OF REMARKS
OF
### HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an exceptionally fine address by Representative PHIL WEAVER, of Nebraska, delivered before a Foundars Day luncheon at Lincoln, Nebr., on Monday, March 16, 1959:

ADDRESS BY REPRESENTATIVE WEAVER

In just 72 days we will face a major crisis in Berlin. Last August it was Beirut. Next September it could again be Formosa.

Every time a crisis arises, there are those in the Senate and House, and the calamity columnists and commentators who plead hysterically for a national mobilization—a nationwide girding of our loins.

But unlike the men of the Old Testament, too many of these latter-day prophets of calamity would have us abandon principle. They would have us go to Berlin shaded by Neville Chamberlain's umbrella.

We have faced crises before. Yet under the leadership of that valiant fighter, John Foster Dulles, who is even now demonstrating that his physical bravery matches his moral courage, we have come through because we have held steadfast to the right. We have placed freedom for ourselves and all who love freedom as our goal and the only solution for which we will settle.

There are those who plead for flexibility at any price. My call is for freedom at any price.

What, really, is flexibility? If you listen to some in the Senate and to some of our nationally syndicated faint-hearted friends, it means a readiness to compromise other people's freedom—and eventually our own. Is this flexibility? Or is it moral cowardice?

To my mind, flexibility does not involve the ability to concede on principle. We had that kind of flexibility at Yalta and at Potsdam. But rather it means the ability to change the rules of the game to force the Communists to meet us on our own terms—whether in Berlin—or Formosa—or Beirut—or wherever they attempt to launch their next regional or limited war of nerves.

The arena will change—but the game and the players—and the coach—will be the same. This is a dirty game, and so far they have made the rules to suit themselves. Their ambition is to bleed us white at every point—to force us to spend our productive genius in every little skirmish. Then when they choose to push the button, we will be exhausted. We will have spent our main energies and be at their mercy.

To play in this game and win, we will have to have two things—

One, a diamond-hard adherence to the principle of freedom. And by that I mean a stanch belief in the ideals that forged this Republic and made it great, the things our fathers had—and which we want our children to enjoy.

Secondly, we must enter the arena strong—with a good team and plenty of trained reserves on the bench—including a strong National Guard.

As a member of the House Appropriations Subcommittee on Defense, it is my grave responsibility, along with 16 others, to see to it that we are strong and remain that way.

We are spending a great deal of money for defense. I want that money to go for building real strength to defend America to keep the pace and keep the peace against all aggressors. I do not want one dime to be spent on building a private empire for generals and admirals who practice a kind of nepotism based on a class ring from Annapolis or West Point or, now, Colorado Springs.

I do not want a single dime to go for buying new fleets of Cadillac limousines—and one day recently I saw nine of them lining the curb near the Capitol.

I do not want one nickel to go for paying the salary of a full colonel who came before our committee—to run a motion-picture projector at a cost of $55.97 a day—when a private could have done the same job just as well. I don't believe it takes a West Point education to learn to run a motion-picture projector.

Nor do I want your defense dollars to pay the salaries of the 24 commanders I saw trailing an admiral and two captains to a committee hearing.

I don't believe your tax dollars under normal circumstances should be used to establish huge public housing projects on military bases. Good homes are available for sale or rent to military personnel in many communities near the bases. To have mutual understanding between our friends on the base and the people in our towns, they should join together in community life whenever possible and help save tax dollars.

I want a strong defense, but I don't want to see a bumbling bureaucratic military empire waste us away and fumble our chance of survival down the drain.

If it comes to a choice between the kind of defense we need and some project here at home, I am going to choose defense every time. I am not going to play politics with the freedom of generations of Americans still unborn.

We can have that defense. We are in the process of developing the kind of defense that has the courage and imagination to put aside that which is outmoded. We can also have an America which is developing with imagination and determination our productive power—our natural resources.

We can have both.

We cannot have either if we allow ourselves through vacillation to play into the hands of an aggressor who has no principles of his own—but fears those who do and who will stick by them.

We cannot have either a strong defense or a vital, growing America if we allow waste and the frittering away of our resources by a military which has adopted a do-it-as-usual philosophy.

We have at present in the White House in Dwight D. Eisenhower a man who will not sacrifice the principle of freedom simply to satisfy those who have placed the flexibility of compromise and equivocation above every American ideal.

I can assure you—there are still some of us in Congress who want a national defense that doesn't bulge at the waistline with self-satisfied generals and admirals whose main worry is to expand their own domain.

These, I think, should be the goals of the Republican Party.

These are the goals for which I am fighting in the 86th Congress.

These are the principles on which I am willing to stake my political life. These are the principles upon which the life of America itself must depend.

Any man in Washington fighting for these goals needs support—not only political support but also moral support. As loyal Republicans, here today, I know you will provide this kind of staunch support from the very grassroots of America.

With this kind of solidarity, let our enemies not be in doubt.

## How Deeply Do You Believe in America?

EXTENSION OF REMARKS
OF
### HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. HALLECK. Mr. Speaker, on March 10, 1959, Postmaster General Arthur E. Summerfield addressed the distinguished membership of the Sales Executives Club of New York.

Mr. Summerfield's courageous talk emphasizing the Nation's struggle against inflation, the need for tax policies that can bring greater opportunity to every American, and his demand for adequate legislation to control labor monopolies and its abuses by labor bosses deserves wide circulation and careful consideration by thoughtful Americans irrespective of party affiliations.

So, too, does his plea for more active participation in the affairs of Government by businessmen, union members, farmers, the 42 million housewives who pay grocery bills every day, teachers, professional men, students, and retired people.

Mr. Speaker, under unanimous consent, I include Mr. Summerfield's remarks in the RECORD:

HOW DEEPLY DO YOU BELIEVE IN AMERICA?

It is good to be here today with so many of you who represent the sales leadership of American business.

I remember with deep pleasure my visit with you several years back. And I cherish greatly the honor you bestowed upon me at that time.

As you may know, I have spent the greater part of my life in businesses in which the sales activity was vital.

I need not tell you that selling in our great, competitive economy is challenging and rewarding—and more, it is the very dynamo of our whole enterprise system.

You also know, of course, that a dedicated salesman really never stops selling, regardless of where he may be. I suspect, therefore, it is no surprise to you that I am still selling.

I am selling a modern, efficient postal service.

I am selling the maintenance of peace and national safety in a troubled world.

And I am selling, with all my heart, the sound growth of our country under a philosophy of government that can provide the greatest opportunity for all our people.

Today, if I may, I should like to lay before you some thoughts on our national security, and our philosophy of government. They are, of course, entirely interrelated.

We must begin with the premise that we are today engaged in a great economic struggle with the Soviet Union. It is not a shooting war, and we pray to God that such a dread resolution will never come.

Neither is this conflict of our own choosing. The Soviets are pushing it for the express purpose of imposing Communist rule throughout the world.

But the struggle nevertheless is a hard, inescapable fact we must recognize and meet.

There is no shooting war only because the Soviets have not dared to launch such a holocaust. Whatever initial success they might have, they know that retribution from the free world would be swift, terrible and decisive.

They have resorted to bold threats of a shooting war, in the hope of dividing the free world alliance and leaving us to face encirclement alone.

But here they have been firmly rebuffed by the supreme statesmanship and courage of our leadership—our President and Secretary of State—and the steadfastness of our friends around the globe.

Nevertheless, the Soviets appear today to be as confident of ultimate victory as ever. Why? Because they are now concentrating on all-out economic war, and they believe they can defeat us in such a war without risking their own destruction.

They boast that they will overtake us in industrial production in 10 years. Their entire economy is aimed at surpassing us, not only internally but in total influence on a world scale. Their Premier has just told the party congress in Moscow: "The time will come when we shall have the decisive edge."

We dare not look cynically on their determination. They are gearing the whole massive Communist society to that objective. They are moving with grim and confident purpose. And the undeniable fact is, they are gaining.

We still, of course, are well in front. But they expect the very demonstration of their ability at closing the gap to win world opinion to their side.

Ironically, they are counting on us to help. While they are pushing the Soviet economy faster, they expect the American economy to falter on at least two rocks of huge and disastrous proportions:

1. runaway inflation; and

2. political unwillingness to hold to the basic principles that have made our country so powerful and so great.

I believe their hope will be in vain. I believe we shall continue to build the strongest, finest, freest way of life the world will know.

But, my friends, this I also believe:

To do so, America must maintain a sound economic philosophy, and sound policies firmly based on such philosophy.

This is why I am selling, with all the energy and devotion I possess, the sound growth of our country under a philosophy of government that can provide the greatest opportunity for all our people.

What is this philosophy?

I think it can be simply stated:

It is a government that discharges every legitimate obligation to its citizens, but does so within the framework of a responsible fiscal policy.

It is a government that recognizes our free enterprise system—our industry and agriculture—as the very wellspring of prosperity and opportunity for all our people. It is a government, therefore, that promotes the sound growth of this system and its service to the people.

It is a government determined to place the best interest of all its citizens above special interests of any selfish group.

Such a government is essential to deal with the problems of these times. It is vital in fighting inflation and in grappling with our tremendous problems of taxation.

For, make no mistake, we are at grips with deadly inflationary forces. We are under the gun of onerous taxation—taxation that can effectively prevent the accumulation of private capital and the incentive for productive expansion.

In our battle against inflation, two facts today stand out very clearly:

The first is, that if public spending soars far beyond the revenues of Government, inflation will infuse itself more deeply and dangerously throughout economy.

Unrestrained spending can only result in deficit financing, higher taxes and cheaper dollars. And in such event, who must bear these burdens? You. You and your family—and every other citizen of our country.

Inflation feeds on the income and the savings of every individual, every enterprise, in America.

It eats away the savings we cherish for our family's security. It robs us of the real value of the dollars we earn. A quick glance at the family food basket can make that point painfully clear.

In 1939, a dollar would fill the basket with potatoes, bread, coffee, cabbage, milk, and eggs. Today's dollar will buy only the cabbage, milk, and eggs.

Twenty years ago, you could buy a pound of round steak, a pound of bacon, a pound of pork chops, and a pound of sugar for what it costs you today to buy just the pound of steak alone.

And so it goes with everything we buy.

Every American, therefore, has compelling reason to be concerned over the gigantic spending schemes that already have been voted by one House or the other of the present Congress. Together, just to date, these schemes represent several billion dollars of needless, unjustifiable spending. And more of the same are in the offing.

All are the creations of political pressures of special groups.

But if they become law, it will be every American whose dollar is cheapened—every American whose paycheck must yield steeper taxes— and every American whose children must bear the future debt.

The second fact in the inflation battle is the vast monopoly power of a handful of union dictators. This is the very core of our inflationary struggle.

Eighty percent or more of the cost of what we buy is labor. Obviously, industrial wage costs have a very direct bearing on everyone's cost of living.

Wage increases have been fundamental to the rising living standards of our people, and the vitality of our economy. They should continue to be. And they will be, so long as they are related to increased productive efficiency.

But when union dictators force wage costs far outrunning productivity gains, inflation is inevitable. With each round of wage and price increases, our dollar drops another notch in purchasing power. The wage earner who gets the increase soon finds that his new dollars, too, are siphoned off by a higher cost of living. And union members everywhere are hurt as badly as everyone else.

In the past 10 years, a 28 percent gain in industrial productivity has been overwhelmed by a 67 percent rise in wage rates. The difference between these figures is wage-push inflation. Inevitably, this has priced more and more American products out of export markets, and reduced our ability to meet foreign competition in our own domestic markets.

The Nation has been shocked by the colossal labor racketeering and corruption revealed in the hearings of the McClellan Committee. Our people—including the great body of union members—want these terrible abuses stopped, now.

But let us recognize that these abuses are but symptoms of a much greater problem.

Why are union racketeers contemptuous of public opinion? Because they operate within the framework of a tremendous concentration of power which aims to control the laws, and lawmakers of our land, and eventually the White House itself. Thousands of our businessmen and workers have been partially "brainwashed" into believing these influences cannot be successfully challenged, thereby weakening their will to resist, to stand up and fight for what is right.

This is a union boss monopoly power that equals any accumulation of vested interest to be found in history.

This monopoly draws upon huge financial resources—almost equal to the total resources of all the Nation's life insurance companies combined.

It is a power that permits a few entrenched bosses to spend millions of dollars of union dues money for political purposes, exactly as the leaders see fit, with no choice given the dues payers.

It is a power to impose at will an ever-rising cost of living upon our people.

It is a power than can systematically bludgeon American business until free competitive enterprise can no longer survive in America as a vital force.

This is a grave moral and economic problem to which our Congress should address itself with all earnestness. Many alarmed Members of the Congress are doing so. But, quite obviously, too many others presently are more concerned with the wrath of the union dictators than their duty to the American people.

Now, of course, whenever anyone questions abuses of union power, the affected bosses and their political cult rush to denounce him as antilabor.

But union members are no longer accepting that deceit. The overwhelming majority of workingmen and women and their leaders are devoted, self-respecting Americans. They know that anyone who is for a strong America, as I am, is for a strong union movement. They know that cleaning up union abuses is no more union busting than the legal cleaning up of pernicious business practices—years ago, was corporation busting.

They have had enough of union rackets, and corrupt unions, and corrupt and power-hungry union leaders. They have had enough of union elections rigged to deprive

members of their rights. They do not want their own dues payments used to further political ideologies to which they may be firmly opposed. And they know that anyone who urges Government help to rid them of these abuses is prolabor in the deepest sense.

Fortunately for America, in these eventful times, there is wise leadership in our Government.

The fight to hold inflation in check, to keep our business economy growing, and to root out corrupt union elements, is being led by the President of the United States.

President Eisenhower prevented wild public spending from wrecking the economy when frantic pressure developed during the recent business slowdown. He insisted instead upon sound measures, with the result that our economy has moved soundly forward ever since. And, of most importance, our cost of living has been checked and has leveled off.

Our President is fighting to prepare the way for tax policies that can bring greater opportunity to every citizen through the sound growth of our economy.

He is standing firmly for realistic legislation to assure America's union members honest and responsible union leadership.

Our Vice President, many Members of Congress, and many others in the Government, are equally vigorous in behalf of these issues.

Much, for example, will be accomplished by the President's new Cabinet Committee on Price Stability for Economic Growth. Good progress is being made under the able chairmanship of Vice President NIXON. I am proud to be a member of this Committee, and look forward to the work to be done.

We hear the question raised in Washing, from time to time, as to what constitutes bold leadership. That is a fair question. Let us take a look at it.

Which calls for the boldness of genuine personal courage and vision? To insist upon a balanced budget and a sound dollar—or to yield to the noisy pressures of special groups for more and bigger spending?

To seek diligently a fair tax code that will inspire our whole economy to grow—or to go along in order to placate everybody with a hand in the pork barrel?

To insist firmly upon labor laws the people desire and the Nation needs—or to try to fool the public with so-called labor legislation dictated by the union monopolists themselves?

These are the choices of leadership offered the American people.

Actually, commonsense policies are the policies the great majority of Americans want.

That fact is demonstrated by several recent polls of public opinion.

In one of the largest, these findings were made:

The large majority of citizens interviewed said the first requirement of responsible national leadership for 1959 is to help check inflation.

The three items they listed as most important for Congress to work on were: Holding down prices; prevention of inflation; and laws to clean up labor monopoly evils.

A higher percentage of union members listed these commonsense objectives than did even the general public.

In view of all these indications, then, why do the spenders, the taxers and the apologists for union abuses dominate the Congress?

The reason is just this: Far too few people take the trouble to let the Congress know what they think.

Congress is responsible to the will of the people. But how can the individual Congressman determine whether the public agrees with a particular proposal unless he hears from the public?

I think you will agree that this is an extremely critical problem. But let me ask you:

Have you let your Congressmen know where you stand?

Did you write to them when the big spending bills were up for debate?

The Members of Congress received plenty of letters, telegrams, telephone calls and personal visists. From whom? From the American people? Or from those groups who had a special interest?

The truth is that the Senate and House were bombarded by energized special interest groups. The arguments that poured in were one-sided. And the special interest groups won the first round.

Ladies and gentlemen, I am a Republican. But I am under no delusion here that I am speaking to the East Side Republican Club. Some of you are Republicans; some of you are Democrats. Some are independents. But what I am urging is not a partisan proposition. I am not asking for partisan expression.

What I am asking, what I am saying, is simply this: Speak out. Let your voice be heard.

Not only to you as businessmen, but also to union members, farmers, the 42 million housewives who pay grocery bills every day; to teachers, professional men, students, retired people—to every citizen, I say:

How deep is your belief in this land of ours? Deep enough to speak up in its behalf?

Is it deep enough to give of your substance, your time and your genius to preserve it?

A hard and fateful struggle is being waged. Your voice and efforts are more than important, they are vital.

They are vital on specific current issues. They are vital on long-range issues. They are needed at campaign time, and between campaigns.

Sound political leadership must have the active support of those who want sound government.

Some State governments today face virtual financial collapse.

Why?

Because those believing in sound political leadership have stood aside as spendthrift politicians have joined forces with labor bosses in an orgy of reckless spending and more and more taxation.

And what permanent solutions are being suggested by those in control?

The only suggestions so far have been the wornout, old-fashioned soak-the-rich ideas; specifically, a call for a corporation's profit tax, and an income tax on so narrow a base that only a small percent of the citizens would have to pay the bills.

Nothing is being done to reduce expenditures. No studies are underway to see where the tax dollars of these States have gone and are going. Nothing is being done through long-range State tax reforms to make these States attractive once again to business and industry, and to help provide more jobs.

My friends, the citizens of these States are learning the hard way that more huge spending programs mean that the Government has to collect more in taxes to pay for them.

The more American business has to pay in taxes, the less it has left to invest in new products and new plants.

And certainly, the less business is able to invest in new production, the less it is able to create new jobs.

It is that simple.

Peaceful coexistence may have its virtues in some fields. But the welfare state and virile free enterprise cannot exist side by side within the same economy. And I don't believe for one minute that the union members of our country, any more than the rest of us, want to surrender their freedom to a welfare state.

Instead of increasing the tax burden, we need to carry out an essential revision in our Federal tax structure.

This task, we know, will be tremendously difficult. But it is part and parcel of the basic solution for stopping inflation and spurring our economic growth. It must be done.

We need to relieve the tax load being carried by the individual citizen and by our business system.

This great Nation has been built on the motivation of high levels of individual achievement. We have encouraged, with material reward, each citizen to perform to the best of his capacity.

Even the Soviets have taken note of this historic process. Russia, despite its Communist doctrine, now offers high incentives for outstanding individual performance in industry, science, and other areas of its society.

Consider, against this, the fact that we have been moving in the direction of destroying personal incentive.

We have steadily compressed the reward for doing something thereby encouraging many to do little or nothing.

Take notice, for example, of what happened to the head of a family of four with an annual income of $5,000. Today he is paying almost 10 times as much in Federal income taxes alone as he did in 1939. And if he strives to increase his income, the penalty of taxation becomes increasingly severe.

Of equally great consequence is the effect of ponderous taxation on business initiative.

Our population is growing rapidly. In the years ahead, our people will need greater opportunities and millions of new jobs. Business is expected to create most of these jobs. Business expects to create jobs. Corporations today provide nearly three-quarters of all the nongovernment wages and salaries paid.

But new jobs can come into being only as billions of dollars are invested in new tools and capacity. Now, where is this money to come from? In the end, it must come from the earnings a company saves after paying all its taxes.

Today Federal taxes alone can take more than half of many a company's net income. Then follow State and local taxes. There are over 100,000 taxing authorities in our country. Their weight can seriously restrict the ability of business to meet its job-creating capital needs.

Much of our Federal tax code was hastily adopted during times of war.

A sensible, equitable, dynamic tax program is needed in its place. Such a program will keep Federal revenues up, not by taxing away incentive and means of growth, but by steadily increasing the tax base.

The present administration has made this clear. It has already embarked on a program of tax reform and reduction with the Revenue Act of 1954. The President's insistence on a balanced budget in 1959 is related directly to this goal. Putting our fiscal house in order, he has emphasized, is essential to a sound, progressive program of tax reform.

Obviously, this program cannot call for immediate and sharp reduction in all income tax rates. It calls for gradual reform and reduction. And it calls for equitable reduction for all taxpayers, large and small.

The ultimate tax pattern, in short, must be a completely integrated program that will meet the real needs of a dynamic economy.

And this kind of program will be achieved only if we avoid the pitfalls of grandiose spending for nonessentials, and other inflationary pressures which swell the costs of Government.

In summary, let me leave these thoughts with you:

We must maintain our initiative in military and world political strength.

We must be equally vigilant against the Soviet determination to defeat us politically with economic strength. This may well be the ultimate battleground the Kremlin has chosen.

To succeed, we must promote the sound growth of our whole economy—we must maintain a philosophy of Government that provides the greatest opportunity for all our people.

We must keep the cost of living in check, while our standards of living go up, with a stable dollar. This means a balanced budget, and control of pressure on prices resulting from the irresponsible demands of a few union dictators.

We must take steps to correct the union abuses that the great majority of working men themselves want corrected.

We must revise our tax system to permit our people to create the great economic expansion of which we are capable.

Here in this room today is a gathering of the finest sales abilities in America. Here are the executives who represent the sales genius of many of our Nation's leading corporations.

Competition is your life. You are constantly devoting your best brainpower and energies to competing with others in your industry, possibly the fellow sitting at your same table today.

But may I suggest an even greater competition exists, in which there is more at stake for you, your company, its stockholders, and its employees?

It is the ever-pressing, huge and deadly competition you face with forces dedicated to Government by pressure groups and labor monopolists. It can defeat you, destroy you, as no industrial competitor could ever do.

There is nothing more important you can do than to devote some of your sales genius and best techniques to fighting this battle. Nothing is more essential to your company and its future.

Thousands of corporate mailings are made to stockholders every day. Why not employ these mailings to enlist their active support? Pressure-group Government and labor monopoly power are definitely contrary to their interests.

I would dare to suggest that your companies, in these communications, tell your stockholders clearly how this struggle affects them, both as citizens and as owners of business. There are also many hard-hitting articles, speeches and other materials that could be included. Mailed regularly to the Nation's 10 million stockholders, they could be of ever-expanding influence throughout the country.

The same can be said of communications with employees. They, too, can see this great competition in progress, and they need to know from you exactly what is at stake and they should be told the truth.

What do you want for America? How deep is your belief in America? It is very deep, I am certain. But it can be effective only as you let it be known.

I urge you to take your place among those who will speak, and work, and fight for sound Government and a stronger America in the years ahead.

My friends, the greatest era in history—the Golden Era of unlimited opportunity, lies ahead.

We can make it mankind's most fruitful period if we but solve the problems we face and move forward, as we can, united for the well-being of America.

We will do so if we but realize that the all-out economic war with the Communists calls for just as much unity of purpose, just as much devotion to country, just as much selfless effort, yes just as much old-fashioned patriotism on the part of every American, as any military war ever did.

I am certain we can and will meet this challenge. We will do so best, I feel sure, by following the program of true liberalism I have outlined here today—a program based on free men organizing and conducting their lives in freedom and spreading freedom to everyone everywhere.

We have inherited the glory of this Nation, its strength and its freedom. Let us protect it—let us perpetuate it—and let us bear it proudly forward into the hands of our children.

## Social Security "Illusion"

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. MULTER. Mr. Speaker, I have introduced several measures which seek to better the plight of our citizens who receive social security. One of these bills which should be enacted at an early date is H.R. 598 which would remove the limitation on outside income an individual may earn while receiving his social security benefits. I believe that the present limitation of $1,200 per year is unrealistic.

In this connection, I commend to the attention of our colleagues the following article by Sylvia Porter which appeared in the Washington Evening Star of March 16, 1959:

SOCIAL SECURITY "ILLUSION"

(By Sylvia Porter)

How much is the retired worker dependent on social security benefits for food, shelter, and clothing really suffering from the inflation?

It is obvious that Americans hurt most cruelly by inflation have been those living on fixed incomes—people who have no more dollars today than they had 10 or 20 years ago, but who must pay more for everything they need and want.

Responsible sources have stated repeatedly that senior citizens now drawing social security benefits are the worst sufferers. In its last monthly bulletin, for instance, the First National City Bank of New York declares flatly that the social security "pensioner's gains, because of inflation, are an illusion. * * *"

PROTEST SUGGESTED

And taking the point 1 step further, authorities urging strong anti-inflation actions insist that if just those already getting social security pensions—about 12.5 million—could be stimulated to organized protest against swelling Government budgets, we'd be well on way to victory over the spiral.

Here's a comparison of benefits and living costs today with 20 years ago, 10 years ago, and last year.

In 1940, the first year of social security benefits, the maximum check a single retired worker could get was $45.60 a month. Today, the maximum for that worker is up to $116. The increase in benefits over the year has been 154.4 percent.

Simultaneously, though the cost of living—as measured by the Bureau of Labor Statistics Consumer Price Index—has soared 108.4 percent.

Clearly, a giant part of the social security gains has been dissipated by rising living costs. But even over this period, which includes the violent inflation right after World War II, the rise in benefits substantially exceeds the rise in prices.

In 1950, the maximum check a single retired worker could get was up to $80, and that, in turn, is now up to $116. The increase in benefits in this decade has been 45 percent.

NINETEEN HUNDRED AND FIFTY-EIGHT FIGURES CITED

Simultaneously, the cost of living has risen 23.4 percent. Again, much of the gain has been wiped out by climbing prices, but a 45-percent rise in benefits is still a lot bigger than a 23.4-percent rise in living costs.

In 1958 the maximum check was $108.50. The rise to $116 is amost 7 percent. In this past year, living costs have risen a bit more than 1 percent.

Once more, the point can be properly made. The pensioners' gains are not, as the First National City claims, an "illusion."

And the straight statistical comparison doesn't tell the full tale. For the man or women over 65 depending on social security benefits does not buy many of the items that have ballooned most in cost—such as new cars, quality meats. This individual does not use the same quantity or quality of goods and services as the average city worker's family upon whose spending patterns the official price index is based—such as daily trips on the bus or subway. Finally, a person over 65 today vividly recalls the pay levels of the thirties and whether or not a younger person can understand it, $116 a month feels a lot bigger than $45.60 even though the larger check doesn't buy much more than the small one.

"We used to get a lot of complaints about benefits," said a spokesman for the Social Security Administration when I called to check my figures. "We don't any more. People seem to feel they're getting a fair deal."

"You don't get lots of mail grumbling about what inflation has done to the benefits and demanding 'you do something about it?' "

"No."

## Educational Television—The Opportunity and the Opposition

EXTENSION OF REMARKS
OF
### HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. McDOWELL. Mr. Speaker, as a strong advocate of realizing the unlimited opportunities offered by educational television I, under unanimous consent, insert in the CONGRESSIONAL RECORD, two recent articles and a letter pertaining to this subject.

The first article, taken from the Wednesday, March 11, issue of the Washington Post and Times Herald, describes just one of the many uses to which educational TV can be put. The second is a letter of March 11 addressed to the Federal Communications Commission, from supporters of the plan for educational TV in Delaware. The third article, a reprint of a letter appearing in the Tuesday, March 10, edition of the Wilmington (Del.) Journal-Every Evening, will bring to the attention of my colleagues an example of the serious obstacles facing those who attempt to make educational TV a reality.

[From the Washington Post and Times Herald, Mar. 11, 1959]

EDUCATIONAL TV GROUP PLANS SUMMER SERIES

The Greater Washington Educational Television Association, now boasting membership by all six area universities, is planning a series of summer programs which would give educational content to recreational programs such as music and gardening.

Mrs. Edmund D. Campbell, president, said the series would be designed for family viewing.

She emphasized that the plan is still in the formative stage and will depend largely upon whether television time and money can be obtained. The cost would be $1,000 a week for five 30-minute programs.

The association reached its membership goal Monday when the University of Maryland Board of Regents voted unanimously to join.

It was also announced that five universities will present a series titled "Understanding" on 5 weekdays starting March 27. The programs will be the Easter recess replacement for the association's "Time for Science," normally seen at 11:30 a.m. daily on WTTG (channel 5).

The schedule and participating schools are: March 27, "The Corridor—the Story of Communications," American University; March 30, "The Wonders of Words," Georgetown University; March 31, "The Layman and Chemistry," Catholic University; April 1, "Understanding through Music," Howard University; and April 2, "The World of the Slavic Peoples," George Washington University.

"Understanding" will be aimed at the 41,000 fifth and sixth graders who now see the "Time for Science" series in 1,239 classrooms in the area.

---

MARCH 11, 1959.

FEDERAL COMMUNICATIONS COMMISSION,
*Washington, D.C.*

GENTLEMEN: At a meeting held on February 25, 1959, the Wilmington section of the National Council of Jewish Women, an organization of over 200 young women, passed a resolution urging the Federal Communications Commission to assign channel 12, formerly in Wilmington, Del., as an exclusively educational outlet.

We believe that there is a great need in Delaware for educational television. This area is served by the three major commercial television networks. The availability of channel 12 at this time offers a tremendous opportunity to improve the quality and widen the scope of local television fare.

We urge you to allocate channel 12 for solely educational purposes. Educational television, regardless of its point of origin, will benefit all Delawareans.

Very truly yours,

Mrs. ALBERT GELB,
*Vice President in Charge of Education and Program.*
Mrs. LEONARD LANG,
*Social Legislation Chairman.*
Mrs. STANLEY BELL,
*Legislative News Reporter.*

---

EDUCATIONAL TV

TO THE EDITOR:

Several weeks ago, you wrote a splendid editorial dealing with the gradual decrease in the number of newspapers and the heavy responsibility which falls upon a newspaper which is the only one in town. I was impressed by your realization of the responsibility which your power placed upon you.

Since then, I have been measuring your performance by the standards which you have set up. The subject is your treatment of the proposed allocation of channel 12 for educational television. I shall not discuss its obvious merits, but only your handling of it.

The allocation of channel 12 for educational television is opposed by a strong politico-economic combination in the State. Educational television can, at present, do little to bring profits to commercial interests or to elect Governors, or to satisfy the ego of the scant population in southern Delaware (who, incidentally, can get ETV from Maryland stations). The proponents of educational television need a real opportunity to present the facts to the newspaper reading public. That is where you could have rendered a public service.

The two articles by John G. Craig (Journal-Every Evening, Jan. 26, 27) appear to me to be an attempted coup de grace after the Governor's committee refused to give even moral support to the cause. An unbiased writer, which he pretended to be, would have pointed out the inherent flaws in the conclusion of the Governor's committee.

Front page space was given to the opposition in articles quoting Rollins and Dr. Ward Miller but not to equally qualified educators such as Mr. Shue, superintendent of the Newark public schools, or Dr. Heiney, superintendent of schools in the Mount Pleasant special school district, who strongly favor educational television for channel 12.

I understand that no reporter was sent to the recent board meeting of the Delaware Educational Television Association on February 19. That evening, however, the Journal had an editorial entitled, "From Cloud 7 to Channel 12." This not so subtle satire by title was worthy of Time magazine whose smart-alecky style was once described by a British court as a "magazine of unequaled scurrility directed against all manner of persons.

Please, Mr. Editor, search your conscience and decide whether you have given the subject of channel 12 for educational television a fair break. Telling only some of the facts can be as deceptive as a deliberate falsehood. I think the least you can do is to give equal emphasis to information and arguments from members of the Delaware Association for Educational Television (I don't belong to it). If you did this, Wilmington stores would not cancel their multipage ads. Where else could they advertise as effectively?

While Delaware quibbles over which State would control the educational television channel, our enemies, the Chinese Communists, are using education by radio to jeopardize our way of life. (Journal-Every Evening, Feb. 16, 17, 18, "Red China Today," by Sripati Ghandrasekhar.)

ROBERT W. NOLAN.

(EDITOR'S NOTE.—We have searched both our conscience and our files and can find no clear evidence of an uneven break. The viewpoint of the proponents of educational TV took the initial front page play in these newspapers back in September. News stories of developments in support of those aims have appeared frequently since, both on p. 1 and in inside columns. The meeting on Feb. 19 of the Delaware Educational Television Association was covered in a comprehensive front-page story in the Wilmington Morning News of Feb. 20. Mr. Craig's two-part series was an objective appraisal of the situation, one part outlining the views of the proponents, and the second part of the opponents of educational TV. His job was to report the views of each side with objectivity—certainly not to advance his own conclusions or to inject his own opinions.)

## Gov. Foster Furcolo's Proposal To Assist Individual States in Providing Needed Educational Facilities

---

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter sent by the Honorable Foster Furcolo, one of our former colleagues and now Governor of the Commonwealth of Massachusetts, to the President of the United States, in which Governor Furcolo requests the President to initiate a study by appropriate executive action on his proposal which he believes may assist individual states in providing needed educational facilities:

THE COMMONWEALTH OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT,
*Boston, Mass., February 27, 1959.*

The Honorable DWIGHT D. EISENHOWER,
*President of the United States,*
*The White House,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Confirming my recent conference with you with reference to educational institutions—college and high school—may I briefly summarize some of the facts and views which were presented for your consideration:

(1) The student population and the trend toward more and more education is rapidly increasing. The existing shortage of teachers becomes doubly important as the student population increases. Therefore, the main problem is to provide enough good teachers which poses the subsidiary problem of using them most effectively.

(2) There are approximately 2,000 public and private colleges and universties in the Nation. About 1,300 of these institutions belong to some regional accrediting associations.

(3) There are six regional accrediting associations. (These are not established by law, but are merely voluntary groups):

New England Association of Secondary Schools and Colleges.

Middle States Association.

Northwest Association of Secondary and Higher Schools.

North Central Association of Colleges and Secondary Schools.

Western College Association.

Southern Association of Colleges and Secondary Schools.

Three of them have no specific teacher-student ratio as a criterion for accreditation. The New England Association has a ratio of 15 students to 1 teacher for 4-year, degree-granting colleges, and a ratio of 20 to 1 for 2-year colleges. The Northwest Association has a ratio of 13 to 1, and the Southern Association has a ratio of 20 to 1 for 4-year colleges, and 25 to 1 for 2-year institutions. The academic standing of any institution of higher learning is largely dependent upon whether or not it is an accredited school.

(4) A college or university is not accredited unless it abides by the standards set by its regional accrediting association. Accreditation is important to the student, because it often determines whether he can be ad-

mitted from a nonaccredited school to an accredited one. It is also important in transfers from one college to another, the value of a diploma, and so forth.

(5) Education is one of the most expensive items and a most important item in the budget of any community, State, or nation. The problem becomes greater as the population increases—and as the pay of teachers increases. It is clearly evident that education will continue to be a more and more expensive item.

(6) It is obvious that the lower the teacher-student ratio—the greater the cost. I wish to again emphasize that which I stressed so much to you in our conference, namely, that under no circumstances do we want any action taken that would impair the quality of education. We must maintain standards of high quality.

(7) For many generations, most educators and virtually all other people of the nation have accepted as incontrovertible that the fewer the number of students per teacher, the better the educational achievement of the students. It does not seem wise to accept this premise without a thorough study by an unquestioned authoritative source.

This almost universally held belief requires examination, particularly in view of the development and extensive use in the last decade of many new teaching methods—including film, television, radio, tape recordings, and so forth.

(8) I have just completed a survey of dozens of studies that have been made that unfortunately are either not widely known or may not be called "authoritative" because of their somewhat limited scope. They all cast serious doubt on the widely held theory that the quality of education improves as the ratio of teacher to student decreases. I discovered that most recent studies indicate that there is no relationship or that student educational achievement actually improves with classes that are larger than the generally accepted models.

For example, the more important of more than two hundred research studies of class size and pupil achievement that were undertaken in the past 50 years were reviewed by the Encyclopedia of Educational Research. It found that 40 percent of the research reports favored large classes, and only 22 percent favored small classes. The more recent studies showed 50 percent favored large classes, and 21 percent favored small clasees. The remainder felt there was no significant difference either way. Factual research studies found better than 2 to 1 that pupil achievement is higher in larger than in smaller classes.

The encyclopedia summarizes: "The general trend of evidence places the burden of truth squarely upon the proponents of small classes * * * on the whole, the statistical findings definitely favor large classes at every level of instruction, except the kindergarten." (Encyclopedia of Educational Research, 1950 rev. ed., pp. 212–215.)

The Connecticut State department of education study of 1957 reported that "the correlation between achievement and pupil-teacher ratio is practically zero."

(9) A very thorough and exhaustive study of the entire subject is being completed by Prof. Seymour E. Harris, chairman of the department of economics at Harvard University. While the study will not be completed or published for another few weeks, there is a published quotation of his that bears on the ratio of college student to faculty. The September 1958 issue of the American Association of University Professors has this quote by Professor Harris:

"There is nothing sacred about the 10 to 1 ratio. In fact, when it is considered that in elementary schools the ratio is 30 to 1, and in secondary schools, 22 to 1, one is puzzled by the 10 to 1 ratio in higher education." Professor Harris then goes on to point out the millions of dollars that could be saved by a changed ratio.

(10) Prior to my trip to Washington to outline my proposal to you, it was discussed with three of the most distinguished educators in Massachusetts and the Nation—State commissioner of education, Owen B. Kiernan; University of Massachusetts president, J. Paul Mather; and Prof. Seymour Harris, chairman of the economics department at Harvard. All three believe this situation merits thorough exploration. Neither they nor I make any specific recommendations other than to say that a full-scale review of the teacher-student ratio appears advisable.

(11) I believe that it should be authoritatively determined whether or not the almost universally held teacher-student ratio theory is sound, in view of the many new teaching methods. We should know whether this aids or hinders the educational achievement of our students. This is a duty we owe, not only to the taxpayers who pay the bills and to those who consistently and conscientiously support the costs of private education, but also to the students themselves.

(12) As was suggested at our conference, I recommend that the education experts in the Department of Health, Education, and Welfare be requested to carefully review the situation. If it be determined that the situation warrants exploring, then I urge you to name a committee of distinguished citizens, including well-known educators, to head up a task force survey, and then make recommendations to you. I am certain that such findings or recommendations will have a very persuasive effect on all public and private colleges and universities.

(13) I would like to have it noted that our conference in Washington was limited to educational institutions beyond high school.

(14) I stress the fact that at this time I am not suggesting anything more than exploration of the situation, for it appears that the teacher-student ratio theory may be a limiting factor based on outmoded preconceptions and, therefore, should be explored.

(15) If full and careful investigation by an unimpeachable survey establishes that the teacher-student ratio should be revised upwards, resulting in more students per teacher, it will unquestionably mean:

(a) Greater educational opportunities for more students.

(b) Improved educational achievement by students.

(c) Better pay for teachers and more effective utilization of qualified teachers.

(d) An easing of the teacher shortage problem.

(e) A saving to Massachusetts taxpayers and to every city and town in the State of many millions of dollars a year and every year in the future—thus saving Massachusetts hundreds of millions of dollars.

(f) A similar saving to every State in the Nation, which means the taxpayers of the Nation will be saved billions of dollars.

In conclusion, I believe that anything that even offers the possibile solutions outlined in paragraph 15 certainly merits profound consideration.

Please be assured that my staff and I will be more than pleased to work with any of your staff who may be assigned to this problem. We have had considerable research done on it that we are glad to make available.

With all good wishes to you, I am,

Sincerely yours,

FOSTER FURCOLO.

## How Much for Foreign Aid?

EXTENSION OF REMARKS
OF
## HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. HARRISON. Mr. Speaker, in the consideration of all Federal expenditures proposed in the President's budget, it is important that we keep in mind the limitations of our national economy with respect to the financing of Federal spending programs. A dollar spent for foreign aid is a charge against this economy, just as is a dollar spent for airports, housing, or defense. Extravagance or waste is no more defensible in the case of foreign aid spending than it is in the case of any domestic spending program.

In this connection, I include an editorial which appeared in the Richmond Times Dispatch of March 14, 1959:

In a carefully worded special message to Congress the President yesterday asked for $3.9 billion minimum for military and economic aid to free and friendly nations.

He warned against reckless cuts, lest the United States become "the richest Nation in the graveyard of history." His sales talk was factual, compact, and persuasive.

He said that the proposed expenditures for mutual security "are fully as important to our national defense as expenditures for our own forces"; that they are, in fact, indispensable.

He said that the proposed expenditures premise:

(1) The threat of some 400 Russo-Chinese divisions comprising more than 6,500,000 men;

(2) The dangers inherent in the disruptive population explosion and subsequent worldwide, revolutionary repercussions.

(3 The fanatic ideological conspiracy which has overrun, in whole or in part, 17 countries in the past 40 years; and

(4) "The interdependence of the military position and economic prosperity of the United States with those of the rest of the free world."

Foreign aid expenditures, he said, are essential to realization of the free world's paramount objective: to prevent general war, and to deter Communist local aggression.

He indicated that he would make recommendations for additional expenditures for military assistance, "primarily for weapons to the NATO area," after receiving a pending report by a bipartisan committee of prominent and competent citizens.

Just how many more millions this will add to foreign aid is conjectural, but underlines the reality, that the Government will go deeper and deeper into the red—unless liberal spenders in Congress withdraw (or the President vetoes) demands for public power projects, schools, aid to depressed areas, and the housing and airport bills already on their way to the White House.

The grassroots uprising against deficit spending, called for by Mr. Eisenhower last January, has not materialized.

Exposures of flagrant waste in foreign aid have dimmed public enthusiasm for this form of security spending, but it is doubtful that Congress will trim the President's request by more than a few million. Apprehension over the Berlin crisis will assure priority for any spending relevant to defense.

The administration will be able to claim, with some justification, that any sizeable cut in foreign aid will jeopardize our occupancy of some of the 250 Army, Air and Navy bases on which we depend to deter Soviet expansion.

But Congress should not sign a foreign aid check without submitting each individual item to careful scrutiny. It should determine precisely how the money is to be spent.

Rumors that previously distributed billions have found their way into the pockets of top politicians and big business within several countries, need looking into. Specific uses to which economic aid billions are to be devoted must be established, and every effort made to reduce total aid as much as possible.

It is the President's place to propose such expenditure. Their disposition is the responsibility of Congress.

The President was remiss in failing to warn Congress that the expenditure of the requested foreign aid billions—in addition to the almost $6 billion appropriations demanded by congressional liberals, will necessitate an equivalent increase in tax revenues, in order to balance the budget for fiscal 1960.

In his state of the Union message he said: "If we cannot live within our means during a time of rising prosperity, the hope for fiscal integrity will fade."

When that hope fades, the credit of the Nation will slump to a point where, as he told his Wednesday press conference, "it will be increasingly difficult to market Government bonds."

What will it profit this country to distribute billions in foreign aid, if in doing so we sap our own economic strength?

## Resolution To Increase Number of Judges in U.S. District Courts

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DORN of New York. Mr. Speaker, I have received from the Brooklyn Women's Bar Association, Inc., a copy of a resolution which was passed unanimously at the March 3, 1959, meeting of that organization, and I should like to call it to the attention of my colleagues.

RESOLUTION URGING THE 86TH CONGRESS TO INCREASE THE NUMBER OF JUDGES IN THE U.S. DISTRICT COURTS IN ORDER TO RELIEVE THE UNPRECEDENTED CONGESTION IN THESE COURTS

Whereas according to a recent report by the Administrative Office of the U.S. Courts, the Federal district courts are experiencing the heaviest workload and resultant court congestion in recent history, and

Whereas the Judicial Conference of the United States has called for the creation of 45 additional judgeships to provide the judgepower needed in areas of critical court congestion, and

Whereas the southern and eastern districts of New York are among the areas seriously affected by the continual growth in the backlog of judicial business, Now, therefore, be it

*Resolved, by the Brooklyn Women's Bar Association, Inc., in regular meeting assembled at 123 Remsen Street, Brooklyn, N.Y., this 3d day of March 1959,* That the 86th Congress be and hereby is urged to create immediately, the additional judgeships necessary to cope adequately with and relieve the mammoth caseload and congestion existing in the southern and eastern districts of New York, and thus speed the administration of justice in these courts, and it is further

*Resolved,* That copies of this resolution be transmitted to the President of the United States, to the chairmen of the Senate and House of Representatives Judiciary Committees, the Members of the House of Representatives from the New York area, the chairman of the Executive Committee of the U.S. Attorney General's Conference on Court Congestion and to all other appropriate public officials and agencies.

## The Cost of Fending Off War

EXTENSION OF REMARKS
OF
### HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Star, March 17, 1959:

THE COST OF FENDING OFF WAR—CRITICS OF FOREIGN AID CALLED BLIND TO HEAVY OUTLAY IT SAVES NATION

(By David Lawrence)

If the American people could express in a single sentence their most important wish today, it would be: "Keep us out of war at any cost."

Yet, when out of a national budget of $77 billion, the President asks for $3,930,000,000 to keep American boys from fighting abroad, and calls for a mutual security program to bolster our allies, this is derided as a foreign aid program or a giveaway.

The label is wrong. It's really keep-us-out-of-war program.

Few of the critics realize the explosive situation that exists in the world today or how interrelated America's fate is with the other free countries—or, if they do realize it, they fail to see how many billions more our defenses would cost if America had to do the job alone. That's why President Eisenhower's television address last night was so important to the country.

For the President had no sooner announced last week that he was asking Congress for $3,930 million when from Capitol Hill—mostly from Democrats—came predictions that the expenditure would be cut by a billion dollars. Acting Secretary of State Herter promptly said that if any such reduction were made it would "serve notice on the world that we are weakening in our determination."

Just why some of the legislators regard any money spent abroad as either a gift or a throwaway is hard to understand unless they think the American people really can be misled by such distortions. Certainly, as sometimes charged, there's waste in the spending of American funds in other countries, because the United States cannot always control how other governments disburse the money they receive. But, conceding that there is some waste, it is a fact that in war itself there is even greater waste. The true test is whether, on the whole, war is prevented, and thus far the United States has managed with the help of strong allies to keep out out of a third world war.

It sometimes isn't realized how much America's own allies have been spending since the close of World War II. Rather, the impression is fostered by the critics that the United States is putting up all the money for international defense or mutual security. The President in his message to Congress a few days ago said:

"Over the years of our combined efforts, these allies and friends have spent on these forces some $141 billion, more than six times the $22 billion we have contributed in military assistance. During calendar year 1958, they contributed $19 billion of their own funds to the support of these forces. * * *

"Without the strength of our allies, our Nation would be turned into an armed camp and our people subjected to a heavy draft and an annual cost of many billions of dollars above our present military budget."

What perhaps isn't generally understood in America is that economic assistance plays a vital role in maintaining the stability of other nations. If there were no stable governments among our allies, America would not have strategic bases overseas. The President said on this point:

"Through the Mutual Security Program our friends among the free world nations make available to us for the use of our forces some 250 bases in the most strategic locations, many of them of vital importance. They support ground forces totaling more than 5 million men, stationed at points where danger of local aggression is most acute, based on their own soil and prepared to defend their own homes. They man air forces of about 30,000 aircraft, of which nearly 14,000 are jets, 23 times the jet strength of 1950 when the program started. They also have naval forces totaling 2,500 combat vessels, with some 1,700 in active fleets or their supporting activities."

Dissenting members of Congress often concede that the military program is logical, but they claim the economic support abroad is questionable and this they would cut. In doing so, they would strike a blow at the morale of the countries affected. For without economic stability, political chaos ensues, and then the Communists find fertile ground for exploitation or even overthrow of existing government. The Communist intrusion in Iraq lately, for example, has unsettled the entire Middle East. The Communists' tactics in Africa, Asia, and Latin America have been supported by Soviet measures in the economic field.

So it's a dangerous international situation which calls for American expenditures to bolster here and abroad our defense—politically, economically and militarily. From a strong alliance, moreover, come firmness in a crisis as is the case today when Moscow is testing the West. The President says the West will not surrender. He can say this convincingly because the Western alliance in the last 10 years has been built on a strong foundation. It is to maintain that strength that the Mutual Security Program, or what might better be called a keep-us-out-of-war program, is really directed.

## Tribute to the Late Benjamin F. Feinberg, State Senator, New York

EXTENSION OF REMARKS
OF
### HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include a committee report and resolution of Joel Lodge No. 118, B'nai B'rith, commemorating Benjamin F. Feinberg, late State senator of New York.

The State of New York has sustained a great loss in the passing of Senator Feinberg. He will be missed by his friends and by the people of the State. All who knew him knew that he was a man of integrity and a man of high honor. He was a gentleman in every sense of the word.

COMMITTEE REPORT AND RESOLUTION OF JOEL LODGE NO. 118, B'NAI B'RITH

The committee of Joel Lodge, B'nai B'rith, appointed to select a person as the 1958 citizen of the year, respectfully submits the following report:

As a result of several meetings held in January 1959, the committee chose as the person to be honored, Senator Benjamin F. Feinberg. In view of the senator's confinement to his home and the hospital, preparations were made for the conferring of the award in Montreal, or at his home if his attendance at a formal dinner during Brotherhood Week could not be arranged.

The late Senator Feinberg's name has long been favorably considered by the committee for the award of citizen of the year, but previous committees had deferred plans in anticipation of the year of his retirement. The prior committees had felt that such time would be most fitting as the culmination of his career of outstanding public service.

The committee feels that the year 1958–59 should be designated as a year of memorial to Senator Feinberg and the award made posthumously by means of a resolution duly adopted by the lodge convening as a whole.

The text of the resolution as adopted by the lodge at its February 17 meeting follows:

Whereas the late Senator Benjamin F. Feinberg, has throughout his lifetime displayed the attributes of selfless devotion to this community and the public which he served so long and so well; and

Whereas such devotion is exemplified by his many accomplishments—

(a) in the field of education, by his fostering and advancing the State University Teachers College; in establishing Champlain College, forerunner of a low tuition State-supported college system; and his promotion of legislation to improve the salaries and working conditions of schoolteachers and encourage qualified persons to enter this profession;

(b) in the realm of government, by his inspirational leadership while serving as State senator, senate majority leader, and confidant of Governors;

(c) in the field of public utilities by his outstanding record as chairman of the Public Service Commission of the State of New York and president of the National Association of Railroad and Utilities Commissioners;

(d) in his service of God, as life trustee of the Beth Israel congregation of Plattsburgh and president and lifelong member of this lodge of B'nai B'rith; and

Whereas he has displayed heartfelt conviction in the principle of the brotherhood of man as demonstrated by his active participation in social and fraternal organizations devoted to charitable purposes such as the Benevolent and Protective Order of Elks, where he served as exalted ruler; and Free and Accepted Order of Masons where he rose to the office of worshipful master of his lodge; Rotary where he was chosen for the presidency of the Plattsburgh Club; and, in furtherance of such conviction and his belief and dedication to this principle of brotherhood, he has been a lifetime true friend of all men and all mankind; and

Whereas Senator Feinberg's ascendancy through life from his humble origin as the son of immigrant parents, through his formative years as a diligent student, devoted teacher, and school principal, distinguished attorney and counsellor, held in high esteem by his fellow members of the bar, and an outstanding member of the New York State and American Bar Associations, a fair and just judge and legislator, has exemplified the American tradition of freedom of opportunity for all regardless of race or creed; and

Whereas his unshakeable faith in democracy and his unflagging determination to preserve and strengthen it was exhibited by the legislation which he sponsored and authored in the State legislature; now therefore in recognition of this record and example of Americanism and brotherhood, be it

*Resolved*, That the award of citizen of the year for the year 1958–59 be conferred posthumously upon Benjamin F. Feinberg; and be it further

*Resolved*, That the year 1958–59 be set aside in the annals of the citizen of the year awards as a year of memorial in his honor, and that a record of these proceedings be suitably inscribed and presented to the members of his immediate family.

The foregoing resolution, upon motion duly made and seconded, was unanimously adopted by the Joel Lodge No. 118, B'nai B'rith, of Plattsburgh, N.Y., convened as a whole at its regular meeting held February 17, 1959.

---

## St. Patrick and the New Barbarians

EXTENSION OF REMARKS
OF
## HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 17, 1959*

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the CONGRESSIONAL RECORD an address I delivered in Cleveland yesterday on "St. Patrick and the New Barbarians":

On this St. Patrick's Day it is our time-honored pleasure and privilege to lay aside the cares and worries of the day as we proudly wear the green. Our songs and cheers, parades and banquets, boasts and tears, all bear testimony to a rich heritage bestowed upon us by our patron saint. But it is more than that. Beneath the precious sentiment we express so well today, there stirs in the heart of every Irishman a gentle reminder of the special mission in life that is his by birthright. That mission is the spiritual enrichment of all mankind.

For 15 centuries the Irish have been faithful to that mission. In the Dark Ages when all civilization in Europe, the cradle of Western culture and thought, seemed certain to perish, it was the Irish who lighted the way out of the darkness. An island of saints and scholars, she has given her sons and daughters to almost every quarter of the globe. They have carried with them the same light and word which St. Patrick brought to Ireland so long ago, that all mankind might be lifted up to the dignity which befits his nature. In keeping faith with this noble purpose in life, the Irish have prospered wherever they have raised the banners of St. Patrick. So, too, have the many lands to which they have gone prospered under the watchful care of this great saint.

This, then, is the unending mission of the Irish to the world. It is unending because the lessons of the ages teach us that from time to time evil forces arise which challenge the dignity of man and seek to overthrow the divine plan which secures that dignity.

In our times we are faced with this challenge, on all sides we find evidence of the dark ages in this 20th Century. The human values which mankind has won at such great sacrifice are being trampled under the heavy boots of Russian barbarians. At this turning point in history we are faced with a series of choices at the core of which rests the fundamental question, "are we willing to sell our birthright for a mess of pottage?"

In a world torn by strife and tension we are told we can have peace if we are willing to pay tribute to the new barbarians. The peace they offered in return, is no peace at all, it is the strange peace of human slavery. Justice, the only basis upon which peace can be built, is rapidly losing its place in the affairs of nations, because it permits no compromise on the dignity of man. A peace without justice is the certain formula for war, a war which no thinking man may countenance.

What is the tribute demanded of us by the new barbarians as the price for an unjust peace?

First, they are asking freemen, particularly the United States, to acquiesce in their enslavement of 35 percent of the people who inhabit the earth. They are trying desperately to drag the spokesmen for the western world into another summit conference. At this conference they expect to force recognition of a status quo, that is, recognition of their right to enforce the darkness of despotism and slavery upon humanity. They want freemen to guarantee to them that their evil work will go unmolested, that the conscience of the West will not be moved by the sad plight of so many of their fellowmen. As they hear the millions of our brothers, now persecuted as martyrs to our cause, cry out for justice, they are fearful that these cries will be answered by a world enraged by man's inhumanity to man. Evil works quietly in the shadows, always fearful of arousing the forces of righteousness.

That is what lies back of the present Berlin crisis, precipitated by the barbarians of Moscow. First we are told that unless we desert the people of free Berlin we will be driven out by force. When we responded to the threat by declaring our intention to stand fast in our defense of freedom, the Russians began a series of retreats. Pressed by the deadline which they were so bold to make, and in the face of our determination to be firm, they have now taken the position that if we agree to a summit conference they will not cause a war over Berlin. This is apparent from the fact that only a few days ago the Kremlin spokesmen stated the deadline of May 27 would be extended if preparations were underway for such a meeting. But, as always, there is a catch. The continued Russian insistence that no agenda be prepared in advance of the conference gives ample evidence that they intend to limit discussion to those items which force recognition of a status quo.

It is strange indeed, that at this point in our history, when free men have advanced so far in knowledge and accomplishments, we should be ordered about by the crude barbarians. We must ask ourselves, has our civilization lost its sense of high purpose, have we surrendered our mission to the world? There is mounting evidence that something is missing from our national life which, in past generations, made our country the beacon light and great hope of the world.

Not many months ago we had a strange visitor come to our country, allegedly on a vacation. He was the eyes, the ears, and the spokesman for the new barbarians. Every

school child in America knew who he was and what he represented. Yet, this same individual was wined and dined by influential segments of our national life. He shrewdly dangled the prospects of huge profits before the eyes of those industrialists and businessmen who willingly paid him homage. He made no mention of the fact that he was simply carrying out the orders of Lenin who held that when the time came the biggest capitalists would be anxious to provide the rope with which they were to be hanged by the new order. Nor did he mention the plan to destroy the hard won gains of free labor in the United States by putting it in competition with the products of his slave empire. Few voices were raised in protest to this spectacle and those who did raise their voices to the danger were branded as extremists and not representative of traditional American hospitality. Few asked, since when has it been the tradition of our free people to extend hospitality to a person who has the blood of martyrs on his hands, to a person whose whole life has been dedicated to the destruction of those priceless values which we hold to be as dear as life itself? This emissary of evil left the United States with the false impression that we are a divided people, that we are more interested in material things than in spiritual and human values. He could no more understand the American people and our way of life than could Hitler in his time. The tragedy is that the false impressions gathered during Mikoyan's short visit to our country will make our role in world affairs more difficult and increase the dangers of war.

Now one hears the call for compromise on Berlin from quarters and individuals who should know better than to ask the impossible. What do we have to compromise? All we have ever asked for is the right of the German people to determine their destiny by the process of free elections. We are fully prepared to accept the results of these elections because we believe in the right of all people to self determination. It is the Russians, the new barbarians, who refuse to accept the verdict of the people directly involved. How can we compromise this position we have taken? There is nothing to compromise unless we are prepared to abandon our position of moral leadership in the world.

There are other disturbing signs of freemen growing weary and tired of the struggle for survival. For the many years of the cold war it has been our national policy to bring comfort and hope to the oppressed through the media of international broadcasts. Broadcasting to the people in the countries now overrun by the new barbarians in their native tongues, we have been able to keep alive their hopes for a better life, and a return to the civilization of which they are a part. This has proven to be a work of peace, because, so long as they could hope, they could not abandon the heritage of freedom, they would not, in desperation, accept things as they are and make accommodations with the despots. Now, we see this policy in the process of change, a change which bodes evil for the future. Gradually there are being eliminated the many voices which carried his mesage of hope. The Russian language, the language of the oppressor, is beginning to monopolize the "Voice of America" programs beamed to the darkened lands behind the Iron Curtain. This tactic can only alienate our proven friends in these many lands and drive them into the camp of the enemy. Frequently I have asked myself whether this results from ignorance or from a secret agreement already entered into by the Eisenhower administration to accept a status quo; that is, to recognize the permanent occupation of these once free lands by the new barbarians.

There are ominous signs of the times; they threaten the precarious peace which now hangs over a tired and weary world. They are dangerous because the appetite of the aggressor cannot be satisfied by concessions, he must have everything or nothing. He understands firmness and courage, though he lacks it himself. The bully is always a bluffer and he dominates none but the timid.

But there are other signs of our times in which we can take comfort. A very large segment of our people have come to recognize the full meaning of the crises of our times. This awakening to the harsh realities of our divided world is being stimulated by the growing pressures put upon us. More and more our people are seeking their strength of purpose from that deep spirituality which is our heritage. When all is said and done, the strength of our country rests firmly in the hands of our people. It is within their power to use that strength as we face the test of our worthiness to lead the cause of peace, with justice. In generations past we have not feared to face responsibilities, nor have we feared the threats and boasts of tyranny on the march. We as a nation have learned well that man lives not by bread alone.

So, on this St. Patrick's Day let us, one and all, rejoice in the knowledge that the spirit of our patron saint has a place in the hearts of all who know the blessings of human freedom. This gift shall give us strength as we carry on our happy mission to bring spiritual enlightenment to all mankind. We must be doers of the word, carrying the light which shall take all mankind out of the darkness of materialism.

## Defense Policy

EXTENSION OF REMARKS
OF
### HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. DORN of South Carolina. Mr. Speaker, the following article from Air Force magazine by Mr. John F. Loosbrock is most worthy of the consideration of every Member of this Congress during this great debate on defense:

HOW MUCH CALCULATION—HOW MUCH RISK?

The initial skirmishes on the annual battle of the Potomac, otherwise known as the budget debate, have quite clearly indicated the views and the strategies of the opposing camps, with few uncommitted neutrals.

The lineup, as might be expected, closely follows party lines. With the Democrats in the saddle on Capitol Hill and the Republicans in power at the other end of Pennsylvania Avenue, headon clashes are the order of the day, rather than the more subtle maneuvers that occur when the same party controls both the executive and legislative branches.

In broad terms the defense issues boil down to a conflict of opinion as to what threat offers the greatest danger to the Nation over the next several years. The view of the Hill, by and large, is that the military might of the Soviet Union presents the clearest and most immediate danger. Administration spokesmen admit a sizable military threat but, either explicitly or by implication, hold that the military problem must take second place to the fiscal problem—that inflation is more to be feared than Soviet missiles.

A smaller and more daring splinter group in Congress feels that both problems can be licked but only through the politicalily unpopular—some would say politically suicidal—device of increasing taxes.

The latter solution, according to many impartial observers, has the weight of logic on its side, a disadvantage which will prove tough to overcome. In fact, the average person instinctively fears higher taxes more than he fears either the Soviets or inflation.

At the moment the debate centers on the so-called missile gap—whether or not the budget for fiscal 1960 will allow the Soviet Union a sizable numerical advantages in intercontinental ballistic missiles through the next 3 years.

That such a gap will exist has been admitted by the administration. Mr. McElroy, the Secretary of Defense, indicated that the U.S.S.R. may have as much as a 3 to 1 advantage by 1961, by which time the dispersed and hardened Minuteman and the mobile Polaris would begin to redress the balance. (Richard Rovere, writing in the New Yorker, points out, however, that "we have no solid-fuel or mobile base missile operational now, and the only one that is in an advanced state of development—the Navy's Polaris, designed for release from a submerged submarine—has a short range, a low accuracy rating, and not very much of a warhead.")

The 3 to 1 ratio is disputed by a number of experienced citizens. Their estimates range from a sanguine 4 to 1 to a gloomy 10 to 1.

We are not trying to match the Soviets missile for missile, the administration is saying, because we are able to take up the slack with long-range B–52's of the Strategic Air Command, SAC's B–47's and B–58's, and the Thor and Jupiter intermediate-range ballistic missile squadrons now being emplaced in Great Britain (and later in whatever other NATO nation may be willing thus to embellish their attractiveness as targets).

The other side of the argument is that intercontinental ballistic missiles represent the one category of weapon systems in which a 1 for 1 match is the irreducible minimum. This theory holds that the Soviets are not only making ICBM's faster than we are but also faster than we can multiply and/or harden the targets that the U.S.S.R. would have to take out in an initial attack. Thus our preponderance in long-range bombers would lose its significance—a majority of them would be destroyed on the ground. The balance of the SAC force would probably do no better than match the Soviet manned bomber force plane for plane. Further, our own air defense system would have been punished in the initial attack while Soviet air defense systems would be alerted and ready to welcome SAC's aircraft.

No number of IRBMs deployed in Western Europe will influence the outcome of this kind of battle. In fact it can be argued that such deployment actually increases the requirement for a U.S.-based intercontinental force. The shorter-range missiles will be only as effective as the long-range umbrella permits them to be. Otherwise we will be in the position of an Army commander who emplaces his artillery in the front lines with inadequate provision for long-range counterbattery fire. It is a good way to get pounded to pieces without ever hitting back. Certainly, as the accompanying editorial from the Boston Herald suggests, if our long-range posture deteriorates vis-a-vis that of Russia's, our Western allies may reply to our offers of more IRBM's, "No, thanks. We just had some."

To rectify the situation obviously calls for more money than the administration is willing to spend. Congress is chafing at the bit, and the chairman of the House Military Appropriations Subcommittee has predicted that some $500 million will be appropriated over and above what the President has requested. He further said that this sum is only one-half to one-quarter of what he thought should be added. GEORGE H. MAHON.

Democrat of Texas, is a veteran of appropriations battles and is not noted for being an exceptionally free spender. His predictions are not to be taken lightly.

More money would certainly help the Air Force at this juncture. Maj. Gen. Bernard A. Schriever, who runs the USAF ballistic missile program, has pleaded on the Hill for more production of Atlases as the fastest way to reduce the missile gap. Atlas is proving a reliable weapon; the hard work of development is past, and it seems a shame not to cash in on our investment.

True, the Atlas at this point cannot be hardened by going underground like Titan or Minuteman, but progress has been made in reducing its vulnerability through so-called "toughening" (raising the missile to its upright firing position only at the last minute).

There are other areas besides ICBMs that need a financial shot in the arm. Housing at operational bases is one. More B–58's to replace the aging B–47's is another. Air defense, because it offers no answer to Soviet ICBM's as yet, is dwindling in effectiveness and popularity.

The Bomarc program has been cut in half, and we are buying no manned interceptors with fiscal year 1960 money. Yet, as pointed out above, the Soviet manned delivery system remains formidable under the way we have elected to play the game. Any kind of airborn alert, although not contemplated for the immediate future, will require money to prepare for it and in the long run will call for more aircraft, more crews, more fuel, more tires, more of everything.

The current debate on the Hill is a useful exercise in airing the issues publicly, even though the taxpayer finds it difficult to pick out the grains of truth that are hidden in the welter of conflicting claims and opinions. Unfortunately, the history of the past several years, under both Democratic and Republican administrations, indicates that congressional action has little positive effect on our defense programs. Knowledgeable Senators and Representatives, who are honestly concerned about our military position undoubtedly are vexed at this, and it will be interesting to see what they attempt to do about it.

Quite a long time ago, Mr. Truman made headlines when he impounded (refused to spend) $800 million that Congress had appropriated for the Air Force. Impounding was news in those days.

Now it is so common as to be accepted as a normal way of doing business. Many times $800 million have been appropriated but not spent for national defense over the past several years. The closest to any explanation ever vouchsafed was a recent remark by the Pentagon's moneyman, Assistant Secretary of Defense Wilfred McNeil, who said, in reference to money ticketed in the last budget for acceleration of Minuteman:

"Oh, we spent it all right. But we took it out of another pocket."

Abraham Lincoln once told another Congress, "The dogmas of a quiet past are inadequate for the stormy present. We must think anew, we must act anew, we must disenthrall ourselves."

Now would appear an appropriate time for Congress to rise up in righteous wrath. Congress represents the duly constituted voice of the people, but in the context of the times it has become largely a voice crying in the wilderness of bureaucracy.

We chatter about how much the country can afford while there are twice as many people unemployed as there are under arms. We counter intercontinental missiles with aircraft that may never get off the ground. We woo allies while denying them the long-range protection that makes their help meaningful. We talk of calculated risks in the face of weapons that make such risks unacceptable.

A little more calculating and a lot less risking would seem to be in order.

## The Jewish Memorial Hospital

EXTENSION OF REMARKS
OF
### HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. ZELENKO. Mr. Speaker, it is with great satisfaction that I speak again of the Jewish Memorial Hospital—one of the great voluntary health institutions of the city of New York and of the District which I have the honor to represent here.

This institution will observe the 54th year of its founding at a dinner to be held in the grand ballroom of the Waldorf-Astoria Hotel on Saturday evening, April 4.

This event, which draws the outstanding citizens from the great metropolis of New York, is one of the high points in our city's community life. Men and women who have demonstrated their civil leadership, and sense of philanthropic responsibility, overflow the dinner to mark their personal tribute to a rare hospital institution. I say rare, because along with its high and highly regarded services for the healing and health of all of the people of the area in which it is located, Jewish Memorial Hospital is noted, and distinctively so, as "The Hospital With a Smile."

Since its founding in 1905, the hospital has grown some 900 percent beyond its first modest beginnings. Yet community demands on the hospital continue to mount. As a result, a new building program is underway that will enlarge the hospital's facilities still more. This building program, developed under the leadership of Jesse H. Barkin, president of the Jewish Memorial Hospital board of trustees, promises to be a shining example of the American pattern of volunteer humanitarian achievement.

Mr. Barkin is fortunate in having associated with him a group of outstanding New York citizens, selfless in their devotion and generous with their time, money, and effort for the hospital.

Jewish Memorial Hospital looks ahead. As one aspect of its forethought, it constructed a special research and laboratory building several years ago in which research is being carried on today for advances in the medical and surgical achievements of tomorrow. A group of dedicated doctors, surgeons, technicians, and researchers are here gathered in an impressive human brotherhood of healing and mercy.

Outstanding in the work of this research laboratory is an extraordinary organization known as the Marcia Slater Society for Research in Leukemia. Its origin is itself a deeply stirring story of courage and aspiration. Its achievements are a unique expression of the human capacity to evoke creative values out of deep personal tragedy.

The Marcia Slater Society for Research in Leukemia was founded in 1950 following the death by leukemia of a child of 8 named Marcia Slater. In the clouded years before she passed into the Great Beyond, Jewish Memorial Hospital mustered every resource of medical skill to prolong her life. Outstanding in this effort was Dr. Harry Wallerstein, now the president of Jewish Memorial Hospital's medical board. So impressed were the parents and friends of the tragically ill Marcia, that they set out to organize a group that would contribute to the study of leukemia and, hopefully, learn to deal with this dread killer.

The group, which called itself the Marcia Slater Society for Research in Leukemia, is not composed of men and women of great wealth. On the contrary, here are average American men and women, with all of the responsibilities of earning a living, of maintaining a harmonious family life and of contending with the problems that face each and every one of us. But this condition does not prevent their fervent and enthusiastic support of a program to make possible substantial research in leukemia. So dedicated, so devoted was and is this group that, as of today, it has been able to contribute $90,000 to the research program in leukemia, headed by Dr. Harry Wallerstein.

Here I want to pay particular tribute to those who have inspired and guided its work.

Dr. Harry Wallerstein, himself, and the officers of the society, Miriam Kaufman, president; Helen Canter, vice president; Evelyn M. Riskin, treasurer; Florence Rosenwasser, financial secretary; Bea Rubine, recording secretary; Frances Edenberg, corresponding secretary; Edythe Willen, auditor; Evelyn Slater, honorary president; Dorothy Silverman, honorary past president; and Gussie A. Wallerstein, honorary vice president.

I believe that my colleagues in Congress agree with me in my regard for this organization of average American men and women, as a shining example of the best and noblest in our American tradition.

## Saving Soil by Making Running Water Walk

EXTENSION OF REMARKS
OF
### HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. JOHNSON of Wisconsin. Mr. Speaker, economic studies made by the agricultural colleges have proved many times that farmers who practice soil conservation realize more income per acre

than farmers on similar land who do not try to save the soil. The small watershed program provides an opportunity for farmers to work together with their neighbors in town to prevent devastating floods and conserve the soil by bringing the entire area's water under control. Once the planning has been started locally and has been approved by the State, the U.S. Department of Agriculture helps the local group carry out this water management work.

I am proud that my home district in Wisconsin has six of these watershed projects in various stages of development. My only regret is that we do not have more of them going. One of these projects is in the Lost Creek watershed, which covers 5,000 acres and all or part of 42 farms.

In a recent issue of the Durand, Wis., Courier-Wedge, Editor William Ender described the way running water is being made to walk in the Lost Creek region of Pepin County. This story presents a comprehensive case history of a watershed project, so, under leave to extend my remarks, I would like to include portions of Editor Ender's article in the RECORD:

TRIP THROUGH SCENIC LOST CREEK WATERSHED AREA PROVIDES EDUCATION IN SOIL CONSERVATION PRACTICES

Do you want to take a pleasant and scenic trip in the country to observe what a community can do to conserve natural resources? A drive-it-yourself tour through the Lost Creek watershed project area north of Pepin shows what has been done and what still needs to be done to some one of our most precious assets, our soil. Traveling up Lost Creek from Lake Pepin, here's what you'll see:

(1) Three sheet piling grade stabilizers and silt traps have been installed near the outlet of Lost Creek by the State highway department and the Burlington Railroad. Above this point, 1 mile of channel improvement work will be completed during the summer of 1959.

(2) Contour strips on the east side of the road, at the Budd Milliren farm, are about a mile long. The channel of Lost Creek shows bank erosion and meandering. A good sod waterway could be built here.

(3) Renovated pasture and contour strips on the Grant Erickson farm help control erosion by reducing the speed of runoff waters. A sod waterway will be constructed on the site of the old Lost Creek channel.

(4) Two grade stabilization structures and a section of channel improvement are located across the highway from the Lost Creek school.

(5) Above the school is the area where State Highway 183 is being relocated and improved. This work was planned and supervised by the Wisconsin Highway Department as part of the watershed work plan.

(6) A water-retarding structure, located about 2 blocks east of the highway, controls water from a drainage area of 200 acres. The dam is 29 feet high and contains about 10,000 cubic yards of fill.

(7) A little to the northwest is another dam, which is 26 feet high, contains about 23,000 cubic yards of fill, and controls floodwaters from approximately 1,000 acres of land. This dam will have a pool of water only during flood periods.

(8) On the other side of the highway, you'll find a dam which has a permanent pool of water. This dam stands 32 feet high and has about 36,000 cubic yards of dirt. Floodwaters from 650 acres of land will be impounded by the structure.

(9) Examples of good forestry practices are seen on the west side of the highway. One woodlot is protected, and a good stand of trees is on the land. An adjoining woodlot shows poor management. Cattle are pasturing the woods and very little new growth can be seen.

(10) A good example of contour stripcropping can be seen on the Willard Johnson farm.

(11) Conture stripcropping protects land on the Glen Moline farm.

(12) Roland Johnson has built a farm pond and gully control structure on his farm.

(13) A complete soil and water conservation farm plan is in effect on the Lewis Jahnke farm. Erosion has been halted on this land.

## We've Been Down This Road Before

EXTENSION OF REMARKS
OF
### HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "We've Been Down This Road Before," which appeared on March 6, 1959, in the Phoenix Gazette, Phoenix, Ariz:

WE'VE BEEN DOWN THIS ROAD BEFORE

Arizona school officials should take another look at public ethics. With the best intentions in the world, some of them are helping the Federal empire builders in a creeping campaign to dominate American education. How it is being done is told in a story on page 1 today.

The U.S. Department of Health, Education, and Welfare has made sure that State and local school authorities hear of the benefits they can get by qualifying under Public Law 815. Doctrinaire educationist groups such as the National Education Association have enthusiastically spread the news. The result is that a good law is being put to bad use. It eventually could be twisted to become a vehicle for achieving federalized school objectives which have been bitterly resisted in Congress and out.

There was virtually no opposition when the law was passed by Congress in 1953. Many of the most dedicated opponents of Federal aid to education favored it. The object was to allow the Federal Government to provide school funds in places where extraordinary concentrations of Federal employees put an unjust burden on local facilities. Locating a great airbase in a small community, for example, might double or triple school enrollment overnight without providing compensating taxable resources. Obviously it was right that the Federal Government should carry a share of the load it created.

But look what is being done. A clause in the law recognized that Federal contracts, such as those bringing in great numbers of people to work on, say, military aircraft production, could create an impacted area. Now we find such firms as Arizona Sand & Rock, the Cudahy Packing Co., and the Caterpillar Tractor Co. included. We find a school district counting noses of parents employed in the U.S. courthouse, the post office, the Veterans' Administration hospital, the Southwest Poultry Experiment Station, on Indian reservations, and on long-established reclamation projects.

Commercial or public, these organizations have one thing in common. They are integral parts of the community. For the most part they were here long before federally impacted areas were dreamed of. They provide services which are largely for local benefit. The community never has considered them to be superstructures imposed by Washington, and it never will. If the commercial firms employ a few more men because they have Federal contracts, well—it is nothing that has not been going on for years.

The law was never intended to cover such established, already as simulated institutions. They pay their own way in the local economy. They do not make Federal aid to education necessary or desirable. To use them as alibis for dollar grabbing from the Federal Treasury is immoral, even though legal. We don't need money so badly that we must sacrifice principle and deny the municipal kinship of our own people.

This is a road that has been traveled before, and its end is plain. Once the intent of a law is destroyed by bureaucratic expediency, there is no stopping the encroachments made in its name. It was done a quarter of a century ago with constitutional provisions governing interstate commerce, and today a bootblack could be subjected to Federal control because his wax is manufactured in another State. Schools could go the same way through distortion of the law's intent.

How? Today one out of every six wage earners in the United States is employed by some branch of Government. State and local governments all have contracts with the Federal Government. They all exist under the Federal Constitution. Therefore, it could be reasoned at some later date, every school district in the United States is automatically a federally impacted district. Any agile attorney could detail for you the tortuous reasoning that could lead to this conclusion—and cite existing precedent.

Of course it might not make any difference by the time the end is reached. Congress spent our money last year at the rate of more than a million dollars for every minute it was in session. This year's Congress will spend it even faster. Next year, well—there will be no stop sign on the road to inflation and bankruptcy unless the people themselves put one up. A good place to start erecting it is in our own school boards.

They need to be reminded that the dollars they get from Washington are not free. They come from the people, minus about 25 cents each for bureaucracy's handling charge.

A few Arizona school districts are actually impacted by large Federal installations. Most of them are not. We have a problem, but let's be honest about it. It is largely a local problem caused by our rapid growth. We are not helping our school districts when we encourage evasions which could eventually destroy all local control over them.

## Yazoo City High School Wins Freedoms Foundation Award

EXTENSION OF REMARKS
OF
### HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WILLIAMS. Mr. Speaker, I desire to call Members' attention to an editorial which appeared in the October issue of Flashlight, the Yazoo City High School student body publication, written by Spencer Gilbert, son of Mr. and Mrs. A. S. Gilbert, Jr., of Yazoo City. The editorial won the Yazoo City High

School $100 and the George Washington Honor Medal. The award was made at the 10th annual Freedoms Foundation on February 22, 1959.

The Yazoo City superintendent of schools, Mr. Fred W. Young, made the following comment relative to this award:

I do not know what kind of country the United States will be 50 years from now. However, I am sure of one thing; it will be the kind of country that most of the people of the United States want. It may not be what you and I would want, but it will be what most of the citizens in that day want. It, therefore, gives me great pleasure to see fine, intelligent, energetic, patriotic young Americans thinking constructively, as Spencer Gilbert is doing. It required an intelligent mind and a patriotic young American to write this editorial. The principal of the high school, the high school teachers, and the entire student body are justifiably proud of the fact that our program of secondary education is producing fine American citizens who will have much to say in determining the kind of country America will be 50 years from now.

Mr. Speaker, it is a pleasure for me to commend Spencer Gilbert on his thought-provoking editorial and I include it at this point in the RECORD:

MAN MUST PROTECT RIGHTS OF INHERITED LIBERTIES

(By Spencer Gilbert)

Current events, both domestic and foreign, reveal to the American that a battle is raging in the world. Not a physical battle with guns, tanks, and planes, but a battle for men's minds. A tug-of-war with the freedoms of men on one side opposed by the servitude of men on the other; one nation under God and one godless nation; the American credo and communism. This battle, which for centuries has pitted advocates of tyranny and freedom against each other, is being continued by these relatively new forces.

The entire American way of life is founded on the principle of a fundamental belief in God. On this foundation are built the constitutional government designed to serve the people and the political and economic rights which protect the dignity and freedom of the individual. These rights cannot be cherished enough by Americans today. It is the responsibility of every true American to maintain our way of life and to pass it to succeeding generations. In order that these freedoms may be preserved, our faith and trust in God must never falter—it is the rock on which our country and its traditions are placed.

It is our privilege to worship in our own way, as set forth in the first amendment to the Constitution, free from any persecution because of religious belief. For this reason alone, many of the first Americans came to this new, wild country.

Since our Government is of the people, for the people, and by the people, primary importance is placed on the people of America—not the state. Many have lost their lives because they have dared to express their opinions openly. We in America enjoy a freedom of speech and press that allows a liberal flow of ideas and, therefore, an unlimited development of knowledge. This right of expression serves to keep the people informed about the affairs of the country and in this manner places a system of checks and balances on Federal authority.

The right to own private property, which is fundamental to each of us, is being denied to many people of the world because socialism with its superficial ideals has been tantalizing to nations. This partial government control of property is a step toward communism. Constraint and complete absence of competition in an economic system, besides creating an injustice toward the individual, substantially mitigates progress that is so vital to our capitalistic system.

These are but a few of the precious freedoms that have been accrued over the ages and have been passed to us to enjoy. Since it is a responsibility to maintain these rights for future generations it is also our duty to further these rights in the tradition of our forefathers who made our way of life as we know it today. Shall we pass into complete oblivion of the rest of the world—these peoples who are seeking a doctrine to follow? The first to confront these uncommitted nations with a plausible policy will be certain of their support. These political vagabonds are playing an important role in world affairs. The cold war rages on with its barrages of propaganda on all sides. Innocent bystanders attempt to separate food for thought from the bologna of propaganda.

The battle for men's minds continues. In our hands lies the potentiality to dissolve a way of life that so many have entered martydom to establish, or to carry it on in the splendor of our heritage.

---

## TVA Develops Program for Reducing National Flood Danger by Local Action

---

EXTENSION OF REMARKS

OF

## HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. EVINS. Mr. Speaker, for some years now the TVA has pioneered in a new program of meeting the menaces of flood control through local action. The Tennessee River is the most completely controlled river in the world. Nevertheless, even a completely controlled river does not eliminate all flood risks. Such risks, however, can be greatly minimized and often eliminated by wise planning on the part of localities lying near the areas of flood danger. The TVA program has addressed itself to offering assistance to these local communities in understanding their own local flood problems and in taking measures to protect themselves against damaging floods.

The TVA program is widely applicable throughout the entire Nation. Accordingly, the TVA has prepared a summary of the operation of its program and recommendations, pointing out how the procedures developed in the TVA area may be applied profitably throughout the Nation.

Because of the wide interest in dealing with the flood menace throughout the country, I include in the Appendix of the RECORD a portion of this report.

The report follows:

TENNESSEE VALLEY AUTHORITY,
*Knoxville, Tenn., March 9, 1959.*

*To the Congress of the United States:*

The board of directors of the Tennessee Valley Authority is pleased to submit for the information of the Congress a report entitled, "A Program for Reducing the National Flood Damage Potential," which has been prepared pursuant to section 22 of the TVA Act and executive order No. 6161 (June 8, 1933) providing for "* * * surveys of and general plans for said Tennessee Basin and adjoining territory as may be useful to the Congress and to the several States. * * *"

Communities throughout the Nation are engaged in a new contest with their rivers and they are losing. They will continue to lose unless steps are taken to provide a new perspective—and a new channel of action—with respect to floods.

The problem arises from the basic fact that there are some floods which cannot be prevented and many cities that cannot be fully protected economically with artificial works such as dams and levees. Coupled with this fact is the rapid growth of urban communities, creating new pressures to utilize inviting but hazardous flood plains for subdivisions, shoppng centers, commercial establishments, and other improvements. This mushrooming trend is creating new flood damage potential faster than construction works can add to existing protection. New demands for Federal flood control expenditures thus are created.

TVA believes that local communities have the responsibility to guide their growth so that their future development will be kept out of the path of flood waters. With the States and communities of the Tennessee Valley, TVA has developed a means of putting this proposition into action. This experimental program has operated successfully for six years. It incorporates the concept of flood damage avoidance as a partner of flood control just as forest fire prevention is an indispensable arm of forest fire control. It is saving lives and property in the area while diminishing the future demands on the Nation for flood relief and flood control expenditures. We believe the same results can be accomplished by adapting this experience to other areas throughout the United States. The pace of river control development in relation to the even greater rate of urban encroachment makes it urgent that this broader concept be made a part of our national flood control policy.

The key to the success of the TVA plan lies in the cooperation of State and local agencies. They are the bodies which must make the basic decisions to guide the growth of their communities so as to avoid the low-lying areas vulnerable to floods. They must, of course, be able to obtain and use adequate technical data on storm probabilities and the behavior of flood waters. The sciences of meteorology and hydrology long have been capable of supplying such information, and much of this kind of data is already aavilable from the activities of several Federal agencies, in addition to TVA. To put the information to work, therefore, it is essential that a working relationship be established between Federal agencies which can furnish and interpret the data, and State and local bodies which can use it in preparing their development plans.

TVA believes the findings of this report and the program which it recommends will be useful to the legislative and executive branches of the Federal Government, as well as the States, in seeking to reduce the national flood damage potential.

The report has been submitted to the Office of the President. The Director of the Bureau of the Budget has replied that "while the administration is not prepared at this time to recommend additional legislation to put into effect all the aspects of the program suggested in the TVA report, we believe that the report is a valuable contribution and should be submitted to the Congress for its consideration." We are forwarding the Director's letter, together with the comments of other interested Federal agencies.

We submit the report for appropriate reference and hope it can be published, to-

ogether with appendixes, as a public document for wide distribution.

Respectfully yours,

HERBERT D. VOGEL,
*Chairman of the Board.*
ARNOLD R. JONES,
*Director.*

---

TENNESSEE VALLEY AUTHORITY—A PROGRAM FOR REDUCING THE NATIONAL FLOOD DAMAGE POTENTIAL

I. INTRODUCTION

No major section of the Nation is immune to flood hazards. The floods in recent years in New England, New York, Pennsylvania, Indiana, Illinois, Tennessee, Virginia, Kentucky, Texas, Oklahoma, Kansas, and California illustrate the fact that the flood plains of American rivers—both along the main streams and extending up the smallest tributaries—are potential danger areas. And along many of the low-lying coastal areas abnormal tides and waves pushed onshore by hurricanes batter and flood those structures built close to the sea. The disasters which occurred in Rhode Island in 1954, in North Carolina in 1955, and Louisiana in 1957, are examples.

There are two basic approaches to the problem of flood damage prevention. One is to control the extent of flooding by the construction of dams, reservoirs, levees, and other protective works. The other is to reduce the damages by adjusting the use of land to the flood hazards. Up to now, attempts to solve the problem have been directed almost exclusively to the use of flood control structures. This was a natural development. In our early history it was convient and often necessary to build homes and factories in the flood plains along rivers and streams. Our ancestors depended on the streams for drinking water, food, and transportation, and also for power for their mills and factories. As a result, the earliest towns and communities sprang up along the river banks and large portions of them were built on land which was subject to periodic overflow.

While the communities were small, the damages from flooding were correspondingly small and little effort was made to guard against them. As communities grew and the flood problem became greater, the people turned to the State and Federal Governments for help and billions of dollars have been spent in providing dams, levees, and other protective works. These works protect the existing investment in many industrial centers which are vital to the Nation's economy, and they produce large flood control benefits. However, they provide only a partial answer to the flood problem. There are many urban communities where flood problems still exist and the flood damage potenetial continues to grow. In many of these cases protective works are economically infeasible.

Modern advances in the technology of power, transportation, communication, and water supply have eliminated the need for most types of buildings to be located in flood hazard areas. In spite of these technological advances an increasing number of new residential subdivisions and commercial and industrial establishments are being built in areas unprotected or inadequately protected from flood hazards. New flood problems are thus being created at the same time that vast expenditures are being made to alleviate existing problems. Because these new developments are so extensive, major sections of the Nation are actually losing ground in their efforts to reduce the potential flood damage.

The Tennessee River with its system of dams and reservoirs is one of the best controlled rivers in the world, but we are finding in the Tennessee Valley that flood control works alone are not enough. Such works are essential to protect the existing investments and to provide for full use of valuable lands in flood hazard areas. However, they need to be supplemented by other measures which will result in the adjustment of land uses and future developments to flood conditions in the hazard areas. TVA has found that through cooperation by Federal, State, and local governments a plan of adjusting to floods can be put into effect which holds promise for reducing the flood damage potential and thus lowering the cost of flood control to the American taxpayer by reducing the need for additional protective works.

This report briefly traces the history of Government participation in flood control works, outlines the comprehensive program begun 5 years ago in the Tennessee Valley, and suggests lines of action by which the program could be implemented on a national scale.

II. FLOOD CONTROL AS A NATIONAL PROGRAM

*Early State and local efforts to protect against floods*

The first protective works of any consequence in the United States were the levees along the banks of the Mississippi River at New Orleans, started in 1717 by the plantation owners. By 1812 about 340 miles of river were leveed on both banks. Levee construction by non-Federal interests continued until 1917, with the peak of construction occurring in the 1850's.

The Miami and the initial development of the Muskingum Conservancy Districts in Ohio, the Hudson River Regulating District in New York, and projects undertaken by the State of Pennsylvania are other examples of early efforts by local groups to prevent flood damage. Other State and local agencies have undertaken flood protection works, but in the past 20 years the Federal Government has borne most of the expense.

*Federal flood control activities*

In 1879 Congress created the Mississippi River Commission. The Commission operated under the Secretary of War and was charged with preparation of plans to improve the Mississippi River channel, protect the banks, improve navigation, prevent destructive floods, and promote and facilitate commerce and the postal service. This was the first direct Federal participation in flood protection.

In 1917 Congress appropriated $45 million for flood control, the first Federal appropriation specifically for that purpose. The policy of local cooperation was affirmed by requiring substantial local contributions to construction costs. This legislation also recognized the multiple-purpose concept by specifying that flood control surveys should include power and other functions. These activities were place under the Corps of Engineers.

In 1924 Congress authorized flood surveys on many streams. These surveys were extended by the Rivers and Harbors Act of 1927, which adopted the provisions of the historic House Document 308, and authorized surveys of navigable streams in the United States except the Colorado for the purposes of navigation, waterpower, flood control, and irrigation. The 1927 act was of far-reaching significance in that it laid the groundwork for the later adoption of the 1936 Flood Control Act.

Following a disastrous flood on the lower Mississippi River in 1927, Congress adopted a comprehensive flood protection plan for the Mississippi in May 1928. This plan included new and strengthened levees, channel improvements, bank protection, cutoffs to shorten the river channel, emergency spillways to discharge excess floodwater into floodways, and reservoirs. The entire cost of $325 million was to be borne by the Federal Government.

In 1933 Congress created the Tennessee Valley Authority and directed that the control of floods in the Tennessee and Mississippi River drainage basins be one of its primary objectives. Under this act TVA has built a system of multiple-purpose reservoirs at a cost of about $744 million, of which approximately $184 million has been allocated to flood control.

Three years later Congress passed the Flood Control Act of 1936. That act provides for Federal participation in the cost of flood control projects "* * * if the benefits to whomsoever they may accrue are in excess of the estimated costs, and if the lives and social security of people are otherwise adversely affected." The work was to be done in cooperation with the States and their political subdivisions.

The Corps of Engineers was given general responsibility for planning and constructing the control works—dams, reservoirs, channels, and levees. A total of about 1,000 flood control projects, estimated to cost approximately $11 billion, has been authorized by the Congress under this and subsequent acts and amendments.

The Congress authorized a Federal flood insurance program through passage of the Federal Flood Insurance Act of 1956. The program was to be underwritten in part by the Federal Government and ultimately in part by the States. In 1957 Congress failed to appropriate funds for operation of the program and it was therefore abandoned. Under the proposed program insurance rates were not related to flood risk. The cost of insurance to the owner of property located on high ground and subject to only occasional flooding would have been the same as to the owner of property located on lower ground and subject to frequent flooding. This would have tended to encourage development of the more vulnerable areas, thus increasing the flood damage potential and the cost to the Federal Government when floods occurred.

In summary, the Federal Government in recent years has assumed the major role in planning and financing the flood control program. The historic approach to the flood problem has been to construct flood control structures and protective works with little or no attention to the approach of land use adjustment.

III. NEED FOR ADDITIONAL MEASURES TO MEET THE TOTAL FLOOD PROBLEM

The Tennessee River system of main stream and tributary dams and reservoirs provides flood relief to a composite area of 264,000 acres within the Tennessee Valley and some 4 million acres of unprotected land in the lower Mississippi River Valley. In some areas, complete protection has been afforded, while in other areas the depth and frequency of flooding have been materially reduced. Yet, there is evidence that the flood damage potential of the Tennessee Valley is increasing. This is largely due to expansion of cities and communities brought about by industrial development of the valley and decline of farm employment.

Since 1930 farm population in the valley has declined by nearly 400,000, while the number of nonfarm people—most of them living in or adjacent to cities—has increased by 900,000. Today, this urban group is 65 percent of the population. Nearly every city has experienced major expansion in its residential, business, and industrial plant. Many of these expansions have been within flood hazard areas, creating additional flood problems.

What is now happening at Chattanooga, Tenn., illustrates this point. In the 20-year period following 1937 there has been a net increase of more than 900 residential, and over 300 commercial, industrial, public, and other types of structures in areas subject to floods. The TVA reservoir system can reduce a flood of the same magnitude as the maximum of record (1867) by about 18 feet,

and can reduce other great floods by substantial amounts. However, larger floods which even when regulated will produce stages as high as the record flood are still possible and levees are needed to supplement the reservoir system in order to give complete protection. Nevertheless, construction of homes and commercial buildings has been allowed to proceed in the potential flood damage areas and damages during great floods would amount to many millions of dollars in spite of protection afforded by the reservoir system. The city is beginning to meet the problem by restricting new development in the lower sections of the flood plain.

The increase in the flood damage potential of the valley is not confined to areas along the Tennessee River and its major tributaries. Cities throughout the valley are growing. Many of these are upstream from the reservoirs themselves, and much of the new growth is occurring in flood hazard areas. Examples are Kingsport, Gatlinburg, Bristol, and Dayton, Tenn. As growth continues the flood damage potential becomes greater.

These trends will continue as the Tennessee Valley becomes more and more urbanized. It is estimated that by 1975 some 80 percent of the population will be nonfarm. On the record of past experience this can only result in greater development of flood plain areas unless steps are taken to hold the development in such areas to a minimum.

The movement of new development into flood plain areas in the Tennessee Valley is not unique. The spread of development into flood hazard areas along the coasts and rivers of the United States is increasing to such an extent that the flood damage potential of the entire Nation is growing despite large Federal expenditures for flood control. Review of the 50-year record of flood damages since 1902 shows that average annual reported losses have increased and that losses during the last half of the period were twice as great as those in the first half, after allowing for changes in the value of the dollar. Part of the increase is accounted for by the somewhat greater amount of flooding which occurred in the last half of the period, but this is offset to some extent by the expenditure since 1936 of several billions of dollars for flood control works.

According to Gen. S. D. Sturgis, then Chief of Engineers, U.S. Army ("The Annals of the Academy of Political and Social Science," January 1957), some 1,000 flood control projects have been authorized under the 1936 Flood Control Act and subsequent acts and amendments. The estimated cost of these projects was $11 billion, including the $6 billion spent on 400 projects completed or under construction as of 1956. Some 300 additional projects are active and ready for construction at an estimated cost of $3 billion, and 300 more costing $2 billion are inactive or subject to review.

The Sturgis report estimated that the average annual flood damage potential in the project areas alone as of July 1954, without Federal protective works, amounted to $911 million. Works in full or partial operation would prevent damage of $491 million; works under construction but not in operation would prevent damage of $83 million; and works authorized but not started would prevent damage of $137 million, leaving a remaining damage potential of some $200 million for which no protection has been considered. The present Federal program of protective works may therefore prevent about three-fourths of the damage potential for existing development of the flood plains in these project areas. Of course the project areas do not encompass all flood hazard locations within the Nation and consequently the damage potential is much greater.

At present rates of construction the existing program might be completed in from 25 to 30 years. But in the meantime new flood hazard areas will be developed. It is estimated that by 1975 the national population will have increased by 55 million with most of the increase in urban areas. This continued national growth and resultant development of flood plain lands will require additional protective works which were not included in the foregoing estimated costs.

Recent studies by the University of Chicago point out that between 1937 and 1957 development in the flood hazard areas of the Nation has increased substantially. Further, present information indicates that development taking place in the flood plains of major sections of the Nation is outstripping the current flood control program and the Nation's ability to pay for the protection of these newly developed flood hazard areas. These data also indicate that flood protection structures alone cannot do the whole job. If the growing flood problem now facing the country is to be solved, the program must be reinforced by other methods and techniques which will prevent the flood damage potential from increasing.

### IV. THE TVA APPROACH TO LOCAL FLOOD PROBLEMS

In 1953 TVA began a cooperative program in which flood damage prevention is considered a problem of adjusting the use of the land to the conditions existing in areas subject to flood. Viewed in this manner, the prevention of local flood damage becomes an essential part of community planning and development. It means giving adequate consideration not only to dams and other protective structures, but also to the use of zoning and subdivision regulations, to land acquisition for parks and open spaces, to planning of streets and utilities, and to construction standards for buildings which must be located in flood hazard areas. It requires cooperative effort on the part of Federal, State, and local government groups, but places in local hands the responsibility for solving the problem.

The various cities and communities have been advised that TVA will assist them, at their request, in making a study of their particular flood problems. When a community requests information on its flood situation, TVA draws on the large amount of flood data which it has already assembled in planning and operating its system of reservoirs. It supplements these data wherever necessary and prepares a report outlining the flood hazard for the particular locality. (See app. A.) The completed report is furnished to the State planning agency and its technicians then assist the local planning commission in using the data. The report provides information on historical floods and estimates the size of floods that may be reasonably expected in the future. The report does not attempt to recommend plans for solving the flood problem but provides a basis for further study and planning on the part of the community itself.

In the past, local governments have asked Federal agencies for reports directed toward the single purpose of justifying protective works. Such reports usually do not give a community sufficiently detailed data to appraise its overall flood problem. On the other hand, the flood data in the TVA reports are presented in a form useful to Government agencies, industries, financial institutions, local officials, and private individuals interested in adjusting their activities to the flood conditions. Flood profiles showing the slope of the stream and the height of the flood crest, as well as maps and cross sections showing areas flooded, are included in the reports.

More than 50 communities in 5 States have requested such assistance of TVA through their respective State planning organizations. Flood reports have been prepared for about 35 communities. Approximately 10 reports are completed each year.

Planning studies by State and local planning agencies (see appendix B) resulting from TVA's flood reports have been completed for 10 communities. These planning studies usually lead to a proposal for establishment of a floodway for the stream in which structures that would block or unduly interfere with flood flows would be prohibited. Permissible uses of the floodway might include parking lots, outdoor theaters, and similar facilities not subject to severe flood damage. Buildings along the fringes of the floodway would have floor levels at an elevation which would be above the flood stage for which the zoning was adopted.

Six cities have officially adopted flood plain zoning. In each case the new zoning ordinances were approved by the local planning commission and the city council. Other communities are now making planning studies to determine how improvements in flood hazard areas should be controlled.

A variety of uses have already been made of TVA's flood reports. At Lewisburg, Tenn., the city, the Federal Housing Administration, and Veterans' Administration used TVA's flood data as a basis to prevent the opening of two subdivisions already laid out in areas subject to frequent flooding. Without the data, the subdivisions would have been approved and financing would have been arranged. Twenty or more houses would have been completed in time to be flooded 4 or 5 feet deep during the flood of March 1955.

City officials in Cleveland, Tenn., expanded their purchase of a school site to include flood-free land suitable for buildings. The land which is subject to flooding is being used for playgrounds. Also, officials of Chattanooga, Dayton, and Spring City, Tenn., have used flood data in planning new school buildings.

Maggie, N.C., a community with a high potential as a mountain tourist center, is using TVA's flood data in planning its development without the force of official zoning or other regulations.

Shelbyville and Knoxville, Tenn., have used flood information in planning urban renewal projects which include relief from flood damages.

The Veterans' Administration, Federal Housing Administration, Public Housing Administration, and Urban Renewal Administration have all used the flood reports in processing home loans and planning public projects. Highway, industrial development, and other departments of the States make use of the flood information in carrying out their programs.

Significant reduction in flood damages through these means is necessarily a slow process. However, once local communities understand the problem they can accomplish a great deal through a program of land use controls for developments in lowlying areas. The acceptance that local governments have accorded the concept of land use regulation in the Tennessee Valley indicates it would have successful application in other regions.

An important aspect of this approach is the placing of responsibility for solving local problems in local hands. Federal initiative in this field has led to Federal responsibility for the total problem, including project justification, design, construction, and financing, as is so well illustrated by events since passage of the Flood Control Act of 1936.

### V. SUMMARY AND RECOMMENDATIONS

The historical approach to the reduction of flood damage has been to construct protective works—dams, reservoirs, dikes, and levees—with little or no attention to preventive measures. In the past 20 years the Federal Government has been responsible for constructing and financing most of these

projects. Although they protect existing developments, the total flood damage potential of the Nation continues to grow each year. It would be uneconomical to protect all newly developed areas, and at present rates of construction, it could never be accomplished. A new approach is needed.

TVA has found that a comprehensive plan involving Federal, State, and local government cooperation can be put into effect which will control the growth of the flood damage potential. This plan is one of adjusting the use of floodable lands to the local conditions and requires that new emphasis be placed on three major points:

A. An expanded program for collection, analysis, and wider use of flood data.

B. A broad approach to flood damage abatement which includes preventive as well as corrective measures.

C. More active participation by State and local governments in solving the flood problem.

*A. An expanded program for collection, analysis, and wider use of flood data*

Fundamental to a flood damage abatement program is an understanding of the nature and extent of the flood problem. This means that adequate information about storms and floods must be available. TVA's reports suggest one approach to the type of flood study needed. Desirable information would include the magnitude, height, areas of inundation, duration, and other characteristics of both historical floods and floods that may be expected in the future. Once collected, the data must be presented in a form which can be easily understood.

The present programs for collecting and analyzing flood data need to be expanded areawise and placed on a continuing and more systematic basis. These programs are of wide regional significance and therefore should be sponsored by the Federal Government either directly or in cooperation with the States.

*B. A broad approach to flood damage abatement which includes preventive as well as corrective measures*

Except for a few instances, current flood control activity is centered on corrective measures—dams, reservoirs, and local protective works built by the Federal Government. These are oriented almost exclusively to the correction of existing problems resulting from intensive use of flood-hazard areas. They have successfully reduced the heights and frequency of floods; but economic considerations place limitations on the extent of protection which they can give. Usually a residual flood problem remains.

Understanding this limitation is important. Present emphasis on corrective structures alone seems to be predicated on the assumption that areas which need protection will not expand. With the dynamic and spectacular changes taking place in the shift from an agrarian to an urban-industrial economy, the number of new homes, stores, and factories built in flood-hazard areas is increasing greatly. These developments extend the problem to new areas and bring demands for additional protective structures.

To meet this situation present activities need to be supplemented by measures which will prevent the flood-damage potential from increasing. This means preventing the creation of new flood problems by the use of zoning, subdivision standards, land acquisition, urban renewal, and occupancy standards for flood-hazard areas. Ways must be developed through which all of these possible remedial actions may be considered in a comprehensive program for drainage basins of the country.

*C. More active participation by State and local governments in solving the flood problem*

Under the policies established by the Flood Control Act of 1936 and its subsequent amendments, the Federal Government assumed major responsibility for planning and financing protective structures. The role of the States and local communities became that of approving and supporting Federal projects.

Yet, the powers to adopt land-use regulations belong to State and local governmental units. These powers must be used if new developments are to be prevented from spreading into flood-hazard areas and thereby increasing the Nation's flood-damage potential. Use of these powers depends upon States and localities assuming a greater share of the responsibility for meeting the flood problem.

In general, State and local responsibilities would fall in two classes. The first involves the exercise of police powers to prevent the use of flood-hazard areas in a manner which will increase the flood-damage potential. The second involves the assumption by State and local governments of responsibility for planning and developing local protective works. This would mean increased financial participation on the part of the States and localities in single-purpose flood-protection projects whose benefits are primarily local. It would also require local initiative and responsibility for studying the total community flood problem. The community would assume responsibility for preliminary surveys as well as for the more detailed design as a preparation for construction of specific projects approved as part of the total local flood damage abatement program.

Because of the national interest and concern with water resources, Federal planning and development of projects which are parts of major stream regulation systems are essential. These systems, as under present programs, should continue to be financed largely by Federal funds.

*Recommendations*

To implement this program the following recommendations are submitted for consideration by the executive branch, the Congress, and the States:

1. A national flood damage prevention policy should be developed. The objectives of the policy should be (a) to prevent the unnecessary spread of buildings and other improvements to new flood hazard areas, combined with continued efforts to alleviate damages in those flood hazard areas which have already been developed; and (b) to encourage appropriate State and local bodies to assume the responsibility for initating and developing plans and programs for local flood damage abatement through construction of protective works and establishment of land use controls as necessary. The policy should also provide a basis for technical and financial assistance by Federal agencies.

2. If protective works are economically justified as a part of the local program for flood damage abatement, the Federal financial contribution to such projects should be contingent upon the requirement that the city or State initiate and prepare engineering plans of the proposed works and that the plans be submitted to an appropriate Federal agency for review and approval.

3. As a prerequisite for the contribution of Federal funds to local flood protective works, State and local governments should be required to adopt and administer flood plain zoning and other such controls as are needed to prevent the unnecessary spread of buildings and other improvements in areas subject to flood damage.

4. Provision should be made to insure that all Federal agencies having responsibility related to site selection or financing of physical structures observe local flood plain zoning and other standards in carrying out their responsibilities, and in cities without land use controls but subject to flood damage require establishment of such controls before Federal programs are approved and put into execution.

5. An expanded and systematic program of collecting and analyzing basic flood information by existing Federal agencies should be authorized which will meet the needs of States, local communities, industries, and others in adjusting to flood conditions.

6. For the purpose of providing cities and communities with basic flood information on which to prepare plans for growth and development and for the prevention of local flood damages, appropriate Federal agencies should be authorized, where such authorization is necessary, to prepare upon request local flood studies which would describe and analyze the local flood situation.

## The Face of Poverty

EXTENSION OF REMARKS
OF
## HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mrs. GREEN of Oregon. Mr. Speaker, it is with a continuing sense of disbelief and shock that I ask that this fourth in a continuing series of articles by Eve Edstrom, of the Washington Post be printed following my remarks in the Appendix of the RECORD:

THE FACE OF POVERTY—SOME ARE TOO POOR FOR PUBLIC HOUSING

(By Eve Edstrom)

The record begins with some hope: "Applied for National Capital Housing."

But it continues: "Won't accept. Eleven in the family."

And it may end: "Children found in deplorable private dwelling. No ceiling in the kitchen, hole in the front door, odor vile. Children taken to Junior Village."

Incredibly bad housing and no hope of leaving it is what faces the bulk of Washington's impoverished families.

Ironically even public housing shuts out many of those who need it most.

LIMIT ON OCCUPANCY

The family of 11 is an example. They include one more person than is allowed in a five-bedroom public housing unit.

So they must live—and sometimes the city, through relief grants, pays for them to live—in foul, decayed private dwellings.

This is because the National Capital Housing Authority has no units larger than five bedrooms and has no plans to build any larger ones in the future.

Furthermore, both the four- and five-bedroom units operated by the Authority are limited. They comprise less than 10 percent of the 6,400 units now operated by the Authority and will comprise no more than 12 percent even after 1,700 units are completed this year.

Therefore families of eight or more have practically no chance to get into decent public housing.

In addition the rent range selection formula keeps many of the poorest out.

NO VACANCY FOR THE POOR

Mrs. Jones is an example. She is trying to raise a family of 5 children on $80 a month. That is all her husband sends her for support after deserting the family to go back to North Carolina.

On paper she is eligible for a 3-bedroom $31-a-month public housing unit. But the Federal housing program requires National Capital Housing to break even on all its projects.

This means the Authority can accept only a certain percentage of families unable to pay more than minimum rents. With one-third of the public housing families now paying $36 or less a month, Mrs. Jones and those like her must wait forever for a vacancy.

So now Mrs. Jones pays $50 a month for a rat-infested dwelling—and tries to feed her children, ages 5 to 10, on $1 a day.

The housing ills of the poor are not only a blight in themselves but they blight everything from children's schooling to their morality, school principals report.

They speak of losing children throughout the city because their families constantly are on the move. A mother, for example, pays $15 a week for 1 room, then hears of a basement with 2 room for $15 and off the family goes.

And they also tell of findng children in intolerable situations, living in rooms which are more like closets but which are filled with men and women of questionable character.

Yet families have been taken out of situations like these, placed in public housing and often have made good. But they need help at the outset of the move and not after they get there.

The Fletcher family is an example. A homemaker from the new Homemaker Service of the National Capital Area literally carried the Fletchers' 4-month-old infant and led the rest of the family by hand from their condemned Southwest dwelling to a Greenleaf Gardens public housing unit.

The homemaker remained in the Fletcher home for a month teaching the mother how to use cleaning utensils, how to keep her children clean, how to feed them nutritiously.

When the homemaker returned for a visit she found that the mother, considered to be a limited person, was genuinely in charge of her household. The mother offered the homemaker a cup of tea, then showed her through the row house.

The floors were highly polished, the beds were neatly made—and the homemaker learned the father of the household held nightly inspections to make sure none of the children marred the walls.

The new Greenleaf Gardens is full of such little miracles as this. It also is full of families who, for the first time, are gaining a measure of self-respect.

A LIFETIME OF DUMPS

Take Doreen, age 16, seventh of her mother's 11 children and 1 of the 5 who still are in the home. This family sometimes made out on as little as $6 a week. They never lived in anything but dumps.

After school the other afternoon Doreen brought a friend to her home in Greenleaf Gardens. When the friend left, Doreen turned to her mother and said:

"Do you know what she told me? She said I live in a pretty house. That's the first time anyone has ever told me that."

"Thats' because this is the first time that you ever lived in a pretty house," her mother replied.

But there is little hope that the thousands of Doreens who need pretty houses will ever get them.

The National Capital Housing Authority constantly has been stymied in its efforts to obtain public housing sites. The cost has been too rich for the Federal Government's blood.

But no one has figured out how much the Nation's capital gains when the Doreens are salvaged.

## Studying the Effects of Pesticides, Herbicides, and Other Chemical Poisons on Fish and Wildlife

EXTENSION OF REMARKS

OF

### HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 18, 1959*

Mr. METCALF. Mr. Speaker, I have just introduced a bill to increase the amount authorized by the act of August 1, 1958, to enable the Secretary of the Interior to accelerate the studies of the effects of pesticides, herbicides, and other chemical poisons on fish and wildlife. The purpose of the 1958 act, which I cosponsored, is to prevent losses of invaluable fish and wildlife resources following application of poisonous materials for insect and plant control and to develop basic information on the various chemicals so that forests, croplands, wet lands, rangelands and other lands can be sprayed with minimum losses of fish and wildlife, barnyard poultry, cats, dogs, and other farm animals.

My bill would increase the amount authorized for these needed investigations from $280,000 to $2,565,000 annually. This is the sum that actually is needed to enable the Secretary of the Interior to study various aspects of the pesticides problem in order to assure that the future use of chemical controls shall not inflict irreparable damage on the Nation's fish and game resources, and farm animals. This amount is by no means inordinate; it represents less than 1 percent of the wholesale value of the chemical sprays that were produced commercially in this country in 1956. It is a modest investment for the protection of fish and wildlife resources which, in 1955, generated nearly $3 billion in sales of goods and services to the Nation's more than 30 million hunters and fishermen.

The use of sprays for forestry, agricultural and other purposes has grown phenomenally since 1940. Chemical controls that year had a wholesale value of $40 million. Their 1956 wholesale value was $290 million, and is expected to rocket to more than $1 billion by 1975.

About 3.4 million acres of forest land were sprayed in 1956 and more will be treated in coming years. In 1956, more than 55 million acres of croplands—no less than one-sixth of the national total—were treated with some 3 billion pounds of pesticides.

These figures illustrate only part of the story of the tremendous upsurge in usage of those powerful chemicals. This increased use has been accompanied by the development of poisons that are many time more lethal than earlier commercial products. Before World War II relatively small amounts of only a few chemicals such as nicotine, rotenone, pyrethrum, and some arsenicals were used for insect control. More recently developed chemicals, which are being used in control programs ranging over millions of acres, are from 15 to 200 times more toxic than earlier formulations. Many have an added killing effect in that they remain toxic in the soil for 3 to 5 years after application. More than 200 basic pesticides and more than 6,000 brand-named products now are on the market.

Some of the more potent formulations are being used by agencies of the U.S. Department of Agriculture in large-scale insect control and so-called "eradication" programs. Early, but very limited research by the U.S. Fish and Wildlife Service showed that the maximum amount of DDT, the first of these new types of insecticides, that could be applied in control programs without massive mortality to animal life was 2 pounds per acre. Heptachlor, an insecticide which is from 15 to 20 times more toxic to wildlife than DDT, now is being used at the same rate—2 pounds per acre—in the controversial multimillion-acre fire ant "eradication" program in the South.

The act which my bill would amend came into being largely because of widespread public alarm over the loss of fish and game resources following several large-scale insecticidal operations. In two areas that were treated with heptachlor for eradication of the imported fire ant, birds were reduced 75 to 85 percent—quail and rabbit populations were virtually wiped out. Fire ant eradication work in Monroeville, Ala., last July was reported in the Montgomery Journal to have resulted in the deaths of hundreds of chickens, more than 50 dogs, many cats, some birds, and and undetermined number of turkeys, ducks, and squirrels. Veterinarian O. L. Poitevint, of Climax, Ga., has stated that the deaths of upwards to 100 head of cattle and large numbers of chickens, turkeys, goats, and sheep, and reproductive failure in 100 to 150 brood sows, resulted from fire ant treatment around that community. No similar deaths occurred in surrounding, untreated areas, the veterinarian said.

Experimental work has shown that pheasants and quail, when exposed to sublethal quantities of commercial poisons in food materials subsequently have a greatly lowered reproductive capacity. The young produced by the experimental birds are weak, and most failed to live more than a few weeks. Larvae of aquatic insects and earthworms, which are foods of many fishes and birds, concentrate some of these poisons in their bodies. The tissues of some fish have been found to harbor high levels of DDT many months after temporary concentrations of the poisons were introduced into their stream environments.

These are a few examples of why biologists, sportsmen, naturalists, and a large segment of the general public are concerned about the pesticides-wildlife problem. Millions of acres of land are scheduled for aerial spraying in the next

few years in the fire ant eradication program. Gypsy moth spraying in New York and New England, Dutch elm disease control in the Midwest, forest insect control in many parts of the Nation, and grasshopper poisoning in the Great Plains show what is in store. Additional millions of acres of private crop and timber lands will be sprayed by individual landowners.

Let there be no misunderstanding, no one thinks that the Federal agencies or private groups are deliberately setting out to kill fish and game with pesticides. The use of economic poisons for insect and pest plant control is an accepted and necessary agricultural and forest management practice. What I am saying is that some control programs have resulted in alarming losses of fish and game. Insect control personnel presently have little knowledge of how the toxic materials can be used to achieve desired results without causing serious and perhaps prolonged damage to fish and game resources. This factor alone justifies enactment of my bill.

This obvious lack of knowledge was brought out in hearings held by House and Senate committees last year on the act which I now seek to amend. Little acually is known about the relative and actual toxicities of commercially available poisons, the proper times and methods of their use so as to minimize loss of fish and game; the direct and indirect effects of poisonous materials on those animals; and many other factors.

We are fortunate, Mr. Speaker, that the 85th Congress initiated a few studies and provided a little money to get them going. I say we are fortunate because that action has enabled the U.S. Fish and Wildlife Service to get a clearer and more definite view of the serious problem that faces the Nation. For the first time that agency was able to survey the magnitude of the danger, designate logical areas of investigation, and estimate program costs. I now find that the annual cost of a basic program of investigation and research both for sport fisheries and wildlife and for commercial fisheries is $2,565,000. This figure represents an investment of less than 1 percent of the wholesale value of all commercial pesticides produced in 1956.

My colleagues should know that the sum of $280,000 per annum as provided in the act of August 1, 1958, was recommended to the House by the Committee on Merchant Marine and Fisheries as a provisional and initial sum to get the program underway. That committee in its report, No. 2181, advised:

The committee in its considerations of the bill, amended it to provide an authorization for an expenditure of $280,000 per year. That was done for two reasons: First, that it is unlikely that the program could be started at a higher level than that set by the amendment, and second, that its inclusion will insure that the Congress will be furnished with prompt and specific information as to the progress of the program if the Department wishes to expand it beyond the maximum figure specified. Although the Department of the Interior in its report recommends against the inclusion of such an authorization on the ground that an adequate program might exceed such cost in certain years, it does not appear to be unreasonable to require the Department to seek additional moneys as an alternative to giving it a blank check. Also, it should be noted that departmental witnesses testified at the hearing on the bill that the specified amount would support a minimum research program.

It is my firm conviction, Mr. Speaker, that the planning and programing in the Department of the Interior has reached the point where this increased appropiration is in order and will be put to good use. The act of August 1, 1958, was invaluable in permitting that department to focus its attention on the pesticides problem and to formulate a specific program to obtain the basic information needed to protect fish and game resources by the development of guides for the proper use of pesticides. The time has come for the Congress to expand the program, as suggested by the Merchant Marine and Fisheries Committee, because the need for such expansion has been manifested over and over during the past few months.

Considerable aerial spraying has been done over salt water marshes, particularly in the South. Important commercial and sport fishes such as menhaden, shad, striped bass, croakers, and weakfish spend their early stages of life in the coastal shallows. Shrimp, crabs, oysters, and clams are present in this inshore environment during a part of their lives.

There are four major lines of scientific investigation that should be pursued by the Bureau of Commercial Fisheries. These and their estimated annual cost are as follows: laboratory research on toxicity and tolerance levels for chemicals now in use, $85,000; field tests of chemicals now in use, $105,000; the effect of present insect and pest control programs on fishery resources, $170,000; and testing new chemicals, $65,000.

Increased appropriations would facilitate a 14-point program for wildlife research by the Bureau of Sport Fisheries and Wildlife. The areas of investigation and the amounts that would be required initially are: the effects of fire ant control formulations on animal life, $175,000; the effects of rodenticides on important mammals and song birds, $75,000; the effects of chemicals applied in the Dutch elm disease control program, $60,000; studies of forest insect programs, $125,000; the effects of orchard spraying on animal life, $25,000; the impact of formulations used for mosquito control on fish and wildlife, $75,000; crop and forage treatment with pesticides other than grasshopper control, $50,000; study of the effects of herbicides on the habitat of birds and mammals, $70,000; the relationships of fungicide, nematocide, and miticide treatments to wildlife, $50,000; pesticides and migrational movements of birds, $150,000; pesticidal contamination of water areas, $25,000; the effects of chemicals on food chain organisms and their storage by resistant invertebrates, $75,000; penned animal experiments, $100,000; and the relationship between sterility in the bald eagles and pesticides, $50,000.

A nine-point investigation program is suggested for sport fisheries research. Major areas of study and the estimated annual costs are: determination of toxicity and tolerance levels for fish and fish-food organisms, $100,000; bioassays for ingested pesticides, $90,000; identification of pesticidal products in the tissues of fish and other aquatic organisms, $60,000; development of techniques to measure pesticide concentrations in the tissues of fish, $70,000; the effects of temporary and sustained exposure to pesticides on the habits, reproduction, growth, and vitality of fish, $80,000; studies of the absorption, concentration, and storage of pesticides by fish, $65,000; determination of the immediate and long-range effects of pesticidal programs on fish, $200,000; experimental application of chemicals in field tests, $85,000; and coordination of the research program and publication of the results of the investigations, $80,000.

These research projects would give us the kind of information that is so desperately needed. As it stands, there is no assurance that we are not poisoning all living creatures to a point of sterility. If this Nation is determined to use billions of dollars of highly toxic chemicals each year, then we better be finding out how those powerful poisons should be handled. The U.S. Fish and Wildlife Service is charged with the responsibility of conducting these studies, and it is imperative that this essential research is started without further delay.

---

## Government Inflation and Spending

EXTENSION OF REMARKS
OF
## HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. BOW. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from John C. Sparks, chairman of the national affairs committee of the Canton Chamber of Commerce offering a number of suggestions on Government inflation and spending. The letter follows:

THE CANTON CHAMBER OF COMMERCE,
*Canton, Ohio, March 9, 1959.*

HON. FRANK T. BOW,
*Representative in Congress,*
*House Office Building,*
*Washington, D. C.*

DEAR MR. BOW: We urgently ask your careful consideration of the recommendations and suggestions on Government inflation and spending offered by the national affairs committee of the Canton Chamber of Commerce. Much time was given by the members of a special task force on "inflation and spending control" in the study and preparation of the ideas presented here.

We believe "you can't for long take out of the bag more than you put in." Past majorities of our Congress have swindled us by

saying in effect "we will spend, but we will not have to pay."

Our national spending has exceeded income in 22 of the last 27 years. One-ninth of the annual Federal budget goes for carrying charges on past reckless spending. Our national debt amounts to $1,600 for every man, women and child. Citizens are refusing to subscribe to or renew their Government bonds. Confidence in the financial integrity of our Government is dwindling.

The legislators who hadn't the courage to lay taxes have instead stolen our savings by stealth. This is the cruelest tax of all—a tax on thrift, levied on those least able to pay, often those no longer able to work. Our savings accounts, life insurance proceeds and pension funds will buy only 53 cents worth, though we are scrupulously paid in dollars.

Specifically, we can see no reason for the recent unwarranted increases in or continuation of much of the nondefense spending, including the following:

1. Subsidies to local or sectional projects.

(a) In this we include aid to education (including vocational).

(b) Plus courthouse planning, sewerage systems, slum clearance, college housing, and airport planning and construction.

These local projects benefit specific localities and should be paid for locally.

2. Payments for the benefit of special groups.

(a) We see no reason for treating nonservice-connected ailments of veterans.

(b) Subsidizing the farming few by taxing the consuming many and then additionally jacking up the prices of their food. A free market will direct farm production to needed items.

(c) Highway and waterway construction. These improvement costs should be assessed on users of these facilities through tolls or fuel taxes.

(d) Foreign aid should be terminated, and any assistance to these countries should be derived from private investments and normal interchange.

(e) Low rent housing and direct loans to veterans for housing.

While we recognize the need for the best and most advanced national defense, we also wonder whether the Defense Department does not continue to defend unnecessarily its right to spend. Specifically, when a weapon or procedure is outmoded by newer atomic and space developments, is the old one scrapped, or do we now buy and support both?

Do we get an honest day's work from all administrative employees? Are their rates not unrealistically high compared to similar jobs in business? Are not sick leaves and fringes overgenerous?

Many departments of Government, diligently, yet wastefully, use up their budgets late in the year to justify their original fund requests—and to justify still further increases in the future. Many of us as businessmen have been given rush orders for an assortment of any old thing—an obvious attempt to use up a budget.

To encourage governmental thrift, we suggest that no department be permitted to spend at a faster rate in the last two months of a fiscal year than it did in the first 10 months.

Furthermore a system of incentive should be developed which will provide a reward in the form of an annual bonus for a percentage of the budget unexpended and unencumbered at the end of the year. This incentive should apply to key administrative personnel in control of expenditures.

We feel sure that many commercial and manufacturing functions performed by the Government are not only costing more than necessary—but denying to the Government the tax revenue which would accrue from their operation by businessmen. Why not sell TVA and similar functions to private investors, and apply the proceeds on the national debt?

At the 150th anniversary of Lincoln's birth, all legislators should reread his famous quotation.

Abraham Lincoln said:

"You cannot bring prosperity by discouraging thrift.

"You cannot strengthen the weak by weakening the strong.

"You cannot help the wage earner by pulling down the wage payer.

"You cannot further the brotherhood of man by encouraging class hatred.

"You cannot help the poor by destroying the rich.

"You cannot establish sound security on borrowed money.

"You cannot keep out of trouble by spending more than you earn.

"You cannot build character and courage by taking away man's initiative and independence.

"You cannot help men permanently by doing for them what they could and should do for themselves."

Sincerely yours,

J. C. SPARKS,
*Chairman, National Affairs Committee.*

(Members of special task force: F. T. Dannemiller, president, Convoy, Inc.; C. C. Martin, vice president, Harter Bank & Trust Co.; F. A. Ceckler, vice president, Hardware & Supply Co.; C. I. Taggart, vice president, Canton Malleable Iron Co.; L. C. Dubs, president, Canton Pattern & Manufacturing Co.; R. W. Gillman, public relations manager, Hoover Co.)

---

## Program of the Disabled American Veterans, Department of New Jersey

EXTENSION OF REMARKS
OF
## HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 18, 1959*

Mr. CANFIELD. Mr. Speaker, I submit the program of the Disabled American Veterans, Department of New Jersey, presented this morning to the New Jersey congressional delegation following a breakfast at the Congressional Hotel. The program was outlined by Department Commander David W. Smith, of Redbank, N.J., and Legislative Chairman John W. Bill, of Clifton, N.J. An honored guest and speaker was National Commander David B. Williams, of Massachusetts:

1. Multiple sclerosis, 7 years: the Disabled American Veterans of New Jersey request that serious consideration be given at this session of Congress to extend the law on multiple sclerosis from 2 to 7 years. This is borne out by competent medical authority and leading medical centers, also by Dr. Leroy E. Burney, Surgeon General of the U.S. Public Health Service, who declared in a statement on October 11, 1958, before the National Multiple Sclerosis Society at the Statler Hilton Hotel in New York City and by Dr. C. A. Dean, M.D., who issued a statement on Wednesday, March 4, 1959, to the effect that multiple sclerosis is a mysterious disease; since the cause is not known, there is no specific treatment. There are, however, many forms of supportive treatment. Maintenance of adequate nutrition including all vitamins, the proper use of physical and rehabilitation therapy and avoidance of chilling and physical and emotional strain are all used, and in view of the numerous bills being sponsored by Members of Congress as indicated in the legislative calendar.

2. Hospitals: We are vitally interested in obtaining a new hospital in south Jersey. The records will prove that a hospital is needed in that location, due to the expansion of homes and industry. The distance from south Jersey to Philadelphia is 80 miles and to Delaware is 110 miles and unless a veteran has a car, it is difficult for him to reach either point for hospitalization. It is the firm conviction of the Disabled American Veterans of New Jersey that with the ever increasing veteran population in that area, they will definitely require a hospital both for general medical and surgical treatment.

It is further our opinion that a new wing should be added on to the Veterans Administration hospital in East Orange to take care of the heavy load of veterans who request neurological treatment. Dr. M. Herbert Fineberg, manager of the East Orange Hospital, corroborates that he is in need of 250 beds for neurological patients: This would allow 250 additional beds for general medical and surgical.

It is our opinion that several new wings should be erected at the Veterans Administration hospital, Lyons, N.J., as the records indicate there is a waiting list for admission of over 700 veterans: In some cases they have been waiting several years.

Unless immediate action is taken, the entire burden will fall upon the municipalities, that are now heavily burdened with taxation. New Jersey is not equipped to take care of its New Jersey veterans who require this treatment.

3. Widows' pensions for World War II and Korean conflict: We also reaffirm our request, that Congress, at this session, will enact a law to equalize widows' benefits. It is noted from the February 1959 issue of the leigslative calendar published by the Committee on Veterans' Affairs, that there are numerous bills to extend these benefits to the widows of World War II and the Korean conflict veterans. We feel that these widows have been discriminated against and that this injustice should be corrected.

4. Reinstatement of national service life insurance to all GI's: We reaffirm our previous stand that Congress, at this session, enact a law to permit World War II and Korean conflict veterans to reinstate their Government insurance. We feel that an opportunity should be extended to all veterans of World War II and the Korean conflict at least 1 year from the date of enactment of such law. This would be considered good business, as it would assist thousands of widows who are left without insurance and have no means to take care of themselves and their children, and the Government would be repaying a debt to those who suffered some disabilities and never filed claims, and were not able to obtain insurance. We believe this is a step forward.

5. To protect service connection after 10 years: We continue our stand, that a law be enacted, at this session of Congress, so compensation received by a veteran for a period of 10 years, for his service incurred disability should not be discontinued unless same was obtained by fraud or misrepresentation.

6. Discontinue VA review as per directive of December 14, 1954: We reaffirm our stand, that Congress give serious consideration at this session to discontinue the review of claims where thousands of veterans of World War I, World War II and the Korean conflict have lost their service connection based on

the theory that these disabilities were supposed to have existed prior to their time of induction or enlistment and were not aggravated by their military service. It is absolutely unbelievable that a person with a disability would be accepted for military service and that the said disability would not be aggravated. It is hard to understand why a draft board or enlisting officer would have inducted a person who was inflicted with a disease or whose disability was noticeable at the time of induction or enlistment. We contend that if they were inducted into the military service, after a physical examination, they were presumed sound in mind and in health. This is the only medical theory that can be assumed. We, therefore ask that the directive authorized on December 1, 1954, be discontinued by law, without further delay, as this is a violation of the veterans constitutional rights.

7. Presumption of soundness on induction or enlistment: It is felt that a veteran's examination at the time of induction or acceptance, and then a full 90-day period under intensive training should be adequate to determine the persons fitness for service. If a disease or disability has not developed within this period, then it would seem only reasonable that the Government assume responsibility for disablements that develop subsequent to that 90-day period, unless it can be established by tangible or concrete evidence of its preservice existence and not aggravated beyond the natural progress, and where the Armed Forces state that the disability existed prior to the time of induction, but was not found in the physical examination at induction. This proposed legislation is designed to insure application of laws and facts in determining the veteran's entitlement, and would curtail some of the present rating practices of speculative and promiscuous use of the now abused term "medical principles and practice," unless a law is enacted at this session of Congress to prevent a discrimination of the veteran's constitutional rights.

8. Income limitations for veterans and widows: The income provisions to qualify for non-service-connected pensions be increased to $2,400 without dependents and $3,600 to veterans with dependents.

9. Disabled veterans preference in Federal employment: That permanent employment in civil service be granted to all disabled veterans who have been employed for 1 year, and who have qualified for the said position. That no action be taken to consolidate a position held by a disabled veteran, with another position, for reason of economy and to recreate the same by a new title—a process used to eliminate disabled veterans from employment.

Unless the Federal Government takes the leading step in offering opportunities of employment to disabled veterans, it will be impossible to expect business and industry to employ disabled veterans. There is considerable discrimination against disabled veterans in Federal, State, county and municipal employment. We make this statement based on our experiences. The solution to this problem is not by proclaiming Physically Handicapped Week or Employ the Physically Handicapped Veteran. It must be done by the Government, taking the lead in employing the disabled veteran or other persons, wherever possible. We are advised by leading medical experts that physically handicapped are the best persons to employ and there is less than one-tenth of 1 percent of accidents among those employed; this statement is based on a survey of industrial concerns, one is the Du Pont Co.

10. Directive to Army Review Board for sympathetic understanding: That legislation be enacted directing the Army Review Board to review all cases of veterans who received discharges other than honorable, and who were denied benefits because of the said discharge by the Veterans' Administration, that provisions be made in the said law so that the Review Board will appear in each State to give the veteran an opportunity to present his case by counsel to the Review Board, as it is a known fact that many veterans received discharges other than honorable because of some misunderstanding and not serious violation of the Army or Navy regulations.

And, the same provision be made that all officers who had disabilities at the time of their release from service be given the right to appear before the Army Review Board and present their claims for direct retirement, and be permitted to be represented by counsel, if so desired.

These two points are of importance to enlisted men and officers, and to widows and orphans of those who have departed this life, since their release from military service.

11. Court of appeals: That there be created by law, a court of appeals, whereby decisions shall be reviewed after the Board of Veterans Appeals review a claim for service connection, or an increase in compensation, on the evidence of record. If the said courts are created they should travel from State to State, so that the veteran's claim may be presented to the said court of appeals, and be represented by counsel, who will present the claim for him. This is necessary, since the veteran is denied his constitutional rights to present his case to a court for further consideration of his claim, for injuries sustained during his military service.

12. Widow's discrimination: That Congress consider enacting a law, at this session, to permit a review of all discharges, of persons who died and whose widows filed claims for whatever benefits may have been due them, and be then advised that their husband received other than an honorable discharge. It is our belief that the veteran had paid a sufficient penalty during his lifetime, and that his widow should not be penalized and denied benefits, unless the veteran was tried by a general court martial and found guilty and sentenced for a crime against the Government of the United States. This should apply to all veterans and their dependents.

13. U.S. Supreme Court decision affecting veterans: That Congress consider the latest decision of the U.S. Supreme Court, wherein it held that the Army could not penalize one who served for a period under honorable conditions, because he had activities with, or was a former member of the Communist Party. This decision should apply to any veteran who served with the military forces and was later discharged and denied benefits by the Veterans' Administration.

LEGISLATIVE PROPOSALS

1. Protects service connections of 10 or more years duration, except where fraud is involved.

2. Permits waiver of insurance premiums for total disability cases regardless of age.

3. Death benefits at service-connected rates if the veteran has a service-connected 100 percent disability.

4. Permits payment of dependency allowance from date rating is increased from less than 50 percent to 50 percent or more.

5. Invokes conclusive presumption of service-connection for disability noted in service after first 90 days.

6. Increases to 2 years presumption in cancer cases.

7. Increases to 2 years presumption for psychoses.

8. Permits application of presumption for service connecting reinfection type of active tuberculosis.

9. Would "freeze" the VA schedule for rating disabilities.

10. Separate statutory awards—one eye and one limb.

11. Dependency allowances for ratings under 50 percent.

12. Federal reimbursement to State workmen's compensation funds, to encourage employment of disabled vets.

13. Sliding scale of additional retention credits for service-connected compensably disabled veterans.

14. To provide a 1-year probationary period for veterans leading to permanent status in Government employment.

15. Compensation increases in certain categories.

16. Increase of death benefits for dependent parents.

17. Exclude commercial life insurance up to $10,000 in computing income for pension purposes.

18. Increase statutory income limitations (pension).

19. Reelection right for widows and parents as to which service-connected benefit is more advantageous.

20. To restore to certain veterans a 1-year period in which they can apply for national service life insurance.

21. To provide a 7-year presumptive period for service connecting multiple sclerosis.

22. To authorize increase in Federal payments to State homes from $700 annually to $1,000 annually, per veteran.

## Civil Responsibilities Are as Important as Civil Rights

EXTENSION OF REMARKS
OF
### HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. WILLIAMS. Mr. Speaker, the Editor of the Jackson (Miss.) Daily News, James M. Ward, has written an excellent editorial on the subject of civil responsibilities. There are groups in this country constantly screaming for civil rights, but these groups absolutely refuse to accept civil responsibilities.

As an example of major newspapers' evading their responsibility in the field of race relations, the Washington Post and Times Herald is currently running a series of articles on poverty and lack of civil responsibility in the District of Columbia. In line with its usual practice of keeping the truth from the public, the Post refuses to mention race in these articles. Perhaps it is assumed that readers are aware of the racial identity of the persons involved, but one would never know it from reading the Post.

It is to be hoped that metropolitan newspapers will start a crusade on the subject of the necessity of Negroes to assume civil responsibility and conduct themselves in accordance with the rules of organized society. Such a crusade would be far more beneficial to the colored race than the constant agitation for Federal force legislation misnamed "Civil Rights."

Mr. Speaker, under leave to extend my remarks, I include Mr. Ward's editorial:

(By Jimmy Ward)

There is a powerful amount of chatter these days about "rights." There are civil rights, constitutional rights, minority rights,

military rights, alien rights, religious rights, the Bill of Rights. There are so many rights and lefts until the average man has little left.

Let's go a bit more on rights before we get to responsibilities.

There was a snooping agent of the Civil Rights Commission out of Washington in Mississippi last week. He wanted to sign up a Mississippi advisory board to determine the best, fastest, quickest, most sudden method of granting every living soul in these United States a flashing, dramatic amount of equality in the voting booth, in housing, in the classroom, in church, in swimming pools, in dining halls, restaurants, toilets—and we suppose in the bedroom. Hurrah for equality and equal socializing everywhere for everyone. That is the theme of the day.

Television is full of it. Pulitizer Prizes are awarded for espousing it. Politicians shout it. Statesmen advocate it. Foreign countries insist upon it—so long as it is to be a policy for somebody else, and that somebody is the people of the South.

This matter of "rights" is on the radio; it's on the lips of people; it has the imagination of this Nation lit up like the eyes of a professor of a pinball machine playing class. The subject glows on film; it sticks out from headlines; it is debated in Congress; it is discussed at diplomatic cocktail parties; students at universities throughout the world harp on it as though it was more vital than the atomic bomb.

The topic of all these rights is a great concern of politicians on the stump; pressure groups thrive on it; rights have become a bogey of the Western World.

All right with rights. What about responsibilities?

We have a neighbor. He is saddled with the same expenses of big government and inflation as are you and I. He operates a home on a salary. He's perfectly sane. He's a leader in the community. He's got a mortgage on his home. He buys groceries. He pays interest, taxes, and he's loaded to the gills with insurance. Now we're getting to the big point.

He has liability insurance.

The law requires people like my neighbor, myself and you to foot the bill of liability insurance or else we lose a driver's license to operate a high-priced, well-taxed, gas-consuming, frequently greased, well-maintained, Detroit-made automobile on the streets and highways of Mississippi—for which you, my neighbor and myself have supplied the money to build. Right? OK.

Now you are driving down the street—as was the case of a neighbor's daughter.

The driver of an opposing automobile was in a bright, new, gay vehicle with a squirrel tail flying from the radio pole. He had himself a gal friend in the car. It was Sattidy night. He had his rights and a Federal agent was in town a few hours before to be damned sure he had all his rights.

What happened?

The man with the "rights" used every ounce of 'em and plowed right across the street beneath a red light.

He hit the 6-year-old automobile driven by the daughter of the neighbor who had accepted his "responsibilities" by investing in insurance, by trying to raise a legitimate family, by supporting the community, by paying school bonds to help educate the children of the city of Jackson—please get this—without regard to race, creed or color.

The opposing automobile clobbered his family car. There was a certain amount of Sattidy night giggling and jibberish going on. The cops came.

The driver of the opposing car claimed all the "rights" under the sun and there are a lot of rights under the sun in these United States of America.

But did he have any responsibilities?

The neighbor's child narrowly escaped death. The neighbor had liability insurance. His car had no squirrel tail flying from the flagpole, but there was an insurance policy in the glove compartment.

The man with responsibility is in a pretty bad mood now, but this doesn't count because there are no Federal agents snooping around in the South to espouse the cause of a man with responsibility.

Federal agents are snooping around in the South on behalf of the man with rights. All kinds of rights.

Read your Monday newspaper, week and week, and see who is being killed on the highways. Also check into who is responsible. Check closely, week and after week, the cause and effect.

This is a political campaign year in Mississippi. Politicians are looking for issues. An equal effective responsibility is needed.

This country has a Bill of Rights. We buy that completely.

This country could well use a bill of responsibilities.

It is strange, indeed, when a nation goes completely beserk about civil rights and not give a hoot in hades about civil responsibilities.

---

## RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

---

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

---

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

---

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

---

## CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

## SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Vice President, Richard Nixon

Aiken, George D., *Vt*——Carroll Arms
Allott, Gordon, *Colo*——Cleveland House
Anderson, Clinton P., *N. Mex.*——6 Wesley Circle
Bartlett, E. L., *Alaska*——1718 33d Pl. SE.
Beall, J. Glenn, *Md*——
Bennett, Wallace F., *Utah*——
Bible, Alan, *Nev*——
Bridges, Styles, *N. H*——
Bush, Prescott, *Conn*——

Young, Stephen M., *Ohio*——

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

## STANDING COMMITTEES OF THE SENATE

*Committee on Aeronautical and Space Sciences*

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

*Committee on Agriculture and Forestry*

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

*Committee on Appropriations*

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

*Committee on Armed Services*

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

*Committee on Banking and Currency*

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

*Committee on the District of Columbia*

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

*Committee on Finance*

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

*Committee on Foreign Relations*

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

*Committee on Government Operations*

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

*Committee on Interior and Insular Affairs*

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

*Committee on Interstate and Foreign Commerce*

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

*Committee on the Judiciary*

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

*Committee on Labor and Public Welfare*

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

*Committee on Post Office and Civil Service*

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

*Committee on Public Works*

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

*Committee on Rules and Administration*

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

## UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

## UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

*District of Columbia:* Mr. Chief Justice Warren. District of Columbia.

*First judicial circuit:* Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

*Second judicial circuit:* Mr. Justice Harlan. Connecticut, New York, Vermont.

*Third judicial circuit:* Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

*Fourth judicial circuit:* Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

*Fifth judicial circuit:* Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

*Sixth judicial circuit:* Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

*Seventh judicial circuit:* Mr. Justice Clark. Illinois, Indiana, Wisconsin.

*Eighth judicial circuit:* Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

*Ninth judicial circuit:* Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

*Tenth judicial circuit:* Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

## Tribute to the Late Cecil B. DeMille

EXTENSION OF REMARKS
OF

### HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. KUCHEL. Mr. President, I have just had an opportunity to read a moving tribute to the late Cecil B. DeMille, written by a member of his staff for 14 years, Mr. Donald Hayne. It is a colorful description of a great genius in our motion picture industry, whose unique artistry produced the most spectacular kind of entertainment on film.

I ask unanimous consent that the text of the eulogy be printed in the Appendix of the RECORD. It is dated January 23, 1959.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

Hollywood today pays final tribute to its best known and least known citizen.

Words of eulogy for Cecil Blount DeMille have been flooding the wires from all over the world, from leaders in motion pictures, religion, education, industry, and government, but there will be no eulogy delivered at his funeral. There will be only the simple service from the Book of Common Prayer, conducted by the young rector of his parish, in the little Episcopal church from which his mother and his grandmother were buried years ago.

And that is what Cecil B. DeMille would have wanted, for this master of the colossal and the spectacular, this "Mr. Hollywood," was essentially a simple and, incredible as it might seem to those who knew only the DeMille of press agentry, a humble man.

Hollywood knew about and smiled at the chair-boy who followed DeMille around on the set, carrying a chair so that the imperious director could sit down anywhere, any time, without bothering to look behind him. Most of Hollywood never knew the DeMille who, when he was told that one of his chair-boys had worked for a famous German director, said in all seriousness, "Maybe I can learn something from him."

A great editor who knew him well once said that DeMille could be summed up in one word, without adjectives: he was a gentleman. That was the greatest surprise to many meeting him for the first time, to find that he did embody the old-fashioned, untarnished meaning of that now little-used word.

His family was one of the oldest in America, having come from Holland to New Amsterdam in 1658. One of his ancestors, from whom he got his middle name, was William Blount, a signer of the Constitution. His grandfater was mayor of Washington, N.C., and an officer in the Confederate Army. Both his parents were teachers at Lockwood's Academy, Brooklyn, when they met and married. His father, a scholarly and deeply religious man, was also a student for the ministry of the Episcopal Church, until he decided to become a playwright and reach a larger congregation from the stage than he could reach from the pulpit.

Next to his father, the greatest influence upon DeMille's thought and work came from his father's collaborator, David Belasco, who practically lived with the DeMille family during his early creative years in the New York theater. Belasco, a brilliant, flamboyant showman, had a genius for detail and for theatrical effects which brought the American stage to a degree of authentic realism which only motion pictures could surpass. DeMille surpassed it, through the more flexible medium of the motion picture camera and screen.

The last 46 years of DeMille's life were the history of Hollywood. Yet in a sense he never left New York or the theater of the 1890's and early 1900's. Last month, when he was given a luncheon in New York by the American Academy of Dramatic Arts, which his father had helped found and from which he was graduated in 1900, he spoke less feelingly about his achievements of the past half-century than about the fact that, as a small boy, he had once dined with Edwin Booth.

DeMille always thought of himself as primarily a dramatist. Mrs. DeMille said to him once, in her quietly incisive way, "It can never be said, Cecil, that your pictures are lacking in plot." To DeMille, sound dramatic construction was the essential framework of a film. All the rest, the gigantic sets, the thousands of extras, the overwhelming special effects, were, as he put it, only frosting on the cake. He hated the word "spectacle." No director ever had a cannier sense of how to fill the screen and the eye of the beholder with spectacular action, but whenever DeMille heard or read that "spectacle" was the outstanding characteristic of his work, he felt that the main point had been missed.

He was a dramatist with a purpose. There his father's influence lived in him. If Belasco taught him much of the "how" of drama, his father had taught him, indelibly, the "what" to say through the medium of entertainment. The primary purpose of entertainment, DeMille insisted, was to entertain. He had no sympathy with propaganda pictures. But even in his so-called bathtub cycle of the 1920's he had a serious social purpose; and in his historical and religious films of the last three decades he was very much his parents' son, a teacher.

In that, more than in the big money his pictures made or the honors heaped upon him in his latter years, DeMille found his deepest satisfaction. He had a keen eye to the box-office always and he enjoyed the esteem represented by the almost embarrassing accumulation of decorations, degrees, plaques, statuettes, and embossed resolutions given him by governments, universities, and societies of all kinds, but the "awards" he was most likely to carry in his pocket and show his family and staff were the letters he received from schoolchildren in Texas or nuns in Iowa or prisoners in Utah or just people everywhere, who told him that "The King of Kings" or "The Ten Commandments" had made God more real to them.

It was characteristic of DeMille that every letter he received, unless it was obviously a "crank" letter, had to be answered. Probably few, if any, prominent public figures spent more time and care on correspondence with total strangers. Some of DeMille's staff helped him draft his huge correspondence, but no letter ever went out over his signature that he had not at least edited and approved; and he would spend as much time and thought on a letter to an unknown fan as on one to a prime minister. Last month, while DeMille was in New York, a letter reached him from a New York man, a complete stranger, who told about his 6-year-old son's nightly prayer for a dog for Christmas, a prayer that the father had not money enough to answer. DeMille was even then so ill that every interview, every telephone call, every letter cost him an exhausting effort. But the little boy got his dog, in time for Christmas.

When DeMille had a job to do, the job was all that counted. He could be ruthless in his demand for perfect work and roughshod in his scorn for incompetence. There was no inconsistency between that and his innate gentlemanly respect for every human being with whom he came in contact. His staff knew that, even if many in Hollywood did not. The proof is in the fact that some of his staff worked with him 10, 20, 40 years and more, with a loyalty and affection nothing could shake. He once said to a newcomer on his staff, "I want you to know that sometimes I can be very disagreeable. But if I am ever unfair, I want you to tell me."

DeMille had a genuine instinct for freedom, not only his own but that of everyone. The man who introduced him on his last television appearance, during the political campaign of 1958, could say, with truth and pride, that in 14 years of working for DeMille, they had often differed sharply politically, but DeMille had never once asked him to do one thing or say one word for a cause in which he did not independently believe.

Contrary to legend, DeMille had no use for "yes men." He had the ability to stimulate in other minds enthusiasm for his ideas and projects, but he wanted the clash of mind with mind, to strike the spark of better ideas than either mind might generate on its own. He would put up a good, and sometimes a tricky, fight for his ideas, but if one could really best him with better arguments, he was quick to acknowledge and accept them. A sure way to make him impatient was to agree with him simply for the sake of being agreeable.

On his last day at his studio office, 12 days before he died, DeMille remarked, as he was leaving to go home, "We have a lot of work to do in the next 3 years." He was thinking of his next two pictures, "On My Honor," and the one he planned as his last and greatest, which he called "Project X." "Project X," DeMille's greatest film, will never be made. Except for a few indications given to his closest coworkers, the secret of its theme died with him. But perhaps there is a hint in a note DeMille scribbled on an airplane last year, when "Project X" was taking shape in his mind. He wrote: "The Lord was expressing something to us far greater than the simple words he spoke to make simple fishermen understand that there is a God far greater than the mind of man can conceive." That is where the mind of DeMille was ranging, in the last months of his life.

It was not unfamiliar ground. He glimpsed it first 70 years and more ago, around the lamp in the old house in Echo

Lake, N.J., when his father read aloud every evening a chapter of the Old Testament and a chapter of the New. He explored it deeper in his studies for his great religious films; and he saw new vistas of it in the hearts of men, women, and children touched by those films. His love of freedom was at bottom a recognition of the image of God in man. He was a man of prayer. The well-worn, well-marked Bible went with him, wherever he went. It was near him when he died. More than once in his lifetime he said, "Father, forgive them," when it was hard to say.

He was human. He had faults, irritating smallnesses, blind spots, vanities—and a prince's grandeur, and astonishing humilities. Famous in every corner of the world, he was unknown to most, misunderstood by many, cordially disliked by some, beloved by those who knew him best. He sought perfection in everything, from the details of his conservative, meticulous dress to his creative work and his mind's outreach to the divine. The perfection he sought often eluded him. But he was a man of unquenchable faith and hope and a courageous heart. Those near him have been saying to each other, these past few days, that they feel numbed more than sad, unable to believe that that heart failed at last. He was a man of vision. Now he sees.

## Statement by the Virginia Commission on Constitutional Government

EXTENSION OF REMARKS

OF

### HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent statement by the Virginia Commission on Constitutional Government entitled "On the Fixing of Boundary Lines. I hope that every Member of the Congress will read this statement most carefully because of the very able presentation which it makes in favor of the principles of constitutional government.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ON THE FIXING OF BOUNDARY LINES—A STATEMENT BY THE VIRGINIA COMMISSION ON CONSTITUTIONAL GOVERNMENT

The human conflicts present in the controversy over the South's public schools are real, are complex, and cannot be minimized. Yet the public attention concentrated upon these social problems unfortunately has obscured a towering question of constitutional government, and this question transcends the immediate and personal issues of particular children in particular schools. It is in the hope of encouraging consideration of a basic concept of the American Republic that this commission, created by the General Assembly of Virginia in 1958, offers this statement.

This basic concept cannot be understood without some recognition of unalterable facts of history and long-establish principles of law. Our Union is a union of States. That is what it was in the beginning and that is what it remains today. In this Union, all power to govern flows from the people in their States. Some powers the people have delegated, under the Constitution, to Federal authority; all other powers they have reserved, under the Constitution, to themselves.

WE ARE NOT THE SAME

There are sound reasons for this. The States are not all the same; their economies, societies, interests, resources, are not all the same; customs and traditions vary enormously from State to State, and laws that might be wise and useful in one area may be demonstrably needless or even harmful in another. This diversity is part of the strength of the Union. It has been recognized as such from the very beginning of our history, and the underlying theory of the Constitution is that the States are left free to govern themselves, subject only to the prohibitions they have expressly imposed upon themselves by the Constitution.

The States manifest their individual powers in many different ways. Each State, for example, fixes a minimum age at which its citizens may vote; and though some may believe it unwise to permit 18-year-olds to vote, nothing in the Constitution prohibits a State from thus extending its franchise. Similarly, many persons may doubt the soundness of a State law providing for rent control, but a State may adopt such a law if its people choose. Two States, Oklahoma and Mississippi, regard traffic in intoxicating liquors as immoral, and they have prohibited it; but the other 46 States are not compelled to accept this view. Half the States permit parimutuel gambling on horseraces; the other half do not. The point we seek to emphasize is that a practice which many people may regard as unwise, or unsound, or immoral is not unlawful until it is made so by a lawful process. That which some persons conceive to be socially or economically wrong may still be constitutionally right.

THE KEY QUESTION

Acceptance of this plain truth of our Government is vital to any proper understanding of the constitutional issue at stake in the South's public school crisis. The Southern States, or some of them, do not conceive the maintenance of racially separate schools to be morally wrong; on the contrary, they believe this policy to be in the best interest of all their people. That many persons strongly oppose this view is not to be doubted. But the question is not whether the Southern States, in exercising a power to maintain such schools, are acting morally or immorally; the question is whether they are acting constitutionally. Distasteful as the conclusion may be to some critics of the South, the conclusion cannot be escaped that the Southern States are fully within their constitutional rights in the position they have taken.

The conflict here, fundamentally, is one of the rights of the citizen and the powers of a State. Whatever the rights of the individual are, these rights cannot be infringed; correspondingly, whatever the powers of the State may be, these powers may be exercised at the State's discretion. In this controversy, as in countless others, the problem rests in determining the line at which rights end, and powers begin; it is a problem in the fixing of boundaries.

We must look to the 14th amendment to determine where this boundary lies. The 14th amendment, leaving aside all questions of the validity of its adoption, was conceived primarily as a prohibitory amendment: It was intended to prohibit to the States certain powers they had exercised in the past; specifically, the States were prohibited from denying to any citizen the equal protection of the laws. Beyond question, the effect of the amendment also was to vest in the newly freed Negro people certain rights they had not enjoyed before—the rights, for example, to own property, to enter into contracts, and to sue and be sued.

WHAT ADDED? WHAT SUBTRACTED?

The constitutional issue now before the country, in this context, is simply stated. So far as public schools are concerned, what individual rights were created? What State powers were reduced? If in 1868 certain rights were added to those possessed by the citizen, then in 1868 certain powers must have been subtracted from those held by the States. What did the amendment mean in terms of public schools?

Clearly, the Congress that framed the 14th amendment, and the State that ratified it, never intended for an instant that a guarantee of equal protection of the laws was to affect the operation of separate schools in any way. Long after the amendment was ratified, States both North and South continued to maintain racially separate institutions. It is unthinkable that they understood the amendment to prohibit them from the exercise of powers they were daily exercising.

The correctness of this understanding was confirmed repeatedly by the highest State and Federal courts in an unbroken line of decisions stretching over many years. It was confirmed, also, by the tacit acquiescence of the States themselves: When the doctrine of separate but equal was sanctioned by the Supreme Court of the United States in 1896, not a single State voiced a protest or asserted a misinterpretation of the amendment. And Congress, from the date of the amendment until the date of the school segregation cases, demonstrated its understanding of the amendment by actively maintaining separate schools in the District of Columbia. Thus the boundary line was fixed. By what authority may it now be changed?

THE LAW OF THE CASE

The position of the Southern States today is that the governmental power they exercised constitutionally for so many years—the power to maintain racially separate schools—cannot be prohibited to them by mandate of the Supreme Court. Many persons, it appears, believe that the Court has the right, as well as the power, to impose this prohibition upon the States as an addition to the law of the land. In actual fact, the Court's mandate is no more than the law of the case in which it is handed down; the Court's power is a judicial power, not a legislative power, and it is worth emphasizing that there is now no law and no provision of the Constitution requiring racially integrated schools. Nevertheless, we acknowledge that some observers believe this to be the effect of the Court's opinion in the school cases. For our own part, we hold that in attempting to prohibit to the States the power to operate separate schools, the Court usurped the amendatory power that constitutionally is vested in three-fourths of the States alone. In effect the Court sought not merely to interpret the Constitution, but substantively to amend the Constitution, and this the Court has no authority to do.

The Virginia Commission on Constitutional Government respectfully urges the people of every State to reflect thoughtfully upon these matters. There are two questions involved in this struggle. The only question properly before the Supreme Court of the United States was whether a State's maintenance of separate schools is constitutional. The other question, whether such schools are morally and socially right or wrong, is a question of policy, not of jurisprudence.

It is our prayer that the people of the United States, whatever their views on segregation, will reflect carefully upon the consequences of entrusting the formation of national social policies to a judicial body appointed for life. We cannot believe that our sister States, viewing the matter dispassionately, will fail to perceive the grave

danger to all State powers that lies in the Court's drastic action here.

IT IS NOT FOR THE COURT

These apprehensions are not peculiar to the South in 1958; Washington voiced them in his Farewell Address. Lincoln many times emphasized the same points. More recently Mr. Justice Black has asserted that it is not for the Supreme Court "to roam at large in the broad expanses of policy and morals, and to trespass on the legislative domain of the States." Mr. Justice Douglas has warned that "instability is created" when "a judiciary with life tenure seeks to write its social and economic creed into the charter." Mr. Justice Frankfurter has declared that, "As a member of this Court, I am not justified in writing my private notions of policy into the Constitution, no matter how deeply I may cherish them or how mischievous I may deem their disregard." The late Chief Justice Vinson emphasized that because the Court must rest its decisions "on the Constitution alone, we must set aside predilections on social policy and adhere to the settled rules which restrict the exercise of our power to judicial review." Holmes, Hughes, Sutherland, Harlan, Taney, among a host of great jurists, have insisted down through the years on strict adherence to the rule, in Hughes' phrase, that "it is not for the Court to amend the Constitution by judicial decree."

We should like also to direct attention to the words of Elihu Root, recently proclaimed as "sound doctrine" by the conference of Chief Justices of the several States:

"If the people of our country yield to impatience which would destroy the system that alone makes effective these great impersonal rules and preserves our constitutional Government, rather than to endure the temporary inconvenience of pursuing regulated methods of changing the law, we shall not be reforming. We shall not be making progress, but shall be exhibiting * * * the lack of that self-control which enables great bodies of men to abide the slow process of orderly government rather than to break down the barriers of order when they are struck by the impulse of the moment."

Let us not abandon these wise admonitions in the passions of a turbulent hour.

## How About the District of Columbia?

EXTENSION OF REMARKS

OF

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. HUMPHREY. Mr. President, the Congress can be justifiably proud of passage of legislation to make Hawaii the 50th State. History books will record as one of the great accomplishments of this Congress its action in admitting Hawaii to statehood.

I hope, Mr. President, that the history books will also record that the 86th Congress also enacted legislation to grant home rule to the District of Columbia. Such legislation is long overdue.

The Minneapolis Tribune of March 14, 1959, contained an excellent editorial urging the granting of home rule to the District of Columbia. I ask unanimous consent that this editorial, entitled "How About District of Columbia?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW ABOUT DISTRICT OF COLUMBIA?

With Hawaii now following Alaska into statehood, it is time for Congress to turn its attention to a case closer to home that involves a much more serious negation of democracy. We refer, of course, to the granting of home rule to the District of Columbia.

The District now contains an estimated 855,000 people in a metropolitan area of just over 2 million. Yet the people living in the District have no vote, no representation, and no way in which to make their voices directly heard with reference to the conduct of their public affairs.

The City Commissioners now are appointed by the President, and Congress, sitting occasionally as a city council for the city of Washington, appropriates funds for and takes other necessary actions to run the city. But members of the District of Columbia committees—who include Representatives WIER and NELSEN, of Minnesota, usually have other more important assignments and thus can afford to spend little time on District problems. Even the Washington School Board is appointed on the recommendation of Federal judges in the District who may or may not be well informed about school problems.

The vote was taken away from Washington 79 years ago, in part to protect the lawmakers in the Capital from the political connivings of a Federal bureaucracy. Yet since 1951 the number of Federal employees in the District has been declining and the number of living in suburbs in Virginia and Maryland increasing. The time will come when the suburban counties will have more Federal employees than the District. So the old argument no longer holds, if it ever did.

What is proposed now to remedy this blot on American democracy is a territorial form of government. There would be a Governor and a secretary appointed by the President, a popularly elected assembly of 15 members, and a popularly elected nonvoting delegate to the U.S. House of Representatives.

Similar legislation has cleared the Senate in the past. But it has bogged down in the House because of southern fear that Negroes, who now constitute a majority of the population of Washington, would elect members of their own race to public office. Yet wouldn't just such an action be a significant symbol to the entire world that we mean what we say when we talk about democracy?

The proposed legislation still would not be full enfranchisement of the people of the District. But it would finally give more than 850,000 Americans the right to rule themselves in local matters. It would provide a more efficient government for the city. It would relieve Congress of the task of handling the details of District affairs. It would be a logical followup to Congress' action in voting statehood to Alaska and Hawaii.

## Assistance for the Physically Disabled

EXTENSION OF REMARKS

OF

### HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. YARBOROUGH. Mr. President, bravery is an American tradition. I am certain that practically all citizens of our Nation are anxious to recognize great bravery and to see that it is properly rewarded.

Some of the finest examples of courage in the United States today are found in the physically disabled citizens of our country. In spite of their handicaps, many of them have, through special hard work, not only become self-supporting, but have, in many instances, become highly successful business men and women. These people provide a wonderful example for all of us.

These people's handicaps cause them special, unusual expenses. Many physically disabled citizens, for example, cannot use public transportation going to and from a job. Special attachments for automobiles are needed. Wheelchairs or crutches are often a necessity. And constant contact with braces, wheelchairs, and similar items causes clothing to wear out much faster.

The Alamo Handicapped Association of San Antonio, Tex., a State-chartered, nonprofit corporation, on February 8, 1959, adopted a resolution calling the attention of the Congress to these facts. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY ALAMO HANDICAPPED ASSOCIATION, INC.

Whereas the United States Internal Revenue Code of 1954 fails to allow income-tax deductions for special transportation expenses incurred by the physically disabled to and from his place of employment; and

Whereas the present code also fails to allow deductions for other extraordinary expenses, e.g., wheelchairs, crutches, automotive hand controls, necessary to the sustenance of employment by the physically disabled; and

Whereas many physically handicapped persons are not motivated to seek employment because of their inability to use public transportation facilities and because of the high cost of private transportation; and

Whereas other physically disabled persons, are unable financially to purchase and maintain special orthopedic appliances necessary to gainful employment, or are unable financially to purchase and keep in repair necessary clothing which has an exceptionally short life because of constant friction with orthopedic appliances and/or a wheelchair; and

Whereas the Honorable EUGENE J. KEOGH of New York has introduced a bill (H.R. 134) in the 86th Congress of the United States proposing to alleviate the situation now prevailing; and

Whereas this bill does not constitute a handout for the physically disabled but only recognizes that such expenses do, in fact, exist and provides an opportunity for equal competition in employment between the disabled and his able-bodied counterpart: Be it

*Resolved*, That this association go on record as favoring passage of House bill 134 during the current session of Congress, and be it

*Resolved*, That this association and its taxpaying members urge in the strongest manner that said bill be reported favorably out of the House Ways and Means Committee to which it has been referred, and be it

*Resolved*, That a copy of this resolution be spread upon the minutes of this meeting and that copies be sent to the following Members of Congress: Senators LYNDON B. JOHNSON, and RALPH YARBOROUGH; Congressmen PAUL KILDAY, House Speaker SAM RAYBURN, WILBUR D. MILLS, EUGENE J. KEOGH, FRANK IKARD, DANIEL A. REED, and BRUCE ALGER.

## Address by the Honorable John F. Kennedy, of Massachusetts, Before the National Association of County Officals

EXTENSION OF REMARKS
OF

### HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. SHELLEY. Mr. Speaker, on Wednesday morning of this week, the National Association of County Officials was privileged to have Senator JOHN F. KENNEDY, of Massachusetts, address them on the very vital subject of urban problems and the place of the county in helping to solve these problems. I would like to call the attention of the Members to this address and urge them to give serious consideration to the proposals contained in the talk.

Under leave to extend my remarks in the RECORD, I am very happy to include this distinguished address by the Honorable JOHN F. KENNEDY, of Massachusetts:

REMARKS OF SENATOR JOHN F. KENNEDY, DEMOCRAT, OF MASSACHUSETTS, BEFORE THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS, WASHINGTON, D.C., MARCH 18, 1959

It is a real privilege and a great honor to have this opportunity to participate in the Nation's first urban county congress. I know that this historic meeting will be of tremendous benefit to our Nation, its county government, and its urban citizens—and I am grateful that your executive director, Bernard Hillenbrand has asked me to participate in this meeting with you. I particularly appreciate your hospitality at this hour of the morning—in Massachusetts such a gathering would not be possible on the morning after St. Patrick's Day. But I will do my best to turn my attention from the old days in County Cork to the new problems of county government.

I do not, however, pose here today as an expert on the intricacies and organization of county government. In my own State of Massachusets, local government is more prominent at the town and city level than in the county. And much of my life is spent here in the District of Columbia—which is not only countyless but voteless. In short, there is much I want to learn from you, in my visits with you today, about the problems and needs of county government.

But the entire Congress is particularly concerned this year with the problems of our metropolitan regions. No more difficult challenge confronts us on the domestic scene. The need for new legislative programs—to meet the growing problems of our growing cities—is becoming increasingly pressing. Already, 60 percent of all Americans live in urban counties—more than 100 million people. By the year 2000, it is predicted that this figure will rise to more than 300 million. The problems created by this tremendous population explosion, with literally hundreds of thousands of people spilling over from the cities into the counties, constitute a formidable challenge for the 86th Congress.

Thirteen million housing units occupied today by American families—living mostly in urban areas—are judged by objective census criteria to be substandard, unsafe, or unsanitary. In city after city, traffic is strangled—public transportation offers less service for higher cost—schools, hospitals and public health clinics are dangerously overcrowded—the air we breathe and the water we drink are dangerously polluted—and so on down a long list already familiar to you.

The growth of urban areas, spreading into the counties—and the growth of urban problems, also spreading into the counties—are both reflected in the dull, dry but revealing statistics of county government in this country. We see it in the tremendous increase in your payrolls with the great bulk of employees engaged in such activities as health and hospitals, highways, public welfare, police and correction, parks and recreation, libraries and education. Many county governments have for the first time been forced to borrow money—learning to their sorrow that it now costs more to obtain such funds while the money doesn't go as far when it is spent.

This means many services are cut back and others denied at a time they should be expanding. It also means long hours and low pay for yourselves and your associates and your employees.

The Congress is aware of these problems, though not always sufficiently aware of their magnitude. And those of us in the Congress who come from urban areas have worked on programs to aid our cities in the solution of these problems. But the point I want to make today is that these are no longer strictly city problems. The Congress should no longer think in terms of city needs alone. We must look also to the county and to combined city-county cooperation.

For the stream that pollutes the city's health pollutes the county as well. The airport that serves the city also serves the surrounding area. The deadly blight we call slum housing spreads slowly but inexorably to the city limits and then to the suburbs. The decline of public transit harasses commuters from the country as well as shoppers in the city. The highway clogged in the city is soon clogged out in the county. Hospitals, libraries, parks, schools, clinics, and civil defense programs—these and other important governmental services concern needs which extend beyond outmoded city limits.

In short, it is only on the TV western that a city can solve its problems by ordering a gunman to be outside the city limits by sundown. Pushing a problem outside the city limits is no longer a solution. For today the city and the county are inextricably linked—they face the same problems and the same pressures. We can no longer collect garbage in the city and dump it in the county. We can no longer use tax gimmicks in the county to bring industries out from the city. Neither our cities nor our counties can avoid their problems by shifting them upon the other—the problems must be faced together or not at all.

Certainly the primary responsibility cannot rest upon our State legislatures, which have proved themselves to be too frequently unresponsive to the needs of our urban areas; for in the absence of real and effective reapportionment our gerrymandered State legislatures will continue to reflect the rural dominance of the 19th century. Nor can complete responsibility be placed upon the Federal Government, which will never be as effective as local government in meeting your needs or even in being alert to them.

In short, it is clear that our city governments cannot always assume the sole responsibility for the solution of these pressing urban problems. I repeat, they cannot. our State governments will not, the Federal Government should not, and, therefore, you on the county level must. It is up to the counties and similar area governments to play a more important role in the solution of these urban problems.

The exact nature and design of those solutions have already been thoroughly discussed in your earlier meetings. The question remaining is: what will be the role of the Federal Government in helping you on the local level meet these pressing needs? You are already familiar with the restrictions placed on your efforts by State governments.

Similar problems are encountered on the Federal level. Federal aid funds, which are largely raised by taxes in these very urban areas, are not always distributed fairly to such areas of the basis of need and numbers. Federal and state governments combined have preempted the best sources of tax revenue—our counties are still largely dependent upon the property tax, with all its limitations—and, to add insult to injury, the continuing growth of Federal installations at the same time removes the property from your tax rolls while as yet no equitable method of payments in lieu of taxes has been devised. I hope this Congress will come up with an equitable payment in lieu of taxes proposed, and end this constant confusion and inequitable hardship for once and for all.

But how large a role should the Federal Government play? I recognize the complaints among local government officials against centralization in Washington. I myself am not a believer in the omnipotence of Federal bureaucracy. I see no magic attaching to tax money which has flowed to Washington and then back again. But whatever current political arguments may rage about spenders versus savers, about balanced budgets versus deficits, I believe any objective student would agree with this one basic premise—a premise which has been true through the years regardless of which party is in control—and that is that Congress assumes responsibility for only those problems which state and local governments have been unable or unwilling to handle themselves.

In short, if we are to obtain a greater degree of responsibility for local government, then it is up to you on the local level to demonstrate that you are able and willing to assume that responsibility. It is not enough to say that you are willing to take on new assignments. The Congress will not yield vital public functions affecting our Nation's strength to uninterested State legislatures—they will not yield them to ineffective, hamstrung city governments—and neither will they yield them to inefficient county governments.

For I know that you will be the first to agree that there are too many county governments in this country that were designed by their legislatures for a simpler rural atmosphere. There are too many counties in this country which are organized in an almost headless and formless fashion, with no single executive responsibility for effective coordinated administration. There are too many counties in this country where—just as 50 years ago—the spoils system is still rampant, the voters are still indifferent and the public business is still neglected.

I realize that the fault lies more with our State legislatures than with the county governments themselves. And I realize that it is up to the voters of each State to demand for themselves the kind of efficient, well-organized government they deserve. But I am addressing this appeal to you—because your attendance here demonstrates your enlightened leadership in the solution of these problems. You are demonstrating that county governments can be alert to the needs of its citizens—that it can plan for the future growth of this Nation—that it can emphasize cooperation, instead of duplication, with other counties and other levels of government. If this same kind of spirit can prevail throughout the more than 3,000 counties

of this Nation, then we will be well on the road to achieving a larger role for local American Government.

In short, it is not enough to complain on the State and the local level about the growth of Washington bureaucracy—about the size of the Federal deficit—or about the number of hands through which each tax dollar must pass. For the answer to these problems to a large extent rests with our State and local governments, themselves, and their ability to adapt themselves to the challenge of the mid-20th century. I know that those of you who are here today will do your utmost to live up to your trust and meet this challenge.

Let me conclude by emphasizing one point. These problems of streamlining our Government, making the most of our potential growth, strengthening the core of our Nation and building a better, wiser, stronger America—these are not merely questions of party politics or even governmental philosophy. Today they affect the very question of survival itself.

That, after all, is the real question of our time. The hard, tough question for the next decade—for this or any other group of Americans—is whether any free society—with its freedom of choice—its breadth of opportunity—its range of alternatives—can meet the singleminded advance of the Communists.

Can a nation organized and governed such as ours endure? That is the real question. Have we the nerve and the will? Can we carry through in an age where we will witness not only new breakthroughs in weapons of destruction—but also a race for mastery of the sky and the rain, the ocean and the tides, the far side of space and the inside of men's minds?

We travel today along a knife-edged path which requires leadership better equipped than any since Lincoln's day to make clear to our people the vast spectrum of our challenges.

In the words of Woodrow Wilson: "We must neither run with the crowd nor deride it—but seek sober counsel for it—and for ourselves."

## Proposed Abolition of Loyalty Oaths Required of Recipients of Certain Loans

EXTENSION OF REMARKS
OF
### HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Thursday, March 19, 1959*

Mr. KENNEDY. Mr. President, on January 29 I introduced a measure to amend the National Defense Education Act of 1958 to divest it of a provision which would require recipients of Federal loans under the act to file an affidavit and take an oath declaring that they do not believe in, belong to, or support any subversive organization.

Since then I have been heartened by the nearly unanimous editorial support this proposal has received. I ask unanimous consent that there be printed in the Appendix of the RECORD editorials from the Williamson (W. Va.) News and the Asheville (N.C.) Times, which express very concisely and with cogent reasoning why Congress should abolish the unnecessary and offending oath.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Williamson (W. Va.) News, Feb. 11, 1959]

SHAM SECURITY

This newspaper never has had much sympathy for the attitude that the man of science is a person apart; that because of the type of mind he possesses and the work in which he is engaged he should be freed of the fetters of conformity which restrain lesser beings. We believe, specifically, that a man can be a scientist or an educator and a patriot at the same time, and that the requirements of good citizenship need not interfere with his work.

Nevertheless, we agree with those who would strike from the National Defense Education Act a requirement that those receiving Federal aid under it take a loyalty oath. Leading educators and associations of educators have denounced the provision, and at least two institutions, Harvard and Bryn Mawr, have declined to participate in the program unless the requirement is dropped.

In proposing legislation to delete the oath provision, Senator KENNEDY (Democrat of Massachusetts) points out that it might defeat the very purpose of stimulating scientific progress by excluding some of the most inquiring minds, by repelling nonconformists and dissenters and those who find oaths distasteful or who are opposed to them for reasons of conscience.

This newspaper is not too much impressed by this argument and is inclined to suspect that some educators take themselves and their academic freedom a bit too seriously. But it is impressed by the other argument of Senator KENNEDY that the oath provision should be eliminated because the really disloyal would have no hesitancy about perjuring themselves.

The loyalty provision should be dropped—and this goes for labor relations as well as for educational aid—not so much because some sensibilities might be offended, but because it is worthless as a security measure.

[From the Asheville (N.C.) Times, Feb. 7, 1959]

LOYALTY OATH ISN'T HELP TO EDUCATION

As the new National Defense Education Act goes into full operation, Senator KENNEDY, of Massachusetts is moving to divest it of a feature that could limit its effectiveness. With the cosponsorship of Senator CLARK, of Pennsylvania, KENNEDY is introducing a bill to repeal a requirement of a loyalty oath by recipients of Federal aid under the act.

The loyalty oath provision was tagged onto the bill from the floor at the last moment before passage, with scant debate and little publicity. Since its existence has become more widely known, it has been criticized by Arthur S. Flemming, Secretary of Health, Education, and Welfare, and by the presidents of quite a number of the Nation's outstanding institutions of higher learning, including Harvard, Yale, and Princeton universities.

The American Association of University Professors has called for elimination of the oath, and several colleges have refused to participate in the education aid program unless the requirement is dropped.

Seantor KENNEDY stated the reasons for repeal clearly and forcefully. He said it would not keep out actual members of the Communist Party because they would "have no hesitancy about perjuring themselves." At the same time, he added, it might defeat the very purposes of the act by excluding the most inquiring minds, by repelling nonconformists and dissenters and those who find test oaths distasteful or who are against them for reasons of conscience.

Now that it has had time to reconsider what it adopted so hastily, Congress should abolish the unnecessary and offending oath.

## Prize-Winning Speeches in Contest Sponsored by the Minnesota 4–H Clubs

EXTENSION OF REMARKS
OF
### HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 19, 1959*

Mr. HUMPHREY. Mr. President, the Minnesota Agricultural Extension Service and the Minnesota Jewish Council this year sponsored the 17th annual 4–H radio speaking contest for members of Minnesota 4–H clubs. The theme of this year's contest was "The Brotherhood of Man—Where Have We Failed—What Can I Do?"

This year 820 4–H Club members wrote and presented talks in 89 county contests.

The grand winner of the State contest was Miss Kathleen Kajer of New Prague, Minn. Miss Kajer is 17 years old and a senior at New Prague High School. Her father is one of the leading farmers in the New Prague area.

The second-place award in the State went to Miss Coralie Christianson of Roseau, Minn. Miss Christianson is 16 years old and a junior at Roseau High School. Her father is the Roseau County superintendent of schools.

I ask unanimous consent, Mr. President, that the award-winning speeches of these two fine young women be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

THE BROTHERHOOD OF MAN—WHERE HAVE WE FAILED—WHAT CAN I DO?

(By Kathleen Kajer (champion), LeSueur County, New Prague, Minn.)

Do you ever say, "Mr. So-and-so is a tribute to his race"? Do you feel it necessary to praise members of another race when you speak of them? Have you friends only among your own racial, religious, and occupational groups? Perhaps you refer frequently to your freedom from prejudice, but if you answer "Yes" to these questions, your prejudice does show through, even though you may not be conscious of it.

Just as sturdy, lasting buildings must be built on firm foundations, so does world brotherhood depend on nations of individuals free from prejudice. I believe we cannot have world brotherhood until we act constructively to dispel our country's prejudice against color, occupation, and religion.

Foremost in the mind of every U.S. citizen is the current Negro problem. The decision of the Supreme Court that segregation was unconstitutional caused a great disturbance in the South. Although equally good education was supposed to be provided for all, it was not done. Segregation also caused great confusion in transportation facilities, and in business circles. Money was need-

lessly wasted in providing duplicate schools and places of business, and Negroes and white people were not treated alike.

Not only in the South have Negroes been degraded and ostracized, but also in Chicago and New York there have been unpleasant incidents, in which Negroes failed in their attempts to purchase homes, or obtain employment because of racial discrimination.

With the Indian we find a highly different situation, one in which we really should hang our heads in shame. Since Sir Walter Raleigh founded the first colony in America, the Indians have been cheated out of what was rightfully their own. In the last century they were herded together like animals, and were literally exiled from their native lands. Despite our idealized democratic equality, we expect them to survive with a hoe in a technological age.

We have a surplus of food, and yet, only a few months ago, Indians were starving in the Dakotas. There is little logic in this.

Here in Minnesota, job discrimination is the most common form of prejudice. We do not care to associate with John because he comes from a farm; Jim's father is merely a janitor; and Joan's mother is only a clerk in a store. Do we ever stop to realize that a farm is actually a big enterprise, requiring great skill and knowledge to operate it successfully? Jim's father is earning an honest wage, and Joan's mother is doing something she really enjoys—helping other people find what they want.

Hard feeling over religious questions is another sore spot. We tend to choose our friends from among those of our own beliefs and in this way we avoid differences and arguments. However, we fail to understand and appreciate the religions of others.

This is what I believe to be the whole key to brotherhood. Each individual person should be judged for himself—for his own honesty, integrity, citizenship, dependability and intelligence, and not by his race, creed or occupation.

What can I do about the brotherhood of man? I must examine facts with an open mind, judge as I see fit, and then follow through with constructive action. When investigating, I must really want to know the truth; I should be willing to learn and accept new ideas. If I find that my present conviction, traditions, and customs are wrong, I should be willing to discard them. Let me exmaine my mind completely to find the true reason for my most cherished opinions.

Love is the basis of brotherhood, and where will we find love if not in the home, the foundation of our society? It is there we learn to love and live with our brothers and sisters. Just because sister Jenny gets on my nerves occasionaly is no reason to embarrass her in front of others and make her feel inferior. I probably get on her nerves too.

It is the same with people outside the family circle. Discussion makes us aware of the point of view of others, but heated arguments between headstrong opponents are senseless.

By following the Golden Rule, doing unto others what we would have them do unto us, we can further the cause of brotherhood.

I ask myself, can I, just one person, affect the lives of others? The answer is not hard to find. One hundred thousand people jammed the Los Angeles Coliseum one starless night. Suddenly the speaker said, "Don't be afraid now. All the lights are going out."

In complete darkness he struck a match, and said, "All who can see this light say 'Yes.'"

There was a deafening roar. So shines a good deed. Then he asked them all to light a match, and the Coliseum was flooded with thousands of litle lights.

I will light my candle, and perhaps others will follow my example. I will not say "Mr. So-and-So is a tribute to his race." I will not use the words "Bohunk," "Nigger," "Polak," or "Jap." I will not speak of other racial and religious groups as "they" and mine as "we." Instead, I will become acquainted with the individuals and their beliefs.

Edgar A. Guest has summed it up in a poem called "When You Know a Fellow." He says:

"You begin to understand him, and you cease to scoff and sneer,
For with understanding always prejudices disappear.
You begin to find his virtues and his faults you cease to tell,
For you seldom hate a fellow when you know him very well."

---

THE BROTHERHOOD OF MAN—WHERE HAVE WE FAILED—WHAT CAN I DO?

(By Coralie Christianson (reserve champion), Roseau County, Roseau, Minn.)

America has always been proud of the democratic ideals which were set up with the founding of our country and which have developed down through the years. She has always taken great pride in these ideals, which have truly shaped the destiny of our great democracy. These ideals, based on the rights and privileges of man, have been eloquently expressed in many important documents and have been written in the hearts of men ever since the birth of our country. We stand ready to defend these ideals at any threat to peace.

And yet, one of the most important of these ideals which has helped to shape our country's destiny, the ideal from which all others stem, has been misused, violated, and neglected. This ideal is the equality of man.

We in America have always been proud that our country was the first Nation of the world to offer equal rights to all men. Are we justified in our pride? Are we being hypocritical—professing to believe in something we do not even practice?

The cold war, with its ever increasing tensions, progresses to the brink of possible world conflict. Others choose to think the greatest danger lies in the undermining powers of Russia through means of propaganda. Whichever the threat, the end results would be equally disastrous. With the increase of power, ruthless aggression, ever increased war weapons, we cannot, must not, rely on our military strength alone. There has to be another solution. And as is often true with intricate problems, the very simplicity of the right solution may become apparent to us. Brotherhood—brotherhood of man regardless of race or religion is the only solution.

The Bill of Rights, in which many of our personal rights are stated, was drawn up for the purpose of serving as a personal charter of liberty bestowed on each person living in this country. Yet, has the Bill of Rights, along with the Declaration of Independence and the Constitution, safeguarded the liberties of all men living in our country? The answer, it is apparent, is "No."

Ever since our country began, there have been constant racial differences among men. In the past, these differences nearly led to the destruction of our Union. Even yet, we have not completely solved our problems with our first brothers, the American Indians.

Racial differences are evidenced strongly at the present especially by the crucial situation in the South and all over the United States. Negroes, who, by the Constitution are granted equal rights along with all citizens, are being barred from restaurants, schools, hotels, and the better residential areas. Men, who, by the grace of God, have been created on an equal basis with all men, are being denied rights belonging to all human beings. And these facts are being used by the Russians as propaganda to spread the cause of communism—that we claim equal rights to all men in the United States and we can't even settle our own racial problems. It is not any wonder the world doubts our sincerity.

Secondly, we have other problems lying within our country which bear the mark of suppositions of human superiorities. One of these, perhaps the most crucial and deplorable situations at the present, is the numerable slum areas which exist in all the larger cities across our country. Is this truly a democratic way of living for us to turn our heads away from these people and their lowly conditions? These people, living in stark poverty and filth in a country of health and prosperity, are ready and ripe for communism. Certainly, we must extend our hand, helping these people who surely are our brothers whatever race, color, or creed. Situations such as these are what may lead to the downfall of our great Nation if they are not checked. For history offers many examples of countries which became careless about their democratic practices and therefore lost their freedom. Our solution again: the extension of a brotherly hand toward those in need.

What can we, as concerned Americans do about these problems? What can I do, as a 4–H member and future citizen of this great country?

The first step is really the most difficult. We must come to realize and accept the fact that we, on this earth, from the beginning of time, were created equal; therefore, we form one huge family of brothers who are all basically the same, regardless of the race or nationality into which we were born. When we have come to realize this fact, then we shall feel the desire to reach out to help those in need as well as accept and befriend those who are now shut out because of race or color.

Secondly, it should be up to us as true Americans, and especially to us as students and future citizens, to delve into the histories of the many nationalities making up America, the melting pot of nations. From this study we can come to understand more fully the peoples of our Nation and of the world.

Thirdly, by encouraging a more thorough program of foreign languages in our schools, we can develop more fully the understanding of nations, binding the ties more closely in this family of brothers.

And so, by practicing these three steps and by putting our trust in God, we shall march forward, striving to reach our goal of national and international peace and of a democratic nation strengthened through the common effort of its people to practice the brotherhood of man.

It is like the little boy who was carrying his brother. A stranger stopped to say, "Son, isn't he too heavy a burden for you to carry?" The little boy answered, "He's not a burden, he's my brother."

So may we truly know, believe, and practice that "God hath made of one blood all nations of men for to dwell on all the face of the earth."

---

## Young Scientists Proving Their Worth Now

EXTENSION OF REMARKS

OF

## HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Thursday, March 19, 1959*

Mr. YARBOROUGH. Mr. President, recently a Corpus Christi, Tex., business was having difficulty because an exces-

sive foaming of soap used in cleaning brake shoes was clogging machinery.

Miss Kay Vreeland solved the business problem. She also won one of two top awards at a recent south Texas Science Fair, for her work. Miss Vreeland is a high school student at Incarnate Word Academy in Corpus Christi.

A 16-year-old high school sophomore from San Benito, Tex., Charles Deyo, exhibited a sonar oscilloscope at the same science show which so interested naval authorities that he was offered a Navy cruise next fall.

These are just a few of the many complicated and learned projects which were displayed by high school students at the science exhibit. These young people are excellent examples of the type who do not make headlines for juvenile delinquency or gang wars. The teen years are usually thought of as the years of preparation—of getting ready for a career which is still ahead. These young students are doing more than just prepare for the future. They are demonstrating their worth now, proving themselves good citizens and good students, aiming to make this a better world today and tomorrow.

Mr. President, in special recognition of the long hours of work which many of this Nation's young people are putting in on studies and worthwhile activities of many kinds today, I ask unanimous consent to have printed in the Appendix of the RECORD a report of the South Texas Science Fair held in Corpus Christi, Tex., on Sunday, March 15, 1959. The story, written by Edward H. Harte, was published in the Corpus Christi Caller for Monday, March 16, 1959, under the heading: "Thousands Attend Science Fair; Local Girl Top Winner."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOUSANDS ATTEND SCIENCE FAIR; LOCAL GIRL TOP WINNER

(By Edward H. Harte)

A little girl looked at the cage of leukemia-ridden mice at the South Texas Science Fair yesterday and wailed, "Daddy buy me some white mice."

Parents and teachers congratulated one another on the high quality of junior's work. And the general public, which turned out by the thousands, admitted by word or look that it didn't understand much of what it saw.

But the Ph. D.-studded panel of judges understood, and yesterday their decisions were announced.

TOP WINNERS

Top winners, entitled to compete in the National Science Fair: Kay Vreeland of Incarnate Word Academy, Corpus Christi, and Fred Parce of Harlingen High School.

Top junior high exhibitor: Celso Guzman of Cathedral School, Corpus Christi.

Navy Cruise winner and two alternates: Charles Deyo of San Benito High School; David Alexander of Harlingen High, first alternate; and Hal Russell of Kingsville High, second alternate.

Medical Society awards: Barbara Ann Bryant of Ursuline, Laredo, senior high winner, and George Duncan of Gay Junior High, Harlingen.

Dental Society awards: Wanda Lee Kendey of San Benito High School and Rene Garcia of Falfurrias Junior High.

Junior Museum award: Kathleen Kennedy of Cathedral School, Corpus Christi.

FIRST LOCAL WINNER

Miss Vreeland is the first Corpus Christi contestant ever to win top honors in a science fair here. In the past 4 years, the Corpus Christi show has sent to the national fair three winners from Harlingen, two from Beeville, and one each from Kingsville and Raymondville.

The local fair also sends two teachers to the national fair. This year they are Sister Jeanne Francis, of Incarnate Word, general chairman of the fair and teacher of prize-winning Kay Vreeland, and Miss Mary Lee Grabowske, of Crockett School, here, for 4 years chairman of the elementary division in the fair.

ACCLAIMED AS BEST

Yesterday's large crowd moved slowly through the exhibits which teachers acclaimed as the best in the history of the south Texas fair.

Laymen who looked about could pick up all sorts of useful information.

For instance, an Incarnate Word entry proved that you can root your geraniums best in plain tapwater. The students also tested the rooting qualities of Corpus Christi Bay water and Lake Mathis water. Tapwater's best. And although the roots will be bigger if you use a rooting hormone, they won't appear any faster.

If you're worried about droughts, remember that the sun's heat will distill fresh water from sea water. Kathleen Kennedy's exhibit showed how simple it is. What could be more practical—after all, isn't this the land of sun and surf?

ALGAE'S SPACE ROLE

You may not care about algae, but space scientists and young Tommy Kantz, of Kingsville High School, do. They know that algae may provide the essential carbon dioxide-oxygen exchange that will be necessary if man is ever to go up in a spaceship. Kantz proved that light was necessary for motion of algae oscillatoria.

Aspirin does not retard the wilting of your cut flowers. This is the conclusion of Rachel Garcia, Eudelia Garcia, and Velma Oliver, all of Ella Barnes, who conducted scientific experiments on the subject.

PHYSICAL SCIENCE

Both the top exhibits were in the physical sciences and were practical answers to real problems. Kay Vreeland's father was losing soap and clogging machinery due to the excessive foaming of soap he used to clean brakeshoes at his business. She discovered that sulfates would control the suds, and recommended either magnesium sulfate (epsom salts) or sodium sulfate.

Fred Parce, who was last year's Navy cruise winner from the South Texas Science Fair, exhibited a Remodified pi-Z Match Network which he assures confused adults is eminently practical for military communications outfits and ham radio operators.

CRUISE WINNERS

Charles Deyo, 16-year-old San Benito sophomore who won a Navy cruise next fall, rigged up his own oscilloscope in a sonar-principle exhibit. Navy men, most of the students, and the few adults who understood were impressed.

First alternate on the Navy cruise, David Alexander, of Harlingen, designed and built a closed-circuit television system that projects its picture on a sphere.

Although candy-machine sales at Exposition Hall probably didn't register any change, Barbara Ann Bryant, of Laredo, winner of the medical society's citation, showed that a diet of sweets will make rats sick, sick, sick. From September until February she fed some rats cookies, crackers, cherries, candies, cakes, pies, and other delicacies. Then she killed them. Their organs, she said, were something to behold. And their bones, too. Yellow and weak.

OTHER RATS

Meanwhile she was feeding other rats a salubrious if uninteresting diet of such things as powdered milk, yeast, cornmeal, etc. At the time of their death, their organs looked good and their bones well formed and strong. The skeletons were right there to prove it.

Wanda Lee Kenedy exhibited sections of healthy and diseased teeth which won her the dental society's citation in the senior division.

Celso Guzman at Cathedral School is a stargazer, but he noticed that because of humidity, some nights in Corpus Christi were better than others for celestial observation. He set up a small weather station, with his own wet- and dry-bulb thermometers. Checking the humidity, he also noted the visibility of the stars. He found they are still visible at humidity as high as 92 percent. He wants to check at humidities of 92 to 99 percent to discover at what point the stars disappear.

Judges did not know the identity of any exhibitors. Until after judging all exhibits were identified only by number.

This year's National Science Fair will be held May 6 to 9 at Hartford, Conn.

## North Atlantic Treaty Organization Convention

EXTENSION OF REMARKS

OF

## HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 19, 1959*

Mr. ZABLOCKI. Mr. Speaker, I am today joining with several other Members in introducing a resolution proposing the calling of a convention of delegates from the North Atlantic Treaty Nations to explore how the NATO nations may, acting within the framework of the United Nations and in accordance with the basic principles of the Constitution of the United States, achieve more effective and democratic unity in advancing their common interests.

The governments of the NATO nations have been seeking greater unity since NATO was founded 10 years ago.

The communiques of the North Atlantic Council have shown the importance which our governments have given to this vital objective.

The legislators of the NATO nations have likewise sought to bring about greater unity since 1955, meeting each year for this purpose in the NATO Parliamentarians' Conference.

Meanwhile the need for closer unity has grown, not diminished. The Communist threat to the United States and to NATO has become political and economic as well as military with accelerating speed ever since the death of Stalin.

This resolution would extend the quest for greater unity among NATO nations to a third level, the level of their peoples. It would bring about a comprehensive survey of this overriding problem con-

ducted by the best minds among our peoples. It can be expected to produce some constructive recommendations, and even chart a fresh approach to the solution of this problem.

This exhaustive survey by a body of leading citizens from the NATO countries would complement the efforts which our governments and our legislators are making; it would neither conflict with them nor interfere with them. The convention proposed in this resolution could in no way commit our governments to any action; its function would be solely to study and report.

Mr. Speaker, in our own country we often turn to a body of distinguished citizens when we have a complex problem to solve, appointing a commission to study the problem and reports its recommendations. The convention proposed in this resolution may be likened to such a commission on an international scale, on a NATO scale, which takes account of the disparity in size of the NATO countries.

The Berlin crisis and the periodic crises which have preceded it in recent years have demonstrated that our unity within NATO needs to be preserved and strengthened if we are going to successfully meet, and properly deal with, Communist pressures.

It is high time that we enlist leading citizens among our nations in this crucial search for greater unity, realizing, as we do, that effective unity among democratic nations must be based on their peoples.

## Mr. Khrushchev and Post-Stalin Russia
